used. Thus the rain-cloud is black; in a sacrifice for rain, therefore, the victim must be in imitation of it. The Wambugwes of East Africa offer a black sheep and a black calf when they want rain; the Garos of Assam offer a black goat on the top of a very high mountain in time of drought; in Sumatra a black cat is thrown into a river and allowed to escape after swimming about for a time; the ancient Hindus set a black horse with its face to the west and rubbed it with a cloth till it neighed (Golden Bough2, i. 101-2); and in the same way white animals must be sacrificed for sunshine (ib. p. 103). For an agricultural sacrifice at Rome red-haired puppies were chosen, in imitation of the colour of ripe corn (ib. ii. 311). In the same way in Egypt red haired oxen were the chosen victims (ib. p. 142). The Iroquois sacrifice of the white dog (see below) may perhaps be set down as another example; for although white is not everywhere the emblem of purity, it is natural to connect with this idea the

selection of a white dog for a piacular sacrifice.
4. CREATOR.—It is by no means self-evident to the savage mind that the functions of the Creator of the universe or of some part of it are necessarily united with those of its sustainer, or of a moral ruler of mankind, or even of a god. Hence, though we find cases in which the Creator is an object of worship, or at any rate respect (see 'Crow' below). we also find a share in creation assigned to animals

which are not even specially sacred.

which are not even specially sacred.

The Gros Ventre account of the origin of the world is that the world was once all water, inhabited only by a swan, which in some unaccountable way produced a crow, a wolf, and a water-hen. One day the crow proposed to the wolf to send down the water-hen to look for earth, for they would be so much happier if they had a little ground under their feet. The earth was brought, and while the wolf sang and performed on a rattle, the crow sprinkled the earth about on the waters and formed the globe as we have it to-day. Subsequently man was created, and the crow turned herself into an Indian (Coues, Henry and Thompson, MS Jls. p. 351). According to the Guayourus of South America, they were called into existence after all the other nations by a decree of the caracarabird, but they show it no special respect (Patriota, 1814, p. 26). In some cases chance seems to have caused an animal to figure as Creator; in S. Australia the islands were said to have resulted from a blow of a great serpent's tail, but Noorele created other things (Eyre, Eupeditions, ii. 356).

5. CULT.—Anthropological data are supplied in

5. CULT.—Anthropological data are supplied in many cases by the chance remarks of a traveller, who, if he understands the true nature of the phenomena he is describing, does not always appreciate their importance, and consequently leaves us in the dark on points which are indispensable to the correct understanding of his information. This is especially the case when the information relates to the worship or supposed worship of animals; not only are the sources of such a cult extremely various, but it may be possible for actions which spring from purely utilitarian motives to wear the appearances which elsewhere characterize the ritual of an animal cult. We find, for example, that in ancient Egypt it was the practice to feed the sacred crocodiles, which were associated with the god Souchos (Sebek); in modern days we have a similar practice recorded in West Africa; but in the absence of information from those who give them food we can hardly interANIMALS

pret the custom without fear of error. Prudence is a faculty commonly denied to the peoples in lower stages of culture; but it may well have happened that accident, if not reflexion, suggested to some one that a hungry crocodile is a far more dangerous neighbour than one which is in no need of food. We cannot, therefore, explain the modern custom, without more ado, as crocodile-worship; the possibility of the utilitarian explanation must also be kept in mind. Quite apart from this, there is a difficulty in the interpretation of the data which arises from the indefinite nature of many of the observances. Savage ritual is well-established, but the savage creed is often vague and fluctuating. At any rate, in the hands of European questioners, it is not uncommon for one native to assert one thing while another will maintain exactly the reverse; or one and the same man will put forward contradictory propositions either after an interval of time or even during a single interview. Where the ritual is unmistakably religious or magical, we can dispense with the commentary of the officiating priest or magician; but where there is room for doubt we can ill afford to do without this guidance, even though we know that the explanation given is not necessarily the

original one.

The terms 'worship' and 'cult' are used, especially in dealing with animal superstitions, with extreme vagueness; and, moreover, the interpretations of the fact to which they are applied is in tion of the facts to which they are applied is in itself uncertain. At one end of the scale we find the real divine animal, commonly conceived as a 'god-body,' i.e. the temporary incarnation of a superior being, with a circle of worshippers. At the other end, separated from the real cult by imperceptible transitions, we find such practices as respect for the bones of slain animals, or the use of a respectful name for the living animal. The question is one with the general problem of the definition of religion; it cannot profitably be discussed in connexion with a single species of cult, and it is the less necessary to do so here, as we are concerned only with general principles and broad

Animal cults may be classified on two principles: (a) according to their outward form; (b) according to their genesis. The first kind of classification is important chiefly for the comprehension of the principles which underlie the evolution of animal worship into anthropomorphic cults; the second is primarily concerned with an earlier stage—that of the actual beginnings, it may be, of the religious sentiment or its manifestation.

senament or us mannessation.

(a) Formal Classification.—Animal cults may be broadly divided into two classes: (i.) the whole species without exception is sacred; (ii.) one or a fixed number of a species is sacred. In a certain number of cases the second class may be indistinguishable from the first; this is the case in the Bornean cult of the hawk; there were only thirty-three real omen birds among the Ibans of Borneo in olden days, but they were indistinguishable

from their fellows.

Although it is by no means axiomatic that the cult of the species has in every case preceded the cult of the individual animal, it seems probable that we may regard this as the normal course of evolution. The transition may be effected in more than one way. (1) As in the case of the hawk (see below) among the Bornean peoples, a simple progress from theriomorphic to anthropomorphic ideas may suffice to explain the change. There is no reason to doubt that such a process may take place both to doubt that such a process may take place both without foreign influence and without any internal impulse due to the rise of sun-, moon-, or other cuts of single deities, which would naturally tend to preduce a species of syncretism in previously

existing multiple cults. Among more than one Australian tribe, for example, the eagle-hawk seems to have been transformed into an anthropomorphic deity; but there is no reason to suspect either foreign influence or assimilation to other native cults, for the latter are admittedly non-existent. So, too, in Central Australia the Wollunqua totem animal is a mythical serpent; the totemic ceremonies are performed to keep him in a good humour, and not, as is the case with the other totems of the same tribe, to promote their increase; but when we reach acts intended to propitiate a single animal, mythical or otherwise, we are on the verge of worship, if indeed the boundary between totemism and animal cults proper has not long been overpassed. At the same time, not only may the rise of individual cults, such as those of the heavenly bodies, exert a deep influence on the multiple cults, but a specialization of function may, where multiple cults alone are present, aid to bring about the same result. The chief purpose for which the Bornean peoples require omens is to get directions for the conduct of their head hunting expeditions; in other words, the conditions themselves made for the specialization of a war-god, either multiple or unified. Intertribal war tends to increase, if it does not call into existence, the power of the chief; from the human leadership on the war-path to the predominance of one individual among the omen birds is not a long step; and we actually find evidence that it was taken by the Ibans, while the Kayans have gone far in the same direction. the Kayans have gone far in the same direction. Evidence of similar tendencies can readily be produced from many other areas; the Amerinds had, in the very early days of the Jesuit missions, already attained the conception of an 'Elder Brother' of each species, marvellously great and powerful (Rel. des Jés. 1634, p. 13). In California the Acagchemens worshipped the panes bird; each village sacrificed a different bird, and the sacrifice village sacrificed a different bird, and the sacrifice was annual; but the view which the worshippers took was that only one bird was sacrificed, each year the same, and the same in each village. In Samoa the process had not gone quite so far; the gods of the villages were incarnate in animals; each god was incarnate in all the animals of the species; consequently although respect was shown to the individual dead animal, the life of the god was in no way affected by its decease; he continued to survive in the remainder of the species (Turner, Polynesia, p. 242). Other examples will be found in Tylor (Prim. Cult. 3 ii. 243 ff.).

(2) The process of unification, as in the case of the Acagchemens, where mystical ideas have also of sacrificing the sacred animal annually. The doctrines of reincarnation and identity of the sacrificial animal would undoubtedly be highly important for the history of this case of evolution, if it works are in the sacrificial animal would undoubtedly be highly important for the history of this case of evolution, if it works are the sacrificial animal would undoubtedly be highly important for the history of this case of evolution, if it were not probable that they were later developments, if not actually due to the influence of European ideas. For an example of a stage in cult where the importance of sacrifice pure and simple is manifest we may turn to the Woguls. Once in each year they go in crowds into the woods and kill one of each species of animals, preferring the horse and the tiger as best; they flay off their skins, hang up the carcases on a tree, and in their way pray to them, falling prostrate on the earth; after which they eat the flesh together (Ides, *Three Years' Travels*, p. 7). In this example we are not, it is true, told what is done

fleece of the ram which was sacrificed to him once a year. Intermediate stages are given by the Californian custom of preserving the panes skin and using it as the tobet, or cloak, of Chinigchinnich; and by the Floridian sacrifice of the goat (see below), whose skin was preserved for a year, until its place was taken by that of the next victim.

(3) In the folk-lore of modern Europe the cornspirit is conceived to bear sometimes human, sometimes animal form; but in neither case has anything like unification made its way into the minds of the peasants who are the repositories of these primitive ideas. In Greece and Rome, on the other hand, we find the corn-spirit, as recorded in literature, no longer an undifferentiated, multiple divinity, who resides equally in every field and on every farm. A process of synthesis has unified the anonymous rustic animal and human gods, though in Greece we can still trace their features in survivals. How far this unification corresponded to anything in the nature of anthropomorphization and unification in the minds of the peasants whose gods they originally were, we do not know; but it may be suspected that the process did not go far. It may, of course, be true that the corn-spirit in modern Europe is but a degenerate descendant of Wodan, Ceridwen, Demeter, or whatever the name of the corn-deity was; but this explanation leaves us without a hint of how the former god came to be conceived as an animal. However this may be, it seems clear that the passage from multiplicity to unity may have come about by a process which implies a certain amount of philosophizing. Just as in Egypt there was a tendency to identify all the gods with Ra, so in Greece, in a minor degree, went on the process of identifying the local corngods with more central and systematized cults. The natural tendency was for the cult of a deity to spread beyond its original area and to swallow up less important or nameless objects of worship, and this went on in the case of animal no less than of other cults. At the same time, we must not overestimate the importance of the movement, which may have penetrated but slightly the lower strata of the population. It may be noted in passing that it is possible to have two distinct kinds of syncretism: (a) where one deity swallows up his fellows, all being of the same species, which probably occurred in the case of Demeter, complicated, however, by the fact that the horse as well as the pig was associated with her, thus leading to a double movement of synthesis—the unification of many local homogeneous corn-spirits, plus the unification of the different species of animals, the heterogeneous corn-spirits - from which we get Demeter as she is presented to us by classical authors; and  $(\beta)$  where there is no underlying unity of function. If the cult of Apollo Smintheus developed from an older cult of the mouse, we can indeed explain why the mouse-god should also be the sun-god, by saying that the mice devastate the fields under cover of darkness, and that the sungod is the natural protector of the farmer against the plague of mice. But though we can explain syncretic movements on semi-rational lines in this case, it by no means follows that we have given the real explanation; and it would be far from easy to hit upon similarly obvious explanations of other syncretic processes

(4) Side by side with the immolation of the victim, and sometimes supplementing the annual sacrifice as a cause of the sanctity of a special animal, may be placed the custom of selecting an animal for special honour. We find two types of this practice. The first, among pastoral peoples, consists in consecrating an animal which is thenceforth inviolate. Perhaps we may see in a custom of this sort the source of the Egyptian cult of the

bull, which later came to be regarded as a 'god-body,' and was recognized by special marks. In the second type, the animal, so far from remaining inviolate, is sacrificed at the end of the year or after a certain period of time; but, unlike the cases referred to in a previous section, its sanctity terminates with its death, and its place is taken by another living animal. This form of worship may perhaps be due in the first instance to the commonly felt wish to apologize and do honour to the animal about to be slain, in order that its comrades, honoured in its person, may show no disinclination to fall victims to the hunter's dart.

(b) Genetic Classification. — In dealing with animal cults from the genetic point of view, it must not be forgotten that, while changes in ritual are at most but gradual, the explanations which are given of the acts are liable to change in a much greater degree. Foreign influences apart, development in creeds is often a slow process; but it may be taken as axiomatic, at any rate for the lower stages of culture, that belief changes far more rapidly than ritual. If, therefore, we find that at the present day a species of animals is held in reverence, it by no means follows that the explanation is the one which would have been given in pre-European days; yet even this more primitive interpretation may not throw any light on the real origin of the cult. The ætiological myth is particularly characteristic of savages, and the ætiological myth is not history but guesswork. To take a concrete example, the Barotse explain the fact that they have the baboon as their totem by a myth which involves the sup-position, if it is to be regarded as real history, that they developed totemism after their passage from savagery to barbarism, marked by their acquisition of cultivated plants (Folklore, xv. 110). Not only is this highly improbable in itself, but the myth throws no light on the genesis of totemism in other parts of the world or among other South African kins, if indeed it be totemism with which we are confronted among the southern Bantus. Again, the southern Bantus as a whole explain their respect for the totem (?) animal, or sitolio, by the story that the souls of their ancestors go to reside after death in the species which they respect. It does not follow that this is an original trait of their creed. True totemism seems to exist among other Bantu tribes, uncontaminated by any eschatological theories. It is by no means impossible that with the southern Bantus true totemism existed in the first instance; with the development of ancestor-worship, possibly a result of the change from female to male descent, there would be a ten-dency to bring other cults into relation with the predominant form of worship. The belief, but rarely found in other parts of the world, of trans-migration into the totem animal may have taken the place of the belief in transmigration pure and simple, which is found in Australia without any connexion with totemism (Man, 1905, No. 28).

Again, the cults of pastoral tribes are commonly explained on the ground that they do honour to the species on which they depend for their subsistence. That may be so at the present day; but there is no proof that the cult of the animal in question does not date back to the days before it was domesticated or when it was only in process of domestication, which obviously must have been for reasons unconnected with its future usefulness. If, as is not impossible, the cult of the animal led to its domestication, the modern explanation is obviously late, and we can only guess at the causes which made the animal an object of worship in the first place.

in the first place.

Animal cults may be conveniently classified under ten specific heads, with another class for non-

descript forms of unknown origin or meaning: (1) pastoral cults; (2) hunting cults; (3) cults of dangerous or noxious animals; (4) cults of animals conceived as human souls or their embodimais conceived as human souls or their embodiment; (5) totemistic cults; (6) cults of secret societies, individual cults of tutelary animals; (7) tree and vegetation cults; (8) cults of ominous animals; (9) cults, probably derivative, of animals associated with certain deities; (10) cults of animals used in magic. Broadly speaking, it may be said that in the cases of (1), (2), and perhaps (7), the motive is mainly the material benefits which the animal confers on its worshippers. (2) and to the animal confers on its worshippers; (3) and to some extent (5) and (10) are connected with fear of the consequences of refusing respect; (6) and (8) are connected with the assistance derived from the animal; and (9) with the fear of the wrath of a god; while (4) seems to be compounded of fear of the wrath of ancestors and desire for their help.

(1) The characteristics of the pastoral type are (1) The characteristics of the pastoral type are that a domestic animal, (a) is spared as a species, or (b) receives special honour in the person of an individual animal. (a) As an example of the first sub-type may be taken the Hindu respect for cattle, and, as a modified form, the attitude of the South African Bantus towards their herds. The latter are losing their respect for cattle; but whereas in pre-European days the sacrifice of cattle was rewritted to the Hindu at the present day be is permitted to the Hindu, at the present day he is absolutely forbidden to kill an animal of the absolutely forbidden to kill an animal of the species, though the prohibition is certainly of late development. (b) As an example of the second sub-type may be taken the Toda cult of the buffalo (see below), the Madi cult of the sheep (see bulano (see below), the Madi cult of the sneep (see below), and perhaps the West Asiatic cult of the camel (unless we should regard the rite described by Nilus in *PL* lxxi. as astral in its nature), since they fairly represent the class of pastoral cults in which honour is done to the special ceremony. In another class of pastoral cult the honour is done to another class of pastoral cult the honour is done to the species by selecting one animal as its representative and letting it go free. As an example of this type may be taken the Kalmuk custom of setting free a ram lamb. But it may be noted that even here it is the practice to sacrifice the sacred animal eventually. This is only, however, when it is growing old, and Frazer explains it, like many other customs of a similar kind, as due to a wish that the god or divine animal may not grow old and thus lose, with the decay of his powers, the strength needed for the fulfilment of his functions.

(2) In hunting cults, on the other hand, the

(2) In hunting cults, on the other hand, the species which receives honour is habitually killed, and, in order to atone for the loss of individual members, (a) the species is considered to be represented by a single individual, which is itself finally killed, but not until it has, like the bear (see below) among the Ainus, received divine honours, and (b) each individual of the species at its death by the hand of the hunter is propitiated and receives offerings, or whatever treatment is conceived to be proper to make its feelings predominantly those of satisfaction, in order that its surviving fellows may show no unwillingness to present themselves in their turn. As examples of this sub-type may be taken the buffalo, and the bear (see below) among some peoples (cf. Golden Bough<sup>2</sup>, ii. 404 ff.), and, in fact, most animals on which hunting or fishing tribes largely depend. In some cases the propitiation does not go farther than forbidding misuse of the bones of the dead animals, such as giving them to dogs, breaking them, etc., which may be a purely prac-tical measure based on savage ideas of reproduction,

the slain animal. They are mainly practised in Africa and South Asia; as examples may be taken the cult of the leopard, lion, and tiger (see below). The dangers to be avoided are twofold: in the first place, the soul of the slain beast may take vengeance on the hunter, who therefore submits to the same tabus as are imposed on him during a season of mourning, with the idea of either deceiving or keeping at a distance the malevolent ghost; in the second place, as in the previous sections, the remainder of the species has to be kept in good humour or prevented from learning of the death of their comrade. To this end, in Sumatra, a magician is employed when a crocodile is to be hunted, and elaborate explanations are frequently given that the animal is to be or has been killed because it attacked a human being and thus broke the truce attacked a human being and thus broke the truce normally subsisting between man and the species. In Japan, a man who kills a snake should crush its head, or more will come; this seems to be intended as a means of preventing it from calling its fellows to avenge its death. Again, after hunting the leopard, it is the custom for the hunter to imitate the voice or the habits of the leopard; if this is not intended to deceive the spirit of the slain animal, it may be intended as a propitiatory act to appease the remainder of the species. Vermin are propitiated in various ways, and many of the practices are applied to mice (see below). In the Baltic island of Oesel an offering is made to a Baltic island of Oesel an offering is made to a weevil, and they think less damage will then be done to the corn. In the island of Nias in the Dutch East Indies the ant is very destructive; at harvest time it is propitiated by being called Sibaia—the name of a good spirit which is supposed to protect the crop from harm. With the position of this spirit may be compared that of Apollo Smintheus (see 'Mouse' below), Dionysus Bassareus (see 'Fox' below), Baalzebub, and other deities whose names are associated with vermin. It is open to question how far we are justified in It is open to question how far we are justified in assuming that any cult of vermin is implied which has subsequently developed into the cult of a god or been united with it by a process of syncretism. In Central India the Waralis worship a stone which they call the lord of tigers (see below; see also 'Horse'), but there is no reason to suppose that they believe the stone to have been a tiger or to contain the spirit of a tiger; nor is any cult of the living tiger recorded among them. It does not necessarily follow that Apollo Smintheus must have been a mouse, or that a mouse cult must have been amalgamated with an independent cult unconnected with mice.

(4) We come to an entirely different set of ideas, in the respect shown to animals because they are in the respect shown to animals because they are regarded as the abode of the souls of the dead, or sometimes as the actual souls of the dead, and even of the living (Rev. de FH. des Rel. xxxvii. 385; Golden Bough<sup>2</sup>, iii. 409 f., 430 ff.; van Gennep, Tabou, pass.; Folklore, xi. 235; von den Steinen, Unter den Naturvölkern, pp. 512, 353, etc.) Some of the Celebes tribes perform a periodical ceremony in honour of the crocodiles, on the ground that their departed relatives take that form: they take prodeparted relatives take that form; they take provisions and musical instruments in a boat and row visions and musical instruments in a boar and low up and down, playing on the instruments, till a crocodile appears; they offer food to it and hope thereby to recommend themselves to their kindred (Hawkesworth, iii. 759). More especially among the Bantu tribes of South Africa and the Malagasy is the belief found that the dead pass into certain animals, which among the Bechuanas differ for each clan. What is sometimes regarded as totemrather than cult properly so called.

(3) The cult of dangerous animals is generally characterized by tabus before, during, and after the hunt, and by ceremonies intended to propitiate each class. What is sometimes regarded as toolems, is at the present day a system of ancestor-worship (Man, 1901, No. 111). With the South African facts should be compared the Madagascar beliefs (v. Gennep, Tabou, pass.). In the Solomon

ANIMALS

Islands it appears to be the custom for a dying man to inform his family into what species of animal he proposes to migrate  $(JAI \times xxviii. 147)$ . The abode thus taken up in an animal is commonly regarded as permanent, the soul of the dead man passing into another of the same species, if his particular animal is killed (Man, 1904, No. 118), but occasionally the soul is believed to pass on after a time to its final abode (Folklore, xii. 342). The belief is occasionally found in Africa that a chief has put his soul for safe keeping into an animal, which is therefore respected (Golden Bough<sup>2</sup>, iii. 407; JAI xx. 13; see below, 'Goat,' 'Cattle').

If we are entitled to assume that the sibokoism of the South African Bantus is totemism, or has replaced an earlier stage of pure totemism, the soul-animal occupies a specially important place in the history of savage religion. In any case, the worship or respect for the soul-animal has probably been the starting-point of other cults; thus the Zulu and Masai respect for the serpent may represent the beginnings of serpent-worship. The association of the dog with the Lar at Rome probably points to a time when the dog was regarded as a form of the soul; at the same time it should not be forgotten that the Lar was also a household god, and that the dog might with special appropriateness be associated with it; the dog was likewise associated with Hecate, also apparently a

family goddess.

(5) One of the most widely distributed animal cults is that known as totemism; it is, however, rather negative, consisting in abstinence from injuring the totem animal, than positive, showing injuring the totel animal, that positive, showing itself in acts of worship. There are, however, exceptions; the Wollunqua totem is a single mythical animal; the Warramunga ceremonies with regard to it are at the present day devoted entirely to placating it, an attitude which can hardly be distinguished from the propitiation of a god. Among certain Central Australian tribes the totem animal is required to be eaten on certain central australian tribes the totem animal is required to be eaten on certain occasions, although this is to be regarded as an aberrant form of totemism (Lang, JAI xxxv. 315-336). In America, too, we hear of sacrifices to the totem (Loskiel, History, i. 40; Maclean, Tanganta fine Verge p. 186), upless indeed totem is Twenty-five Years, p. 186), unless, indeed, totem is here used in the sense of individual totem, offerings to which are frequent (Frazer, Totemism, p. 54). Under this head may be noticed the cult of certain animals in Australia, which are associated with all the males or all the females of a given tribe. They are frequently termed 'sex totems,' but 'animal brothers' would be a more intelligible term. Their real meaning may be said to be unknown. How far totemism tends to evolve into other forms of cult is a disputed question, but it seems probable that the totem of the chief, where the office is

that the totem of the chief, where the office is hereditary, will come to be respected by the whole tribe (Miss. Cath. 1888, 262; cf. Tour du Monde, 1895, p. 100). The segregation of totem kins leads to certain districts holding certain animals sacred, and may open the way to higher cults.

(6) In the case of the totem kin, the association of a human being with a species of animals is hereditary, and no choice in the matter is permitted to him. Of a more voluntary nature are secret societies. Even here inheritance has much to do with the acquisition of membership in a society, especially in N.W. America. At the same society, especially in N.W. America. At the same time, initiation seems to play a considerable rôle in the case of the secret society; in the absence of initiation ceremonies a man remains outside the society, but this can hardly be the case with a totem kin, for women, too, belong to it, though their initiation ceremonies, if performed at all, do not seem, any more than those of the males, and probably much less, to bear any relation to the

totem. The fundamental idea of many secret totem. The fundamental idea of many secret societies is the acquisition of a tutelary animal. In the same way the individual gains an animal genius by his initiation fast. Closely connected with these 'naguals,' as they may conveniently be termed, are the familiars of witches and the wer-wolves, or other animal forms of wer-men.

(7) More especially in Greek and Roman mythology we find a number of woodland deities, which

ology we find a number of woodland deities, which are very clearly spirits of the woods in animal or partly animal form. Bearing in mind the possibility of syncretism, it may be recognized that even if Dionysus and other deities commonly associated with vegetation cults are sometimes conceived in animal form, this is no proof that they were so conceived qua vegetation spirits; but this objection applies in a much less degree to Pan, the Satyrs, and Silenuses, while in the case of the Fauns there is a general agreement that they are spirits of the woods (Mannhardt, Ant. Wald-u. Feldkulte, p. 113). We have a parallel to them in modern European folklore; Lêshi, the woodspirit, is believed in Russia to appear partly in

m modern European folklore; Lêshi, the woodspirit, is believed in Russia to appear partly in human shape, but with the horns, ears, and legs of a goat (Mannhardt, Baumkultus, p. 138).

The frequent conception of the corn-spirit as an animal, and particularly as a pig, makes it highly probable that Frazer is correct in arguing that Proserpine, Attis, and Adonis were originally conceived as pigs, or, at any rate, that their cult developed from that of a corn-spirit in pig form. In European folklore there is little that can be termed worship or cult in the attitude towards the animal under whose form the corn-spirit is believed to appear; few or no ceremonies are performed, save those whose object is to placate the spirit injured by the reaping of the crop and to ensure the proper growth of the new crops when they are sown in the spring. More definite nots of worship are recorded of the Pawnees on the Unpur Missouri (see 'Bison' below), and of some of the tribes in Fiorida.

(8) Omens are drawn from the cries and actions of birds, mammals, etc., all the world over; but developments like the cult of the hawk (see below) in Sarawak are probably rare. If we may assume that the present-day conditions in the tribes referred to represent three stages in the evolution of a god, there is no doubt that from an omen-giving bird has been evolved a specialized anthropomorphic deity, especially associated with warlike operations.

(9) The guestion of the geograficer of

operations.

(9) The question of the association of certain animals with certain deities is a very difficult one. On the one hand, it is certainly impossible to prove that all such animals were sacred before they became connected with the god; and equally im-possible to show that the god has actually been crystallized out of one or more sacred animals. On the other hand, we cannot point to any clear case of respect for an animal paid to it wholly and solely because it is associated with a certain deity. If the jackal was respected in Egypt because it was associated with Anubis, it may be argued, on the one hand, that this association was due to the fact that the jackal was formerly regarded as a soulanimal; on the other hand, we may with apparently equal justice argue that the jackal was frequently. seen about the tombs, and that this led to its being associated with the god of tombs. The question seems to be in most cases insoluble.

(10) It can hardly be said that there is any cult proper of animals used in magic. Among the southern Bantus, however, the crocodile (see below) is sacrosanct. The explanation of this is not far to seek: the crocodile is used for evil by magicians; to kill a crocodile, therefore, would be to incur the suspicion of being a magician and possibly the penalty of death. It is therefore easy to see how the association of an animal with evil magic can lead to its being respected (for the view that magical animals become gods, see Preuss's articles

in Globus, vol. lxxxvii. passim).

(11) In a comparatively large number of cases we are unable to trace the origin of a cult of

ANIMALS

First and foremost the facts of serpentanimals. worship—the most widely spread of animal cultsare far from having been explained. The serpent is, in many cases, associated with a cult of ancestors; is, in many cases, associated with a cult of ancestors; this is readily comprehensible where the species is a harmless one; the very fact of its harmlessness would mark it out as different from its fellows; so, too, where the snake inhabits the house or its immediate neighbourhood, we have an adequate cause for its association with the worship of the dead; among the Zulus, for example, not every snake is an *idhlozi*, but only those which are found in the neighbourhood of the kraal. Some part of serpent-worship may be put down to their association with water; one of the commonest forms of water-monster is the serpent. The water-snake is specially honoured among the Xosa-Kafirs, in order that cases of drowning may not be frequent (Merensky, Erinnerungen, p. 38). But these facts are far from sufficient to explain the wide distribution of serpent-worship. On the other hand, its cult is much more than the cult of a dangerous animal, as is readily seen by comparing serpentworship with the cult of the wolf or the crocodile, and it seems doubtful if the mysterious nature of and it seems doubted in the surjective surjective the serpent, which is sometimes invoked as an explanation, is sufficiently important to account for the preference given to the reptile. Probably a multiple origin may be assigned to it.

The relations of animals and gods in Australian religion are by no means clear. Baiame seems in some eastern tribes to occupy the same position which the bell-bird holds in the mythology of the central tribes; his opponent, Mudgegong, is conceived under the form of an eagle-hawk, thus reproducing the familiar mythical conflict which in other parts of Australia is narrated of the eagle-hawk, thus hawk and the crow. Farther south the eagle-hawk, under the name of Mullion, again figures as an evil spirit. The name of the god of some Victorian tribes is Pundjel, and the same name is applied to the eagle-hawk; possibly, however, both receive it simply as a title of respect. However that may be, it seems clear that a certain amount of anthropomorphization has gone on in Australia. What is not clear is the position of the animals from which the anthropomorphic gods or evil spirits seem to have been evolved. Both eagle-hawk and crow are phratry names; but, while the crow (see below) is respected, possibly as a soul-animal, there are few traces of a similar respect for the eagle-hawk. Yet we cannot find that the crow has been anthropomorphized into a deity, and the deities and demons are connected with animals in areas where the phratry names, at least at the present day, have nothing to do with these animals. On the other hand, the eagle-hawk is a common form of the wizard (Spencer and Gillen, Native Tribes of Central Australia, p. 533).

Howitt has maintained that Koin and other spirits which the Howith has maintained that Koin and other spirits which the European observers have regarded as demons are really gods. If this be so, if the god of the Australian is no more than a magnified medicine-man, we have a sufficient explanation of the position of the segle-hawk. Even it Howith's theory is not generally applicable, the fact that the medicine-man of one tribe may be erected into a god by them, and into a demon by their neighbours who suffer from his machinations, gives a not improbable explanation of the facts. It does not, of course, follow that any one medicine-man has been deified; just as the Ibans have deified a generalized hawk (see below), the Australians may have apotheosized a generalized eagle-hawk-medicine-man.

medicine-man.

In view of the position of the eagle-hawk as head of one of the phratries, it is of some importance that on the north-west coast of America we find among the Thlinkets two deities, Yehl and Khanukh, whose names mean 'raven' and 'wolf'; at the same time they are divided into two phratries, which are also named after the raven and the wolf. It is true that Tylor has denied (JAI) exviii. 149 that Khanukh ever appears in wolf form; Yehl, on the ether hand, assumes the bird form in many of his adventures. This does not, however, seem tatal to the view that the presiding animals of the phratries have somehow been developed into deities or demi-gods, for Yehl is little more than a culture hero;

at the same time this theory leaves unexplained the spread of the two cults into the opposite phratry. For neither in America nor in Australia is there any trace of uni-phratriac deities, as there should be on the supposition that the presiding animal has become a god. It should not be forgotten that in some of the central tribes of Australia there are traces of species deities (R.G.S.Aust., S. Aust. Br. ii. 30). It is true that animal form is not expressly attributed to them; on the other hand, emu feet are attributed to the chief god of the southern Aruntas (MS note). It may therefore be that the defication of the eagle-hawk is due neither to its importance in magic nor to its position as a phratry animal, though these facts may have had influence in bringing about its preferred position.

Even were it established that phratry animals have been promoted to godship, it by no means

have been promoted to godship, it by no means follows that this is equivalent to the erection of a totem into a god. That phratry animals have ever been totems is a pure hypothesis, and no consistent account has yet been given of the process by which

Another animal god of unexplained origin, whose importance marks him out for notice, is the Great Hare of the Algonquins (Strachey, Historie of Travaile, p. 98; Lang, Myth<sup>3</sup>, ii. 79; Brinton, Myth<sup>3</sup>, p. 193), who, in his human form of Michabou or Manibosho, was the culture-hero of this important family of Amerinds. Brinton, emphasizing the connexion of the Great Hare with the East, has, on etymological grounds, explained it as the dawn. Meteorological explanations have ceased to be convincing; moreover, according to one form of the myth, the rabbit (which is Brinton's translation of the latter half of Michabou = Manibosho) was not in the east but in the north (Brinton, p. 196). To speak of the cult of the Great Hare as animal-worship is, according to Brinton, to make it senseworship is, according to Brinton, to make it sense-less, meaningless brute-worship; but this is to view it from the point of view of Europe in A.D. 1900 rather than in the light of other primitive cults. It may safely be said that no attempt to explain away animal-cults on these lines can be successful in more than very small measure. Brinton's prein more than very small measure. Brinton's pre-ference for a dawn myth cannot therefore carry the day against the natural meaning of the Algonquin legends. Moreover, no adequate account has ever been given of the process by which men came, on the score of a simple etymological misunderstanding, to turn a god in human shape into an animal.

Less important is the Bushman god Ikaggen or Cagn (see 'Mantis' below), who, according to the latest account, was believed to manifest himself in the form of the mantis (ikaggen), or the caterpillar (ngo). From this duplex form we may perhaps direction of anthropomorphization. The problem of how one god comes to manifest himself in several animals is a complicated one, when it is a phenomenon of the religion of savage or barbarous peoples, among whom the syncretic processes, the working of which in Greece or Egypt is fairly obvious, cannot be assumed to have played a large part, if indeed they played any at all. We see the same phenomenon in Samoa, where one village-god was believed to be incarnate in two or three kinds of animals. In the latter case it is perhaps to local causes, such as the aggregation of villages under one chief, or the coming together of more than one clan in a single village, that we must look for the explanation. But such an explanation can hardly be applied to the god of the Bushmen, who are on the very lowest nomadic plane of culture. The question is complicated by problems of Bushmen. question is complicated by problems of Bushman origin and history; for if they were once a more settled folk, who suffered dispersal and disorganization when the Bantu stream overflowed South Africa, it may well be due to their disintegration that the hypothesis of syncretism, as an explanation of the sult of Company in a particular. tion of the cult of Cagn, seems inappropriate. Perhaps material for the solution of the problem may be found in the still unpublished mass of

material relating to the Bushmen collected by Dr. Bleek and Miss Lloyd.

Prominent among animal gods is the Hindu monkey-deity, Hanuman, who figures largely in the Rāmāyana. It has been argued that his cult is not primitive, but has been borrowed from some wild tribe; and this conclusion is based on the fact wild tribe; and this conclusion is based on the fact that there are no traces of worship of the monkey in the Veda, save so far as Vrishākapi (Rigveda, x. 86) may be regarded as the object of such (cf. the conflicting views of Bergaigne, Religion védique, ii. 270-272; Oldenberg, Religion des Veda, 172-174; Geldner, Vedische Studien, ii. 22-42; and Hillebrandt, Vedische Mythologie, iii. 278). But this line of proof overlooks the fact that the Veda is concerned with official religion, and that Hanuman may have been worshipped unofficially without any record of the fact being available. At the same time it is by no means improbable that the cult is to some extent based on an aboriginal predecessor, for we can hardly suppose that the Aryan-speaking invaders brought it with them from regions where the monkey is less prominent, if not non-existent. Hanuman is distinctly a species god; but we cannot discover the origin of the cult. The resemblance of the monkey to man, which has been suggested as the origin, has not produced the same effect elsewhere, and seems inadequate to account for a cult, however satisfactory it may be as an explanation of a rich monkey mythology.

6. DELUGE, EARTH-FINDING.—In legends of a deluge, animals figure in two capacities. In the first place, they are simple messengers, like the raven in the Book of Genesis; the crow, hare, dog, pigeon, and other animals go out to see if the waters are abated or how large the new earth is, sometimes causing it to increase magically in size by making the circuit of it. In other cases the waters show no signs of abating, and the water birds or animals are made to dive, and bring up mud, sand, or earth; from this the new earth is formed and laid on the waters; it grows to the size of the present world. This form of the terre pêchée is especially common in America, where it also occurs as a cosmogonic myth. Among the Mordvins and in the Altai the incident figures in a Creation myth. Among the Yorubas a hen plays a somewhat similar part in producing the earth from beneath the waters. See Deluge.

earth from beneath the waters. See DELUGE.
7. DIVINATION.—For the purpose of divination, the entrails, the liver, and frequently the shoulder-blade of dead animals are used. Animals also serve to give indications which are more properly classifiable under 'divination' than under 'omens.' Ashes were strewn on the floor in Peru, and from the character of the tracks founder. the character of the tracks found on them was inferred the kind of animal into which the soul of a dead person had passed. In Mexico snuff was spilt on the altar, and inferences were drawn from the footprints of eagles, etc. (Tschudi, Reisen, p. 337; Bancroft, iii. 438). In Australia the ground near a corpse is carefully smoothed; if a track is found on it, they infer from it the totem of the person who caused the death of the man. In other cases a watch is kept, and the movements of an insect or its flight decide the direction in which the malevolent magician resides. Another method of using animals in divination is to make dice or

other instruments of their bones; knuckle bones are especially used for this purpose.

8. DOMESTICATION.—The problem of the history of the domestication of animals has seldom been attacked, and up to the present no satisfactory solution has been propounded; we are in complete under the earth, sometimes in the sea (Natur, 1878, solution has been propounded; we are in complete their under the earth, sometimes in the sea (Natur, 1878, 551; Brauns, Jap. m. 120). In Sumatra the crab is instance came to tame animals, bring them up in captivity, and induce them to perpetuate their whose horns are perhaps due to Muslim influence

species. In the Pacific the frigate bird is often tamed. The Indians of South America frequently keep tame animals in their huts. But in neither of these cases can we properly speak of domestication. In the New World the domestic animals known before the advent of Europeans were few; the dog is, of course, nearly universal, but with this exception domestic animals many found and in the second course. tion domestic animals were found only in Mexico and Peru, and then only the turkey, llama, alpaca, and perhaps one or two more, of which the llama and alpaca alone were economically important. In the Old World the main centre of domestication seems to have been Asiatic; but little, however, is known as to the localities in which the domesticated species first came under the dominion of man.

Probably the dog (see below) attached itself to man, but in other cases a process of domestication seems to be a necessary assumption. Totemism by itself seems inadequate, even when we make allowance for the additional leverage of the segrega-tion of totem kins. Probably some form of cult (see 'Cattle' below) was in many cases the deter-

mining factor.

9. EARTH-CARRIER.—The problem of the stability of the earth has been solved, more especially by the people of Southern Asia and the Asiatic Islands, thanks in some degree to Hindu and Muhammadan influence, by the hypothesis that some great animal supports the world; the myth is also found in other areas, but only sporadically.

some great animal supports the world; the myth is also found in other areas, but only sporadically. Among the Iroquois the world-turtle who received Aataentsic on his back, before the world was brought into existence, is clearly a mythical animal of this description; the Winnebagoes too, according to Knortz, made the earth rest on four animals and four snakes, which were in the end unequal to their task; but since a bison has joined his forces with theirs, the safety of the earth is assured. In India we find various myths; one account gives the snake, another the elephant, as the world-bearing beast (Ward, View, i. 3; Pinkerton, vii. 369); another view is that eight elephants bear the world on their backs (Monier-Williams, Indiam Wisdom<sup>3</sup>, p. 480), and the Lushai (Soppitt, Short Account, p. 28) and Daphtas (Bastian, Völker am Brahma, p. 16) make the world rest on the same animal. Another Hindu myth makes both turtle and serpent (dragon) rest upon an elephant (Calc. Rev. xi. 407), while a later myth gives the boar as the supporter. In Ceylon the world-carrying giant rests on a serpent, which rests on a turtle; the turtle rests on a frog, and beneath the frog is air (Miss. Herald, xviii) 365). The Indian boar recurs in Celebes (Journ. Ind. Arch. ii. 837; Med. Ned. Zend. vii. 114). Another account gives the buffalo (ib. x. 285), which recurs in the Moluccas (De Clercq, in Bijdr. 1890, p. 182). In Arabia and Egypt are ifound the cow and bull (Andree, Ethnog. Par., 102; Lane, 1001 Nights, i. 21), which are also said to rest on a rock, and that on a fish. Probably as a result of Muhammadan influence, the bull or ox is found in Bulgaria (Strausz, Bulg. p. 30); Sumstra (Hasselt, Yolkebes. p. 71), where it rests on an egg, this on a fish, which is in the sea; and in Java (Coolsma, Yorlez, p. 78). The turtle in a Kalmuk myth seems to play the part of the world-carrier (Bastian, Geog. Bilder, p. 357); the snake in Nias (Tijdschr. T. L. V. xxvi. 113), Sumatra (Allg. Misszts. xii. 404, etc.), and Java (Tijdschr. Ned. Ind.

10. EARTHQUAKES .- Most of the peoples ro. EARTHQUAKES.—Most of the peoples enumerated in the preceding section account for earthquakes by the movements of the animal supporting the earth. In addition we find the snake in the Moluceas (Bastian, Indonesien, i. 81), interchangeably with the ox, in Bali (Globus, lxv. 98), Roti (Müller, Reisen, ii. 345), Flores (Jacobsen, Reise, p. 51), Mindanao (ZE xvii. 47), and among the Dayaks of Borneo (Perelaer, Ethn. Bes. p. 8). In Flores a dragon myth is also found (loc. cit.), The earthquake fish of Japan is placed sometimes

(v. Brenner, Besuch, p. 524). In Flores (Jacobsen, doc. cit.), and Persia (Ritter, Asien, vi. 563), the dragon is the cause. In Kamtchatka the earthquake is said to be due to the dog of Touila, whose name is Kozei; the snow collects on his coat and he shall a binary to the dog of the coat and he shakes himself to get it off (Krachenninikow, Descr. i. 94). The movements of the other animals are put down to a bee or mosquito stinging them.

II. ECLIPSES.—Animals figure in some of the ri. ECLIPSES.—Animals figure in some of the primitive explanations of eclipses. Among the Potawattomies they are caused by the combat of the dog with the old woman who makes the basket (Ann. Prop. Foi, xii. 490). The dog plays the part of a protector, as does probably the bird in a Mongol myth (Ausland, 1873, 534), and possibly in the Lules myth (Lozano, Desc. Corog. p. 91). More commonly it is said that the moon is swallowed or attacked by an animal. In Burma the lowed or attacked by an animal. In Burma the Karens say that wild goats are devouring the moon, and they make a noise to drive them away, or that frogs are eating it (Miss. Cath. 1877, 455). In Eastern Asia the dragon myth is common; it is found in China (Grimm, Deut. Myth. ii. 589), Siam (Bastian, Reise, p. 243), Sumatra (Marsden, Hist. p. 194), and Tidore (De Clercq, op. cit. p. 73). This form of the myth is not far removed from that which makes a giant or undescribed monster attack the moon or sun.

attack the moon or sun.

The dragon myth is found sporadically in Asia Minor (Naumann, Yom Goldenen Horn, p. 75), in Carinthia (2ts. d. Myth, iv. 411), and among the southern Slavs (v. Wiislocki, Yolkey), p. 54); among the latter a bird myth is also found (ib.). In Sumatra (Globus, Ixv. 96), and Celebes (Med. Ned. Zend. xi. 243; Zts. Ges. Erdk. Berlin, xxxi. 370), it is the snake that produces an eclipse, among the Nagas the tiger (Bastian, Yölker am Brahm. p. 30), among the Chiquitos the dog (Tylor, Prim. Cult. i. 328), who tears the flesh of the moon and reddens her light with the blood which flows. Among the Tupis the jaguar was the animal which was believed to attack the sun (ib. p. 329), and the Peruvians held it to be some monstrous beast (ib.). The Jaguar recurs among the Manaos (Martius, Beitr. i. 585), and the Guaranis (Ruiz de Montoya, Conquista, p. 12 ft.). The Tagbanuas tell a myth of a huge crab (Worcester, Philippine 1st. p., 1477. The old Norse (Grimm, i. 202; ii. 588, iii. 207) held that a wolf attacked the sun or moon; and the same idea is found in France (ib. ii. 449). In rany cases the dogs are beaten or inclical to attack the monser which is assailing the heavenly body.

12. FABLES.—Animals figure largely in the folktales, no less than in the myths or sagas of primitive peoples (see Bleek, Reynard the Fox; Dennett,

tive peoples (see Bleek, Reynard the Fox; Dennett, Folklore of the Fjort; MacCulloch, op. cit. etc.). In these they think and act and move like human beings, so much so that a lawsuit on the Congo turns on such questions as what the hare said to the elephant, instead of on legal procedure. At a later stage the beast story is complicated with a moral (Asop's Fables). Beast stories are found in most collections of Märchen; for India, see

especially the Panchatantra.

13. FAMILIAR.—All the world over the witch or wizard is associated with an animal, termed 'the familiar,' which is sometimes conceived as real, sometimes as a spirit which stands at the beek and call of the human being. Just as the injury to the nagual, or bush-soul, has fatal results for its possessor, so the familiar's life is bound up with that of the witch; if a witch-animal is wounded, the owner will be found to have suffered an injury at the corresponding part of the body. Sometimes magical powers are attributed to whole classes, such as the Boudas, i.e. blacksmiths and workers in clay of Abyssinia, who are believed to have the power of turning into leopards or hyænas, instead of simply having the animals or their spirits at their command.

their command.

In the Malay Peninsula the alliance between the pawang (priest) and the tiger is said to be the result of a compact entered into long ago between the species and mankind; the office is hereditary, and the son must perform certain ceremonies to prevent the familiar from being for ever lost to the tribe. In Siberia the ye-keela (witch-anima) is said to be sent out by a shaman to do battle with the ye-keela of a hostile shaman, and the fate of the man depends on the fate of his

ye-keela, which refuses the fight if it thinks it cannot beat its adversary.

In curative magic the wizard carries figures of his familiar and imitates them; sometimes his familiar is said to appear before he meets with

success.

14. FASCINATION.—The power of fascination actually possessed by the serpent has been attributed to many other animals, among them the lion (Aelian, de Nat. An. XII. vii.; cf. Maspero, Études, ii. 415), párris (Schol. ad Theoc. X. xviii.), basilisk (see below), toucan (Smith, Brazil, p. 559), basilisk (see below), toucan (Smith, Brazil, p. 559), and, naturally, above all the serpent (Mélusine, iv. 570, v. 18, 41). The power of fascination is attributed to the wer-wolf in the East Indies (Tijdschr. xli. 548 f.). Something similar is believed of the ordinary wolf in Norway (Liebrecht, Zur Volkskunde, p. 335). See EVIL EYE.

15. FOOD TABUS.—The use of animals as food is prohibited for many different reasons. The totem the usually abstains from eating the totem the

kin usually abstains from eating the totem, the nagual is sacrosanct to the man with whom it is associated, and certain animals, like the cow in India, or in fact cattle generally among pastoral tribes, are never or only very seldom eaten. But whereas the totem is absolutely tabu, cattle, on the other hand, supply the pastoral peoples with a large part of their subsistence. Another class of animals which is commonly tabu, at any rate for those who claim kinship with them, are soul-

animals (see below).

Sometimes special persons, by virtue of their position or occupation, are forbidden the use of certain meats. In Fernando Po the king may not eat deer and porcupine, which are the ordinary food of the people. Egyptian kings were restricted to a diet of veal and goose. Certain tabus are also imposed on mourners; in Patagonia the widow may not eat horse flesh, guanaco, or cassowary. Certain foods are tabu to men but not to women; among the South African Bantus men may not eat fish, fowl, or pig. Other foods are forbidden to women but not to men; on the island of Nias, in the Dutch East Indies, the former may not eat monkey flesh. Especially in Australia there is an extensive system of food tabus in connexion with initiation; as one gets older, these are abrocertain meats. In Fernando Po the king may not with initiation; as one gets older, these are abrowith initiation; as one gets older, these are aprogated one by one; emu flesh is usually reserved for old men. Similarly girls may not eat various meats at puberty; among the Dénés their sole non-vegetable diet is dogfish. Sometimes marriage removes some of the tabus. On the Murrumbidgee, ducks are the food of married people only.

In many cases only certain parts of an animal are tabu to certain persons: a Dene girl may not eat moose nose or reindeer head; among the Ottawas blood is tabu to the unmarried; the heart, liver, blood is table to the unmarried; the heart, hver, etc., are table to a Dakota after initiation till he has killed an enemy. The female animal is frequently table; in sickness the female animal only might be eaten by some of the New England

peoples.

During pregnancy and after the birth of a child many kinds of food are prohibited to one or both parents; in New South Wales the woman does not eat eel or kangaroo; in Martinique both parents abstain from turtle and manatee. The reason abstain from turtie and manatee. The reason generally given is that the nature of the food influences the offspring. Thus a turtle is deaf, and eating a turtle would make the child deaf too; a manatee has small eyes, and the child would have small eyes too if the parents did not abstain from it. Just as animals are eaten to gain their quali-ties, so their use as food is prohibited in order to avoid incurring them; this is the explanation often given for abstinence from the flesh of deer, the hare, and other timid animals.

Especially in West Africa food tabus are im-

ANIMALS

posed upon members of a certain family by a priest, and the tabu is sometimes thenceforth hepriest, and the tabut is sometimes themselver in reditary. Among the Andamanese some food is prohibited to every individual, generally some kind which, in the opinion of the mother, disagrees with the child; but if it is not selected in this way, each person is free to determine what food is to be tabu for himself.

Other food tabus are connected rather with seasons than with anything else. It is not uncommon in south-east Europe to find a prejudice against eating lamb before a certain day.

In connexion with food tabus may be mentioned the prohibition against cooking certain kinds of animals together. In Kamtchatka different kinds of meat may not be stewed in the same pot; the Saponas of the Eastern States of America would not cook venison and turkey together, on the ground that they would have ill success in hunting if they

did. See TABU.

16. FUTURE LIFE: (1) CERBERUS.—It is a common belief that the soul has to traverse a river on its journey into the other world. Sometimes the bridge over which it passes is said to be an animal; the Ojibwas said that a great serpent served as a bridge, and that he threatened to devour those who were in a trance (Keating, Expedition, ii. 154). In New Caledonia a serpent serves as a bridge from Morou to Tum, and allows to pass only such as find grace in his eyes, in other words, those who are tatued in due form (Ann. Prop. Foi, xxiii. 369). In other cases an animal guards the passage; in North Borneo the belief is that a fiery dog watches at the gate of Paradise and takes possession of all virgins (Forster and Sprengel, *Beiträge*, ii. 239). The idea of a dog at the end of the soulbridge is also found among the Iroquois (Le Beau, Aventures, i. 359). Sometimes the river contains fish which devour the souls which fall in (Globus, xlvii. 108, among the Dayaks). In other cases the function of the animal is to turn back the souls of those who are to live; the Assiniboines held that a person in a trance went as far as the river, but was driven back by a red bull (Coues, Henry and Thompson, MS. Journ. ii. 521). The Senels of California also made a bull obstruct the path of the soul; but it was the bad who fell victims to him (Cont. Am. Ethn. iii. 169). In the Dayak mythology figures a bird, who lives aside from the direct road of the soul; if the soul turns aside, however, the bird sends it back (Ling Roth, Natives of Sarawak, i. 210). In the Solomon Islands the function of the bird is quite different; the natives of San Cristoval say that the soul becomes a ghost ('ataro) when it leaves the body, but that it fails to recognize that it is dead; a kingfisher strikes it on the head after two or three days, whereupon it becomes a real spirit (Codrington, Melanesians, p. 257).

The soul pursues in the other world the same occupations as it followed in this life. Conse-

quently it is commonly represented as chasing the animals on which the living man depended for his sustenance on earth. The belief is especially

nis sustenance on earth. The belief is especially common among the American Indians, whose 'happy hunting grounds' are proverbial (Matthews, Hidatsa, p. 49; Rev. Hist. Rel. xxx., xlii. 9 f.).

Sagard, one of the early Jesuit missionaries in Canada, tells us: 'The Indians say that the souls of dogs and other animals follow the road of souls; . . . the souls of the dogs serve the souls of their masters in the other life; the souls of men go hunting with the souls of their tools and arms' (Histoire du Canada, pp. 497, 498).

To this idea of the functions of crimels and the

To this idea of the functions of animals and the lot of the soul in the other world is due in great part the custom of burial sacrifice (for the horse see Teutonia, ii. 148-162). Sometimes the object of the sacrifice is only to bear witness to the importance of the deceased in this life and thus in-

fluence his future lot (Abinal and Vaissière, Vingt

fluence his future lot (Abinal and Vaissière, Vingt ans à Madagascar, p. 221).

17. FUTURE LIFE: (2) SOUL-ANIMALS.—Few beliefs are more common than that the souls of the dead pass into animals. In South Africa it is the prevailing belief, but it is found in Europe (Folklore, xi. 234), America (Tylor, ii. 6-8), and Asia (ib. p. 9f.; Mission Life, N.S. i. 459; TOung Pao, ii. 11, etc.). Especially in the form of the doctrine of transmigration, as a punishment for evil done of transmigration, as a punishment for evil done of transmigration, as a punishment for evil done in this life, the belief prevails not only in India (see, e.g., Manu, ii. 201, xii. 55-69), but also in Oceania and New Guinea (Golden Bough<sup>2</sup>, iii. 432-4) and Australia (Man, 1905, No. 28; for a collection of references, see Rev. Hist. Rel. xxxvii. 385; see also below, 'Bat,' 'Crocodile,' 'Lion,' 'Lizard,' 'Tiger,' etc.).

The causes which are supposed to lead to this re-incarnation are various. Among the Mokis it.

re-incarnation are various. Among the Mokis it is the form of the totem animal that a man assumes at death (Frazer, *Tot.* p. 36). In South Africa the different clans believe that their members pass into the animals which they venerate (Man, 1901, No. 111). The Zulus believe that their dead pass into snakes, called amadhlozi (Golden Bough?, iii. 411); according to another account, the chiefs inhabit one kind of snake, the common people inhabit one kind of snake, the common people another, while the old women are re-incarnated in lizards (Callaway, *Religious System*, p. 200). According to the Masai, the souls pass into different kinds of snakes, one of which receives the souls of each clan or family (Hollis, *Masai*, p. 307). In Madagascar the body is thrown into a sacred lake, and the cell that the first hite at the lake, and the eel that gets the first bite at the body is the abode of the soul (v. Gennep, Tabou, p. 291). In China the soul of the drowned man is held to make a rush for the nearest living being; consequently they take the first crab seen in the mud to be the receptacle of the soul (Mission Life, loc. cit.). The Barotse hold that they can choose into which animal they shall pass (Bertrand, Au Pays, p. 300). In the Solomon Islands a man tells his family which animal will be his re-incarnation (Golden Bough<sup>2</sup>, ii. 433). In the Argentine Republic it is the animals which are seen about the grave that come in for respect as soul-animals (Bol. Inst. Geog. Arg. xv. 740). In Brazil a kind of hawk is believed to inoculate with the souls of the dead the animals on which it perches to extract maggots from their flesh (Spix and Martius, p. 1084). It is a common belief in Europe, that if a cat jumps over a corpse, it becomes a vampire; in other words, the soul of the deceased passes into the cat. The Macusis believe that souls which are unable to rest come back to earth and pass into the bodies of animals (Waterton, Wanderings, p. 177). In Paumotu it was also believed that the wicked found refuge in the bodies of birds, which the priests accounted holy (Arbousset, *Tahiti*, p.

In many cases the lodgment of the soul in an animal is held to end the matter. If the animal is killed, the soul passes into another beast of the same species (Man, 1904, No. 118). In Madagascar, however, the death of the animal is held to set free the soul lodged in it (Miss. Cath. 1880, p. 551). The Chiriguanos, on the other hand, hold that the soul enjoys a few years of liberty and then passes into the body of a fox or a jaguar (Globus, xlviii.

37). Some tribes can describe in more or less detail the process of transmigration. The Amandabele of South Africa believe that the souls of chiefs pass into lions, but that the process takes place underground; for which reason the corpse does not remain long unburied. The body is put into a large wooden trough and hidden away in a cavern; some time afterwards it is found to have become a

lion's whelp, which grows rapidly (Thomas, Eleven Years, p. 279). The Betsileos are more explicit. The fanany (soul animal) is in the form of a lizard, The fanany (soul-animal) is in the form of a lizard, which comes to the surface after burial; the family approach it and ask if it is really the relative they have lost; if it moves its head they make offerings to it. It then returns to the tomb and grows to a large size; it is the tutelary spirit of the family (v. Gennep, Tabou, p. 272). According to another account, the corpse is attached to the central pillar of the hut until decomposition sets in; whereupon a large worm develops, which becomes a boa at the end of several months (ib. p. 278). In several of these accounts the soul seems to

In several of these accounts the soul seems to become an animal rather than to enter into an animal; this is notably the case with the Amanda-bele belief; the Betsileos seem to waver between two opinions, if we take account of all the data. In other cases the belief is more explicit. In the Solomon Islands the common people turn into white ants in Marapa, the island of the dead, and in this form serve as food for the spirits of the chiefs, the warriors, and the successful men, who, however, in the long run suffer the same fate as the common people (Codrington, Melanesians, p. 260). Sometimes the change is regarded as the result of evildoing; the Chins believe that the bad go to dark caverns, in which are the entrails of all sorts of animals; they are hungry, and stretch out their hands to find food; but as soon as they touch the entrails they themselves are transformed into the shape of the animal whose entrails they have grasped (Miss. Cath. 1884, p. 468). On the other hand, among the Montagnais, of whom P. le Jeune writes, the transformation of the soul is the result writes, the transformation of the soul is the result of simple misfortune or carelessness; the souls go to the extremity of the earth, which is flat with a great precipice beyond, at the foot of which is water; they dance at the edge of the abyss and some fall over; these are forthwith turned into fish (Rel. des Jés. 1637, p. 53).

The soul-animal is usually respected, for which two reasons are assigned. The injuring of the animal is the injuring of a relative or of a friend, for it is believed that the animals into which the souls pass do not injure those with whom they

for it is believed that the animals into which the souls pass do not injure those with whom they were allied on earth as men. By eating the animal, men may even eat the soul of a relative, and perhaps inflict unmerited hardship on it in its non-human existence. On the other hand, the eating of the animal may be an insult rather than an injury; but it may provoke the wrath of the dead man or of his fellows, and thus recoil upon the living. As a rule, however the objection to dead man or of his fellows, and thus recoil upon the living. As a rule, however, the objection to injuring a relative is the prevailing feeling; for we find that, though a man will not injure his own family animal, he will not hesitate to kill the family animal of another man (Golden Bough<sup>2</sup>, ii. 433). In the same way a man does not injure his own totem, but will kill that of another.

18. FUTURE LIFE: (3) PSYCHOPOMP.—The duty of convoying souls to the other world is sometimes assigned to animals. The Araucanians believe that Tempulcague an old woman appears in the form

Tempulcague, an old woman, appears in the form of a whale and carries off the soul of the dead man of a whale and carries off the soul of the dead man (Molina, Historia, p. 70). On the Orinoco huge snakes are said to carry off the souls in their belly to a land where they entertain themselves by dancing and other delights (Ruiz Blanco, Convercion del Piritu, p. 63). In Brazil the duty was assigned to the humming-bird (Alencar, O Grurrany, ii. 321). Among the Saponas, the soul, after an old hag had condemned it, was delivered over to a huge turkey buzzard, which flew away with it to a dark and barren country where it was always winter (Byrd, History of the Dividing Line, p. 96 f.). Sometimes the animal is not a mythical one. The object of some burial sacrifices is to provide

the dead man with a conductor. In Mexico the dog (see below), according to one account, fulfilled this office. Among the Yorubas of West Africa the young men who attend a funeral kill a fowl and throw its feathers in the air as they walk, and throw his feathers in the air as they wark, subsequently cooking and eating the flesh. This fowl they call Adie-Irana, 'the fowl which purchases the road'; its function is to precede the dead man on his road (Miss. Cath. 1884, p. 342).

19. IDOLS .- It is not difficult to trace the main lines of the development of idols, so far as animals are concerned. It is a common custom, when the sacred animal is sacrificed annually, to keep its skin for the ensuing twelve months, just as the various figures made of the new corn are suspended in the house till the next harvest. From the custom of keeping the skin there arises, by a natural transition, the practice of stuffing it in order to give it a more lifelike appearance. Then order to give it a more lifelike appearance. Then it is found more convenient to have a wooden or stone image, and the skin is drawn over it, as was the ram's skin over the image of Ammon; and the idol is a fait accompli. There is, however, a tendency to anthropomorphize animal gods. We find, therefore, that in Egypt, India, and even Siberia, idols compounded of man and animal appear; sometimes the head only is human, as in the case of the Sphinx: sometimes it is the head the case of the Sphinx; sometimes it is the head which is animal, as in the case of the crocodile-god Sebek. Sometimes the head and body are human, but some minor portion is animal; the Fauns had goats' feet, and Dagon a fish's tail. With the appearance of the mixed form the course of evolution is a completed as feet as the course of evolution is a completed. appearance of the mixed form the course of evolution is completed, so far as the animal is concerned. It ceases to be an idol, and henceforth becomes an attribute of the god; he carries it on his shoulders, leads it, or stands in relation with it in some other way. Finally, if it is sacrificed to him, it ends by being regarded as his enemy.

20. INSPIRATION.—One of the methods by which inspiration may be produced is by drinking the blood of the sacrificial victim; possibly the result is in part due to physiological causes. Near

is in part due to physiological causes. Near Bombay, in the ceremonies of the Komatis, an old man, nearly naked, carried a kid round a car used for hook-swinging, and tore open its throat with his teeth; when he had sucked the blood of the kid, he was regarded by the populace as a god (Miss. Reg. 1818, p. 157). In this case no mention is made of any signs of inspiration; but in some parts of Southern India, when a devil dancer drinks the blood of a servificial goat, he shows arident signs. the blood of a sacrificial goat, he shows evident signs of being possessed. As if he had acquired new life, he begins to brandish his staff of bells and to dance with a quick but unsteady step. Suddenly the afflatus descends. His eyes glare, and he leaps in the air and gyrates. Having by these means produced an auto-hypnotic condition, he is in a position to give oracles; he retains the power of utterance and motion, but his ordinary consciousness is in abeyance (Golden Bough<sup>2</sup>, i. 134). The Sabæans explained the inspiration thus produced as due to the obsession of the blood-drinker by demons, whose food they held blood to be. They expected to gain the gift of prophecy by entering into communion with the demons (ib. p. 135).

(Golden Bough<sup>2</sup>, iii. 412). In the latter case the story usually takes the form that the soul of the person with whose life that of the animal is bound up has been deposited for safety in the animal. A few instances have been recorded in Australia in which the life of one of a totem kin is believed to be bound up with the life of the totem animal

(Frazer, Tot. p. 7).

22. MAGIC.—The term 'magic' is vaguely used to denominate a great number of different conceptions, but these need not be distinguished in a tions, but these need not be distinguished in a brief survey of the part played by animals in magic. (1) Many forms of sacrifice (see below) are magical. (2) As the nagual (see below) or familiar, the animal gives man greater force than he would otherwise possess. (3) Just as in dying the dead animal sets free the magical power within it, so in life it may repel evil influences or attract them to itself and neutralize them. (4) By eating animals men acquire their qualities; lion's flesh gives courage, hare's meat makes a man a coward. By partaking of long-lived animals a man may overpass the ordinary span of life; by consuming wise animals he will acquire the gift of prophecy. (5) The external qualities of animals are susceptible of transference in like manner; by rubbing bear's grease on the head a plentiful growth of the hair is assured, for the bear is a hairy animal. This is called the doctrine of signatures. (6) Just as the familiar represents the witch and any injury done to the animal reappears in the witch, so any animal to the animal reappears in the witch, so any animal to the animal reappears in the witch, so any animal may be selected to represent a given person; a girl who wishes to compel the presence of an absent lover may, in Wales, take a frog's heart and stick it full of pins. (7) Diseases in the human being may be got rid of by transferring them to an animal. (8) Certain animals, like the frog (see animal. (8) Certain animals, like the frog (see below), are connected with certain departments of nature; by injuring or otherwise constraining them, these animals can be forced to produce the natural phenomena desired by the magician; thus frogs are whipped to produce rain. (9) Magical, too, from some points of view is the torture applied to the favourite animal of a god (Golden Bough<sup>2</sup>, i. 108), to compel the deity to supply man with what he demands. From being used in magic the animal may come to be sacrosanct, as the crocodile (see below) among the Bantus of South Africa. See animal may come to be sacrosanct, as the crocodile (see below) among the Bantus of South Africa. See also 'Nagual,' 'Familiar,' etc. Although some animals are in greater request, it is probable there are few that are not in demand for magical purposes of some sort (v. Jühling, Die Tiere in der Volksmedizin; Melusine, viii. 14, 32 f.). Especially important in European magic are the first animals seen in the spring, and the feathers, etc., of birds and animals carried in annual processions (see and animals carried in annual processions (see 'Wren' below, and art. MAGIC).

23. Marriage. — Animals figure largely in European marriage customs. The custom of the 'Hahnenschlag' (Folklore, xi. 25) is sometimes practised, but more often the cock, or other bird or animal, is eaten by the bride and bridegroom or by the guests in general. Sometimes the bird is a mere ornament to the bridal waggon; sometimes it is killed by being burned in a bonfire, or hunted, or simply thrown into the house of the newly married, or rocked in a cradle before them; in some cases it is merely a gift from the bridegroom to the bride or her parents; or a game such as 'fox and geese' is played at weddings; or the newly married hunt the living animal. Custom sometimes requires a younger sister who marries first to give a white goat to the elder. The animals which figure in wedding ceremonies are the cat, cock or hen, crane, duck, goat, goose, owl, ox, partridge, pig, pigeon, quail, sheep, swan, and wren. The object of the ceremonies seems to be in some cases simply to avert evil by the ordinary method in use at other

times of the year; sometimes the more definite times of the year; sometimes the more definite object of securing fertility seems to be held in view. The tail, which is sometimes given to the bride, may perhaps have a phallic significance. The mimetic dance at weddings (Cong. des Trad. pop. 1900, p. 100) is perhaps intended to secure fertility. Sometimes an animal mask or dress only is worn. The bride is sometimes called 'lamb,' 'partridge,' etc., but this seems to be merely allegorical

gorical. 24. 'MEDICINE,' AMULET, TALISMAN.—When the American Indian kills his medicine animal, he usually takes some portion of it, such as its pelt, claw, or wing, as a talisman and puts it in his medicine bag. It is held in some tribes that the medicine, once lost, cannot be replaced; it may, therefore, be conjectured that the medicine is regarded as the seat of the tutelary spirit whose aid is secured at puberty (cf. Golden Bough<sup>2</sup>, iii. 432). In this connexion may be quoted a remark (Wied, Reise, ii. 190) that many Indians believe they have an animal, bison, tortoise, etc., in their bodies. The central idea of African 'fetishism' is that a spirit which temporarily inhabits a stone, bone, or other object, becomes for the time being the servant of the possessor of that object. The magical apparatus is sometimes composed of a bag made of the skin of some rare animal which contains various talismans, such as dried monkeys' tails, claws, etc. The same idea may be traced in the East Indies. The same idea may be traced in the East Indies. If a Batta has a tooth as a talisman, he will, on the approach of danger, swallow it; this may perhaps be to ensure a greater measure of protection for himself; but it is more probably to ensure the safety of the talisman, which thus equals in importance the medicine of the American Indian. importance the medicine of the American Indian. The uses of animal amulets are innumerable. Just as the American Indian believes that his medicine makes him invulnerable, so in Central Africa the leopard skin girdle is held to be a complete protection. In France the milk of a black cow is thought to confer the gift of invisibility. In Scotland serpent soup will make one wise like the serpent, but the serpent can also be made to assist the possessor of its skeleton. Often the particular purpose to be served is no longer remembered, and the talisman is simply carried for luck. In the Isle of Man the feathers of the wren are distributed at each house where the bearers call (see 'Wren' below).

Wren' below).

25. MIMETIC DANCES, MASQUERADES, ETC.—
Many primitive peoples are in the habit of imitating the movements and cries of animals, and usually in so doing assume the animal mask or dress. In some cases the object seems to be simple amuse-ment, but this kind of dramatic representation is usually magical or religious in its purpose. (1) The initiation dance is frequently mimetic, and may perhaps have at its root the idea of transforming the man into a member of the kin by imparting to him a share of the nature of the animal. (2) Other dances, also performed at initiation, have for their primary object the conferring of magical power over the animal in the chase. (3) This magical power is also sought by mimetic dances performed immediately before a hunting expedition. (4) Mimetic dances before hunting may also tion. (4) Mimetic dances before hunting may also be sympathetic in their purpose; the animal in human form falls a victim to the hunter, and in the same way the real animal will fall beneath his darts. (5) Sometimes mimetic dances are performed after a hunt also; their object seems to be protective (see 'Leopard' below), like so many of the other ceremonies after killing animals. (6) It may, however, be intended sometimes as productive magic, for the purpose of increasing the numbers of the animal and perhaps bringing to life again those laid low by the hunter. (7) With the object of providing for the due increase of the species, some American Indian tribes mimic the buffalo, the men taking the part of the males, the women of the females. (8) In many of the Central Australian ceremonies the movements of the totem are imitated in the ceremonies intended to provide for its due increase. (9) Conversely, imitation of the movements of animals and birds forms a part of some European marriage ceremonies, and seems to be here, too, a rite intended to promote fertility. (10) Where animals are sacred to a god, mimicry of their movements is equivalent to prayer and adoration, just in the same way as graphic representations of them. (11) The object of these prayers is often to produce rain or wind or some other natural phenomenon associated with the animals (see 'Frog' below); possibly in its origin the mimetic dance was intended by its magical power to produce these effects without the intervention of a god. (12) The wearing of animal disguises and imitation of animal movements during the chase have probably the purely rational object of deceiving the animal.

26. MYTHS OF ANCESTORS, CHILDREN, HELP-FUL ANIMALS, SWAN-MAIDEN STORIES.—Sometimes as a totemic extiological myth (Frazer, Tot. p. 3f.), but often as a myth of tribal origin (Hearne, Northern Ocean, p. 342; D'Orbigny, Voyage, iii. 209 ff.; Liebrecht, Gerv. Tilb. p. 115, Zur Volksk. p. 17 ff., etc.), the descent from an animal ancestor is found all over the world. In the same way stories are told of animal births, which sometimes are simply extiological myths of the origin of totem kins (Frazer, p. 6), and sometimes narratives of facts believed to occur at the present day (see 'Crocodile,' and cf. Mélusine, iii. 212, etc.). In another type of myth, animals are said to bring the children (Folklore, xi. 235, see also 'Lizard' below; JRAS, S.B., 7, 146; Alencar, O Guarany, ii. 321). Corresponding to the animal form of the soul of the dead, we have the belief that the soul of the new-born child is in the form of an insect (Miss. Cath. 1994, 140) or of a bird (Skeat and Blagden, ii. 4), which the expectant mother has to eat. The helpful animal figures in many Märchen (Hartland, Legend of P., pass., see also v. Gennep, 214-292; MacCulloch, 225-253, etc.). Sometimes animals figure as guides in tribal migrations, etc. (Wackernagel, Kl. Schriften, iii. 203 ff.). Under this head we may perhaps class the animal nurse (Frazer, Paus. iii. 234, 250; Farnell, Cults, p. 443; Rep. Ind. Eth. Com. 1866-7, p. 52). Connected with the myth of the animal ancestor is the swan-maiden story (Frazer, Paus. iv. 106; Hartland, Science of Folklore, pp. 255-332, 337-352; Romania, xxi. 62; Aust. Ass. Adv. Sci. iv. 731. See also 'Seal').

27. MYTHS (ÆTIOLOGICAL).—A great part of the mythology of savages is simply their idea of the history of the Universe. They account for natural feats, beliefs evictores and vites by telling whether the product of the past beliefs evictores and vites by telling whether the surface and vites by telling whether the product of the surface and vites by telling whether the product of the surface and vites by telling

27. MYTHS (ÆTIOLOGICAL).—A great part of the mythology of savages is simply their idea of the history of the Universe. They account for natural facts, beliefs, customs, and rites by telling what some god or hero once did, by endowing all nature with sensibility and volition, by positing the same conditions in the heavens as exist on the earth, and so on. In particular, they account for the existence and peculiarities of animals by telling stories of what happened in the early days of the world. Once men went on all-fours, and pigs walked like men; but something fell on the head of a pig, and since then they have gone on all-fours and men walk upright.

The Indians of Brazil tell how the daughter of the great serpent married a young man who had three faithful slaves. At that time there was no night upon the earth; the young wife said her father had it, and the slaves were sent for it. They received it in a nut sealed with resin, which they were on no account to open. En route they heard a buzzing in the nut; it was the hum of the insects at night. Curiosity overcame them; they opened the nut, and night spread over the earth. Then everything in the forest changed into animals and birds; everything in the river into fishes. A wicker basket became a jaguar;

the fisherman in his cance turned into a duck, the oars forming the feet. When the woman saw the morning star, she said, 'I am going to separate night and day.' Then she rolled a thread of cotton, and said, 'You shall be the pheasant'; she coloured it white and red. She rolled another thread and made the partridge. These two birds call, one at dawn, the other at dusk. For their disobedience the three servants were changed into monkeys (Magalhanes, Contes indiennes, p. 5).

The relations of animals to man, and especially their sacrosanctity, are explained by ætiological myths. In Madagascar the Vazimbas account for the respect paid to the kingfisher by the following story: 'The Vazimba sent the kingfisher to visit their relatives with a message of good bye to the father and mother, and an injunction to send fowls and sheep; when it had fulfilled its errand it came back, and the Vazimba said that as a reward for its bravery and wisdom they would put a crown on its head and dress it in blue by day and by night. Moreover, young kingfishers should be cared for, and the penalty of death inflicted on any one who sought to kill them' (v. Gennep, Tabou, p. 265). More common is the explanation that the animal in some way helped an ancestor of the kin (v. Gennep, pass.; see also 'Owl' below). In N.W. America an adventure with the animal is a prominent motive in the myths. Descent from the totemanimal seems to be the prevailing form of the story in the remainder of North America (for ætiological myths in Africa see Folklore, xv. 110; Rançon, Dans la Haute Gambie, p. 445; Merensky, Beiträge, p. 133 n., etc.); see also 'Eclipse,' 'Earth-carrier,' Earthquakes,' etc., above).

it is the custom to undergo some ceremony, usually at the age of puberty, for the purpose of procuring a tutelary deity, which is commonly an animal. This is called tornaq (Eskimo), manitou (Algonquin), nagual (C. America), yunbeai (Euahlayi of E. Australia), etc. Among the Eskimos the bear (see below) seems to be the usual animal. Among the Thlinkets a young man goes out and meets a river otter; he kills it, takes out its tongue and hangs it round his neck, and thenceforth understands the language of all animals (JAI, xxi. 31; Krause, Die Tlinkit-Indianer, p. 284). Among the Eastern Dénés each hunter selects some animal, invariably a carnivorous one (Smiths. Rep. 1866, p. 307). Elsewhere the initiant has to dream of his medicine animal, and sometimes kills it in order to procure some portion of its body as a talisman (Frazer, Tot. p. 54). In Africa it is the magician who provides the tutelary beast; in one case a blood-bond is said to be performed with the animal selected. In Australia also the medicine-man sometimes provides the nagual; sometimes it is acquired by a The animal thus brought into relation with a man is usually sacrosanct for him; if he loses his talisman, he cannot get another medicine animal (parts of America); the death of the nagual entails the death of the man (Nkomis of W. Africa); in Australia the yunbeai is sacrosanet, though the totem is not

Closely connected with the nagual is the 'bush-soul' of West Africa. Possibly only our limited knowledge disguises their identity. A man will not kill his 'bush-soul animal,' for that would entail his own death; he cannot see it, but learns what it is from a magician. A 'bush-soul' is often hereditary from father to son, and from mother to daughter; sometimes all take after one or the other parent. In Calabar many are believed to have the power of changing into their ukpong. Something of the same sort is known in Europe, for in Iceland each family had attached to it an attar-fylgja; each individual too had his fylgja, which took the shape of a dog, raven, fly, etc. (Folklore, xi. 237; Meyer, German. Myth. p. 67).

The nagual seems to be closely related, on the

one hand, to the 'soul-animal' (see above); on the other, it stands very near to the 'familiar' (see above) of the witch, and the 'wer-wolf' (see below). It has been argued that kin totemism arises from the nagual, which becomes hereditary. Up to the present no trace of animistic ideas has been found in connector with totemism if we except found in connexion with totemism, if we except some doubtful cases in Australia (Man, 1902, No. 85). Nor has it been explained how the totem, the descent of which is, in Australia, predominantly in the female line, has developed from a nagual, which is seldom, if ever, possessed by women or inherited from the maternal uncle.

Closer to the nagual than the kin totem is the Closer to the naqual than the kin totem is the sacred animal of secret societies (which see), the initiation ceremonies of which, it should be noted, bear a strong resemblance to those practised by totem tribes. The naqual is the lineal ancestor of the 'genius' of the Romans, no less than of the 'guides' of modern spiritualism.

29. NAMES.—Animal names are very commonly used, and not among primitive peoples only, for three per cent of English surnames are said to be derived from animals (Jacobs. Studies in Bibl.

derived from animals (Jacobs, Studies in Bibl. Arch. p. 68; for Indo-Germanic theriophoric personal names see Fick, Griechische Personennamen, passim). (1) Tribes are named after animals; the name of the Aruntas in Central Australia is the name of the Aruntas in Central Australia is said to mean 'cockatoo'; the Wakelburas are the eel people. In America we have the Dog Rib Indians, who trace their descent from the dog. In India the Nagas are a serpent tribe. (2) Far more common is the practice of naming totem kins after animals; it is one of the tests of totemism. In Australia we have a long list of Arunta and other totems in the works of Spencer and Gillen (for other kins see Frazer, Totemism). (3) The two sections into which most Australian tribes are divided are, especially in the south, often named after animals, and in particular after the eagle, hawk, and crow. Similarly we have the raven and wolf phratry among the Thlinkets (see also Frazer, op. cit.). (4) The intermarrying classes in Australia are also known by animal names; on the Annan River they are called after the eagle, hawk, Annan River they are called after the eagle, hawk, Annan River they are called after the eagle, hawk, and bee; at Moreton Bay they are named from the kangaroo, emu, etc. (5) In America the age classes and the closely connected secret or dancing societies are named after animals; in West Africa there is the leopard society. (6) In Zululand, possibly as a relic of totemism, the regiments are named after animals; we find similar names in Welsh history. (7) Both in America and in Australia sections of tribes are named from their principal food (Globus. xxxi. 381: Ixix. 59). (8) Local cipal food (Globus, xxxi. 381; lxix. 59). (8) Local divisions of Australian tribes have animal names. These are not to be confused with local totem groups. (9) Priests and worshippers are named after animals (see art. PRIEST). (10) Totem kins in America, and rarely in Australia, name their members after some part of the totem animal. (11) In South Africa the chiefs of animal-named kins bear the name of the animal. (12) Especially in America personal names derived from animals, either for magical purposes or as indications of the characters of their bearers, are very common. In Central America a child is named after some animal, which is thenceforward his nagual (see 'Nagual' above; cf. Jahrb. Geog. Ges. Bern, xiii. 150). (13) As a mark of respect kings and nobles receive names of animals as titles of address. (14) Gods are named from animals associated with them (see 'Goat,' 'Fox,' 'Mouse'). (15) Divisions of the calendar are named after animals in East Asia, and children take their names from them. (16) The signs of the zodiac, the constellations, etc., are named after animals. (17) Animal names

bridegroom. (18) The reaper of the last ears, as representative of the corn-spirit, conceived in animal form, is called the cow, etc. At Easter or Whitsuntide, St. Thomas's Day, etc., animal names are applied to the last person to get up, or to an individual selected in some other way; cf. 'gowk,' poisson al Avril. (19) Various games are known by animal names, in particular 'Blind Man's Buff' (see 'Sacrifice' below). (20) Animal nicknames are common in Europe, and probably in other parts of the world (Lang, Social Origins, App.). (21) The last ears of corn, as embodiments of the animal corn-spirit, receive animal names. animal corn-spirit, receive animal names.

30. OATH, ORDEAL.—Just as in more advanced societies it is the custom to call upon the gods to bear witness to the truth of an assertion or to ensure the fulfilment of a promise, so the savage calls upon his sacred animal (see 'Bear,' 'Dog'). In later times this is regarded as an appeal to the gods but originally the primal itself regods, but originally the animal itself was believed to punish the perjurer, either by persecuting him as a ghost-animal or by devouring him as a living ani-The procedure varies, sometimes the hand is laid upon the animal or on its skull, sometimes its blood is drunk, sometimes the foot is put upon its skin. The Bantus of South Africa take an oath by their sibolo, the Hereros by the colour of their oxen. In the island of Eibo the oath is taken by the Christmas boar. Corresponding to the oath by animals is a class of ordeals, in which the person to be absolved exposes himself to dangerous beasts by swimming across a river full of erceediles, or by similar means.

full of crocodiles, or by similar means.

31. OMENS.—In many cases it is impossible to point out either the causes which determine the augural character of an animal or those which make the appearance of a given animal favourable or unfavourable. Broadly speaking, omen animals may be classified as—(1) Totem or tutelary animals whose appearance is equivalent to a promise or grant of help to the receiver of the omen; their appearance may, however, be interpreted unfavourably (Frazer, Tot. p. 23). (2) The messengers of evil spirits or animal forms of evil spirits, whose appearance is equivalent to the announcement appearance is equivalent to the announcement that a magician is seeking to do an injury to some one (see 'Owl'). (3) The animal is divine and has foreknowledge; by the manner of its appearance it shows what the future will be (see 'Hawk'). (4) The animal is the messenger of a god, who sends it to instruct man (see 'Hawk'). (5) The animal is possessed of magical influence, which tends either to promote or to retard the enterprise to which the omen is taken to relate: consequently to which the omen is taken to relate; consequently its appearance is favourable or the reverse.

its appearance is favourable or the reverse.

Omen-giving animals are (1) always of evil augury; (2) always of good augury; (3) auspicious or the reverse, (a) according to the manner in which they behave, or (b) according to the number which appear, or (c) according to the actions of the augur, who may change a bad omen into a good one by magical or other means, e.g. by killing the animal, by turning round three times, by spitting, or by purificatory ceremonies.

32. POSSESSION.—A belief in possession by animals is not uncommon. In New Guinea it is held

mals is not uncommon. In New Guinea it is held that the witch is possessed by spirits, which can be expelled in the form of snakes, etc., just like any other disease. In the East Indies wer-wolfism is regarded as a disease of the soul which is communicable by contagion, or perhaps as a kind of possession in which the soul may be regarded as poisoned by the evil principle in the form of animals or reptiles. In South Australia the natives believed that they were sometimes possessed by certain animals, and it is no uncommon belief in Africa and Samoa that an offence against a totem are sometimes applied in Europe to the bride and or other sacred animal will be followed by its growth within the body of the offender, which is equivalent to a kind of possession. Among the Anus madness is explained as possession by snakes, etc., and they hold that it is caused especially by killing some sacrosanct animal. Thus a man who kills a cat is liable to be possessed by a cat, and he can prevent this only by eating part of a cat; it is called cat punishment. There is also bear punishment, dog punishment, and punishment by all the other animals. In Japan the obsessing animal is regarded as the physical incarnation of the sins of the sufferer, and is said to leave him after a while. In particular, foxes are held to possess people who have damaged the fields, etc., of their owners; and certain families are said to own foxes which enter the bodies of offenders and cause them to blurt out their crimes. In other parts dogs are the animals used; they are held to go out in spirit form; the body may even die in the absence of the vivilying principle; if so, the spirit enters the body of the owner of the dog, who is then more powerful than ever as a magician. Belief in the possession of wizards being so widely found, it is probable that the statement of the Prince of Wied (Reise, ii. 190), that many American Indians believe they have an animal in their bodies, refers to possession by the medicine animal. There are, however, traces of a similar belief in Australia with regard to totems.

33. POWER OVER ANIMALS, ETC. — Magical

33. POWER OVER ANIMALS, ETC. — Magical powers over the totem are frequently claimed by the kin in Australia, and occasionally in other parts of the world. Mimetic dances (see above) are held to give the same control. The eating of the flesh of an animal is believed to give power to cure diseases, which are often known by the name of that animal. Wizards and others sometimes claim immunity from the bite of serpents, etc.; in some cases this is said to be the result of inoculation at initiation. See also 'Familiar,' 'Nagual.'

34. SACRIFICE.—An account of the origin, function, and theories, savage and civilized, of sacrifice will be found in the article on that subject. It will suffice here to enumerate the various explanations, real or assumed. (1) The commonest view is that the animal is a gift or tribute to a god, a mark of homage or of self-denial. (2) From the facts of totemism the theory has been developed (Robertson Smith) that the animal killed is really the god; the object of the sammar kined is really the god; the object of the sacrifice, and especially of the fol-lowing ritual meal, is to re-establish or strengthen the tie between the god and his worshippers. (3) It is in fact found that a savage will kill and eat It is in fact found that a savage will kill and eat the animal god of his enemy (Miss. Reg. 1822, 254); this may be explained on the same principle—the bond established by the ritual meal prevents retaliation, for an alliance has been entered into, unwillingly but none the less effectively. (4) Starting from the conception of the slain god (2), it has been surmised (Frazer) that the killing of the sacred animal, no less than of the god, has for its object the preservation of the the god, has for its object the preservation of the Divine life, conceived as something apart from the living animal, from the pains and penalties of old age, and from the weakness to which they would reduce the being on whose strength the preservation of the people, or the growth of the crops, or some other important fact, depends. (5) From (2) follows also the magical totem-sacrifice, found as a totem rite in full activity only in Central Australia, by which the multiplication of the animal is promoted and the species at the same time desacralized for men other than the totem kin. Desacralization seems to have been also one of the purposes of the sacrifice of the corn-spirit, although here the object may have been primarily sacralization of the participants. (6) One means of the expulsion of evils is the scapegoat (see 'Scapegoat'); the purificatory sacrifice attains the same object by

killing the animal, perhaps by disseminating the mana of the sacred animal, and thus counteracting hurtful influences. (7) Corresponding to (6) we have the magical sacrifice intended to produce direct benefits; the animal representative of the corn-spirit is killed and its blood sprinkled, or its bones mixed with the seed as a means of increasing fertility. (8) The burial sacrifice is intended to provide the dead with means (a) of subsistence in the other world, (b) of guidance to the other world, (c) of proving his earthly status in the other world, etc., or to purify the living from the dangers of mourners. (9) The deficatory sacrifice provides (a) the individual with his nagual or individual tutelary spirit; (b) a building with a protecting spirit; (c) a frontier with a guardian spirit, etc. (10) We have, further, the inspirational sacrifice, where the priest drinks the blood of a victim in order to procure obsession by his god. (11) In the messenger sacrifice, an animal is killed that it may go as an envoy to the dead (see 'Bear,' 'Turtle,' etc.). The simple food sacrifice must of course be distinguished from this. (12) A common ætiological explanation among the ancients was that an animal was killed because it was the enemy of the god or had in some way injured him.

Various forms of sacrifice are found. The victim may be slaughtered, burnt, thrown over a precipice or from a height, immured or buried; to these modes may be added the setting free of the bird or animal (see 'Scapegoat'). The skin of the victim may be put on an idol, used for a sacred cloak, hung upon a tree, etc. The flesh is frequently eaten; or part may be eaten and part burnt or buried. Special care is frequently taken of the bones. The priest sometimes arrays himself in the skin or mask of the animal to be sacrificed; if the sacrifice is that of the animal-god, the priest thereby assimilates himself to his god, and by putting on the Divine character sanctifies himself for his task. In any case, the donning of the skin and mask may be regarded as a rite of sacralization, fitting the human being for contact with divine things. Not only so, but the priest is actually called by the name of an animal. The worshippers of Ephesian Artemis were 'king bees,' the priestesses of Demeter, Proserpine, and the Great Mother, and possibly those of Delphi, were 'bears'; those of Dodona were 'doves'; youths at the Ephesian festival of Poseidon were 'bulls'; the girls at the Brauronian festival were 'bears' (Frazer, Paus. iv. 223). In Laconia the priests of Demeter and Kore were πῶλω (de Visser, Götter, p. 198).

Demeter and Kore were πῶλοι (de Visser, Götter, p. 198).

In this connexion may be noticed some facts connected with the game of 'Blind Man's Buff.' All over Europe the game is known by the names of animals [Folklore, xi. 261; to the names there given add cuckoo (Ren des Trad. Pop. iii. 345), hoopee (Maspons y Labros, Joehs, p. 45), sheep (Rolland, Rimes, p. 164), wryneck (Fagot, Folklore, p. 84); the name 'blind fly' is also found in Indial. The players in the Middle Ages wore masks, as may be seen in Strutt's Sports and Pastimes, and we may certainly infer that they wore the mask of the animal by whose name the game was known. The significance of these facts is seen when we discover that the procedure in the game of 'Blind Man's Buff' is precisely that of many popular customs, in which cocks, cats, etc., are killed (Folklore, xi. 251 fl). It cannot, however, be assumed that the game is a mere imitation of rituals in which animals are sacrificed, for it was not by children only that it was played or performed in the Middle Ages. In this connexion it should not be overlooked that in Sierra Leone the leopard society don leopard skins when they seize a human victim for sacrifice (Kingley, Trauels, p. 537). In this case, however, the human victim may have taken the place of a leopard; the leopard hunters of the Gold Coast likewise dress like leopards and initate their actions when they have killed one (see 'Leopard').

As to the priority of human or animal sacrifices,

As to the priority of human or animal sacrifices, no general law can be laid down. On the one hand, we find in Central Australia the ritual eating of the totem, and this is certainly not derived from any antecedent human sacrifice. On the

other hand, we find, also in Australia, a ceremony of child sacrifice in connexion with the initiation of the magician, where the priority of animal sacrifice is in the highest degree improbable. In America the ritual killing of the medicine animal (see 'Nagual'), as the central feature of the initiation rite, cannot be regarded as anything but primitive. But the human sacrifices of Mexico seem to be secondary in their nature, due, possibly, to a scarcity of domestic animals. How far the agricultural sacrifice of a girl among the Pawnees can be regarded as primitive it is difficult to say; the idea of the animal corn-spirit was certainly known to them, and the influence of cannibalism may have determined a transition from animal to human sacrifice, if indeed it did not at the outset bring about a practice of human sacrifice. Where, as in Africa and the East Indies, the sacrifice is dead man, we have no reason to argue that one form preceded the other. At the same time we cannot affirm that these sacrifices were the original form in those regions. The question is in most cases insoluble.

35. SCAPEGOAT. - Diseases and evil influences are commonly conceived by savage and barbarous peoples as persons, often as spirits; and as a logical consequence they hold that it is possible by suitable means to expel or otherwise render innoxious all the ills with which they are from time to time afflicted. One method of doing so is to cause them to enter the body of an animal, or sometimes, where the personal form of the evil influences is less emphasized, to load them upon the animal, and drive it from the neighbourhood of human habitations. from the neighbourhood of human nabitations. In India the scape-animal may be a pig (as for Sītalā, the smallpox goddess), a goat or buffalo (for cholera in Berar), or a cock (for cholera among the Pataris, and, in light epidemics, in Berar); and it is noteworthy that the buffalo, goat, or cock must be black (as the vehicle of Yama, the god of death). In many cases, moreover, the scapeanimal becomes an actual sacrifice, as among the Hill Bhotiyas, where once a year, in honour of the village god, a dog is intoxicated with bhang and spirits, and then beaten and stoned to death, so that no disease or misfortune may visit the village

spirits, and then beaten and stoned to death, so that no disease or misfortune may visit the village during the year (Crooke, i. 141 f., 166 f., 169-174). When the Piaroas of the Orinoco build a new hut, they believe that it is occupied by an evil spirit who must be dislodged before it is possible for them to take possession of their new abode. They capture some bird, by preference a toucan, alive, wrap it up in banana leaves, and place it across the threshold, so as to prevent the spirit from escaping. The men of the family dance, gesticulate, and menace the evil spirit, which at last endeavours to leave the hut; it cannot pass over the body of the toucan, and is compelled to enter it. The bird, terrified by the noise and confusion, struggles within its covering of banana leaves; its movements are observed by an old woman; at the proper moment she sets it free and herself flees at full speed into the forest. The bird makes use of its recovered liberty and carries away the evil spirit (Tour du Monde, 1888, ii. 348; for similar customs see GB<sup>2</sup> iii. 102 ff.).

Sometimes it is held sufficient to make images of animals instead of using living animals; in Old Calabar the expulsion of ghosts or devils is called ndok; rude images of crocodiles, leopards, etc., called nabikom, are placed in the street, and guns fired to frighten the spirits into the images, which are then thrown into the river (Goldie, Calabar, p. 49; Hutchinson, Impressions, p. 162). Sometimes the scapegoat is a dvine animal; the people of Malabar share the Hindu reverence for the cow, but the priests are said to have transferred the sins of the people into one or more cows, which then carried them sway to whatever place was appointed by the Brāhman (Golden Bough², iii. 111).

There is a European custom of hunting the wren

There is a European custom of hunting the wren and other animals, usually in the winter season, and especially about Christmas, at which time the expulsion of evils among peoples of lower culture usually takes place. The wren and other animals which figure in these customs are sometimes simply set free (Rolland, op. cit. ii. 297; Volkskunde, vi. among the cattle. In the Congo area it is thought 155, etc.). It is not improbable that one of the ideas at the bottom of the practice is the expulsion of evils | birth to animals of the totem species, or die of

The second second

 $(FL\ {
m xvii},\ 258\ {
m f.}).$  It should be observed that a frequent feature of these popular customs is a procession in which the wren or other animal is carried round the village or town. A similar practice prevailed in Dahomey (Miss. Cath. 1868, 107), where every three years the serpent god Danbe was carried round in a hammock, his bearers killing dogs, pigs, round in a hammock, his bearers killing dogs, pigs, and fowls on their way; this ceremony they explained as intended to rid the community of its ills and diseases. In the hunting of the wren and similar customs the striking at the animal with sticks, etc., is a prominent feature; this appears to be the method by which the sins and evils of the community are put away. In Bombay the Mhars celebrate the Dusserah festival, at which a Minars celebrate the Dusseran lesuvai, at which a young buffalo is set free and pursued, each of his pursuers striking him with his hand or some weapon. The effect of this ceremony is held to be to make the animal the bearer of the sins of every person

who touches him (Globus, xvii. 24).

36. SKULL, GABLE-HEADS.—Reaching back to classical times, and in the present day extending far beyond European limits, is the custom of hanging up the skulls of slain animals, or sometimes their jawbones. The head is often regarded as the seat of the soul, and in the East Indies this is the reason given for preserving the jawbone; probably the Eskimo custom of preserving the heads of seals has a similar idea at its base. More commonly the head is put up in a field or a vineyard as a talisman to keep off evil influences; in the same way, after a head-hunting expedition, the head of a buceros (see below) is put up as a defence. American farmers frequently fasten the skulls of horses or cattle to barns and other outhouses, although the object is now merely decorative. Arising out of this use of the skull, which had its counterpart in this use of the skull, which had its counterpart in Europe, we find the practice of carving horses' and other heads on the gables (Folklore, xi. 322, etc.), but here again their magical significance seems to have been lost. In the Middle Ages the Wends put up a skull when there was a plague among the cattle, but in modern days the practice is rather to bury it; from the stories of the revival of the disease when the skull is dug up, it is clear that the idea now is that the plague is buried; the same idea is found in India. The skull is sometimes important in ritual (see 'Bison').

37. TABU.—Respect for totems or other sacrosanct

important in ritual (see 'Bison').

37. TABU.—Respect for totems or other sacrosanct animals may be shown positively or negatively. The system of prohibitions by which respect is shown negatively is commonly called tabu. It is very generally forbidden to kill the animal (Frazer, Tot. p. 9; Folklore, xi. 239-242; and below, pass.). It may not be eaten, even if killed by another person; or in some cases even touched, save sometimes for the taking of an oath. In South Africa it is held to be unlucky to see the siboko (tabued animal), and in many cases there is an objection to using the ordinary name of an animal. Sometimes it is forbidden to imitate the voice of an animal or bird; forbidden to imitate the voice of an animal or bird; it is often accounted unlucky to keep it in or near the house. The eggs of birds may not be taken, and there is a strong objection to the use of the feathers of certain birds in making feather beds.

The penalties for violation of these tabus, which are, of course, seldom found exemplified completely in any one area or in the case of a single animal, are varied. It is a common belief in England that are varied. It is a common benefin in England that the harrying of a robin's nest is punished by an accident to the offender, usually the breaking of a bone. Of other birds it is said that he who kills them is killing father or mother. Sometimes an injury done to a sacrosanct animal is believed to be followed by ill-luck or sickness in the family or some dreadful disease, if a totem animal is eaten. some dreadful disease, it a totem animal is eaten. Leprosy, madness, death by lightning, and various diseases are among other penalties for disrespect to sacred animals. In Samoa the sacred animal was thought to take up its abode in the man who broke the tabu protecting it, and thus kill him; a 'man of the turtle' would not object to helping a friend to cut up a turtle, but would take the precaution of tying a bandage over his mouth, lest an embryo turtle should slip down his throat and cause his death.

No sharp distinction can be drawn between sacred dunclean animals. The mere fact that an and unclean animals. animal is the subject of tabus is indecisive.

Name-tabu. — It by no means follows that all tabus are an indication of respect for the animal whose name is avoided. In the case of dangerous or destructive animals the use of their name may have the result of summoning them, just as the use of the name of a dead man calls him. Various words are forbidden among fishermen; but it may be that it is unlucky for seafaring folk to mention things connected with the land, just as the Eskimos think that land and sea animals must be kept apart in cooking. Or it may be that the naming of an animal or fish will warn it that it is being pursued. Or the words may be, for some reason,

of ill omen. See TABU.

38. TATU, PAINT, KELOIDS, DEFORMATIONS.—
In America and New Guinea totem kins frequently bear their totem tatued on their bodies (Frazer, Tot. p. 28). In South Africa (ib. p. 2) teeth are knocked out in order that a resemblance to oxen may be produced. In British Columbia the totem is painted upon the face (Globus, lxxiv. 194). In South America some of the tribes of Brazil tatu their faces so as to resemble birds (Spix and Martius, Travels, p. 1027), which they respect and mourn for when they die, and into which they believe that they pass at death (von den Steinen, Naturvölkern, p. 512). The Californian Indians burned their naguals into their flesh, just as the Indians of Canada tatued theirs (Frazer, p. 55). In Africa some of the tribal marks, probably in raised pattern, are intended to make the wearer resemble a lion or a panther (Tour du Monde, 1891, i. 63). Some Hindu tatu marks, which are, for the most part, restricted to women, are intended to represent animals, but they are selected merely according to the desire of the person to be tatued, and, though perhaps originally totemistic, are now regarded simply as ornamental (Crooke, ii. 30-33). The totem mark in America and the tribal mark in Africa are sometimes emblazoned on the property of the totem kin or of the tribe (Frazer, op. cit. p. 30; Tour du Monde, loc. cit.). In Australia the tribes of the Upper Darling are said to carve their totems on their shields (Frazer, p. 30). The wizard frequently has animals carved on his wand or painted on his dress.

39. TONGUE. - Hunters frequently cut out the tongues of slain animals, and the tongues are eaten as sacred food. In folk-tales the test of the tongues is a frequent means of deciding between two claimants. The tongue of the sacrificial victim is important, and in Bohemia fox's tongue is held to confer the gift of eloquence. In N.W. America the shamans wear otter and eagle tongues round their necks as a means of acquiring supernatural part of America, and similar figures have been found in the Pacific (Ann. Rep. Bur. Ethn. 1881-1882, pp. 111-112). Tongue masks are recorded in

New Zealand (Parkinson, Journal, pp. 98, 128; see also Frobenius, Weltansch. p. 199).
40. TOTEMISM.—Under ordinary circumstances, totemism is a relation between a group of human beings and a species of animals, characterized by three main features: (1) the assumption by the totem kin of the name of the animal; (2) the prohibition of the intermarriage of persons of the same totem name; (3) respect paid by every member of the totem kin to the totem animal. Each of these features is liable to deformation; we find totem kins which respect an animal other than their eponymous one; kin exogamy becomes local exogamy or disappears altogether; the totem animal is eaten ritually or otherwise. Other features of totemism are present only occasionally, and their absence in no way invalidates the totemic character of the relation. More especially in America the connexion between the kin and the animal is explained as one of descent, the animal sometimes having united itself to a human being, sometimes having transformed itself into the ancestors of the kin by a gradual process, and so on. But it must not be supposed that totemism exists or has existed wherever we find a myth of descent from an animal (see 'Myths of Ancestors' above). More especially in Australia the totem is held to aid his kinsmen by omens or in other ways. Conversely, in Central Australia, the kin perform magical rites to promote the increase of the totem species; traces of magical influence over the totem are found elsewhere; but it does not seem legiti-mate to assume that all cases of magical influence of this sort are totemic in origin. Sometimes the kin indicate their totem by tatuing or other marks, sometimes by deformations, or by the mode of wearing the hair, or by their dress.

In determining the totem of a child, kinship is usually reckoned through the mother. On the other hand, the usual course at marriage is for the female to remove to the husband's house or district. The result of this is that the kins in any area are (1) intermingled, and (2) continually changing. Where the parent from whom the child takes its totem continues to reside in his or her own district, the tendency is for the totem kins to become localized. The result of this is that certain animals are respected in certain districts; in this way perhaps originated the local cults of Egypt. Tribal respect for the totem of the chief, and ancestor-worship are also paths by which totemism may have been

transformed.

Totemistic tabus do not differ markedly in form from those connected with other sacred animals; they may therefore be dealt with together in this

article (see 'Tabu' above).

Sex totems.—A peculiar relation exists in Australia between the two sexes and two species of animals which might better be termed 'animal brothers and sisters.' It is found from South Australia as far as Brisbane, and the animals thus related to the men and women are lizards, owls, bats, emu-wrens, superb warblers, and goatsuckers. Although the life of a man or woman is believed to be bound up with the life of one of these animals, and although they are in consequence jealously protected by the sex to which they belong, as a preliminary to marriage it is the custom among the Kurnais for one of the 'animal relatives' to be killed by the opposite sex (Golden Bough2, iii. 414-416)

41. VEGETATION.—In the ancient world a number of minor deities, especially connected with vegetation, were believed to possess animal or semi-animal form. Not only were the bull and goat closely associated with Dionysus, but Pan, the Satyrs, and the Fauns are especially associated with goats (see below). The only explanation hitherto suggested of this connexion is that the goat naturally wanders in the forest and browses off the tender shoots of trees, so that the animal which so boldly appropriates the property of the treespirit can be none other than that spirit in bodily form. Frazer has explained the ceremonies performed at various periods in the spring as intended in part to promote the growth of vegetation by killing the old, and therefore weak, spirit of the previous year, replacing him by a more youthful and vigorous representative. Many of these ceremonies are performed during the Carnival or at Mid-Lent; among the animals which appear at that period are the bear (in effigy), the ox, the goat, the wolf, etc. But these ceremonies seem to have had another purpose too,—that of the expulsion of evils,—so that we cannot identify all the animals that so appear with the spirit of vegetation. In the same way various animals (the squirrel, fox, cat, etc.) are thrown into the bonfires at Easter or other periods of the year,—Frazer says as sun-charms. It is hardly legitimate to regard these as so many representatives of the spirit of vegetation. In China the spirits are bull-shaped (de Groot, Rel. Syst. iv. 279).

42. WATER. — In Greece, Poseidon and river gods generally seem to have been conceived under the form of bulls (JHS xiv. 126, 129). The festival of Poseidon was called Tauria, and his priests were termed 'bulls' (de Visser, Götter, pp. 41, 193). In the north of Europe, on the other hand, the horse seems to have been considered a more appropriate form for the god of water (see 'Horse'; cf. Folklore, v. 116). In South Africa and Australia the form attributed to water-monsters is that of the serpent (see below). In India and Eastern Asia the conception of a dragon replaces that of a serpent; we find traces of the same idea in Europe in the story of Perseus and its many variants. See also 'Dragon,' 'Serpent.'

43. WER-WOLF.—The belief in wer-wolves is

43. WER. WOLF.—The belief in wer-wolves is connected, on the one hand, with the pathological condition known as lycantbropy, in which the sufferer believes himself turned into an animal; on the other, with the belief in naguals (see above), familiars and tutelary spirits which serve the human beings who can secure their services. Corresponding to these two sources of the belief, there are two different forms of it. In the first place, the man is conceived to put off his own form and assume that of the animal—in Europe most commonly the wolf, as the last dangerous animal to be exterminated or to survive in the west and south. This transformation may be temporary or permanent, may be due to eating human flesh, to the sins of the transformee, or to some magical procedure such as the drawing on of a wolf's skin, or to contagion, such as eating food left by another wer-wolf. In the second place, it may be simply the spirit of the wer-man which undergoes the change, his body being left torpid at home; or, according to another form of the belief, the wer-animal is simply his servant, and the man himself goes on with his ordinary occupations while it is on the prowl; his life, however, depends on its security.

In Europe the wer-wolf is supposed to fall upon his victim like ordinary wolves. In the East Indies the procedure of the wer-animal is more complicated. He attacks solitary individuals, who forthwith become drowsy. Thereupon the werman assumes his own form, cuts up his victim, eats his liver, and puts the body together again. There are various signs by which a wer-wolf can be recognized, and ordeals are prescribed for discovering it. The wer-wolf is, as a rule, in the form of a living man; but sometimes the dead are believed

to return in animal form (see 'Soul-animal' above) and practise the same arts as wer-wolves proper. A method of burial is prescribed in Celebes for preventing the revival of the dead wer-man. The wer-wolf as form of the dead is closely connected, if not identical, with the vampire in some of its forms. See also 'Nagual,' 'Totemism' above. See Lycanthropy.

44. PARTICULAR ANIMALS.—Ant.—We learn from Greek writers that ants were worshipped in Thessaly; the Myrmidons revered them and claimed descent from them (de Visser, Götter, p. 157; Lang, Myth, ii. 197). In Dahomey and Porto Novo, ants are regarded as the messengers of the serpent-god Danbe (Miss. Cath. 1884, 232). In Jabim, New Guinea, it is believed that a second death after the first is possible, in which case the soul becomes an ant (Nachr. K. Wilhelmsland, 1897, 92). We find in Cornwall the belief that ants are the souls of unbaptized children (FLJ v. 182). In France it is held that it brings ill-luck to destroy an ant's nest (Rolland, Faune, iv. 279). The ant is fed by Hindus and Jains on certain days, and is regarded as associated with the souls of the blessed dead (Crooke, ii. 256).

In South America and California one mode of

In South America and California one mode of initiation was to allow the boy or girl to be stung by ants (Golden Bough², iii. 215); it is said to make them brisk and impart strength. The Piojes submit to it in order to acquire skill with the blow-tube (JAI viii. 221). The Athapascan Dog-Ribs believed that the gift of prophecy was acquired by secretly putting an ant under the skin of the hand (Franklin, Second Expedition, p. 291). On the other hand, the Aruntas hold that a medicine man must not go near the nest of the bull-dog ant; for if he were bitten, he would lose his power for ever (Spencer and Gillen, Nat. Tr. p. 525). In Bulgaria and Switzerland, ants are regarded as of bad omen (Strausz, Bulgaren, p. 298; Schw. Arch. ii. 216). The Esthonians regard them as of good omen (Gel. Ehst. Ges. Schriften, No. 2, p. 28); and for the Huculs red ants are lucky, black unlucky (Kaindl, p. 105).

Not only the ant but also the ant-hill is the object of superstitious observances. The Juangs take an oath on an ant-hill, and the Kharrias use it as an altar (Miss. Cath. 1897, 369, 380). At Poona a dance round an ant-hill is part of a religious ceremony (Bombay Gaz. XVIII. i. 293). In West Africa, ants' nests are regarded by the Susus as the residence of demons (Winterbottom, Sierra L. i. 222). Elsewhere they are brought into connexion with the souls of dead chiefs (Bastian, Bilder, p. 181). In South Africa the bodies of children are buried in ant-hills that have been excavated by ant-eaters (Account of Cape of Good-Hope, 143). In the Sudan it is believed that a hyæna-man assumes his animal form at an ant's nest (Globus, xlii. 157). For myths and folk-tales of the ant see de Gubernatis, Zool. Myth. ii. 44ff.

Ass.—The Romans believed that the Jews worshipped the acc. (Tea. Am. Y. 222).

Ass.—The Romans believed that the Jews worshipped the ass (Tac. Ann. v. iii. 4; Diodor. iv. 148; cf. Reinach, Cultes, i. 342; Krauss, in JE ii. 222-224). In Greece at the present day the pagania are believed to have asses' heads; the people believe them to be Jews who worshipped the ass (Pouqueville, Voyage, ii. 415; cf. Tsuntas, 'E\phi. 'Ap\chi. 1887, p. 160, pl. x.). At Frickhausen in Württemberg the peasants are said to keep a wooden ass in a cellar as the tutelary deity of the village (Mannhardt, Germ. Mythen, p. 411). In explanation of the poverty of Silesian vine-yards, it is said that the ancient Silesians ate the ass on which Silenus rode (Sinapius, Olsnographia, i. 342, 3). Typhon was represented with an ass's head, and the inhabitants of Coptos threw an ass down a precipice as his representative (Plut.

de Is. et Os. 30). The Armenians sacrifice an ass at the grave of the ancestors of a person against whom they have a claim, in the belief that if their whom they have a claim, in the belief that if their claim is not satisfied, the soul of such ancestors will pass into an ass (Haxthausen, Transkaukasia, ii. 21). In parts of Germany, children are said to come from the ass's pond (Mannhardt, Germ. Mythen, p. 411). At Erfurt it is the custom to sell earthenware images in the shape of donkeys are an envel fair (4). In Moldayis. at an annual fair (ib. p. 414). In Moldavia, Calabria, and Portugal, an ass's head is a means of averting evil or the influence of the evil eye from the fields or orchards (Rolland, Faune, iv. 191; Trede, Heidenthum, p. 210; Mélusine, viii. 14). Near Meiningen the last stroke of the reaper was said to kill the oats, barley, or lentil ass, just as in other parts other animals are regarded as incarnations of the corn-spirit (Haupt's Zeitschr. f. D. Altertum, iii. 360 ff.).

Prominent among mediæval festivals was the fête des anes or festa asinaria (Chambers, Medieval Stage, i. 282, 306, 331 ff.; Zts. des Alpenvereins, xxviii. 135-154), and there are traces of the performers wearing ass masks (Chambers, op. cit. p. 332). It seems probable that in spite of its ecclesiastical associations it was-simply a popular festival of the same nature as the 'white horse' (Rev. Hist. Rel. xxxviii. 334) and other customs, the existence of which far back in the Middle Ages is well attested by ecclesiastical fulminations. In the present case the association of the ass with Palm Sunday made it possible for the Church to throw a veneer of religion over the pagan rite. In Augsburg in the 16th century a wooden ass was drawn through the streets; palms were thrown down before it; a priest prostrated himself and down before it; a priest prostrated nimself and was beaten by another priest; and the first palm to be caught up was used in magical ceremonies (Germania, xvii. 31). Many of these celebrations are kept up unofficially at the present day at various times in the spring — Mid-Lent, Palm Sunday, Easter, Whitsuntide (Tradition, vi. 197, 226; Bavaria, II. i. 163; Reinsberg-Düringsfeld, Festl. Jahr, pass.; Zts. f. Volksk. iii. 307, iv. 33). The ass also appears in connexion with St. The ass also appears in connexion with St. Nicholas on Dec. 6th, and in Zug children on this day carry round a wooden ass's head (Schw. Archiv, i. 64). In Grisons the ass of St. Nicholas is said to carry off the children and throw them down a precipice (ib. ii. 167). On the Thursday before Christmas the *Posterlyagd* is held at Entlebuch; people from other villages arrive, and one of them represents Posterli, sometimes in the shape of an ass. The image is left in a corner of the village (Stalder, Schweizer. Idiotikon, i. 208). For myths of the ass, its supposed phallic meaning, and folk-tales relating to it, see de Gubernatis, Zool. Myth. ii. 359-399. The story of Midas is also discussed by Ciszewski, Bajka o Midasowych

Basilisk.—Accounts of the basilisk (βασιλίσκος), a king of the serpents, have come down from Pliny (XXIX. xix.) and Heliodorus (Æthiopica, iii. 8). It was believed to be a small serpent with a cock's head; its look was fatal. In mediæval and modern Europe the basilisk or cockatrice is supposed to be hatched from the egg of a seven-year-old cock or hatched from the egg of a seven-year-old cock or from the hundredth egg of a hen (Mélusine, v. 18-22). On the other hand, the first egg of a black hen is held in Bohemia to be the dangerous one; there is, however, another belief, according to which it produces the sotek, or demon of good luck (Grohmann, Abergl., Nos. 77, 543, 544).

Bat.—Among the Cakchiquels the chief god, Chamalcan, took the form of a bat (Bancroft, iii. 484). A sacred hat figures in a Queensland myth.

484). A sacred bat figures in a Queensland myth; the first man and woman were told not to approach it, but the woman disobeyed and the bat flew away;

after that death came into the world; the form of the myth, however, suggests Christian influence (Ballou, *Under the Southern Cross*, p. 141). Among the Bongos, bats are called by the same generic the Bongos, bats are called by the same generic term as witches and spirits—bitabok (Schweinfurth, Heart of Africa, i. 144). In West Africa an island on the Ivory Coast is peopled with huge bats, which are regarded as the souls of the dead, and are sacrosanct for that reason (Golden Bough<sup>2</sup>, ii. 431). The Bantus of Natal will not touch a bat (Fleming, Carthur Africa 1995). In Touch The Bantus of Natal will not touch a bat (Fleming, Southern Africa, p. 265). In Tonga, bats are sacred, probably as the abode of the souls of the dead (Bässler, Südseebilder, p. 318). No native in Victoria will kill or eat them for this reason (Parker, Aborigines, p. 25), and the Adjahdurahs also respect them (R. G. S. Aust., S. Aust. Br. II. iii. 17). They are respected in Bosnia (Wiss. Mitt. iv. 471) and parts of Shropshire (Burne, Shrop. Folkl. p. 214), but in other places they are killed. In Kusaie, or Strong Island, bat flesh is tabu to men (Hernsheim, Südsee, p. 49). Among various Victorian tribes the bat is a 'sex totem,' better termed a 'man's brother' (Frazer, Tot. p. 52). In China the bat is the emblem of the four desirable termed a 'man's brother (Frazer, 10t. p. 35). In China the bat is the emblem of the four desirable things (Miss. Cath. 1899, 359). In Poland it is of good omen before sunset (Tradition, viii. 138). It is considered lucky in Sarajevo for one to come into the house (Wiss. Mitt. iv. 441). On the other hand, it is usually considered of bad omen (Wiedemann, Ehsten, p. 451; Strackerjan, p. 24, etc.), and in Salzburg it is believed to bring death into the house (MS note). In Sicily the bat is rethe house (MS note). In Sicily the bat is regarded as a form of the devil, and a verse is sung to it; when it is caught it is killed by fire or nailed up with outspread wings (de Gubernatis, Zool. Myth. ii. 203). For the song, compare Ledieu, Monogr. d'un Bourg picard, p. 41. The custom of nailing up bats is common (Sébillot, Trad. de la H. Bret, p. 94; Trede, Heidenthum, ii. 249; Böcler-Kreutzwald, p. 143). A bat's heart is believed to bring luck at cards (Köhler, Volksbrauch, p. 417).

brauch, p. 417).

Bear.—Although the bear is an object of fear and respect to most of the uncultured races who are acquainted with it, there is but little to say of it so far as mythology is concerned. In a few cases we find a myth of descent from the bear; the Modocs of California believe that they are sprung from the union of a daughter of the Great Spirit, who was blown down Mount Shasta, with a grizzly who was before this bears were like men, but the Great Spirit then made them quadrupeds. As a mark of respect they never mention the bear by name; if an Indian is killed by a bear, he is buried on the spot, and all who pass by the spot for years afterwards cast a stone upon the place (Miller, Life among the Modocs, p. 242). Some of the totem kins of the Amerinds trace their origin to bears (Dwight, *Travels*, iv. 184; Schoolcraft, *Ind. Tr.* iii. 268). In Europe, as well as in Syria and in Dardistan, stories are or have been told of girls who are abducted by bears and produce sometimes human, sometimes half-human, offspring (Rolland, Faune pop. i. 53; Twysden, Hist. Angl. Scr. x. 945; Leitner, Languages and Races of Dardistan, iii. 12; MacCulloch, 270 f.). The Crees tell a similar stars have the effective terms of the second stars. similar story, but here the offspring are bears which are later transformed into men (Petitot, Traditions, p. 460). The Malays tell of the bear a story of the Gelert type (JRAS, S.B., No. 7, p. 23). As a useful and at the same time dangerous

animal, the bear receives in many parts of the world a tribute of respect during its lifetime, which is often manifested by a disinclination to pronounce its name (see below, 'Name tabu'). It is, however, but seldom that it receives actual worship before it has been laid low. In Japan there is a tradition of a white bear-god which lives in an inaccessible

ANIMALS

mountain (Mitt. d. Ges. N.V. Ostasiens, xlix. p. 431). Among the Tatars the earth spirits take the form of bears among other animals, and on this account they are accorded increased respect (Castrén, Vorlesungen, p. 230), but there is nothing to show that they receive actual worship. One authority says that the Ostiaks worship the image of a hear (Ides. Translet p. 20), and in Iddia the of a bear (Ides, *Travels*, p. 29); and in India the bear is believed to scare away disease, so that ailing children are made to ride on the backs of tame animals of this species (Crooke, ii. 242).

Name-tabu.—Some animals are not called by

their ordinary names for fear of summoning them, but in the case of the bear the use of special terms seems to arise from a fear of offending it and a desire to do it honour. In Sweden it is called 'grandfather,' by the Esthonians 'broadfoot'; analogous to this case, though with a difference of usage, is the Ottawa practice of terming the bear kin 'broad feet.' The Finns call the bear 'the apple of the wood,' 'beautiful honey paw,' etc. (Golden Bough', i. 455; see also ARW ii. 332; Kaindl, Huxulen, 103). The Yocuts never express enmity to the bear, lest he should hear and take vengeance (FLJ v. 73).

Far more marked is the respect paid to the dead bear. Indeed, more than one observer has asserted bear. Indeed, more than one observer has asserted of some of the East Asiatic peoples that the bear is their chief divinity. There can, however, be no doubt that the Ainus and others kill the bear whenever they can, and that its flesh forms their staple food. The subject has been treated at length by Frazer (Golden Bough<sup>2</sup>, ii. 375 ff.), whose account is here followed, and who explains the custom as a convergence of ferred to the species through tom as an atonement offered to the species, through the medium of single individuals, for the loss it sustains in the slaughter of so many of its members for food.

In preparation for the Ainu festival, a young bear is caught about the end of winter and brought into the village; it is fed until its strength increases and it threatens to escape from its wooden cage; then, in the autumn, the festival is held. The giver of the feast invites all his friends; libations are offered to the bear and various deities; and the women dance round the cage, addressing the animal in terms of endearment. After the men have shot at it with blunt arrows, a number of men put an end to its life by kneeling on it and men put an end to its life by kneeling on it and pressing its neck against a log, the women all the time uttering lamentations behind them. The carcass is set up before certain sacred wands and decorated in various ways. Libations are offered to it, and the women, laying aside all marks of sorrow, dance merrily before it. The animal is next skinned and cut up, and its blood is drunk, so far as is known, by men only. The liver and brain are eaten on the spot, and the remainder of the flesh is divided among those who have been present. The Gilyaks hold a similar festival; but the bear is shot with arrows in this case; at the end of is shot with arrows in this case; at the end of the ceremonies the skull is placed on a tree  $(GB^2)$ the ceremonies the skull is placed on a tree  $(GB^2)$  ii. 380). There seems to be a practice of imputing the guilt of the slaughter of the bear to the toad, which has an evil reputation among the Gilyaks (*ib*. p. 383). Before being sacrificed the bear is led round the village, and ceremonies are performed in its honour (*ib*. p. 382).

According to a later account, which is important for our attitude towards the whole of the East Asiatic bear ceremonies, [the Gilyaks celebrate a festival for any bear which they kill in hunting, as well as for those they rear: as soon as the cere-

as well as for those they rear; as soon as the cere-mony is over, the soul of the animal, which has permitted itself to be killed, goes to the 'Lord of the Mountain,' Pal, accompanied by dogs killed in his honour, and by the souls of gifts of which

it is the recipient.

The bear festival proper is instituted in honour of a recently deceased kinsman. It is prepared by the gens of the deceased, but forms a general by the *gens* of the deceased, but forms a general feast of several *gentes*, which are a more important factor in its celebration than the *gens* which provides the festivity. When the time comes to kill the bear, the chief guests are the husbands of the women of the host's kin; they bring with them their sons-in-law, whose duty it is to kill the bear. The guests are called *narch*, and they are entertained by the 'lord of the bear.' Women are excluded from the ceremony of killing the hear, which cluded from the ceremony of killing the bear, which is preceded by a trial of skill with the bow, in which the narch take part as well as the kin of the which the narch take part as well as the kin of the 'lord of the bear'; it is a point of honour for the latter to shoot badly. The narch then settle among themselves who is to give the fatal wound. When the guests have gone, the nearest kinsmen of the dead man proceed to cut up the bear, which is placed in a majestic pose after being killed, its head to the west. Its head is carried off by the women on a sacred sledge, on which are also tobacco, sugar, bow and arrows, etc., gifts to the dead beast, who takes their souls with him. The guests of honour alone partake of the flesh of the bear; their hosts get only bear soup. Before they depart, the narch leave several dogs tied near the head of the bear. These are directed to follow their master the bear, and are then killed on the same spot. The flesh of the dead man. On the following day the head of the bear is taken to its last resting place, and then its soul goes to the women on a sacred sledge, on which are also last resting place, and then its soul goes to the 'Lord of the Mountain' (ARW viii. 260-272).

If the precise meaning of these ceremonies is not apparent, it is at least clear that the cult of dead kinsmen is one of the elements at the present day; it may be noted that the 'kin gods' of the Gilyaks are human beings who have met with a violent death, but whether it is only in honour of such that the festival is held does not appear (*ib.* p. 259).

Assecond element is possibly that of purification

On the whole, we must regard the Gilyak ceremony as analogous to the Zuñi turtle-killing—a means of communication with the dead of the

The Ostiaks, on the other hand, appear to pay equal honour to every bear which they kill; they cut off its head, hang it on a tree, and, surrounding it, pay respect to it; then they run towards the body and lament over it, explaining that it is not they but the Russians who have killed it (Auterthey but the Russians who have killed it (Autermony, Voyage, ii. 92). As a mark of respect, Samoyeds allow no woman to eat of its flesh (Erman, Reise, i. 681). If the Ostiaks show respect to the bear, they also give evidence of very different feelings; its skin is stuffed with hay and spat upon to the accompaniment of songs of triumph (iò. 670), but they subsequently set up the figure in a corner of the court and treat it for a time as a tutelary deity (iò.). (For sones in honour time as a tutelary deity (ib.). (For songs in honour of the bear see Beiträge zur Kenntniss, xxv. 79).

We find a similar custom among the Pottawa-tomies. The head of the bear is set up and painted with various colours, and all participants in the feast sing songs in its honour (Baumgarten, Allg. Ges. Am. ii. 542). Although no special ceremonies are observed by the Kamtchatkans, the killer of a bear is obliged to invite all his friends to partake of the flesh (Krachenninikow, ii. 107). Among the Lapps the bear hunt is the occasion of various ceremonies. When the animal is dead, they beat it with rods and then transport it on a sledge to a but constructed on purpose; they then go to a hut where their wives await them; the latter chew bark to colour their saliva red, and spit in the faces of the men (probably as a purificatory ceremony).

1、1400年的18日本第十四十四日。18

Continence is observed for three days, and then the flesh is prepared and eaten by men and women nesn is prepared and eaten by men and women separately; the women may not approach the place where the bear is cooked or partake of flesh from the rump (Voyages et Av. des Emigrés français, ii. 150). The Montagnais prohibit bear's flesh to women and children (Hind, Explor. i. 179); the Ojibwas will not allow dogs to touch a dead bear (JAI iii. 111). The Tacullies eat bear's flesh at the feast of the dead (Harmon, Journ. 289). The Mohawks offered bear's flesh to Agreskoui when they had met with ill-success in war (Megapolensis,

Beschrijving, p. 48).
In East Asia an oath by a bear is not uncommon. In East Asia an eath by a bear is not uncommon. In some cases the skin or a piece of flesh is brought (Schrenck, i. 408); or an offering of a skin is made (Ides, p. 19), and in case of perjury the animal comes to life; we may take this to mean that they believe the bear will devour the perjurer, for the Samoyeds make a man bite a bear's head, and hold that a bear will devour him if he swears falsely (Billings, i. 228; cf. Latham, Russian Empire, p. 124)

(Billings, i. 228; cf. Latham, Russian Empire, p. 124). There is a European practice, possibly connected with agricultural rites, of dressing a man up as a bear, especially in the winter season, and going with him in procession (Mannhardt, Ant. W. u. Feldculte, 188 ff.; Zts. Ver. Volks. vi. 429). The custom is especially prevalent in the Lausitz, a Wendish area (MS notes). In Poland the 'bear' is thrown into the water (Kolberg, Poznanskie, i. 134, 136, 139, ii. 350).

The Central Eskimos believe that they can acquire a bear spirit as tutelary deity, or tornag. The

a bear spirit as tutelary deity, or tornaq. The would-be angakok must travel to the edge of the great ice-floe and summon the bears. When they appear, he falls down at once; and if he falls upon his face, a bear steps forward and asks his will.

The man recovers and goes back with the bear (Ann. Rep. Bur. Eth. 1884-1885, p. 591).

The bear is especially associated with Berne, the name of which means 'bear,' and the town has kept bears for centuries. The explanation given is that duke Berthold delivered them from a greatile bear with their second and the second gigantic bear, but this is simply ætiological and probably late; for it is certain that the bear was associated with the town centuries before Berthold. In 1832 a statuette of a goddess, Artio, was discovered in the neighbourhood, which dated from Roman times. Now Artio is certainly connected with Irish art, Lat. ursus, Gr. äpkros, and means the goddess of the bear or something of that sort. A bear, was also discovered among the other statuettes, but was not until later brought into connexion with the goddess, before whom it was standing in the original form of the group (Rev. Celt. xxi. 280). See CELTIC RELIGION, § x. 8.

In Greek cult, bears were burnt in honour of Artemis Aappla at Patræ (Paus. VII. xviii. 8), and bear Artemis' was one of the names by which she was known. There is a good deal of evidence to connect Artemis with a cult of the bear (Farnell, Cults, ii. 435). Callisto, in an Arcadian myth, is changed into a bear, and she seems to be only another form of Artemis (Müller, Proleg. pp. 73-76), who is also called Καλλίστη. Moreover, at Brauron, Athens, and Munychia, Artemis Βραυρωνία was worshipped (cf. Lang, Myth, ii. 212-215) in ceremonies which were perhaps a survival of initiation customs. Young maidens danced in a saffron robe, and, like the priestesses, were called 'bears'; the dance was called apkreia, and the participants were of ages from five to ten; the celebrations were or ages from five to ten; the celebrations were quinquennial, and no girl might marry before undergoing the rite. There is a trace of a bear sacrifice at Brauron (Farnell, ii. 437), but the animal usually offered was the goat or hind. For folk-tales of the bear see de Gubernatis, Zool. Myth. ii. 109-119. For myths see Bachofen, Der Bür.

Bee. - The Tchuwashes of East Russia have a beegod, and celebrate a bee festival at which they drink beer sweetened with honey (*Globus*, lxiii. 323). The priests of Ephesian Artemis were called 'king bees'; the priestesses of Demeter, Proserpine, and the Great Mother were known as 'bees.' From the fact that the priests of the horse-goddess Demeter were called 'horses,' we may infer that the goddesses in question were bee-goddesses, or that their cult had included a local cult of the bee (Frazer, Paus. iv. 223). As a means of attacking or defending cities, bees figure in Quiché and European sagas (Liebrecht, Zur Volksk. p. 75). In North Guinea beehives are actually hung at the entrance to a village, but the intention is probably magical (Wilson, Western Africa, p. 158). For myths of bees proceeding from the bodies of animals, as in the story of Samson (Jg 148), see Globus, xxxix. 222. The soul is believed in parts of Europe to take the form of a bee (ib. li. 316; Jecklin.

Volksthümliches, i. 59).
In European folklore the bee is everywhere sacrosanet (Folklore, xi. 239), but, as often happens, the first bee may be killed for use in magic (ib. p. 254). As ominous animals, bees vary in their signification; in some parts of Wales a swarm entering a house in some parts of wales a swall entering a house is a bad omen; elsewhere the reverse is the case (Rev. Hist. Rel. xxxviii. 308). If they leave their hive it is a death omen (Brand, Pop. Ant. ii. 175, 219; Rochholz, i. 148). A swarm on a house means fire (Globus, xxvii. 96; Rochholz, loc. cit.). The European peasant attributes special intelli-gence to bees; they suffer no uncleanliness of any sort near them; they should not be sold; the death of a member of the family must be announced to of a member of the family must be announced to them, and mourning put on their hives (Globus, xxxix. 221 f.). At certain times in the year honey should be eaten (ib.). For myths and folk-tales of the bee see de Gubernatis, Zool. Myth. ii. 215-223. For the symbolism of bees see Pauly-Wissowa (1894), p. 446 ff.; for myths, p. 448 ff. See ARYANS. Beetle.—The cult of the scarab was general in Egypt (Budge, Gods, ii. 379). At the present day it is feared by the Hottentots, of whom Kolbe says that they scarifies sheep and oven to a beetle.

that they sacrifice sheep and oxen to a beetle (Walckenaer, *Hist. Gen.* xv. 372). The beetle is tabu in various parts of Europe (*Folklore*, xi. 239, 242). Killing it is believed to cause rain (Rolland, Faune, iii. 324; Napier, Folklore, p. 116; MS notes). In East Prussia it is held to be lucky to notes). In East Prussia it is held to be flicky to set a beetle on its feet when it has got 'cast' (MS note; cf. Afzelius, Sagohäfder, i. 13). In Schleswig-Holstein its name connects it with Thor (Schiller, Thier . . . buch, p. 11). It is sometimes kept in a cage for luck (Napier, Folklore, p. 116; Böhme, Kinderspiel, p. 424). In Scotland the stag beetle is killed because it is the devil's imp; the black beetle is killed whenever it is found and the black beetle is killed whenever it is found, and a story is told to explain the custom (Gent.'s Mag. 1876, ii. 510; cf. Rolland, Faune, iii. 327). In Lautenthal, boys put a stag beetle in the ground and strike blindfold at its horns; the one who hits it is the winner and takes the beetle home (Kuhn, Nordd. Sagen, p. 377). In the Grafschaft Mark the horns are used for divination (Wöste, p. 56).

The ladybird is often tabu (Grahmann Abend.)

The ladybird is often tabu (Grohmann, Abergl No. 1686; Strackerjan, Abergl. p. 45). It is said to bring the children (Mannhardt, Germ. Mythen, p. 272). It is regarded as of good omen.

The cockchafer is also tabu (Folklore, xi. 240).

It is greeted in the spring (Bavaria, IV. ii. 357), carried in procession (La Fontaine, p. 62), and sold in the spring (Germania, vii. 435; FLR iii. 138; cf. Rolland, Faune, iii. 340). It is considered of good omen for one to settle on the hand (Bavaria, Iv. ii. 402). Children often repeat verses to the ladybird (Ledieu, Monographie, p. 40; Rolland, Faune, iii. 351-358). In Picardy it is the custom

to kill the ladybird (Ledieu, loc. cit.). A beetle is carried for luck (Spiess, Aberglauben, p. 417), and used in magic (Heyl, Volkssagen, p. 787; Wuttke, Der Aberglaube, passim). In the mythology of the Sia the beetle was entrusted with a bag of stars; getting very tired, he peeped in, and they flew out and covered the heavens (Ann. Rep. Bur. Ethn. 1889–1890, p. 35). For the folklore of the beetle see de Gubernatis, Zool. Myth. ii. 209 ff.

Bison.—One of the Omaha clans traced its

descent from a bison, which is said to have been originally under the surface of the water; they believed that they returned to the buffaloes at death (Frazer, *Tot.* pp. 4, 36). Both Iowa and Omaha males dress their hair in imitation of the bison when it is their totem (ib. p. 27). A southern tribe, probably the Kwapas, propitiated the dead bison; they adorned its head with swan and bustard down dyed red, and put tobacco in its nostrils and in the cleft of its hoofs. When they had flayed it, they cut out its tongue and replaced it by a piece of tobacco. Two wooden forks were then stuck into the ground and a crosspiece laid upon them, on which were placed pieces of flesh as an offering (Hist. Coll. Louisiana, i. 181). Another account says that the Louisiana Indians bewailed the bison before they set out for the chase (Hennepin, Desc. p. 80). Possibly the Blackfoot practice of putting a bison skull on an altar is part of a similar propitiation (*Miss. Cath.* 1869, 359). Many tribes performed mimetic dances in order

Battey, A Quaker, p. 172). The Sioux believed that they could attract the bison by imitating the bark of the coyote (Tour du Monde, 1864, i. 54). The Pawnees used to 'dance the bison' for their neighbours; they dressed in war costume and covered their heads with a bison skin with the horns still attached (Perrin du Lac, Voyage, p. 334). It does not appear whether this had anything to do with the belief in the bison form of the corn-spirit, but the Creek dance was performed at the time of their Green Corn dance; men, women, and children took an active part in the ceremony, dressing themselves in the scalp of the bison with horns and tail attached; uttering sounds in imitation of the animal, they danced in a circle, their bodies in a half bent position, their weight being supported on two sticks which represented the forelegs of the animal (Stanley, Portraits, p. 10). The bison is associated with corn in various ways by the Pawnees (Dorsey, Traditions of Skidi Pawnee, pp. 85, 344). For their corn dance preparations are made by killing a bison; this is done by a woman; the pericardium is dried and filled with various kinds of corn. For the dance itself the floor must be as clean as possible; sacred bundles of corn and bison flesh are prepared, and a bison skull and two hoes ness are prepared, and a bison skull and two noes of bison bone are placed before them; the women dance, holding their hoes, and every one searches for buffalo hairs; if they see any they say, 'Now we are going to be successful in our hunt and in our corn' (Grinnell, Paunee Hero Stories, p. 372). They give the name of 'mother' to the dried skull of a bison corn winted and which they also at the same of the state of the same of the sam of a bison cow painted red, which they place at the bottom of the hut on a sort of altar; they think that it has the power of attracting bison. At seed-time the corn is brought to the hut, and the old men bring out little idols and bird skins, and sing all day to obtain a good harvest. Offerings of first-fruits are also made (Du Lac, Voyage, p. 270). Probably the same ideas prevailed among other tribes; for we find that the Osages had a myth that corn was given them by four bison bulls (Ann. Rep. Bur. Ethn. viii. 379; cf. Matthews,

Ethn. of Hidatsa Indians, p. 12).

Buceros (rhinoceros-bird).—This bird is important in the East Indian area. In Borneo the gables

of some of the houses have a buceros in wood; and with this may be connected the fact that when they have taken a head on a head-hunting expedition, a wooden buceros is set up with its beak pointing towards the foe; on the gable it is said to bring luck. In Celebes the priests put the head of a buceros on a magic staff, and it is also believed to attract purchasers to shops on which it is placed. Under the central post of the house it is believed to avert evil from the dwelling. The head-hunter sometimes wears a buceros head on his own, probably for the same reason that one is set up; in Borneo it has become general to wear feathers and carved bills, but the right to do so is restricted to those who have taken a head with their own hands. It figures in the death dance of the Battas; a mimetic dance in Borneo seems to have in the present day no other object than amusement. At a ceremony of peacemaking the Ibans suspend from a wooden buceros a great number of cigarettes, which are taken down and smoked ceremonially by all the men present (*REth* iv. 312 ff.; *JAI* xxxi. 180, 198; *Tijdschr. T.L.V.* xxviii. 517, xxxi. 349).

Buffalo.-Like many other pastoral peoples, the Todas show their domestic animal, the buffalo, a degree of respect which does not fall far short of adoration. As often happens, the flesh of the female is never eaten; once a year a bull calf is remale is never eaten; once a year a buil call is killed and eaten by the adult males of the village in the recesses of the wood. It is killed with a club made of a sacred wood; the fire is made of certain kinds of wood, produced by rubbing sticks together (Marshall, *Todas*, p. 129 f.; see also Rivers, *Todas*, p. 274 ff.). In other parts of India the animal serves as a scapegoat in case of cholera (Golden Bough<sup>2</sup>, iii. 101). The Mhars of Bombay (Golden Bough, iii. 101). The Mhars of Bombay sacrifice a buffalo at the Dusserah festival; they lead it before the temple of Bhavānī, and the chief strikes it on the neck with a sword; thereupon it is hunted and struck with the hand or with a weapon; in this way it is laden with the sins of those who succeed in touching it. After being driven round the walls, its head is struck off at the gate; a single stroke must suffice if the sacrifice is to be efficacious. Then they fall upon the victim and tear it in pieces; a procession round the walls follows, in which the demons are prayed to receive the offering; pieces of flesh are thrown backwards over the wall for them (Globus, xvii. 24). A somewhat similar sacrifice is performed among certain hill-tribes at the festival in honour of Nanda, Krishna's foster-father, and was also celebrated formerly by the Bhumij. The buffalo is frequently sacrificed, moreover, in honour of Durga, the consort of Siva, and in art is the vehicle of Yama, the god of death, the female being regarded as the incarnation of Savitrī, the wife of Brahmā (Crooke, i. 112, ii. 236 f.). The Zulus hold that the souls of the dead pass into the Cape buffalo (Fritsch, Eingeborene, p. 139). The Ewe tribes hunter observes tabus when he kills a buffalo (Mitt. d. Schutzgeb. v. 156). Among the Ewe tribes, when a buffalo bull has been killed, it is cut up and sold before the hut of the hunter. With an old woman as president, he and older companions partake of a meal in a hut, and the entrails of the buffalo are wound round some of the guests. The successful hunter must remain in his hut for some days, and for nineteen days wear no clothes. He is led by an older man through the villages during this period, and is permitted to capture and take home chickens. He may eat the flesh of warm-blooded animals only, and may eat no pepper, though salt is permitted. This period of tabu is concluded by a general festival, at which a mimetic representation of a hunting scene is given. At the close the

hunter who killed the buffalo is carried home (Zts.

Geog. Ges. Thür. ix. 19).
Butterfly, moth.—In a Pima myth, the Creator, Chiowotmahke, takes the form of a butterfly, and flies until he finds a place fit for man (Bancroft, iii. 78). Many of the Malagasy trace their descent from a sort of moth, and believe that it was a man who was changed into a moth at death. The Sihanakas believe that the soul has to suffer after death till the body is only a skeleton; if it cannot endure this it becomes a butterfly; the Antimerinas call the soul by the same name as the butterfly call the soul by the same name as the butterfly (v. Gennep, Tabou, p. 292). In Samoa the butterfly was one of the family gods (Frazer, Tot. p. 13). Butterflies are tabu in Europe (Folklore, xi. 239; Napier, Folkl. p. 115). In Bukowina they should not be taken in the hand (Zts. Oest. Volksk. ii. 352). In the Vosges, France (Sauvé, Folklore, p. 317; Noel du Fail, ed. Asseyrat, i. 112), they should be caught. In Oldenburg the first butterfly should be caught and allowed to fly through the should be caught and allowed to fly through the coat sleeve (Strackerjan, Abergl. p. 105). In Suffolk, butterflies are 'tenderly entreated,' and white butterflies are fed in the west of Scotland (Suffolk Folklore, p. 9; Napier, Folklore, p. 115), while at Llanidloes (Montgom. Coll. x. 260) the coloured ones are killed; in Scotland it is unlucky to kill ones are killed; in Scotland it is unlucky to kill or to keep them. Moths are killed in Somerset and Dorset (Rolland, Faune, iii. 316), red butterflies in the North of England (Denham Tr. ii. 325), the small törtoiseshell in Pitsligo (FLJ vii. 43), the first butterfly in Devonshire (Hone, Tablebook, p. 339); while in Essex the directions are to catch the first white butterfly, bite off its head, and let it fly away (MS note). The Magyars say that it brings great luck to catch the first butterfly (Jones it fly away (MS note). The Magyars say that it brings great luck to catch the first butterfly (Jones and Kropf, Folktales, xlix.). In Yglau it is put in the gun to make it impossible to miss (Zts. Oest. Volksk. iii. 273). Some of the customs point to a scapegoat ceremonial; in other cases there is a belief that butterflies and moths are the souls of the dead (Arch. Rev. iii. 226). In Scotland, Friesland, and Bosnia, moths are regarded as witches (Gregor, Rolklore, p. 147; Wiss. Mitt. vii. 315; Globus, xxvi. 158). In Germany the butterfly is sometimes

said to bring the children (Ploss, Kind, i. 12).

There is a curious diversity in the omens given by butterflies. In North Hants three butterflies are a bad omen (NQ, 8th ser. iv. 165). In Brunswick a white butterfly seen first means death, a yellow butterfly a birth, and a coloured one a marriage (Andree, Braunschw. Volksk. p. 289). Elsewhere a (Andree, Braunscone, Volksk. p. 289). Elsewhere a white butterfly means a rainy summer, a dark one thunderstorms, and a yellow one sunshine (Am Urdsbrunnen, iv. 16). The Ruthenians hold that a red butterfly in spring means health, and a white one sickness (Globus, lxxiii. 245); while for the Bulgarians the dark butterfly announces sickness

(Strausz, Bulgaren, p. 286).

Cat.—The cat was generally respected in Egypt, and mummified at Thebes; but this is not enough to establish cat-worship proper. In many parts of Europe it is considered unlucky to kill a cat (Folklore, xi. 239), and the same belief is found in Africa; the Washambas respect the cat, and believe that if one is killed, some one in the family falls ill; a sheep is led four times round the sick person, and then slaughtered; its head is buried, a living cat is caught, and part of the sheep's heart, covered with honey and fat, is given it to eat; if it will not eat it, the illness is put down to another cause; finally, the cat has a dark neckband put on and is set free (Mitt. von d. Schutzgebieten, ix. 313, 325; Zts. Geog. Ges. Thür. xi. 108). It has been stated, but incorrectly, that in Egypt a cat is regarded as holy, and that if one is killed, vengeance will sooner or later fall on the person who committed the deed (*PEFSt*, 1901, 267). On the

Gold Coast a cat which had been of good omen received offerings; it was also held that the souls of the dead passed into cats (Bosman, Reise, p. 444; Müller, Fetu, p. 97). At Aix, in Provence, on Corpus Christi the finest tom-cat in the country, wrapped like a child in swaddling clothes, was publicly exhibited in a magnificent shrine (Mills, History of Crusades, quoted in Gent.'s Mag., 1882,

The cat is one of the animals sacrificed in Europe at various times (Folklore, xi. 253; Lund, Danat various times (Folklore, xi. 253; Lund, Danmark og Norges Historie, vii. 160, etc.), in some cases by being thrown from a tower (Coremans, L'Année, p. 53; Mitt. des Ver. für Ges. der Deutschen in Boehmen, x. 347, etc.). In other cases the cat is burnt (Rolland, Faune, iv. 114; Golden Bough², 324; Chesnel, Dict. Hist. etc.). The explanation of these customs seems to be that they are survivals of a custom of expelling evils; this interpretation is borne out by the fact that at Wambeck the custom took the form of that at Wambeek the custom took the form of throwing the cat out of the village on a day known as 'Kat-uit.' In Bohemia they kill it and bury it in the fields sometimes, in order that the evil spirit may not injure the crops (Volkskunde, vi. 155; Grohmann, Aberglaube, No. 367). Sometimes the cat is associated with marriage ceremonies. In the Eifel district the 'Katzenschlag' follows the marriage by a few weeks; in Creuse a cat is taken marriage by a few weeks; in Creuse a cat is taken to the church and afterwards killed by striking people with it; it is then cooked and given to the newly married couple (Schmidt, Sitten, p. 47; Rolland, Faune, vi. 102). In Poland, if the man is a widower, a pane is broken in the window and a cat thrown in; the bride follows through the same opening (Tradition, v. 346). In Transylvania the farm hands bring a cat in a trough the morning farm hands bring a cat in a trough the morning after the wedding and rock it on the cradle before the bride (Haltrich, Zur Volksk. p. 290). Probably the idea of getting rid of evils is in part an explanation of these customs, in part a magical rite to promote fertility. In India, on the other hand, the cat, being regarded as an uncanny animal, is respected, and it is a serious offence to kill it (Crooke, ii. 241, 270 f.).

The corn-spirit is sometimes believed to appear in the form of a cat (Golden Bough, ii. 270). At the Carnival in Hildesheim a cat is fastened in a basket at the top of a fir tree; influence over the fruit harvest is attributed to it (Kehrein, Volksp. p. 142). In Sumatra and the East Indies a cat is used in rain charms (Golden Bough<sup>2</sup>, i. 102; Tijdschr. vi. 83). There is a curious conflict of opinion as to the omen to be drawn from the sight opinion as to the omen to be drawn from the sight of a cat. In Germany, Scotland, the Vosges, etc., a cat, especially a black one, is of bad omen (Gregor, Folklore, pp. 123, 125; ZE xv. 90; Sauvé, Folklore, p. 116). On the other hand, in Hildesheim and other parts of Germany the black cat is held to bring luck (Niedersachsen, vi. 61; Zts. des V. f. Volksk. x. 209; Alemannia, xx. 284; Schreiber, Taschenbuch, p. 329). In the United States it is an evil omen for a cat to cross one's sath, but good luck to be followed by a black est path, but good luck to be followed by a black cat, while a strange cat, especially a black one, brings good fortune to the house which it chooses to make its home. For folk-tales of the cat see de Gubernatis, Zool. Myth. ii. 53-66, and for Jewish material

Jacobs, in JE iii. 613 f.

Cattle.—Among the cults of domesticated animals the most important is that of cattle. The question of the origin of the cult is complicated by the problem of the origin of domestic animals; for if the pastoral peoples who in historical times have respected or worshipped their cattle obtained them from a single centre, where they were originally domesticated, possibly, in part at least, through practices connected with religion (Hahn, Demeter

und Baubo, pass.), we cannot base any argument on the attitude of the cattle-keeping tribes of the present day. If, on the other hand, no sanctity attached to cattle when they came to them, the respect and even love, which these peoples fool

attached to cattle when they came to them, the respect—and even love—which these peoples feel for their herds is important as a factor in the evolution of the more definitely religious attitude. Pastoral peoples, of whom in pre-European days there were many representatives in Africa, commonly live on milk or game (Alberti, De Kaffers, p. 37; Fleming, S. Africa, p. 260). The Damaras cannot comprehend how any one can live upon meat from such a source; when they have any special feast, the killing of the cattle is almost a sacrificial function, and falls to the lot of the chiefs. In the same way bulls in ancient Egypt were killed only as a piaculum (Herod. ii. 41); and cows, as among the Phœnicians (Porphyry, de Abstin. ii. 11), were never eaten on any pretence.

In these cases there is no positive cult, though the cow is recorded to have been sacred to Hathor-Isis. With the male animal it was different.

the cow is recorded to have been sacred to Hathor-Isis. With the male animal it was different. Conspicuous among Egyptian animal cults was that of the bull, and the worship of Apis (Hāp) goes back to the earliest times. According to Herodotus (iii. 28), it was the 'calf of a cow incapable of conceiving another offspring; and the Egyptians say that lightning descends upon the cow from heaven'; on the latter point another story was that the god descended on the cow as a ray of moonlight (Wiedemann, Religion, p. 188; Plut. de Is. et Os. xliii., Quast. Sympt. viii. 1). Various accounts are given of the marks by which it was recognized; Herodotus (loc. cit.) says 'it is black, and has a square spot of white on its forehead; on its back a figure of an eagle; in its tail double hair; and on its tongue a beetle.' Pliny, however (viii. 72), says that a white crescent on its right side was the mark, and adds that after a certain age it was drowned in the fountain of the pricests. Oxen were sacrificed to Apis, and had a certain age it was drowned in the rountain of the priests. Oxen were sacrificed to Apis, and had to be pure white (Herod. ii. 38). When the old Apis died, a new one was sought; the owner of the herd in which it was found was honoured; the discoverer was rewarded, and the dam of the bull was brought with it and confined in a second sanctuary at Memphis (Wiedemann Loc cit. sanctuary at Memphis (Wiedemann, loc. cit.; Strabo, xvii. 31). Once a year a cow was presented to Apis and then killed (Pliny, viii. 186); others were regarded as concubines and permitted to live were regarded as conculmes and permitted to live (Amm. Marc. xxii. 14. 7; Solinus, Polyh. c. 32). Its food consisted of cakes made of flour and honey; a special well was provided for its use. Its birthday was celebrated once a year; when it appeared in public, a crowd of boys attended it. Women were forbidden to approach it save during its four months' education at Nicopolis, when they exposed themselves before it (Diodorus i 25)

exposed themselves before it (Diodorus, i. 85).

Oracles were obtained (1) by the behaviour of the bull, (2) by dreams which came to sleepers in the temple, and (3) by the voices of children praying before the temple. Both the living and the dead Apis were connected with Osiris, and its soul formed with Osiris a dual god Asar-Hapi (Serapis). The dead bull was carefully mummified and buried in a rock tomb. The cult of Apis was national. Less wide-spread was the cult of Mnevis, also constructed to origin (as Pades ii) 251.50. secrated to Osiris (see Budge, ii. 351 ff.).

At the present day similar observances have been noted on the Upper Nile. The Nuba (=Shilluk and Bonjack) venerate a bull, according to Petherick (Travels, ii. 10), usually a piebald one; it leads the cattle; its aid is invoked to avert evil. At its death it is mourned with great ceremony; at its master's death it is killed, and its horns fixed on his grave. This latter feature suggests that it may have been regarded as the abode of its master's soul, or possibly of the soul of the previous head

of the family. Another account says that it is of the family. Another account says that it is venerated under the name of Madjok (the Great God), and worshipped with music and dancing (Hassan, Vita, i. 58). Among the Nuers the bull is likewise honoured; it is regarded as the tutelary deity of the family, and receives the name Nyeledit, which is also applied to thunder and perhaps to their Supreme Being (Marno, Reisen, pp. 343, 347; Mitt. Ver. Erdk., Leipzig, 1873, p. 6).

Among the Angonis the spirit of a dead chief was located in a hull which was then set apart and

Among the Angonis the spirit of a dead chief was located in a bull, which was then set apart and considered sacred. Offerings were made through it to the indwelling spirit; if it died, another was put in its place. This cult ceased as soon as the next chief died (Folklore, xiv. 310).

The Sakalavas of Madagascar have a black bull in

The Sakalavas of Madagascar have a black bull in a sacred enclosure in the island of Nosybe, which is guarded by two hundred priests. When it dies, another takes its place. In January the queen visits the island and a bull is sacrificed, whose blood is held to drive away evil spirits from the neighbourhood of the sacred enclosure (v. Gennep, Tabou, p. 248). In some parts of Madagascar myths of descent from cattle are told (ib. p. 239). When the sigh perform the bile generatory to remyths of descent from cattle are told (ib. p. 239). When the sick perform the bilo ceremony to remove the tabu under which they lie, a bull is sometimes selected, which is thenceforth sacred until its master's death (ib.). Cattle played a great part in the as yet unexplained ceremony of Fandroana at the New Year (ib. p. 240). Cattle were kept for their milk and as sacrificial animals only (ib. p. 241). The sacrifice was eaten, and custom prescribed the persons to whom particular parts of the animal should fall (ib. p. 243). A child born on an unlucky day was usually put to death, but its life might be saved if the ordeal by cattle so determined (ib. p. 245). Among the most honourable terms of address were 'bull' and 'cow' (ib. p. 247).

(ib. p. 247).

The origin of the Hindu respect for the cow is an unsolved problem. Unlike Egypt, it is clear that India developed a respect for the animal in historic times. Of actual worship there is little to record; but the pañcha-gavya, or five products of the cow, are important factors in exoreism and magic; as a means of annulling an unlucky horohagt; as a heads of annuing an unitary noro-scope, re-birth from a cow is simulated; the pious Hindu touches the tail of a cow at the moment of dissolution, and believes that it will carry him across the river of death; just as, in the last re-in-carnation before the assumption of the human form, the cow receives the spirit and brings it across the the cow receives the spirit and brings it across the river Vaitarani, which bounds the lower world. Cattle festivals are celebrated in Nepāl and Central India, but their object seems to be mainly magical. The nomadic Banjaras, however, devote a bullock to their god Balaji, and call upon it to cure them in sickness (Crooke, Pop. Rel. ii. 235-236). In Iranian mythology the moon is closely associated with the bull, and is regarded as containing the seed of the primeval bull (Būndabishm, iv. x.), whence one of the standing enithets hishm, iv. x.), whence one of the standing epithets of the moon in the Avesta is gaocitra, 'having the seed of the bull.' Here the underlying idea is evidently a fertility-concept (Gray, 'Maonha Gaocithra' in Spiegel Memorial Volume). In Zoroastrianism, moreover, as in Brāhmanism, the urine of the bull is one of the chief modes of religious praisfection (Marker in 195, 112). For the urine of the bull is one of the chief modes of religious purification (Muséon, ix. 105-112). For the bull and cow in the Veda, see de Gubernatis, Zool. Myth. i. 1-41; in later India, p. 41; in Persia and North Asia, p. 90 ff.; for the Slavs, p. 171; Teutons and Celts, p. 221; Greeks and Romans, p. 261 ff. For other cases of respect for cattle, see Hahn, Demeter, p. 60. For the bull as form of water god, see 'Water' above; see also de Gubernatis, i. 265.

In Greek cult the bull was associated with

Artemis Ταυροπόλος and Ταυρική, which Farnell interprets as referring to the agricultural functions of the goddess; in the worship of Ταυροπόλος the bull and cow were rarely, the calf never, sacrificed; the goddess is represented with horns on her shoulders, which are usually supposed to refer to the moon; the horns certainly appear in the representations of Selene, but the bull figures in the cult or representations of many non-lunar divinities, such as Themis, Dionysus, Demeter, Hestia, Apollo, Poseidon, etc. (Farnell, Cults, ii. 451, 454, 456, 529). The bull was one of the chief sacrificial animals in the cult of Zeus (for βουφόνια see below); and a cow was, in one form of the myth, his nurse (ib. i. 37, 95). Hera is termed βοῶπις by Homer; but there is no monument showing her as cowbut there is no monument showing her as cowheaded, and her eyes are often unlike those of the cow (ib. i. 20, 228); at Mycenæ, Schliemann found cow draθήματα; but this is of no value as evidence (ib. i. 181). White oxen drew the priestess in the lepòs γάμος (ib. i. 188). The bull was prominent among victims offered to Athene (ib. i. 290); an Athene Boarmia ('ox-yoker') was worshipped in Bœotia (ib. p. 291). In Crete two cults seem to have been mingled—that of a Semitic goddess whose animal was the goat and whose lover was whose animal was the goat and whose lover was the bull, and that of Zeus-Dionysus and Europa; the bull may originally have belonged to the latter, but it was certainly associated with Dionysus and to some extent with Zeus (ib. ii. 632, 645). The bull was important in the ritual of Astarte (ib. ii. 676). In the cult of the Syrian goddess worshippers sometimes cast their children from the Propylea of her temple, 'calling them oxen' (ib. i. 92). For the bull in Celtic religion, see CELTIC

Religion, § x. 8.

Bouphonia.—The sacrifice of an ox at the altar of Zeus Πολιεύς on the Acropolis requires to be noticed at length. The myth of origin is as follows: A certain Sopatrus, a stranger, was offering cereals, when one of his oxen devoured some of his cereas, when one of its otten devotined some of its corn; Sopatrus slew it; he was then seized with remorse and buried it; after which he fled to Crete; a dearth fell upon the land, and to remove the curse the sacrifice of the  $\beta o \nu \phi \delta \nu \mu a$  was instituted. The oracle directed that the murderer should be punished and the dead raised; all were to taste the flesh of the dead animal, and refrain not. The ritual was as follows: At the festival of the Diipoleia oxen were driven round the altar, and the one which tasted the cereals was the chosen victim. The axe with which the deed was done was sharpened with water brought by maidens and handed to the sacrificer; another cut the throat of the victim, and all partook of its flesh. The hide was stuffed with grass and sewn together, and the counterfeit ox was yoked to the plough. The participants in the sacrifice were charged with ox murder (Sovebora); and each laid the blame on the other; finally, the axe was condemned and thrown into the sea (Farnell, Cults, i. 56-58). This sacrifice has been interpreted by Robertson Smith as totemistic, but no totem sacrifice of this kind is known elsewhere. On the other hand, Mannhardt and, following him, Frazer have regarded it as connected with agriculture; but, as Farnell points out, the sacrifice of the corn-spirit is not attended elsewhere with a sense of guilt. The admission of where with a sense of guilt. Sopatrus to citizenship as a result of his sacra-mental meal lends little or no support to the totemistic hypothesis, although there was an ox-clan (Boutadæ) at Athens.

In modern European folklore the corn-spirit is frequently understood to take the form of a bull or cow (Golden Bough 2, ii. 279 ff.). Perhaps we may p. 44; Panzer, Beitrag, ii. 117; FLJ iv. 118; Schweiz. Archiv, ii. 228, cf. 178; Rolland, Faune, vi. 91; NQ, 9th ser. vii. 247, etc.). The same explanation probably holds good of the Athenian sacrifice of the Bouphonia (see above), after which a mock trial took place, in which the instruments of sacrifice were condemned to be cast into the sea. Possibly we may apply the same explanation to the spring ox of the Chinese (Zool. Garten, 1900, p. 37). The emperor offers a hecatomb annually to heaven and earth; the animals must be black

or red-brown (ib. p. 31).

In Egypt and India the bull or cow played the part of a scapegoat (Golden Bough<sup>2</sup>, iii. 1).

Among the Abchases a white ox, called Ogginn, was sacrificed annually, perhaps as a 'pastoral'

sacrifice (see above).

The Ova-Hereros have some practices which have been interpreted as totemistic. They are divided into eanda and oruzo; membership of the eanda is inherited through the mother, and is inalienable; the oruzo, on the other hand, descends, like the chieftainship and priesthood, in the male line. The omaanda are named after the sun, the rock rabbit, rain, etc.; the otuzo, after the chameleon, etc.; they are distinguished (1) by the practice of keeping or not keeping cattle with certain marks, and (2) by practising certain abstinences with respect to cattle and other animals; the orosembi oruzo, for example, do not keep grey oxen or injure the chameleon. It seems clear that the omaanda comes nearer the totem kin, though no totemistic practices are assigned to its members (Zts. Vgl. Rechtsw. xv.; Mitt. Or. Sem. pt. iii. v. 109; Ausland, 1882, p. 834). It has been recorded that certain plants are sacred to each 'caste,' but whether eanda or oruzo is meant is not clear (Andersson, Lake Ngami, 228). The Batokas break their upper teeth at puberty to make themselves like cattle; but here, too, there is no connexion with totemism (Livingstone, Miss. Trav. p. 532), for it is not confined to any special clan.

Among the Bechuanas a cow or bull that beats the ground with its tail is regarded as bewitched (Mackenzie, *Ten Years*, p. 392). In the Hebrides, oracles were given by a man wrapped in a fresh bull's hide and left all night at the bottom of a precipice near a cataract (Saussure, New Voyages, Lond. 1819, vol. viii. 92). The Kalmuks take an oath by the cow; the accused stands on the skin of a black cow, moistened with blood, and jumps

over the threshold (JAI i. 415).

In opposition to the practice or the African pastoral peoples, of the Hindus, and probably of ancient Europe (Hahn, Demeter, pp. 60-61), the East Asiatic culture area abstains from the use of milk, regarding it as a pathological product (ib. p. 21). These peoples employ their cattle for draught 21). These peoples employ their cathe for graught purposes only, over a considerable area (ib. p. 60; Zool. Garten, 1900, p. 34), without using them as an article of food; they explain their abstinence on the ground that it is improper to eat an animal which labours to provide them with food. There is nothing to show that the Hindu and Chinese explanation of the sacrosanctity of cathle within their grees is incorrect; and possibly the African their areas is incorrect; and possibly the African tabus are explicable on similar grounds. It seems clear, however, that the Chinese learned to know cattle as draught animals, possibly as sacred animals, and not as direct factors in the economic situation. Prima facie this leads us to suppose that cattle were domesticated for a long period before the use of milk was introduced, for otherwise the practice of abstinence in China is hard to explain. On the other hand, it seems probable look to this conception for an explanation of the custom of leading round, about Christmas, a man introduction into the East Asiatic culture area; clad in a cowskin (ib. 447; Evans, Tour in S. Wales,

way of breeding cattle for food and at the same time making use of their labour in agricultural

operations.

Hahn has argued (Die Haustiere, Leipzig, 1895; Demeter und Baubo, Lübeck, 1896) that we must look to a religious motive as the decisive factor in the domestication of cattle. If neither the milk nor the flesh was originally used, we are left to choose between the religious and utilitarian theories of domestication. It is by no means impossible that the idea of replacing hoe culture by plough culture may have occurred to a people destitute of domestic animals; and they may have proceeded to tame and utilize cattle for this purpose. But in this case we should expect to find that man as a draught animal preceded the ox as the motive power of the plough; there is, however, no evidence of this. It seems, however, far more probable that man already had cattle in partial subjection, and that possibly on religious grounds he proceeded to employ them in agriculture, than that he took but a single stride from hoe culture to ploughing with cattle. The use of milk in early times as an offering seems to point in the same direction; for there would be no special reason for attaching sanctity to the products of an animal domesticated for utilitarian purposes. As to the grounds which led to cattle becoming associated with religion in the first instance, Hahn has put forward a theory that it was the shape of their horns which brought them into connexion with the crescent moon. The cult of the moon has undoubtedly been wide-spread, and was indisputably important in the West Asiatic area, where appearances suggest that we may locate the domestication of cattle. There is, however, no evidence that the horns of the ox were in fact brought into connexion with the sickle of the moon at an early period. On the whole, it seems more probable that cattle, like the bison among the Pawnees, were associated with agriculture, possibly as a form of the corn-spirit, before they came under man's domination. The association of the moon with vegetation would naturally result in bringing cattle into close connexion with the moon-goddess. Just as the Pawnees use the bones of the bison as hoes, it would be a natural idea to impress cattle, on this theory, into the service of agriculture on magical grounds, even if they were not employed at an earlier period as draught animals for the car of the god or goddess, and thus inured to labour. If their employment as draught animals in the sacred car was the primitive usage, it seems probable that the processions would visit the fields, and herein we may see another factor which may have suggested the use of the draught animal for the plough.

See also 'Earth-carrier,' 'Earthquakes,' 'Vegetation,' 'Water,' in present article.

Coyote.—The coyote figures largely in American mythology, especially among the tribes of California. The Gallinomeros attributed to him the creation of the sun, with the aid of the hawk, from a ball of tules (Bancroft, iii. 85). The Neeshenams made him their ancestor, and told how he rescued them later from a terrible old man (ib. 546). In Shuswap and Kutenay myths he is the Creator (Brinton, Myths, p. 161). According to the Chinooks, he was the creator of the human race, but fashioned men clumsily, so that another powerful spirit had to open their mouths and teach them how to make canoes (Bancroft, ib. 95). The Cahroks attributed to him the rôle of Prometheus; fire was in the possession of some old hags, and the coyote outwitting them brought a brand away in his mouth (ib. p. 115). They also said that he stocked the river Klamath with salmon (ib. p. 136). Many tribes held that they were descended from covotes; the Potoyantes,

or Coyote Indians, related how the primeval coyotes gradually assumed the shape of man (ib. p. 87). Many tribes worshipped the coyote (Bancroft, iii. 137; Brinton, p. 161). The Nahass erected a 137; Brinton, p. 161). The Nahuas erected a temple to him and buried him at death (ib.). Among the Acagehemens the coyote was one of the forms under which the god Chinnigchinich was worshipped (Bancroft, iii. 166). The coyote figures in the Deluge myth of the Papagoes; he warned Montezuma, and with him escaped the Flood (ib. The Pomos made him the hero of one of the widely spread myths of a water-swallower; he drank up Clear Lake and lay down to sleep off the effects; a man pierced him; the water flowed out, and with it the grasshoppers on which he had made a meal; and they became the fish that are found in the lake (ib. p. 86). The Shastas told a legend of how there were once ten suns and ten moons, so that man was in danger of perishing by heat and by cold alternately; the coyote slew nine of each, and saved the human race (ib. 547) (for other coyote myths see Bancroft, iii. 545, 549; Müller, *Geschichte*, pp. 64, 108b, 134). According to some of the Navahos, bad men are turned into coyotes at their death (Bancroft, iii. 528).

Crab, lobster.—The lobster was generally considered sacred among the Greeks; if the people of Seriphus found a dead lobster, they buried it, mourning over it like one of themselves; a living one caught in their nets they put back into the sea (Frazer, Tot. p. 15). They held that it was dear to Perseus (Hartland, Legend of P. i. 9). In New Caledonia a crab goddess or demon is known, who has a sacred grove, on the trees of which are hung little packets of food for her. She is in the form of an enormous land crab, and causes elephantiasis; she is the enemy of married people; the little crabs are her messengers, and are feared as such (Miss. Cath. 1879, p. 28). In one district of Madagascar the lobster is tabu; it is never eaten or caught

(v. Gennep, *Tabou*, p. 292). Crocodile.—The Egyptian god Sebek was believed to take crocodile shape; sometimes he was represented as wholly animal, sometimes only with a crocodile head; offerings of cake, meat, and honey wine were made to the sacred animals, which were tame with the priests; oracles were drawn from their behaviour; they were embalmed at death (Wiedemann, Religion, p. 191). The alligator is said to be put into a tank in India sometimes and proven the property of the prope worshipped (Crooke, ii. 253). In West Africa, Bastian saw crocodiles fed in a pond, but it does not appear whether they were regarded as sacred (Bilder, p. 161). The crocodile is respected in many parts of Africa and Madagascar (Int. Arch. xvii. 124 ff.; v. Gennep, Tabou, p. 279 ff.), the Malay Peninsula (JRAS, S.B., No. 7, p. 24), and New Georgia (JAI xxvi. 386). In New Guinea and the East Indies crocodiles are frequently respected as being the abodes of souls of ancestors (Hagen, Unter den Papuas, p. 225; Hawkesworth, Voyages, iii. 759); so, too, in West Africa (Hutchinson, Impressions, p. 163); any one who falls a victim to a crocodile is supposed to have incurred the vengeance of some one who has taken that form; those who kill crocodiles are supposed to take that form after death. Slightly different is the Malagasy view, which makes the crocodile the ally of the magician in his lifetime (v. Gennep, Tabou, p. 280). The Matabele hold that killing a crocodile is a serious crime, because its liver and entrails The Matabele hold that killing a crocodile can be used as charms (Decle, Three Years, p. 153); so, too, the Bechuanas (Mackenzie, Ten Years, p. 390). On the other hand, some of the Bantu tribes it is not clear whether the Bakuenas alone or not (probably not; cf. Chapman, Travels, i. 46)—seem to regard the crocodile in another light. A man over whom a crocodile splashes water is excluded

from the village, in other cases a man bitten by a crocodile (Merensky, Beiträge, p. 92; ZE i. 43); the dead crocodile is handed over to the doctors to make medicine of; if one is killed, the children cough, and a piacular sacrifice of a black sheep must be offered (Merensky, loc. cit.). In many places the crocodile is attacked only if it has already shown its hostility to man. The Antialready shown its hostility to man. The Anti-merinas trace their descent from the crocodile, which, however, formerly waged war on them, which, however, formerly waged war on them, after which a treaty was made. If this is violated, notice is given in the district, and complaint is made of the offence on the shores of the lake; the crocodile tribe is called upon to hand over the offender, and to make matters more certain a baited hook is thrown into the water. On the following day the capture is hauled up, condemned to death, and executed on the spot. Thereupon to death, and executed on the spot. Thereupon the persons present begin a lamentation; and the body is wrapped up in silk and buried with the ceremonies usual at the interment of a man. its grave a tumulus is raised (v. Gennep, Tabou, p. 281 ff.). The same precautions are taken and the same respect is shown in Borneo and Sumatra (Golden Bough', ii. 390 ff.). In the Philippines, offerings were made even when the islanders had no intention of attacking the animals (Marsden, Sumatra, p. 303). In North Arakan the ceremony of ya, or 'tabu,' is strictly performed when any one belonging to a village has been killed by an alligator (JAI ii. 240). This is perhaps explained by the belief of the Philippine Tagalogs that any one so killed becomes a deity, and is carried up by the rainbow (Marsden, Sumatra, p. 301). Connected possibly with the belief that the crocodile is a magician or his servant, is the Basuto belief that a crocodile can seize the shadow of a passer-by and draw him into the water; it is believed to suck the blood of the men and animals thus captured, but not to injure them otherwise—a point which still further brings it into relation with the magician (Arbousset, p. 12). Among the Jabuns and in Celebes it is believed that women sometimes give birth to crocodiles or to twins one of which is a crocodile (Hagen, *Unter den Papuas*, p. 225; Hawkesworth, iii. 756). In Celebes, families which tell of such a birth constantly put food into the river for their relatives; more especially the human twin goes constantly at stated times to fulfil this duty, neglect of which is said to cause sickness or death. In South Africa the Bawendas draw the figure of a crocodile on the ground at the girls' initiation ceremony (ZE xxviii. 35). In the west of Ceram boys are admitted to the Kakian association at puberty; in some parts the boys are pushed through a crocodile's jaw of wood, and it is then said that the devil has swallowed them, and taken them to the other world to regenerate and transform them (Golden Bough<sup>2</sup>, iii. 442). Amours between crocodiles (or caimans) and human beings are recorded in Senegambian, Malagasy, Basuto, and Dayak folklore (MacCulloch, 260, 267).

Dayak folkfore (MacCullech, 260, 261).

Crow, raven.—The most important area for the worship of the crow, or, if not worship, for the pre-eminence of the crow in the pantheon, is the northwest coast of America. Among the Thlinkets the chief deity, sometimes identified with the raven (but of. JAI xxviii. 144), is Yehl. In the Creation with he plays a part similar to that extributed to myth he plays a part similar to that attributed to the thunder-bird in the Chippewayan myth, and produces dry land by the beating of his wings; probably Chethl, the name of the thunder-bird, and Yehl, the Creator, are variants of the same word, which is also written Jeshl (Bancroft, iii. 100 ff.). The neighbouring Haidas of Queen Char-The neighbouring Haidas of Queen Charlotte Islands make the raven their ancestor (Frazer, Tot. p. 5; Mission Life, iii. 32; Macfie, Vancouver, i. p. 452; but see Boas, Indianische Sagen, p. 306 f.,

where the chief incident is a contest between Yehl where the chief incident is a contest between Yehl and his uncle). The crow figures as Creator in the Eskimo and Chukchi mythology (Seemann, Voyage of Herald, ii. 30, 67, 72; Zts. Geog. Ges. Thür. vi. 120). It also figures in a Javanese myth of origin (Med. Ned. Zend. xxxii. 131). Among the Gros Ventres it played an important part in the creation of the world (Coues, Henry and Thompson, MS Journals, i. 351). The crow appears occasionally in Deluge myths (Rel. des Jés. 1633, p. 16; Am. Rev. viii. 397; Ann. Prop. Foi, xiv. 52, etc.), and the early date of the first notice seems to establish the native character of notice seems to establish the native character of the myth; in several cases the crow is said to have the myth; in several cases the crow is said to have been originally white, but to have suffered a change as a punishment (Ann. P. F.; Am. Rev., loc. cit., Boas, p. 273), or for some other reason (Leland, Algonquin Legends, p. 27); a similar myth is found in Europe (Wiedemann, Ehsten, p. 404; Zts. deutsches Altertum, N.S. x. 15). In the north-west of America the grow is a culture here who west of America the crow is a culture hero, who brings the light, after tricking the power in whose possession it is, or gives fire to mankind (Bancroft, loc. cit.). The same trait is found in Victoria (Parker, Aborigines, p. 24; but of. Dawson, Aust. Abor. p. 54, where the crows are represented as keeping the fire to themselves). Among the Algonquins the crow was held to have given man Indiancorn and beans (Williams, 'Key into the Language of America' in *Mass. Hist. Soc.* iii. 219). A Spanish expedition in California in 1602 reported that the Indians of Santa Catalina Island venerated two great black crows; but it seems probable that they were in reality buzzards (Bancroft, iii. 134), which are known to have been respected and worshipped in California (Golden Bough<sup>2</sup>, ii. 367). As a parallel fact may be quoted the keeping of ravens at Nimeguen at public expense (Hone, Everyday Book, i. 44). The Ainus also keep crows, and reverence them (Frazer, Tot. p. 14). For Indian reverence them (Frazer, Tot. p. 14). For Indian crow myths, etc., see Crooke, i. 166, ii. 243-245. The name of the crow is sometimes tabu (Holz-

maier, Osil. p. 41; cf. Wiedemann, Ehsten, p. 492, for another form of respect). It is not killed in Victoria (Morgan, Life of Buckley, p. 58; Parker, Abor. p. 25), New England (Williams, in Mass. Hist. Soc. iii. 219), among the Gilyaks (v. Schrenck, December 21). Reisen, iii. 437), parts of Europe (Folklore, xi. 240; New Voy., London, 1819, iv. 60), and North America (Pennant, Arctic Zoology, p. 246), the explanation given being that it contains the souls of the dead (Morgan, Parker; cf. Crooke, ii. 243). Connected possibly with the idea of the crow as a soul-animal, at the helicit that it being the children (Grannia). is the belief that it brings the children (Germania, is the belief that it brings the children (Germania, xvii. 349; Ploss, Kind, p. 12; Zts. d. Altertum, N.S. x.11; cf. Aelian, de An. Nat. iii. 9; Hesychius, Lexicon, s.v. κουριζόμενος, etc.). The crow is one of the birds which figure in the annual processions so commonly found in Europe (Schütze, Holst. Idiot. iii. 165; J. des V. f. Meckl. Ges. ii. 123). Either a living crow or the nest was carried round. Frazer's suggestion (Golden Bough?, ii. 446 n.) that the crow song of the ancient Greeks (Athenæus, viii. pp. 359, 360) was used in connexion with a similar ceremony may be regarded as certain. In similar ceremony may be regarded as certain. some cases the crow is killed (Niedersachsen, v. 126). The ceremony is probably connected with the idea of the expulsion of evils. Offerings are made to crows at funerals in India (Home and For. Miss.

Rec. 1839, p. 303).

As a bird of omen, the crow, raven, or rook is As a bird of omen, the crow, raven, or fook is inauspicious (Dorman, Prim. Sup. p. 224; Purchas, ii. 1758; Billings, i. 231; Zts. des V. f. Volksk. iii. 134; Wolf, Beiträge, i. 232; Henderson, Folklore of N. C. p. 20, etc.; the Talmudic tractate Shabbath, 67b). Occasionally it is the reverse (Autob. of Kah-ge-ga-bowh, p. 48), especially at a funeral (Crooke, ii. 243). The crow is specially associated with sorcerers in Australia (JAI xx. 90), America (Schoolcraft, Ind. Tr. iv. 491; Adair, Hist. pp. 173, 194), and Europe (Clouston, Folklore of Raven, p. 20). The Twanas hold that when a person is very sick the spirit of some evil animal, sent by a wizard, has entered into him and is eating away his life (Eells, Ten Years, p. 43). Ancient diviners sought to imbue themselves with the spirit of prophecy by eating the hearts of crows (Golden Bough², ii. 355); and raven broth in Denmark is held to confer the powers of a wizard on the person who tastes it (Clouston, loc. cit.). The crow is largely used in magical recipes (Folklore, xi. 255). A stone found in its nest is believed to confer invisibility (FLJ vii. 56; Alpenburg, Alpenmythen, p. 385). Both in India and Greece the brains of crows were regarded as specifics against old age (Crooke, ii. 245; Golden Bough², ii. 355). For folk-tales of the crow see de Gubernatis, Zool. Myth. ii. 250-258, and Pauly-Wissowa, s.v. 'Aberglaube,' p. 76.

Cuckoo.—In various parts of Europe are performed ceremonies named after the cuckoo. At Pollern, near Thieux, was held, on August 21st, a cuckoo court: husbands whose wives deceived

Cuckoo.—In various parts of Europe are performed ceremonies named after the cuckoo. At Pollern, near Thieux, was held, on August 21st, a cuckoo court; husbands whose wives deceived them had to appear, and at the end of the proceedings the last married man in the village was thrown into the water (Düringsfeld, Cal. belge, ii. 115). In other parts the ceremony was in the middle of April (Rolland, Faune, ii. 91). At Stembert a man called the cuckoo was placed on a waggon with the last married man of the village by his side; they were dragged through the village and the cuckoo was thrown into the water (Harou, Contrib. IX. ii.). With these customs we may perhaps connect a Harz custom of putting a cuckoo into the bride-chamber, probably as a fertility charm (Pröhle, Harzbilder, p. 87), and the cuckoo dance at North Friesland marriages (Ausland, Ivii. 810). In S.E. Russia at Whitsuntide, a pole is put up with a cuckoo upon it; round this a dance is performed (ib. lix. 253). A cuckoo dance was also known in Lithuania, for which the third day after Easter was the proper season (Wurzbach, i. 216). Among the Rajputs of India the girls paint a cuckoo on a tree or board at the Dusserah festival, and lay flowers and rice on it; they then call till a cuckoo comes (Bombay Gaz. IX. i. 137). The scavenger caste also worship cuckoos (ib. p. 380). A cuckoo tabu is very common in European folklore (Folklore, xi. 240), and in Madagascar (v. Gennep, Tabou, p. 264). Like many other migrants, it should be greeted in the spring by leaping or running (Traditions pop. iii. 345). It is said to lay Easter eggs (Schw. Arch. i. 115), and 'cocu-mallard' is one of the names given to 'Blind Man's Buff' (Trad. pop., loc. cit.). The cuckoo is a bird of bad omen (Böcler-Kreutzwald, Ehsten, p. 140; Russwurm, Eibvoolk, sec. 358; Melusine, i. 454). It is connected with rain (Panzer, Beitrag, ii. 172; de Gubernatis, Zool. Myth. ii. 235). It is commonly believed that it is not a migrant, but turns into a hawk (cf. de Gubernatis, ii. 231). For cuckoo my

Deer.—Tame deer were kept in Guatemala, which were held sacred by the inhabitants on the ground that their greatest god had visited them in that form (Bancroft, iii. 132). The natives of Nicaragua had a god whose name was that of the deer, but the animal was not regarded as a god; they explained it by saying that this god had to be invoked by those who hunted the deer (ib.). Deer are tabu in Sarawak, and both there and in California they are held to be the abode of souls of deceased ancestors (JAI xxxi. 187, 193; Bancroft, iii. 131). In West Africa an antelope is sacrificed annually (Ellis, Tshi-speaking Peoples, p. 224).

Especially in America, deer, moose, and elk were treated with great respect by hunters; their bones might not be given to the dogs, nor might their fat be dropped upon the fire, because the souls of the dead animals would know that they were not being properly treated and tell the others. In Honduras the Indians preserved the bones till their houses were quite encumbered, for they believed that otherwise they would not be able to take other deer. If a man were ill among the Chiquitos, the medicine-man would explain it by saying that he had thrown deer flesh away, and the soul of the deer had entered him and was killing him. The Tzentales and Kekchis offered copal to a dead deer before they ventured to skin it. Cherokee hunters ask pardon of the deer they kill, otherwise Little Deer, the chief of the deer tribe, who can never die or be wounded, would track the hunter by the blood drops and put the spirit of rheumatism into him. The Apache medicine-men resorted to certain caves, where they propitiated the animal gods whose progeny they intended to destroy. When the Thompson River Indians of British Columbia killed a deer, they thought the survivors were pleased if it was butchered cleanly and nicely; if a hunter had to leave some of the meat behind, he hung it on a tree, especially the head, so that it might not be contaminated by dogs and women. Venison was never brought in by the common door, because women used it; the head was never given to the oldest or the second son of a family, for that would make the deer wild (Golden Bough?, ii. 406). The Eskimos of Hudson Bay believe that a white bear rules over the reindeer. They pray to him to send the deer, and assure him that they have been careful to treat the deer well (ib. p. 408). Deer and sea-animals may not come in contact with one another (2nd Ann. Rep. Bur. Ethn. p. 595).

The deer is eaten by more than one tribe in connexion with the feast of new corn. Among the

The deer is eaten by more than one tribe in connexion with the feast of new corn. Among the Delawares, venison and corn were provided, and divided into twelve parts, according to the number of the old men who took part in the ceremony; after they were eaten, the new corn was free to all: in the evening, venison was again eaten and the remainder burnt, for it might not remain till the sun rose, nor might a bone be broken. A deer burnt-offering was made with much ceremony once a year (Beatty, Journal, p. 84; cf. Rupp, History of Berks, p. 23, quoting a letter of W. Penn). The Housatunnuks also had a deer feast, but it is not brought into connexion with agriculture (Hopkins, Hist. Memoirs, p. 10). Probably the deer was regarded as a form of the corn-spirit; for in Florida it was the custom to take as large a deer hide as could be procured, leave the horns on it, and at the end of February fill it with all manner of herbs and sew it together. They then proceeded to an open space and hung the skin upon a tree, turning the head to the east. A prayer was then offered to the sun, asking that these same fruits might be given. The hide was left up till the following year (JAI xxxi. 155; cf. the account quoted on p. 156 from Prætorius). Probably a Papago rain dance performed beneath a deer's head stuck on a pole in the month of July may be similarly interpreted (ib.). A small deer figures largely in Malay and other folk-tales (Skeat, Fables).

Dog.—It can hardly be doubted that the dog is the oldest, as it is also the most widely spread of the domestic animals. It has been maintained (Ausland, 1881, p. 658) that man's association with the dog was due in the first place to its being used as food. Though there is no reason to suppose that the religious factor entered into the causes which brought about its domestication, the food

化原基橡皮器 人名德格

theory seems less probable than the view that the dog made himself the companion of man, rather than that he was brought into subjection by the acts of man (cf. Much, Heimat der Indogermanen, 182–185). The dog is used as an article of food by a large number of peoples of low grades of culture, and sometimes by higher grades, e.g. the Chinese. It was used by neolithic man in Europe for the pursuit of game, and is employed in a for the pursuit of game, and is employed in a similar way all the world over at the present day. In some cases the breed has become in no way specialized thereby; but among the Batuas (Int. Arch. ix. 111), pigmies of the African forests, a great advance in this respect is found. Among the great advance in this respect is found. Among the Ainus the dog is used for capturing fish (Howard, Life, p. 51). Mainly in Arctic and sub-Arctic regions it is used as a draught animal; occasionally as a beast of burden. It was used by the Cimbri in war; the same usage prevailed in Uganda and Usukuma. (For the uses to which the products of the dog are put, see Int. Arch. ix. 140 ff.).

'Dog' is found as a term of abuse among Semitic and most Muhamma.

'Dog' is found as a term of abuse among Semitic and most Muhammadan peoples; among the Romans the contempt thus expressed was less

than in modern Europe.

A myth of dog ancestry is not uncommon; it is A myth of dog ancestry is not uncommon; it is found in Alaska (Lisiansky, pp. 196-197), among the Dog Ribs (Petitot, 311 ff.), the Ojibwas (Frazer, Tot. p. 4), in Madagascar (v. Gennep, p. 231), Indo-China (As. Q. Rev. 3rd ser. i. 140), Kirghiz (Petermann, 1864, p. 165), New Guinea (Chalmers, p. 151), among the Kalangs of Java (Raffles, i. 328), and even in Europe (Liebrecht, p. 19; see also in general MacCulloch, 263 f.). In the Pomotu islands the first race of men are held to have been made into dogs (Miss. Cath. 1874, 343).

Especially in N. America the dog (coyote) figures in Creation myths (Bancroft, pass.), and occasionally in Deluge myths (see 'Deluge'). The Pottawatomies believe that in the moon is an old woman making a basket; the earth will be destroyed when it is finished; but a great dog ruins her work at intervals and then results an eclipse (Ann. Frop. Foi, xi. 490). Among the Mongols, Mbocobis (Int. Arch. I.c. 147), Chiquitos (Tylor, i. 329), Chinese (Ann. Prop. Foi, xxii. 355), etc., a similar association of the dog with eclipses is found. In Kamtchatka, earthquakes are attributed to Touile's dog, Kozei (Krachenninikow, i. 94). Classical mythology tells us of Cerberus (q.v.), who guards the entrance of the Infernal Regions (see Bloomfield, Cerberus, the Dog of Hades). In N. Borneo a fiery dog is held to watch at the gate of Paradise, and to lay claim to all virgins (Forster, ii. 239); the

and to lay claim to all virgins (Forster, ii. 239); the Massachusetts also believe that a dog watches the gate (Wood, p. 104); so, too, the Eskimos (ZE, 1872, 238); and the Iroquois the bridge by which souls had to pass (Rel. des Jes. 1636, 104).

Yama was held to have two dogs, whom he sent out to bring in wandering souls (Rig Veda X. xiv. 10-12; Atharva Veda, viii. 1, 9); and these dogs, described as four-eyed (i.e. with two spots above the eyes), recur in the Avestan dogs that guard the Chinvat Bridge, which leads from this world the eyes), recur in the Avestan augs that the Chinvat Bridge, which leads from this world to the future life (Vendīdād, xiii. 9; Sad Dar, xxxi. 5; cf. Scherman, Materialien zur Geschichte der indischen Visionsliteratur, pp. 127-130, and the

references there given).
The Aztecs sacrificed a red dog to carry the soul

p. 421).

The Tlaxcalans hold that a wer-man appears as

wer-dog was believed to sit at cross roads (Wahlen,

The Baschilange (*Mitt. Af. Ges.* iv. 255) and Tonkinese (*Z. allg. Erdk.* i. 108) believe that human souls take up their abode in dogs.

Actual dog-worship is uncommon. sairis and others are said to worship a dog (W. R. Smith, p. 291). According to Raffles (i. 365), the Kalangs worship a red dog, and each family keeps one in the house; another authority says they have images of wood in the shape of dogs, which are worshipped, and burnt 1000 days after the death of the person (Tijd. xxiv. 427). In Nepāl, dogs are said to be worshipped at the festival called Khicha Puja (Wright, 39 ff.; for other Indian cases see Crooke, ii. 218 ff.). The Yorubas have a demi-god, Aroui, god of the forest, with a dog's head (*Miss. Cath.* 1884, 221). Among the Harranians dogs were sacred, and held to be the brothers of the mystæ (W. R. Smith, p. 291). In brothers of the mystæ (W. R. Smith, p. 291). In ancient Egypt, dogs were commonly respected and mummified, in particular at Cynopolis (Strabo, 812). In ancient Persia the dog was held in the highest esteem, and most rigorous penalties were exacted for killing it (Vendidād, xiii. xv. 19-51; Dēnkart, viii. 23). It was employed, moreover, in the sagdīd, 'dog's gaze' of the Parsi funeral ceremony, in which a 'brown four-eyed' dog or a 'white dog with yellow ears,' was made to look at the corpse three times, and was also led three times back over the road traversed by the corpse times back over the road traversed by the corpse (Geiger, Ostiranische Kultur, 264-265; Karaka, History of the Parsis, i. 197; Jackson, Persia Past and Present, 388 f., 391 f.). The Bahnars say the dog is under the protection of Bok Glaih, god of thunder (*Miss. Cath.* 1894, 133). Sometimes only the use of dog's flesh is prohibited. The dog is found as a totem in Alaska (Lisiansky, 196) and in West Africa (Ellis, Tshi-sp. p. 206); a dog-kin is found in Madagascar (v. Gennep, p. 234). In German New Guinea an offering of food is made to the spirit of a dog (Nachr. K. W. land, 1897, 88). Among the Ot Danums the bodies of dogs are buried near the houses, rice and salt are given them in the grave, and rice is strewn on the grave to induce the gods to send the souls to the dog-heaven (Schwaner, 78). The Woguls lay the bodies of specially useful dogs in a small hut (Ides, p. 7). of specially useful dogs in a small hut (Ides, p. 7). In Egypt a family shaved clean when the dog died (Herod. ii. 66); and so, too, the owner among the Masai (Ausl. 1857, 442), The Gonds purify themselves when a dog dies (Hislop, Papers, p. 6). The Tunguses take an oath by the dog, drinking its blood (Ides, 45). The exposure of the dead to dogs may spring from a similar idea; it is found among the Magi, Bactrians, Hyrcanians, and others (Spiegel, iii. 703), in Tibet (JRAS, S.B. lix. 212), Java (Verh. Bat. Gen. xxxix. 40), and Kamtchatka (Krachenninikow, p. 189). Omens are frequently drawn from dogs (Crooke, ii. 222 ff.; Ausland, 1891, 574; Z. Ver. Volksk. iii. 134, etc.). The Kalangs strew ashes on the floor, and if a dog's footmarks are seen, judge that the ancestors are favourable are seen, judge that the ancestors are favourable to a marriage (Tijd. T.L.V. xxiv. 424).

Connected with the sanctity of the dog is its use

in art; in Borneo it is a frequent tatu pattern (JAI xxxv. 113). As might be expected, the dog is frequently sacrificed. The best known case is that of the Iroquois, who kill a white dog in January of the king across a deep stream (Bancroft, ii. 605), or announce his arrival (ib. iii. 538; cf. Ober, 9. 320); in Louisiana they killed their sick and sent dogs on to make the announcement (Stoddart, p. 421).

The Tlaxcalans hold that a wer-man appears as a capegoat; it is then burnt, and the ashes sprinkled at the door of every house; but there is some doubt as to the antiquity of the practice (Golden Bough³, iii. 72, 109). Other authorities vary the details (Ontario Arch. Rep. 1898, 91; Sanborn, Legends, p. 7; Miss. Her. xxv. 91, etc.).

Other dog-sacrifices are found among the Sacs and Foxes (Miss. Her. xxxi. 86), the Ottawas (Perrot, Mœurs, 19), the Mayas at New Year (Bancroft, ii.

703), and in the cacao plantations in May (ib. 692), in Honduras before war (ib. i. 723), etc. (see Bancroft, passim). The Fuegians offer dogs (Voice from croft, passim). The Fuegians offer aggs (voice from S. Apr. xiii. 211). In Asia, dog-sacrifice is found in China (Ann. Prop. Foi, xxxvii. 217), Aracan (Miss. Cath. 1881, 69), Java (Med. Ned. Zend. xvi. 307), etc. In Luzon the firstborn of a bitch are drowned (Globus, xlviii. 186). In Africa a dog is sacrificed by the Baghirmis (Barth, iii. 571; see also Int. And in 144 viii 125 for further references). Int. Arch. ix. 144, xvii. 135, for further references).

In Greece the dog was regarded as unclean, but was used for ceremonies of purification in Beotia, probably as the animal of Hecate, to whom the Argives offered a dog. The Spartan ephebi offered a young hound to the war-god (Farnell, Cults, ii. 507 n.). The Romans connected dogs with the Lares (Fowler, Rom. Fest. 101). They were sacrificed on April 25 (ib. p. 90), and in the Lupercalia (ib. pp. 313-314).

The dog is frequently used in magic. In Dahomey a dead dog is hung up as a protection against sorcery (Robertson, Notes on A. 291; Ellis, Ewe, 93). In Greece its flesh was used as medicine (Paus. iii. 250); so, too, among the Chukchis (Sauer. In Greece the dog was regarded as unclean, but

Eve, 93). In Greece its flesh was used as medicine (Paus. iii. 250); so, too, among the Chukchis (Sauer, Reise, 236). Among the Kimbundas its flesh is reserved for warriors (Magyar, Reisen, 309). The dog figures in more than one ceremony of uncertain import. In China a big dog is dressed like a man and carried round in a palanquin in times of drought (Ann. Prop. Foi, xxii. 355). The Orang Dongus whip a black dog round the kampong in the first new moon after the rice season (Journ. Ind. Arch. ii. 692). The resemblance of the custom to the dog-whipping of the Carnival, the custom to the dog-whipping of the Carnival, handed down as a popular custom here and there nanded down as a popular custom here and there in England (Nicholson, Folklore, p. 22), suggests that it is meant as an expulsion of evils (cf. Waling Dykstra, p. 318). For Jewish beliefs concerning the dog see Kohler, JE iv. 631 f.

Dragon.—Although the dragon is usually associated with the peoples of East Asia, it is by no means unknown in Europe. Not only is the story of St. George and the dragon told (Hartland, Legend of Perseus, pass.), but we find in the Mabinogion the same legend of the fighting dragons as occurs in the Malay Peninsula (cf. Skeat, Malay Magic, p. 304). In European folklore the dragon is taken round in procession at many places (Grande Encyclopédie, s.v. 'Dragon'), and there are many local dragon legends. Part of Anglesey is said to have been ravaged by a dragon; at last a champion tackled it, but his victory brought him reproof, not reward, for he had done his deed on Sunday. In the Alps a dragon inhabits a tarn; if a stone is thrown in, rain will follow, however good the weather may be; for if it hits the dragon, its movements throw up so much spray that a mist appears from which the rain condenses (Jecklin, Volkst. i. 44). On Norse houses the dragon sometimes figures as a weather-vane or gable decoration. coration. Germanic mythology abounds in stories of dragons, which inhabit air, water, and earth, bringing woe (and, more rarely, weal) on men and animals, spitting forth fire and venom, and guarding treasures (Meyer, Germanische Mythologie, 95–100). There is a proposer as a princip cycle of these 100). There is, moreover, an entire cycle of tales, exemplified in the story of Perseus and Andromeda, in which human sacrifices must be made to a dragon, who is finally slain by the hero (MacCulloch, 381-409).

The association of the dragon with water is by no means confined to the West; in China the waterspout is regarded as a dragon, which is never seen completely, for its head or its tail is always invisible. The dragon and the tiger are at enmity,

falls (Doolittle, Social Life, ii. 264, i. 275). The great dragon lives in the sky, and the emperor is the earthly dragon (Gould, Mythical Monsters, p. 215; see pp. 215-257, 377-404). In Japan the dragon is associated not only with water but also with a variety of other things. The dragon produces nine young at a birth, each with different qualities; hence dragons are carved on bells, musical instruments, drinking vessels, weapons, books, chairs, and tables, according to the particular tastes of the different kinds of dragon. ticular tastes of the different kinds of dragon. One kind loves dangerous places; consequently it is put upon the gables of houses (Natur, 1878, p. 549). India, too, had its dragons; one used to lie in wait for boats or ships, hiding itself on a neighbouring mountain; a criminal obtained his life on condition of ridding the country of the pest; he had human figures made, and the bodies filled with books at a the dragon devoured them and per hooks, etc.; the dragon devoured them, and perished (*Lettres édif.* xviii. 409; cf. Crooke, ii. 129—131). In the same way in the last century a dragon on the borders of Wales was said to have been induced to meet his fate by putting red flannel round a post on which sharp spikes were fixed. Tiamat is the cosmogonic dragon of Babylonia (see

Tiamat is the cosmogonic dragon of Babylonia (see BAB.-ASSYR. RELIGION).

Eagle.—The eagle is frequently respected, but, except in Australia, the respect does not seem to have risen to an actual cult. In many parts of Australia the eagle-hawk is one of the names of the phratries into which many tribes are divided; in Victoria, Pundjel seems to be a deified eagle-hawk (Brough Smyth, i. 423); elsewhere it is the evil spirit, so-called, which is the eagle-hawk. Mullion is the name of the former, Malian of the latter, and their identity is established by the belief and practice of the Wellington district, where the eyric of the eagle-hawk was formed on where the eyrie of the eagle-hawk was formed on the ground, at initiation, in memory of his contests with an anthropomorphic god, Baiame (Man, 1905, 28). The Apaches think there are spirits of Divine origin in the eagle and other birds (Bancroft, iii. 132). The Ostiaks regard a tree as holy on which an eagle has needed (Lethern Barrier Francisco Control 132). eagle has nested (Latham, Russian Empire, p. 110). In the island of Tauri, off New Guines, a certain kind of eagle is tabu, but there are no totemic ideas connected with it (Zts. vgl. Rechtswiss. xiv. 325); the osprey is hope ('sacred') in New Georgia (JAI xxvi. 386). The Osages would turn back from an expedition if an eagle were killed (Nuttall, Travels, p. 87). The Samoyeds account it a crime to kill an eagle, and if one is caught in a snare and drowned, they bury it in silence (Schrenck, Reisen, i. 168). The Bosnians regard it as unlucky to kill an eagle (Wiss. Mitt. iv. 442). Some of the aboriginal Peruvians asserted their descent from eagles (Frazer, Tot. p. 5). The Buriats hold that the good spirits sent an eagle as shaman, to counteract the evil deeds of the bad spirits; the first human shaman was the son of the eagle and a Buriat woman (JAI xxiv. 64). The Zuñis, Dakotas, and others keep eagles for the sake of their feathers. The Mokis fasten an eagle to the roof in spring, and kill it at the summer solstice in order to get they bury it in silence (Schrenck, Reisen, i. 168). and kill it at the summer solstice in order to get its feathers for ritual purposes; the body is buried in a cemetery, and it is believed that the soul of the eagle goes to the other eagles and returns again as an eagle (Globus, lxxvi. 172). The Hopi hunter purifies himself before going after eagles, and makes an offering; one bird has a prayer-stick tied to its foot and is set free (Am. Anth., new ser., iii. no means confined to the West; in China the waterspout is regarded as a dragon, which is never seen completely, for its head or its tail is always invisible. The dragon and the tiger are at enmity, and if a tiger's bones are thrown into a 'dragon's well,' rain will follow within three days, for the animals fight, and when the dragon moves, rain to its tool and its set free (Am. Anth., new ser., in 701). The Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot hunter practises many tabus when he is on the hu

VOL. I.-33

influence on bananas is attributed to the eagle, and no one plants them when an osprey is in sight (Zts. Geog. Ges. Thür. xii. 95). Among the Ojibwas the sailing of an eagle to and fro was a good omen (Autob. of Kahgegahbowh, p. 48; for the eagle see also de Gubernatis, Zool. Myth. ii. 195–197). The eagle is likewise important in Indo-Iranian mythology. In the Rigveda (especially iv. 27) the eagle brings the sacred sōma (which see) to mankind (cf. Macdonell, Vedic Mythology, 111 f. and the references there given); while in the Avesta an eagle dwells on the 'tree hight All-Healing' (Yasht, xii. 17) in the midst of Lake Vouru-kasha (the Caspian), aided by his fellow (Dināā Mainōgā Khrat, 1xii. 37-41). From the Avesta the eagle passes into Persian literature as the simürgh, whence is developed the roc of the Arabian Nights. The feathers of the sīmūrgh, which dwells on Mount Kaf or Mount Albarz, form talismans for the heroes Tahmuraf and Zāl (Casartelli, in Compte rendu du'congrès scientifique international des Catholiques, 1891, sec. vi. 79-87). influence on bananas is attributed to the eagle,

(Casartelli, in Compte rendu du'congrès scientifique (Casartelli, in Compte rendu du'congrès scientifique international des Catholiques, 1891, sec. vi. 79-87). In classical mythology the eagle occupied an important place; it was the first of ominous birds, and Roman legions took up their winter quarters where there was an eagle's nest. The eagle is associated with Zeus and the lightning; its right wing was buried in fields and vineyards as a protection against hail. The eagle stone (derirns) and parts of the eagle's flesh were used in magic (Pauly-Wissowa, s.v. 'Adler'). It was believed that the eagle was never struck by lightning. Its appearance was auspicious (ib. s.v. 'Aberglaube'). The eagle is the constant attribute of Zeus in the older monuments (Farnell, Cults, i. 128), as also of Jupiter (Preller, Röm. Myth.3 ii. 327).

Eel.—For many of the Malagasy the eel is a forbidden food, and various ætiological myths are told to explain the fact (v. Gennep, Tabou, p. 290). By the Imerinas it is regarded as a soul-animal; the Betsileos believe that the lower classes pass into eels; when the body is thrown into the sacred lake,

sets es believe that the lower classes pass into eels; when the body is thrown into the sacred lake, the first eel that takes a bite becomes the domicile of the soul (ib.). The eel is also a soul-animal among the Igorrotes (Wilken, Het Animisme, p. 72) as well as in Ceram (ib.), and receives a daily portion of food. In the Paumotu Archipelago the eel seems to have been held sacred; when one was captured, prayers were offered at a shrine apparently devoted to a cult of female ancestors or relatives; there was an 'enmity between eels and women,' and the latter might not look on them (Miss. Cath. 1874, 366). In N. Siam, Muang Naung was covered with water because its inhabitants ate white eels and thus enraged Thegya, the ruler of the world (Zts. Geog. Ges. Thür. iv. 149). In N. Queensland a connexion between eels and a flood seems to avis (Tumboltz, America Granikala, 2005). to exist (Lumholtz, Among Cannibals, p. 205); although the passage may also be interpreted to mean that those who eat eels have the gift of prophecy. This belief is found in Europe (Wolf, Beiträge, i. 232, No. 594). Sacred eels were also known to the Greeks (Pauly-Wissowa, s.v. 'Aal'); and the eel is a totem of the Mundari Kols of Bengal and of the Oraons (Crooke, ii. 255). Neither they nor the Nosairis eat eels (Dussaud, Histoire et religion des Nosairis n. 93)

they nor the Nosairis eat eels (Dussaud, Histoire et religion des Nosairis, p. 93).

Elephant.—In Siam it is believed that a white elephant may contain the soul of a dead person, perhaps a Buddha; when one is taken, the capturer is rewarded, and the animal brought to the king to be kept ever afterwards, for it cannot be bought or sold. It is baptized and fêted, and when it dies it is mourned for like a human being (Young, Kingdom of the Yellow Robe, p. 390 ff.). In Cambodia a white elephant is held to bring luck to the kingdom, and its capture is attended with numerous ceremonies (Moura, Cambodge, i. 101). In some parts of Indo-(Moura, Cambodge, i. 101). In some parts of Indo-

China the reason given for the respect paid to it is that it has a soul, and may do injury after its death; the whole village therefore fêtes it (Mouhot, Travels, i. 252; see also Bock, Temples and Elephants, p. 19 ff.). The cult of the white elephant is found also at Enarea, south of Abyssinia; but in view of the frequent respect Abyssinia; but in view of the frequent respect accorded to white animals it is unnecessary to see in this any proof of Indo-Chinese influence. They are regarded as the protectors of mankind, and any one who killed a white or light-coloured elephant would pay the penalty with his life (Int. Arch. xvii. 103). Among the Wambugwes the elephant is believed to be the abode of the souls of their ancestors (ib.). The elephant is regarded as a tutelary spirit in Sumatra (Tijdschr. T.L.V. xxvi. 456). The name is sometimes tabu (Golden Bough<sup>2</sup>, i. 457).

i. 457).

The hunting of the elephant is attended with numerous ceremonial observances. The Wakamis numerous ceremonial observances. The Wakamis of East Africa prepare for the chase by passing a night with their wives on a kind of ant-hill, of which they believe that the female elephant makes use to feed her young one. On the day of the hunt a dance is held, and they make certain marks on their forearms. The hunter buries the trunk and cuts off the end of the tail; the latter he rolls up in palm leaves and puts in his bag; until he next goes to the chase this bag must remain in his wife's care; she also has a right to purchase something with the proceeds of the sale of the ivory; if the hunter quarrelled with her, his next hunt would thing with the proceeds of the sale of the ivory; if the hunter quarrelled with her, his next hunt would be unlucky (Miss. Cath. 1874, 44). The Amaxosas offer a sacrifice after killing an elephant (Shaw, Story of my Mission, p. 452); the hair on the end of the tail is hung at the entrance to the cattle-fold; the end of the ear and the trunk are cut off and buried, the tusks are taken out, and no use is made of the remainder (Kay, Travels, p. 138). According to another authority, excuses are made and the elephant is appealed to during the chase not to crush his pursuers (Lichtenstein, Travels, i. 254), and the tusks are sent to the king (ib. p. 270). The Hottentot hunter must sacrifice a sheep or some other small animal, and none but he may partake of its flesh; any one, on the other hand, may eat of the slain elephant (Zis. Geog. Geo. Thiir. vi. 42). The Wanyamwezis seek to propitiate the dead elephant by burying his legs, and the Amaxosas inter with the end of the trunk a few of the articles which they buy with the proceeds of the ivory (Golden Bough<sup>2</sup>, ii. 400). In India the elephant is the representative of Ganesa, who is also figured with the head of this animal; and in later Hinduism the earth is supported by eight elephants. Some elephants can fly through the air, and all have in their frontal lobes magic jewels. air, and all have in their frontal lobes magic jewels. Touching an elephant is a chastity-test, and the hairs of its tail serve as amulets (Crooke, ii. 238-241). According to one account, the world rests upon an elephant (Tylor, i. 365). In West Africa, elephants which destroy plantations are regarded as wizards, and feared (Wilson, West Africa, p. 164). On the Congo the end of an elephant's tail is used as a sceptre (Int. Arch. xvii. 103). According to the Talmud (Berākhōth, 57b), it is a bad omen to dream of an elephant. For it is a bad omen to dream of an elephant. For elephant myths see de Gubernatis, Zool. Myth. ii. 91-94, cf. 77. See also 'Earth-carrier,' above.

Fish.—Although sacred fish are not uncommon, a fish-god seems to be a somewhat rare phenoa fish-god seems to be a somewhat rare phenomenon. Dagon is often regarded as a fish-god (but see EBi, s.v. 'Dagon'), but it is certain that he had a human head and hands; possibly his body was scaly, or he had the tail of a fish; for that he was a fish-god seems certain from the fact that his worshippers wore fish skins (JHS xiv. 104, quot. Menant, Glypt. Or. ii. 63). A figure probably intended for, at any rate regarded as, Artemis Eurynome was depicted with a fish's tail (de Visser, Götter, p. 187; cf. Farnell, Cults, ii. 522), and there were sacred fish in the temples of Apollo and Aphrodite at Myra and Hierapolis, which raises a presumption of a fish cult (de Visser, pp. 177-178; cf. p. 163). Atargatis is said to have had sacred fish in a pool at Askelon, which were fed daily and never eaten; according to another account, they were the food of the priests. From Xenophon (Anab. I. iv. 9) we learn that the fish of Chalus were regarded as gods; and Hyginus tells us that the Syrians looked on fish as holy, and abstained from eating them (EBi, s.v. 'Fish'; for fish tabus see W. R. Smith, p. 292 ff.). In modern days fish are sometimes sacred in India, where they also play a considerable part in folklore, often serving as life-indexes. They likewise form the favourite food of bhūts (ghosts). Varuna rides on a fish, and Vishnu had a fish-avatār (Crooke, i. 243, ii. 156, 253 f.). The 'Small People' of Cornwall hate the smell of fish (Hunt, Popular Romances of the West's, 109). According to the Talmud, fish eaten in the month of Nisan are conducive to leprosy (Pesahim, 112b). Iranian mythology likewise has the kara fish which guards the white Hōm (Yasht, xiv. 29, xvi. 7; Būndahishn, xviii. 3-6, xxiv. 13), as well as the 'ox-fish,' 'which exists in all seas,' and whose cry makes 'all fish become pregnant, and all noxious water-creatures cast their young' (Būndahishn, xix. 7). Fish are kept in parts of Wales to give oracles. Most of the South African Bantus will neither eat nor touch fish, giving as their reason that fish are snakes (Fritsch, Drei Jahre, intended for, at any rate regarded as, Artemis Eurynome was depicted with a fish's tail (de Visser, will neither eat nor touch fish, giving as their reason that fish are snakes (Fritsch, Drei Jahre, p. 338). Other fish tabus are found in various parts of Africa (Internat. Archiv für Ethnographie, xvii. 128). Among the Yezidis only the lowest classes are said to eat fish (Badger, The Nestorians and their Ritual, p. 117). In North Aracan fish may not be eaten at harvest time (JAI ii. 240), and pregnant women are forbidden them in Servia (Globus, xxxiii. 349), thus reversing the teaching of the Talmud, which especially recommends them to women in this condition (Kethūbim,

The economic importance of fish makes it natural The economic importance of fish makes it natural that fishermen often propitiate them. In Peru sardines are said to have been worshipped in one region, skate in another, dogfish in another, and so on, according to the species that was most plentiful (Golden Bough<sup>2</sup>, ii. 410). Many tribes do not burn the bones of fish, because if they did the fish could not rise from the dead (ib.). The Thlinkets pay special respect to the first salmon which they take, and many other tabus are observed (ib. n. 411 f. and many other tabus are observed (ib. p. 411f.; for treatment of the first fish see also Sébillot, Folklore des Pecheurs, pp. 131, 254, 256). In the Ægean, sacrifices are still made to the melanurus (Walpole, Memoirs, p. 286; cf. Pliny, XXXII. ii.). In other cases magical ceremonies are resorted to in order to segue a good eath. In the Cusar in order to secure a good catch. In the Queen Charlotte Islands the fish are strung on a rope with feathers as charms, and put on the top of a pole stuck in the bed of the river. One of the tribe is banished to the mountains during the fishing is banished to the mountains during the fishing season, and may not have a fire or communicate with the tribe, or the fish will leave the river (Mission Life, v. 103). In Jabim, New Guinea, the fishermen may not be mentioned, no noise may be made in the village, and women and children must remain at a distance from the fishers (Zts. Geog. Ges. Thür. xii. 95). In New Caledonia for one kind of fish appeal is directed to ancestral spirits in the sacred wood: offerings are made there. in the sacred wood; offerings are made there, and when the men go into the water, the women extinguish all fires but one; then they perform a dance, and silence follows. For the sardine a stone wrapped in dried twigs is taken to the

cemetery and put at the foot of a post and two sorcerers perform ceremonies (Miss. Cath. 1880, 239). In some countries a fish is sacrificed for

239. In some countries a fish is sacrificed for success in fishing (Sébillot, op. cit. p. 116; Krassoff, Peuple Zyriane, p. 101).

The Ottawas held that the souls of the dead passed into fish (Rel. des Jés. 1667, p. 12; cf. 'soulanimals,' p. 493). In Japan the earthquake is explained as the result of the movements of a great animals, p. 493). In Japan the earthquake is explained as the result of the movements of a greatish in the sea or under the land (Natur, 1878, p. 551). In the Middle Ages the same explanation was given in Europe (Mone, Anzeiger, viii. 614). Fish are found as totems in South Africa (Fritsch, Eingeborenen, p. 153), Alaska (Trimmer, Yukon Terr. p. 109), and among the American Indians (Frazer, Tot. p. 4, etc.). Myths of fish descent are also found (ib. p. 6). For fish myths see de Gubernatis, Zool. Myth. ii. 331-353; for the crab, ib. pp. 354-359.

Fly.—In Greek mythology both Zeus and Apollo had names connecting them with flies, but it is doubtful whether either of them can properly be termed a fly-god; for the appeal to the god was that he would keep flies from interfering with a sacrifice (Farnell, Cults, i. 45). It is equally uncertain whether Beelzebub, whose name is commonly translated 'Lord of Flies,' had any connexion with them. In Africa, however, there seems to be a real fly-god. Flies are kept in a tappole (Boschen Autorates n. 177). The Kal

seems to be a real fly-god. Flies are kept in a temple (Beecham, Ashantee, p. 177). The Kalmuks regard the fly as a soul-animal and never kill it (JAI i. 401). In North Germany it is held to be unlucky to kill the last flies, and any one who keeps one alive through the winter will rewho keeps one alive through the winter will receive a sum of money (Bartsch, Sagen, ii. 186). In Greece the 'brazen fly' was one of the names of 'Blind Man's Buff' (Pollux, Onomastikon, ix. 123); it is known as the 'Blind Fly' in Italy (Folklore, xi. 261) and North India (Panyāb NQ, iv. 199). In the latter country it is a lucky omen for a fly to fall into the ink-well (Crooke, ii. 257). According to the Avesta (Vendādād, vii. 2, viii. 71), the demon of death assumes the shape of a fly. For Jewish legends concerning flies, see Krauss, JE v. 421 f.

Fowl.—The cock is one of the most important sacrificial victims (for Africa see Int. Arch. xvii. 145-148), and has probably replaced larger and more valuable animals in many cases. In some of the Bantu tribes the men abstain from eating domestic Bantu tribes the men abstain from eating domestic fowls (JAI xix. 279). The Araucanians do not eat the domestic fowl, because they regard it as a transformed man (Bol. Inst. Geog. Argent. xv. 740). Fowls are also tabu in East Africa and Abyssinia (Globus, xxxiii. 78). A refusal to eat eggs is more widely found, but does not necessarily point to a tabu of the fowl; abstinence from milk in the same way does not imply a tabu of cattle.

The cock figures in spring ceremonies in Europe; in Schiermonnikoog a green branch is fastened at the top of the May-pole, and on it is hung a basket containing a live cock (NQ, 8th ser. x. 194). In the same way at Defynog boys put the figure of a cock at the top of a rod and carried it round on the eve of the first day of May (Montgom. Coll. xvii. 268). The cock is one of the forms in which the corn-spirit is supposed to appear (Golden Bough<sup>2</sup>, ii. 266). The cock is sometimes used in the expulsion of evils (ib. ii. 103). Modern Jews sacrifice a white cock on the eve of the Day of Atonement (ib. p. 109; cf. p. 25). We may probably interpret in the same sense the numerous European customs in the same sense the numerous European customs in which a cock or hen is hunted or beaten (Folklore, xi. 250, 251; RHR xxxviii. 341); connected with these customs is the name of the 'blind hen' used in parts of Europe for 'Blind Man's Buff.' These customs frequently re-appear in wedding ceremonies, perhaps with the same meaning. The eating of a cock (Tradition, iv. 364; Anthropologie, iii. 552; Bavaria, i. 390; Russische Revue, xii. 269, etc.) may be a fertility charm; and in like manner etc.) may be a fertility charm; and in like manner a cock and hen were carried before a bridal couple on their wedding day among the Jews of the Talmudic period (Gittin, 57a; for other Jewish beliefs concerning fowls see JE iv. 139, vi. 344). Occasionally a dance is performed in which fowls are imitated (Bavaria, I. i. 394, II. i. 317; Pröhle, Harbilder, p. 8, etc.). In many of the games with fowls the successful player is termed the 'king.' Sometimes witches are believed to take the form of cocks, and, according to the Talmud, the demons had cock's feet (Brākūth, 6a); in Holland a cock put in a vessel over the fire is burnt to ashes to overcome the devil (Globus, xxvii. 195). The cock

overcome the devil (Globus, xxvii. 195). The cock scares demons and ghosts (cf. Hamlet, I. i. 149-155), and witches are obliged to return from their Sabbat when the cock crows (cf. art. SATANISM). It is universally held to be a bad omen for a hen to crow like a cock; the remedy is to kill it; sometimes it is also thrown over the house top. tames it is also thrown over the house top. The crowing of a red cock is held in Germany to betoken that a fire will break out in the building on which it is perched; the same belief is found in China (Matignon, Superstition, p. 43). The cock is used in various magical ceremonies in China. When a boy is named at the beginning of China. When a boy is named at the beginning of his sixth year, two priests push a cock backwards and forwards through a wooden cylinder (Zool. Garten, 1900, 70). On the coffin of a Chinaman whose body is being brought home is a white cock in a basket. One of the three souls is buried with the corpse, but it has to be eaught; it can find no rest till the grave is covered with earth; the cock is to show the soul its way back to the body (ib. 71). For folk-tales and myths of fowls see de Gubernatis, Zool. Myth. ii. 278-291.

Fox.—Dionysus had the surname of Bassareus, not, probably, because his worship coalesced with that of an earlier fox-deity, but because as lord of the vine he protects the vineyards against the little

the vine he protects the vineyards against the little foxes (ClR x. 21). A fox-god was also known in America (Müller, Urrelig. p. 320). Among the Chiriguanos it seems to be a soul-animal (Lettres edif. viii. 335). In Europe it is one of the forms in which the corn-spirit appears (Golden Bough, ii. 283); it was also burnt in some of the annual fires. A fox tabu is found at Inishkea (Proc. R. Irish

Acad. iii. 631).

At the Cerealia at Rome foxes were set on fire and hunted about the circus, but it seems probable that they were originally driven over the fields (Fowler, Rom. Fest. p. 77f.); Liebrecht draws attention to the similarity between this custom and the incident in the Samson story (Zur Volksk. i. 261 ff.; Frazer, Paus. iv. 178). In Finnic In Finnic 1. 261 if.; Frazer, Paus. iv. 178). In Finic mythology the aurora is known as the light of the fox (Grimm, Reinhart Fuchs, p. xxxi). In China and among the Eskimos the fox is a wer-animal who appears in the shape of a beautiful woman and seduces the youths (Arch. Anth. v. 135; Rink, Eskimoiske Sagen, Nos. 16, 18). The same belief exists in Japan, where some families are noted for their ownership of foxes (see 'Possession,' above), and others refuse to intermarry with them on the and others refuse to intermarry with them on the ground of their magical powers (Chamberlain, Things Jap., s.v. 'Fox'). The fox is the hero of a number of Japanese tales (Globus, xxi. 332). a number of Japanese tales (Goous, XXI. 502). In Schleswig-Holstein a procession with a fox in a basket takes place in summer, and presents are collected (Schütze, Idiotikon, iii. 165). To the fox is sometimes attributed the production of Easter eggs (Globus, XXXIV. 59). The name of the fox is sometimes tabu (Golden Bough<sup>2</sup>, i. 454). As an ominous animal the Lithuanians regard it as inauspicious (Tettau und Temme, Volkssagen, p. 280); but in Masuren and Siebenbürgen the opposite view is taken (Töppen, p. 77; Haltrich.

viii, 4). For folk-tales and myths of the fox see

de Gubernatis, Zool. Myth. ii. 121-142.
Frog, toad.—In more than one European country the frog and the toad are hardly, if at all, distinguished; they may therefore be treated together. That this confusion is found in the New World seems clear from the association of the toad with seems clear from the association of the toad with rain, exactly as the frog is, justifiably, associated with water in Europe. In Ceylon the frog was held to be the undermost of the supporters of the earth; on its back was a turtle, then a serpent, then a giant; and he upholds the world (Miss. Her. xviii. 385). In South America the Chibchas gave the frog a place among their divinities, and had an annual ceremony in connexion with the calendar, in which the frog furned (Bollaert Researches) in which the frog figured (Bollaert, Researches, p. 49; Dorman, Prim. Sup. p. 256). Among the Araucanians of Chile the 'land toad' was called the lord of the waters (ib.). In the mythology of the Iroquois it is told how all the water was originally collected in the body of a huge frog, by piercing which Ioskeha formed rivers and lakes (Rel. ing which loskeha formed rivers and lakes (Kel. des Jés. 1636, p. 102). A similar story is told by the Micmacs (Leland, Algonquin Leg. p. 114), and the Australian blacks have Deluge legends in which the Flood is caused by the bursting of a water-swallowing frog (Brough Smyth, i. 429, 477). Among the Wends the frog is believed to bring newborn children; with this may be compared the Sea Dayak belief that the goddess Salampandai takes the form of a frog: if a frog comes into a takes the form of a frog; if a frog comes into a house, sacrifice is offered to it and it is released;

house, sacrifice is offered to it and it is released; Salampandai is held to make the children, and a frog is seen near a house when a child is born (JRAS, S.B. vii. 146; Schulenburg, Wend. Volkstum, i. 94).

In Bohemia, children are believed to hop about the meadows in the form of frogs (Ploss, Kind², i. 12); with this may be connected the Brandenburg belief that a woman who digs up a toad will soon bear a child (Zts. Ver. Volksk. i. 189). A Shan tribe, the Wa, believes itself to be descended from tadpoles (Asiatic Q. Rev., 3rd ser. i. 140). The Bahnars of Indo-China respect the frog, holding that one of their ancestors took that form (Miss. Cath. 1893, 140, 143), and in this shape he is believed

that one of their ancestors took that form (Miss. Cath. 1893, 140, 143), and in this shape he is believed to guard their fields. The Karens of Burma explain eclipses by saying that a frog is devouring the moon (ib. 1877, 455).

We have seen that the frog is associated with water. Like the Araucanians, the Orinoco Indians held the frog to be the lord of the waters, and feared to kill it even when ordered to do so; they kept it under a pot and beat it in time of drought (Golden Bough<sup>2</sup>, i. 103; Blanco, Conversion del Piritu, p. 63). The Newars of Nepāl worship the frog, which is associated with the demi-god Nagas in which is associated with the demi-god Nagas in the control of rain. A sacrifice of rice, ghi, and other objects is made to it in October (Golden Bough<sup>2</sup>, i. 104; cf. Latham, i. 83, who says August). Water is also poured over a frog in India, or a frog is hung with open mouth on a bamboo, to bring rain (Crooke, i. 73, ii. 256).

In Queensland, British Columbia, and Europe, frog are also associated with the procuring of rain

frogs are also associated with the procuring of rain  $(GB^2, loc. cit.)$ , and among the Bhils (Bombay) Gaz. IX. i. 355), etc.; in the Malay Peninsula the swinging of a frog is said to have caused heavy rain and the destruction of a kampong (JRAS, S.B.iii. 88). The toad is sometimes regarded as a tutelary deity in Europe (de Gubernatis, Zool. Myth. ii. 380). The Tacullies of British Columbia are said to have no gods, but say, 'The toad hears me' (Maclean, Twenty-five Years, p. 265). The Caribs are recorded to have had idols in the form of toads (Sprengel, Auswahl, i. 43). In some parts of Germany the toad is regarded as a household genius (Zts. Ver. Volksk. i. 189; MS notes). With this compare the belief of the Roumanians that killing a frog or toad is an omen that the killer will murder his mother (Zts. Oest. Volksk. iii. 373). In accordance with this belief, the frog and toad are spared (Folklore, xi. 240, 241; Brandenburgia, viii. 418; Wiedemann, Ehsten, 454; Russwurm, § 356, etc.). On the other hand, they are regarded as witches (FLJ v. 198; Haltrich, Zur Volksk. vii. 4; Müllenhof, Sagen, i. 212; Holzmaier, Osiliana, p. 37). Accordingly they are often killed (Zts. Ver. Volksk. i. 182; Rolland, Faune pop. iii. 49f.; cf. Devonshire Assoc. xxviii. 63). For magical purposes they were killed at certain times of the year (Wuttke, Der Abergl. p. 95; Rolland, op. cit. iii, 54). In Zoroastrianism frogs and toads are evil animals, and are to be killed (Vendīdād, xiv. 5); and in Armenia the frog causes warts (a belief found also in the United States) and makes the teeth fall out (Abeghian, Armenischer Volksglaube, 30 f.). To cure these warts, meat must be stolen, rubbed on the excrescences, and buried; as the meat decays, the wart will disappear.

In a Mexican festival one of the ceremonies consisted in a dance round the images of the Tlalocs placed in a pond alive with frogs and snakes, one of which each dancer had to eat during the dance. More definite was the belief of the Choctaws, who assigned to the king of the frogs and other aquatic animals the function of initiating the rain-makers Miss. Reg. 1820, 408). We may put down to the same idea the belief of the Guaranis that if a frog enters a boat one of the occupants will die (Ruiz de Montoya, Conquista, § 12). The southern Slavs attribute a magical influence to the name of the attribute a magical influence to the name of the frog, which may not be mentioned before a small child (Krauss, Sitte, 549). The precious jewel in the head of the toad is mentioned by Shakespeare (As You Like It, II. i. 13 f.); a similar belief is found in Germany (Germania, vii. 435). For myths and folk-tales of the frog and toad, see de Gubernatis, Zool. Myth. ii. 371-379, 379-384.

Goat.—In Greek mythology the goat was associated at Argos with the cult of Hera; youths threw spears at a she-goat, and he who struck her got her as a prize (Farnell, Cults, i. 189), exactly as in modern Europe many animals are shot at, struck at blindfold, or otherwise gamed for (Folklore, xi.

modern Europe many animals are shot at, struck at blindfold, or otherwise gamed for (Folklore, xi. 25). The custom was explained by a myth that Hera had once fled to the woods and the animal revealed her hiding-place. The goat was usually a prohibited animal in the cult of Athene, but was once a year sacrificed on the Acropolis (Farnell, Cults, i. 200), it has been suggested that the acro-Cults, i. 290); it has been suggested that the ægis (which see) was simply the skin of the victim. Alyophyos is found among the titles of Zeus, and there is a myth in which the animal figures as the work of Zeus; he is called alylogos, just as Dionysus is termed \(\mu \text{Actvacycs}\) ('wearer of the black goatskin'); in spite of the connexion of \(alylogoup \text{alylogoup in the wind}\), the original epithet was probably connected with the goat (i\text{\text{\text{\$\dagger}}}\). In the worship of Brauronian Artemis, a worshipper sacrificed a goat (allies it his own developer \(\text{\text{\$\dagger}}\) (i) ii 426) of Brauronian Artemis, a worshipper sacrificed a goat, 'calling it his own daughter' (ib. ii. 436)—possibly a trace of human sacrifice. In Sparta a goat was sacrificed to Artemis before charging the enemy; at Ægina torches attached to the horns of goats are said to have scared away invaders (cf. Liebrecht, Zur Volksk. p. 261), and in Attica 500 she-goats were a thank-offering for Marathon (Farnell, ii. 449 f.). Aphrodite is the 'rider on the goat' (ib. 684), probably because it was her sacred animal. was her sacred animal.

At Rome goats were sacrificed at the Lupercalia, and youths clad themselves in the skins of the victims. After feasting they ran round the base of the Palatine, striking with thongs of goatskin the women whom they encountered, or who offered themselves to their blows (Fowler, Rom. Fest.

p. 311). The Flamen Dialis was forbidden to touch a goat, and it was excluded from the cult of Jupiter (ib. p. 313). For the goat see also Pauly-

Wissowa, s.v. 'Aberglaube,' p. 2.
Dionysus was believed to assume the form of a goat (Golden Bough<sup>2</sup>, ii. 165), probably as a divinity of vegetation. Many minor divinities like Pan, Silenus, the Satyrs, Fauns, etc., either are in goat form or have some part of their body taken from the goat, and they are all more or less woodland deities. In similar fashion, the devil is commonly believed, in Europe, to have one foot in the form of a goat's hoof; and throughout mediæval demonology the goat is associated with Satan and with witches; while at the Sabbat the Evil One frequently was believed to assume the form of a goat. In Northern Europe, the wood-spirits Lēshi are believed to have the horns, ears, and legs of goats, and the goat is a form in which the corn-spirit is supposed to appear (Golden Bough<sup>2</sup>, ii. 271, 291). In the 17th cent. the Circassian Tatars offered a supposed to appear (Golden Bough, Il. 211, 221). In the 17th cent. the Circassian Tatars offered a goat on St. Elias day, a date on which the lamb is also offered in some parts. After proving the victim to be worthy, they drew its skin over its ears and hung it upon a pole; the flesh was then cooked, and consumed by men and women together; the men then prayed to the skin, and the women left them to their brandy and devotions (Strauss, Reise, p. 116). In Africa the Bijagos are said to have the goat as their principal divinity; on the Massa River the goat is kept as a tutelary deity. It is sometimes regarded as the resting-place of the souls of the dead (Int. Arch. xvii. 104). The king of San Salvador was believed to have deposited his soul in a goat during his lifetime (Golden Bough, iii. 407; Bastian, Fetisch, p. 12), and possibly this belief explains the position of the goat of the law which Soyaux saw near Old Calabar (Aus West-Africa, 1. 106).

The name of the goat is tabu in the Sunda Islands (Golden Bough, i. 462). The animal itself is similarly hedged round in South Africa (Galton, Travels, p. 84), Madagascar (v. Gennep, Tabou, p. 238) and in West Africa (Int. Arch. Inc. vit.)

is similarly nedged round in South Africa (Galton, Travels, p. 84), Madagascar (v. Gennep, Tabou, p. 238), and in West Africa (Int. Arch., loc. cit.). The goat is tabu to some of the Bechuanas (Mackenzie, Daydawn, p. 65 n.) ['Bushmen' in the text should be corrected to 'Bechuanas'], who believe that to look upon it would render them impure, as well as cause them undefined unescines; it does well as cause them undefined uneasiness; it does not, however, appear to be a totem. If a goat climbs on the roof of a house, it is speared at once, because it would bewitch the owner if it were not put to death (Mackenzie, Ten Years, p. 392). The antipathy, therefore, depends on its association with wizards. The goat is an important sacrificial animal, especially in Africa (Int. Arch. xvii. 136). In Athens it was excluded from the Acropolis, but once a year it was driven in for a sacrifice (Golden Bough<sup>2</sup>, ii. 314). Frazer conjectures that the goat was originally a representative of Athene.

From the Jewish custom of sending a goat into the wilderness laden with the sins of the people (see 'Scapegoat,' above, and art. AZAZEL), has been derived the name for the whole class of animated derived the name for the whole class of animated beings so employed in the expulsion of evils (Golden Bough<sup>2</sup>, iii. 101 ff.). The goat itself is the animal employed by the Lolos (Vial, Les Lolos, p. 12) in West Africa (Burdo, Niger, p. 182) and in Uganda (Ashe, Two Kings, p. 320). In Tibet a human scapegoat is dressed in a goat's skin; he is kicked and cuffed, and sent away after the people have confessed their sins (South Am. Miss. Mag. xiv. 112)

The Karens of Burma attribute eclipses to the fact that wild goats are eating the luminary; they make a noise to drive them away (Miss. Cath.

In Europe the goat appears in processions and

other functions at Christmas, the Carnival, etc. (Mannhardt, Antike Wald- u. Feldkulte, 184 ff., 197). In Bohemia it is thrown from the church in September (Mannhardt, Myth. Forsch. 163 n.), but this apparent association with the harvest may but this apparent association with the harvest may be late; for in Wendish parts the date was July 25th (Kosche, Character, iv. 481). In Transylvania a goat dance is performed at weddings, probably as a fertility charm (Mannhardt, Myth. Forsch. 198). For the same reason, perhaps, the goat is given to the parents of the bride in Bulgaria, where, as in the Upper Palatinate, it forms the recognized dish (Anthrop. ii. 587; Schönwerth, Aus der Oberpfalz, i. 98; cf. 342). Among the Matabele of South Africa the husband gives the bridesmaids a goat to eat (JAI xxiii. 84). In the Vosges the a goat to eat (JAI xxiii. 84). In the Vosges the younger sister who marries first must give her elder sister a white goat (Mélusine, i. 454).

'The goat' is one of the names by which the 'blind

man' in Blind Man's Buff is known (Folklore, xi. 261). For myths and folk-tales of the goat see de Gubernatis, Zool. Myth. i. 401-428.

Goose.—The goose was one of the animals which

were tabu to the Britons (Cæsar, de Bello Gall. v. xii.). The Norsemen also refused to eat it (Life of Bede, ch. xxxvi.). At Great Crosby it is still regarded as tabu (Arch. Rev. iii. 233). But, on the garded as tabu (Arch. Rev. iii. 233). But, on the other hand, it is not infrequently eaten with more or less ceremony. The Michaelmas goose is certainly a very old custom. The bird is hunted or killed in various parts of Europe (Folklore, xi. 253; for ceremonial eating see p. 259). In China two red geese are given to the newly married; the explanation offered is that they are faithful to each other, as human beings should be (Zool. Garten, 1900, p. 76). The goose is also a gift to the newly married at Moscow (Anthrop. iv. 324); it has perhaps in some cases taken the place of the swan (see below). The Mandans and Minnetarees made their goose medicine; the dance was to remind the their goose medicine; the dance was to remind the wild geese, which then prepared to migrate, that they had had plenty of good food all the summer, and to entreat them to return in the spring (Boller, *Indians*, p. 145). There were sacred geese in the Capitol and in Greek temples (de Visser, Götter, p. 175). In mediæval times, the goose, like the goat (see above), was associated with witches who frequently used these birds as vehicles to carry them to the Sabbat. For myths and folktales of the goose, swan, and duck, see de Gubernatis, Zool. Myth. ii. 307-319.

Hare.—Although the hare is one of the most important animals in the belief and practice of the uncultured, it cannot be said that it is anywhere regarded as divine, unless it be among the Kal-muks, who call it Sākyamuni (the Buddha), and say that on earth the hare allowed himself to be eaten by a starving man, and was in reward raised to the moon, where they profess to see him (Crooke, ii. 50). The connexion of the hare with the moon 11. 50). The connexion of the hate when the most is also found in Mexico (Sahagun, vii. 2) and South Africa, where the Hottentots tell the story of how death came into the world, and explain it by a mistake made by the hare in taking a message mistake made by the hare in taking a message from the moon (Merensky, Beiträge, p. 86; Bleek, Reynard the Fox, pp. 69-74). In North America, all the Algonquin tribes had as their chief deity a Great Hare (see 'Cult' above) to whom they went at death; he lived in the east, or, according to some accounts, in the north. In his anthropomorphized form he was known as Manibosho, Nanabojou, Michabou or Messou (Brinton, Myths p. 193). In one aspect he is a culture hero, who teaches to the Indians the medicine dance and the arts of life; in another aspect he is a buffoon, who tries his magic art on various animals and fails ludicrously. In a New England Flood legend the survivors took a hare with them to the mountain

on which they found refuge, and learnt of the assuaging of the waters by its non-return (Josselvn. Account, p. 134).

The name of the hare is frequently tabu (Russwurm, Eibovolk, § 358; Holzmaier, Osiliana, p. 105; FLJ v. 190; Brit. Ass. Ethnog. Survey Rep. [Toronto Meeting], 353; Grimm, Deut. Myth. exxiv; GB<sup>2</sup> i. 457). It is unlucky to kill the hare (Folklore, xi. 240) or eat its flesh (Lyde, Asian Mystery, p. 191; Dussaud, Hist. des Nosairis, p. 93; Globus, xxxiii. 349; Ausland, lxiv, 58, etc.). There is a wide-spread belief that hare-lip is award if a recent women ruts her foot in is caused if a pregnant woman puts her foot in a hare's form.

a hare's form.

Like many other animals, the hare is hunted annually at many places (Folklore, iii. 442, xi. 250; Mem. Soc. Ant. France, iv. 109; Melusine, i. 143; Ons Volksleven, viii. 42), and sometimes eaten ritually (Folklore, xi. 259). Sometimes the hare is offered to the parish priest (Ann. Soc. Em. Flandre, 5th ser. i. 436; Folklore, iii. 441 f.). The hare is more especially associated with Easter (Folklore, iii 442) and is said on the Comtinent to (Folklore, iii. 442), and is said on the Continent to lay Easter eggs (Das Kloster, vii. 928; Schweiz. Arch. Volksk. 1. 115). It is one of the animals in whose form cakes are made at Christmas (Bartsch, whose form cakes are made at Christmas (Bartsch, Sagen, ii. 227; Kolbe, Hessische Volkssitten, p. 7; Curtze, Volksüberl. p. 441). Among the Slavs harecatching is a similar game to Blind Man's Buff (Tetzner, p. 86). In Swabia it is said that children come from the hare's nest (Mannhardt, Germ. Mythen, p. 410). The hare is said to change its sex every year (Liebrecht, Zur Volkskunde, p. 362). The hare is almost universally recarded as an

The hare is almost universally regarded as an the nare is almost universally regarded as an unlucky animal; when a Kalmuk sees one, he utters a cry and strikes a blow in the air (JAI i. 401). The Hottentots kill it, though they do not eat it (Zts. Geog. Ges. Thür. vi. 42). Its appearance in a village is thought to betoken fire, both in England and Germany (MS notes; Grohmann Aberral 275. At the Universal 275. mann, Abergl. 375; Am Urquell, iii. 107; Zts. Ver. f. Volksk. x. 209). In Oesel it is sometimes of good omen (Holzmaier, p. 43). Probably the association of hares with witches is in part responsible for the hare's evil augury. In Gothland the so-called milk-hare is a bundle of rags and chips of wood; it is believed to cause cows to give bloody milk (Globus, xxiii. 47). On the other hand, hares' heads are found on the gables in the Tyrol, probably as a protection against witchcraft (Heyl, p. 156); a hare's foot is a counter charm against witchcraft (Hone, Tablebook, iii. 674). Among the American negroes, in like manner, a most lucky charm is the left hind foot of a rabbit caught jumping over a grave in the dark of the moon by a red-haired, cross-eyed negro. It is also to be noted that the rabbit is one of the chief figures in the folk-tales of the negroes of the southern United States, where he outwits 'Brer Wolf' and all other animals (Harris, Uncle Remus, his Songs and his Sayings; Nights with Uncle Remus, etc.). The hare is one of the forms believed to be assumed by the corn-spirit (Golden Bough<sup>2</sup>, ii. 269). For myths and folk-tales of the hare see de Gubernatis, Zool. Myth. ii. 76-82.

Hawk,-According to the Gallinomeros of California, the hawk flew in the coyote's face in the primeval darkness; apologies ensued, and the pair together made the sun, put it in its place, and set it on fire (Bancroft, iii. 85). According to the Yocuts, the hawk, crow, and duck were alone in the world, which was covered with water; the two former created the mountains from the mud brought

up by the latter (ib. p. 124).

The most important area for the cult of the hawk seems to be North Borneo (JAI xxxi. 173 ff.). The Kenyahs will neither kill nor eat it. They address it, as they do anything regarded in its spiritual

aspect, by prefixing 'Balli' to its name; they always observe its movements with keen interest, and formally consult it before leaving home for distant parts. The rites are very elaborate, and, if successful, secure that the hawks which gave the omens serve as tutelary deities during absence. After a war expedition, pieces of the flesh of slain enemies are set out as a thank-offering to Balli Flaki for his guidance and protection. The hawk's sid is correct to the flesh of the server of the serve aid is sought before agricultural operations are entered upon, and a wooden image of a hawk with its wings extended is put up before a new house. During the formal consultation of the hawk, women may not be present; but they keep in their sleeping-places wooden images with a few hawk's feathers in them, which serve magical purposes during illness. In this tribe the hawk seems to be regarded as a messenger of the Supreme God, Balli Penyalong; but the thanks seem to be offered to the birds exclusively. The Kayans have gone some distance in anthropomorphizing the hawk, though they still retain the morphizing the hawk, though they still retain the idea that it is the servant of the Supreme God; they appeal to it for help, but if they get no reply, they transfer their prayer to Laki Tenangan. The hawk-god, Laki Neho, is described as living in a house at the top of a tree; but the individual hawk is still of importance. Among the Sea Dayaks the hawk-god, Singalang Burong, has become completely anthropomorphized. He is the god of war, but they say that he never leaves his house; consequently, though they take other bird omens, they do not regard the hawk as his omens, they do not regard the hawk as his messenger. He is the god of omens, clearly developed from a divine hawk species, and, as such, is the ruler of the omen birds; a trace of his hawk nature is found in the belief that, though he put on the form of an Iban to attend a feast, he flew away in hawk form at the end of it, when he took off his coat. It is instructive to note that in the opinion of the Ibans there are only thirty-three of each kind of ominous bird, though all are re-spected because of the impossibility of distinguishing ominous from non-ominous individuals of the same species.

In Madagascar (v. Gennep, Tabou, p. 261) various species of hawk are ominous. Some Sakalava families regard one species as sacred and bury it. In Imerina prayers are addressed to it, and portions of the wing, leg, or body serve as charms. One tribe is called by the name of a species of hawk, and the hawk is its emblem. The omens given by hawks are good or bad, according to the

species.

In America the Kailtas held that when a man died his soul was carried to spirit-land by a little bird; if he had been a wicked man, the burden of his sins enabled a hawk to overtake the bird and

devour the soul (Bancroft, iii. 524).

In Europe the hawk is regarded as lucky; in Baden one kind is kept or allowed to nest on the house; its presence is thought to avert a flash of

house; its presence is thought to avert a flash of lightning; in Bohemia a kind of hawk is regarded as a luck-bringing bird (Mone, Andeiger, vii. 430; Grohmann, Aberglanibe, No. 459). Like the owl and the bat, it is sometimes nailed on the doors of stables (Mélusine, viii. 21). For hawk myths see de Gubernatis, Zool. Myth. ii. 92-94.

Horse.—In Greek cult there was at Colonus a common altar to Poseidon Hippius and Athene Hippia (Farnell, Cults, i. 272). Artemis was also associated with the horse (ib. ii. 450); so, too, Aphrodite (ib. ii. 641), perhaps in her maritime character. Cronus is said to have taken the form of a horse, and the Illyrians sacrificed a horse to of a horse, and the Illyrians sacrificed a horse to him (ib. i. 29). But in none of these cases does the connexion of the animal with the deity justify the supposition that we have to do with a horse-cult

which has undergone development, except perhaps in the case of Poseidon. There are, however, other deities intimately associated with the horse, in a manner which makes it legitimate to suppose that manner which makes it legitimate to suppose that they have undergone anthropomorphization or taken up earlier theozoic elements. In the cave of Phigalia, Demeter, according to popular tradition, was represented with the head and mane of a horse, probably as a legacy from an older theriomorphic non-specialized corn-spirit (Golden Bough²; ii. 303). In Laconia her priests were called πῶλοι (de Visser, Göötter, p. 198; cf. JHS xiv. 138). Not (de Visser, Götter, p. 198; cf. JHS xiv. 138). Not only Poseidon but also the river-gods were, as a rule, conceived as tauriform, but at Rhodes four horses were cast into the sea (Smith, Rel. Sem. 2 p. 293); though this was interpreted as a sacrifice to the sun, it may have been connected with the horse form so commonly attributed to water-gods in Gaul, Scotland, and North Europe generally (Teutonia, ii. 72; Black, Orkney and Shetland Folklore, p. 189 ff.). In Gaul we find a horse-goddess, Epona, whose name is derived from epos, 'horse'; there are also traces of a horse-god, Rudiobus (Rev. Celt. xxi. 294). Of less specialized forms of horse-worship traces are to be found in Persia, where white horses were regarded as holy (Herod. i. 189; Geiger, Ostiran. Kult. 350 f.), and Teutonic regions, where their use was restricted to kings, and they were kept in holy enclosures (Tacitus, Germ. '9, 10; Grimm, Deut. Myth.' ii. 552; Weinhold, Altn. Leben, p. 47). Horses seem to have attained sanctity early in India (Crooke, ii. 204), and the cult is not unknown sun, it may have been connected with the horse Horses seem to have attained sanctity early in India (Crooke, ii. 204), and the cult is not unknown at the present day (ib. p. 208). Koda Pen, the horse-god of the Gonds, is a shapeless stone, like the tiger-god of the Waralis (Hislop, Papers, p. 51 n.). (For the horse in mythology see Negelein in Teutonia, ii.; de Gubernatis, Zool. Myth. i. 290-296, 330-355. For superstitions see Pauly-Wissowa, s.v. 'Aberglaube,' p. 76).

The horse or mare is one of the forms of the compility in Europe (Colding Regula) 2 ii 201) and the

spirit in Europe (Golden Bough<sup>2</sup>, ii. 281), and the sacrifice of the October horse at Rome is usually connected with this idea (but cf. Fowler, Rom. Fest. pp. 248-249; see also Gruppe, Griechische Culte, p. 839 n.). A horse race was held, and the righthand horse of the victorious team was offered to Mars. Its head was cut off and adorned with a string of loaves, for which the inhabitants of two districts contended; its blood was caught and used to fumigate the flocks in the spring (Fowler, Rom. Fest. p. 241 f.; Golden Bough<sup>2</sup>, ii. 315 f.; cf. iii. 122). The head was fixed to the palace or the Mamilian tower. The custom of fixing horses' heads to buildings is still common, though it does not follow that we can explain the old custom on the same lines; the modern explanation is usually that the skulls are intended to keep away evil influences (Trede, *Heidenthum*, iii. 210). A similar custom exists in Germany and other parts of Europe of exists in Germany and other parts of Europe of carving animals', commonly horses', heads at the end of the gables (Petersen, Die Pferdeköpfe; Folklore, xi. 322, 437). The horse is very commonly sacrificed in the Old World (Teutonia, ii. 90-148), especially in burial rites (ib. pp. 148-162). It is also offered in South America (S. Amer. Miss. Mag.

xxviii. 38).

Processions in which a horse figures take place, commonly at Christmas, in Germany, France, and England (Teutonia, loc. cit.; Nore, Coutumes, pp. 70, 72, 76, 203, 205; RHR xxxviii. 334). The interpretation of these customs is uncertain; the German ceremonies are often brought into connexion with Wodan in popular belief; a connexion with the corn-spirit has also been suggested; possibly they may be associated with a mid-winter festival of the expulsion of evils, of which other traces can be found (Panzer, Beitrag, ii. 115 f.).

At Whitsuntide it was the custom to hold a horse race (Mannhardt, Antike Wald- und Feldkulte, pass.), to which we find a Roman parallel in the October race; they may probably be brought into connexion with the cult of vegetation.

The horse is important as an ominous animal (Teutonia, ii. 15), and in modern folklore omens are drawn in particular from the white horse. It is frequently regarded as being of ill omen (*RHR* xxxviii. 298; Grohmann, *Abergl*. Nos. 336–337) or a foretoken of death; but at the same time in Bohemia the white horse brings good fortune to the house where it is stabled (ib.); and in Northern India it is a lucky omen for a horse and his rider to enter a field of sugar-cane while it is being sown (Crooke, ii. 207). The horse, like the bull, is a fertility animal (ib.). If a boy is put on a horse immediately after his birth, Mecklenburgers think that he has the power of curing various maladies from which horses suffer (Ploss, Kind2, i. 74). Some part of the magical importance of the horseshoe is perhaps derived from the horse itself. In Wales and Ireland are found stories of the Midas

Hyæna.—One of the chief centres of the hyæna-cult is the Wanika tribe of East Africa. One of the highest ranks of their secret society is that of the Fisi or hyænas, so called from the power of administering to suspected persons the oath by the hyæna, which, before the practice of burial was introduced, devoured the bodies of the dead. It is held that a false oath by the hyæna will cause the death of the perjurer. The Fisi also protect the fields from thieves by consecrating them to the hyæna, which they do by making certain marks near the boundaries (Report on E. African Protectorate, 1897, p. 10 ff.). The Wanikas look upon the hyæna as one of their ancestors, or as in some way connected with their origin and destiny. The death of one is an occasion of universal mourning, and a wake is held over it by the whole people, not by one clan only. It is a great crime to kill one, and even imitation of its voice entails payment of a fine (New, *Life Wanderings*, p. 188). Hyenas are tabu in Accra (*Int. Arch.* p. 101), and the Ewe tribes hold that they are inhabited by a god or spirit. The Masai expose their dead to be eaten by hyenas; and hold that they are inhabited by a god or spirit. The Masai expose their dead to be eaten by hyeenas; and if a corpse has to wait more than a day for burial, it is a token of ill-luck, to be countered by the sacrifice of cattle (Baumann, Massailand, p. 163). South African Bantus likewise expose their dead to be eaten by hyeenas (Account of Cape of G. Hope, p. 143), which they never kill. The hyeena is a common form of the wizard (Int. Arch., loc. cit.), and there are various stories told of the budas in Abyssinia and others having transformed themselves in the sight of other people (Tylor, Prim. Culture<sup>3</sup>, i. 310); gold rings are said to be found in the ears of dead hyeenas similar to those worn by the budas, who are workers in clay and iron. Among the Matabele, wizards are said to go to fresh graves and dig up corpses, to which they give medicine and transform them into hyeenas (Thomas, Eleven Years, p. 293), which they then employ as their messengers, or upon which sometimes they ride themselves. When the voice of the hyeena is heard, the hearer must remain perfectly still. If a hyeena is wounded at night and escapes to another kraal, the place is thought to be the residence of a wizard. The sight of a hyeena at night is unlucky; and if a man discovers a dead one, he runs away and remains The sight of a hyæna at night is unlucky; and if a man discovers a dead one, he runs away and remains perfectly silent about it. A wizard or diviner, when his training is over, has to put on the skin of a hyæna, as a sign that the Amadhlozi have endowed him with the processory amadhlozi have endowed hysena, as a sign that the Amadhlozi have endowed him with the necessary powers (ib.). In ancient Arabia it was believed that, if a hysena trod on a man's shadow, it deprived him of the power of speech and motion; and that, if a dog, standing on with the practises continence and is fed to satiety (Kolbe, Pres. State, i. 252).

The leopard society is common in West Africa. Members wear leopard skins when they seize their victims for sacrifice (Kingsley, Travels, p. 537). him with the necessary powers (ib.). In ancient arghia it was believed that, if a hyena trod on a man's shadow, it deprived him of the power of

a roof in the moonlight, cast a shadow on the ground and a hyæna trod on it, the dog would be dragged from the roof as if a rope had been made fast to it (Golden Bough<sup>2</sup>, i. 287). In Talmudic belief (Bābā kammā, 16a), the male hyæna goes through the stages of a bat, 'arpad, nettle, thistle,

and demon, each lasting seven years.

Leopard.—The cult of the leopard is widely distributed in West Africa. In Dahomey it is especially sacred to the royal family; it is also an Ewe totem. A man who kills a leopard is liable to be put to death; but usually he pays a fine and performs propitiatory ceremonies. No leopard skin may be exposed to view, but stuffed leopards are objects of worship. Some of the king's wives in Dahomey were known as kpo-si ('leopard-wives'). A man wounded by a leopard was regarded as specially fortunate (Ellis, Ewe-speaking Peoples, p. 74; Labarthe, Reise, p. 153).

The Bakwiris regard the leopard as possessed by

evil spirits (Beitr. zur Kolonialpol. iii. 194). On the Gold Coast it is regarded as the abode of the spirits of the dead (Müller, Fetu, p. 97), or of evil spirits (Mitt. Geog. Ges. Thür. ix. 18), which may endanger the life of the hunter or make him fire at a man in mistake for an animal. The hunter, when successful, announces his triumph to those who have killed a leopard previously; then a blade of grass is put in his mouth as a sign that he may not speak; his comrades tell the leopard why it was killed—because it had killed sheep; a drum gives the signal for an assembly; and the leopard is fastened to a post, its face to the sky, and carried round the town, its slayer behind it on the shoulders of another man; on their return the leopard is fastened to a tree, and the hunter is besmeared with coloured earth, so as to look like a leopard. Thereupon they imitate a leopard's movements and voice; for nine days after the death of the leopard they have the right to kill all the hens they can catch. In the afternoon the body is cut up, and portions are sent to the chief of the village and others; the hunter retains the teeth, head, and claws (ib.). In Agome the hunter observes the same ritual interdictions as at the death of his wife (Mitt. d. Schutzgeb. v. 156). Among the Fjorts the king has a right to the body of the leopard; people loot each other's towns when one is killed; and the killer has the right to appropriate any article outside a house when he is on his way to take a leopard to the king (Dennett, Seven Years, p. 180). In Loango a common negro who kills a leopard, which is regarded as a prince, is tried, and must excuse himself by saying the leopard was a stranger; a prince's cap is put on the leopard's head, and dances are held in its honour. In olden times the capture of a leopard was one of the few occasions on which the king could leave his *chibila* (Bastian, *Loango-Küste*, p. 243 ff.; *Int. Arch.* xvii. 98). When a leopard is killed in Okeyou, its body is treated with great respect and brought to the hunter's village. Representatives of neighbouring villages attend, and presentatives of neignbouring villages attend, and the gall-bladder is burnt coram populo; each person whips his hands down his arms to disavow guilt (Kingsley, Travels, p. 543). In Jebel Nuba a hunter, on killing his first leopard, may not wash himself for several weeks; the skin belongs to the chief; the hunter's tabu is broken when the last novice to kill a leopard has given him a slice of meat and received from him his shoes and the animal's skin (Mies. Cath. 1882, 461). In South Africa a man who has killed a leopard remains in

Among the Yaos, leopards are among the animals

Among the Yaos, leopards are among the animals whose figures are drawn on the ground at the initiation of girls (Macdonald, Africana, i. 131).

The leopard is one of the forms assumed by wizards in West Africa (Wilson, West Africa, p. 398), among the Madis and Latukas (Stuhlmann, Mit Emin Pascha, p. 801), and the Baris (Int. Arch. xvii. 99). The Nubas believe that the spirit of a panther passes into the kudjur ('priest') when he gives an oracle; he sits upon a stool covered with panther skin and imitates the panther's cry (you panther passes into the kitajur (\* priest\*) when he gives an oracle; he sits upon a stool covered with panther skin and imitates the panther's cry (von Hellwald, Naturgesch. ii. 235). In Calabar, on the other hand, the leopard is one of the animals whose images are placed in the streets at the Ndok, or purification festival, for evil spirits to pass into (Bastian, Fetisch, p. 21 ff.). In South Africa the heart of the leopard was sometimes eaten to gain courage, and portions of the animal were scattered over the warriors by magicians (JAI xix. 282). Among the Fans a leopard-skin girdle was held to render them invisible (Du Chaillu, Voy. et Av. p. 502). Zulu warriors at leopard flesh to make them brave, and a Zulu would sometimes give his children a leopard's blood to drink, or its heart to eat, in order that they might become strong and courageous (Golden Bough\*, ii. 354). The gall of a leopard is regarded as poison, and in West Africa its whiskers are believed to have magical properties (Kingsley, op. cit. p. 543).

(Kingsley, op. cit. p. 543).

Lion. — In Egyptian mythology the tunnel through which the sun passed was supposed to have a lion at each end; statues of lions were off evil spirits. There was a lion-god at Baalbek, and songs were sung when it devoured a calf. It was associated with Ra and Horus, and possibly was associated with ha and horus, and possibly the Sphinx with its human head and lion's body was intended as an abode for Ra (Budge, Gods, ii. 360; Damascius, Vit. Isid. p. 203). There was a lion-headed goddess Sekhmet, and the Arabs had a lion-god Yaghuth (EBi iii. 2804). In modern Africa we find a lion-idol among the Balondas. It is made of grass covered with clay, and resembles a crocodile more than anything else; it is placed in the forest, and in cases of sickness, prayers are in the forest, and, in cases of sickness, prayers are offered and drums beaten before it (Livingstone,

South Africa, pp. 282, 304).
In comparison with its traditional position as king of the beasts, the lion occupies, however, an undistinguished place among the animals in savage belief and custom. It is regarded as the abode of belief and custom. It is regarded as the abode or the souls of the dead on the Congo and the Zambesi, as well as among the Wambugwes, Bechuanas, and Mashonas (Bastian, Loango-Küste, ii. 244; Livingstone, Zambesi, p. 159; Baumann, Massauland, p. 187; Brown, On the S. A. Frontier, p. 217; cf. Speke, Journ. pp. 221, 222). As a rule, it is the chief who is thus transformed; but among the Angonis there is a universal desire to be transformed into a line after death (ZE xxxii, 199). The name Angonis there is a universal desire to be transformed into a lion after death (ZE xxxii. 199). The nametabu is not by any means uncommon; the Arabs call the lion Abū-l-Abbās; the negroes of Angola call it ngana ('sir'); both Bushmen and Bechuanas avoid using its proper name (Golden Bough<sup>2</sup>, i. 456); the Hottentots avoid using its name on a hunting expedition, and call it gei gab ('great brother'). In South Africa the same ceremonies are gone through by the slayer of a lion as of a leopard or a monkey (see below). Another account says that the hunter is secluded for four days, purified, brought back, and feasted (Lichtenstein, Travels, i. 257). In East Africa the dead lion is brought before the king, who does homage to it, prostrating himself on the ground and rubbing his face on its muzzle (Becker, Vie en Afrique, ii. 298, 305). Among the Fulahs the killer of a lioness is brought before the king, who does homage to it, prostrating himself on the ground and rubbing his face on its muzzle (Becker, Vie en Afrique, ii. 298, 305). Among the Fulahs the killer of a lioness is made prisoner, and women come out to meet the party; the lioness is carried on a bier covered with

white cloth. The hunter must be released by the chiefs of the village when he pleads, in reply to the charge that he has killed a sovereign, that it was an enemy (Gray and Dochard, Travels, p. 143). The lion is one of the animals whose shape is said to be assumed by wizards; this belief is found on the Luapula (Petermanns Mitt. 1874, 188) and on the Zambesi (Livingstone, Zambesi, p. 159), where a certain drink is said to have the power of transforming them; among the Tumbukas, men and women wander about smeared with white clay, and are held to have the power of assuming the shape of lions (Elmslie, Among the Wild Ngoni, p. 74); the Bushmen say that the lion can change itself into a man (Lloyd, Short Account, p. 20). In Greek cult a lioness was led in a procession at Syracuse in honour of Artemis (Farnell, Cults, ii. 432). The lion is used in magic to give courage (Golden Bough?, ii. 354, 356; JAI xix. 282). It figures in Masai fables, where it is outwitted by the mongoose (Hollis, Masai, p. 198), and among the Bushmen (Lloyd, loc. cit.). In Hottentot stories it is outwitted by the jackal (Bleek, Reynard, p. 5); in another story the lion thinks itself wiser than its mother, and is killed by a man (ib. p. 67). In like manner, in an Indian story, first found in the Pañchatantra (i. 8; cf. Benfey, Pantschatantra, i. 179 ff.), and widely borrowed, appearing even in Tibet (O'Connor, Folk-Tales from Tibet, pp. 51-55), the lion is outwitted by the hare. For lion myths see de Gubernatis, Zool. Myth. ii. 153-159.

Lizard.—Of lizard myths unconnected with any cult or tabu there are but few, the best known and most widely distributed being the Bantu account of the origin of death; according to this, the chameleon was sent to man with a message that he was to live, the lizard some time after with a certain and an account of the origin of death account and all all the section and an account of the origin of death account and all all the continuous and anost widely distributed being the Bantu account of the origin of death; a The hunter must be released by the white cloth. chiefs of the village when he pleads, in reply to the

the chameleon was sent to man with a message that he was to live, the lizard some time after with a contrary message; the chameleon dawdled on its way, and as a result man is subject to death (Kidd, *Essential Kafir*, p. 76). In the Sandwich Islands lizards are believed to form part of the food (Kidd, Essential Kafir, p. 76). In the Sandwich Islands lizards are believed to form part of the food of the soul which goes with the body after death (Miss. Cath. 1880, p. 626), while in Zoroastrianism the lizard forms part of the food of the damned (Būndahishn, xxviii. 48). In the Malay Peninsula the Orang Laut regard the small flying lizard as the emissary of the great flying lizard, which guards each man's life-stone; they cause the souls of the newborn to enter their bodies. They can change at will into crocodiles, and cause the death of any one whose life-stone is buried (ZE xxxviii. 187). With this may be compared a Polynesian myth about Moko (Gill, Myths, p. 229). The Maoris tell a story according to which the first of their race was drawn out of the water at the Creation by a lizard (Gerland, Südsee, p. 237). In South Australia the lizard is believed to have divided the sexes; it is a so-called sex-totem, the men destroying the female and the women the male lizards (Frazer, Tot. p. 52). Stories of lizard births are told in Indonesia and New Guinea (Wilken, Het Animisme, p. 73; Ber. Utrecht Zendelingsver. 1891, p. 20). In New Zealand, Yap, and the Banks Islands, the lizard is regarded as the residence of the souls of the dead (Shortland, p. 93; cf. JAI x. 288, 297, xix. 120; Hernsheim, Südseeerinn. p. 22; Codrington, Melanesians, p. 180; cf. 'Future Life,' above).

The main areas of lizard-cult are Polynesia (Wilken in Bijdragen T.L.V. 6th ser. vol. v. p. 468 ff.) and West Africa (Int. Arch. xvii. 112). The evidence in the latter case is, however, unsatisfactory; Dahomey is mentioned as one of the seats of

is said to have abolished the worship of the lizardgod (Globus, x. 285, xii. 256). An old writer describes a custom of bringing food to a lizard-god; it seems to have been the sacred animal of a secret it seems to have been the sacred animal of a secret society (Pruneau de Pommegorge in Cuhn's Sammlungen). On the other side of Africa the tribal god of the Shilluks is said to appear in the form of a lizard (Ratzel, ii. 43). In Polynesia respect for the lizard was wide-spread. In New Zealand, according to one account (but cf. Shortland, p. 93), it was regarded as an incarnation of Tangaloa, the it was regarded as an incarnation of Tangaloa, the heaven-god; a green lizard was more especially associated with him, perhaps from its habit of coming out and basking in the sun (Dieffenbach, Travels, ii. 116; Wilken, loc. cit.); so, too, in Samoa (Globus, Ixxiv. 256 ff.). In the Hervey Islands, Tongaiti or Materau (the night-heaven) Islands, Tongaiti or Matarau (the night-heaven) was likewise identified with a spotted lizard, which comes out at night (Gill, Myths, p. 10). In Samoa not only family gods but general deities assumed lizard form, among them Le Sa, Pili, and Samaui (Turner, Samoa, pp. 44, 46, 72). An idol in lizard form, or rather a house-god, is reported from Easter Island (Geiseler, Osterinsel, p. 32; Man, 1904, No. 46). Moko, the king of the lizards, is recognized all over Polynesia (Gill, Myths, p. 229). In Micronesia lizard-worship was found in the shape of a cult of the dead. Lizards were kent in special enclosures. the dead. Lizards were kept in special enclosures, the dead. Lizards were kept in special enclosures, and their power over lightning and rain was held to pass into their keepers or priests, to whom offerings were made from all parts of the island (Hernsheim, Südsecerin. p. 22). In New Caledonia, a Melanesian area with Polynesian immigrants, the lizard was one of the animals respected and termed 'father,' probably as the abode of the soul of a dead man. Lizards were also worshipped or redead man. Lizards were also worshipped or respected in Sumatra, Boeroe, the Mentawei Islands, Bali, etc., and seem to be identified in some cases with imported Hindu gods (Wilken, loc. cit.). In Madagascar the fanany is, according to the Betaileos, the re-incarnation of the soul of a dead man, and takes the form of a lizard; it is buried in a pot, and communication with the surface established with a bamboo; if, when it appears, it tastes the food offered, it becomes a tutelary deity of the family and the neighbourhood (v. Gennep, Tabou, p. 272). The lizard is commonly respected in Europe (Folklore, xi. 240). In Central Celebes it is killed to prevent ill-luck (Bijd. T. L. V. i. 88), probably as the familiar of a wizard; but this attitude is uncommon, although the Zoroastrians consider it an evil creature, the same belief surviving in Armenia (Abeghian, Armenischer Volksglaube, p. 31). We find the lizard in S.E. Australia as the familiar of a wizard (JAI xvi. 34); and the Maoris, though some lizards were respected, are recorded to have killed them as 'witch-animals' (Aust. Ass. Adv. Sci. Reports, vii. 774), or as the cause of sickness (Taylor, Te Ika i Maui, pp. 409, 44–5, etc.; cf. JAI xix. 120). As a messenger of the gods, or of the dead (Gill, Myths, p. 229; Deutsche Geog. Bl. x. 280), the lizard is ominous, also as the familiar of the wizard. The ominous, also as the familiar of the wizard. The lizard is especially ominous in India (Pandian, Indian Village Folk, p. 130; Asiatic Researches, 1824, 421 ff.). The Musheras sacrifice a lizard (Calcutta Rev. lxxxviii. 286). The lizard is frequently employed in magic, sometimes as a love-charm (Ausland, liv. 912), or curative charm (Jones and Veraf Feliciales and Indiana Liv. 1912). and Kropf, Folktales, xlix.), or for luck (Rolland, Faune, iii. 12). A lizard buried alive under a Frame, iii. 12). A lizard buried alive under a threshold is a protection against sorcerers (Mélusine, viii. 22; Müllenhof, Sagen, i. 212), but elsewhere it is regarded as maleficent in this position (Rochholz, Deutscher Glaube, ii. 167). In Madagascar the lizard is buried to cure fever (v. Gennep, Tadou, p. 271). In Tripoli the sight of a lizard is held to cause women to bear speckled children

(Globus, xxxiv. 27). Connected doubtless with its magical qualities is the wide-spread use of the lizard as an art motif (Publ. Kgl. Mus. Dresden, vii. 14; Bastian Festschrift, p. 167). In classical antiquity the lizard was used in medicine (Pauly-Wissowa, s.v. 'Aberglaube'). For myths and folk-tales of the lizard see de Gubernatis, Zool. Myth. ii. 385-387.

Magpie.—It is held to be unlucky to kill the magpie (Folklore, xi. 241), but in Sweden it is the magpie (Folklore, xi. 241), but in Sweden it is the custom to rob its nest on May day and carry the eggs or young round the village (Lloyd, Peasant Life, p. 237). A magpie's nest betokens ill-luck (Jahrbücher f. Schleswig-H. viii. 92), but the omens drawn from it usually vary according to the number of birds (Napier, Folklore, p. 113; Gregor, ib. p. 137). In Norse belief the form of the magpie is assumed by witches (Meyer, Germ. Myth. p. 112). For magpie omens see Liebrecht, Zur Volksk. p. 327; Jahrb. f. Roman. Lit. N.S. i, 232; Socin, Die neuaram. Dial. p. 175; Wigstroem, Sagor, p. 114; Rolland, Faune, ii. 137, etc. The magpie is supposed to show the presence of foxes magpie is supposed to show the presence of foxes or wolves; and in Poitou it was the custom to fasten a bunch of heath and laurel to the top of a high tree in honour of the magpie (Mem. Antiq. viii. 451). For myths and folk-tales of the magpie see de Gubernatis, ii. 258-260.

Mantis.—A prominent figure in Bushman mythology is Ikaggen or Cagn (Bleek, Brief Account, p. 6; Cape Monthly Mag. 1874, July, pp. 1-13; Lloyd, Short Account, p. 5, etc.). Some doubt was thrown by Fritsch (Eingeborenen, p. 340) on the worship of the mantis by the Bushmen, and no very satisfactory evidence could be quoted with regard to them (Int. Arch. xvii. 131) until the publication of Mr. Stow's collection (Native Races of South Africa, pp. 531, 533), from which it seems abundantly clear that Cagn was sometimes conceived under the form of the mantis, sometimes under the form of the caterpillar, ngo (see 'Cult' above). It seems clear that the Hottentots regarded the insect as auspicious (Merensky, Beiträge, p. 36), and worshipped it on that account; the whites called it the 'Hottentots' god'; they abstain from injuring it (Schinz, Deutsch S.W. Africa, p. 101). Among the Tambukas, certain insects, among which is the mantis, are supposed to give residence to ancestral souls (Elmslie, Wild Ngoni, p. 71). In the Bismarck Archipelago there are two exogamous phratries, one of which is named after the mantis (JAI xxi. 28).

Monkey.-Even if it was not a common savage trait to believe in the descent of man from one of the lower animals, the resemblance between human beings and monkeys would be sufficiently strong to suggest such a tale. Consequently we find not only that man is regarded as an evolved monkey, but also that the monkey is explained as a degraded man (Tylor, *Prim. Cult.*<sup>3</sup> i. 376 f.; *Miss. Cath.* 1081, 97; Spix, iii. 1107). It is seriously believed in Africa and South America that monkeys can talk, but do not do so for fear of being made to work. Another group of stories tells how the great apes carry off women to the woods; while the belief

in tailed men has been held by Europeans as well as savages (cf. MacCulloch, p. 277).

The chief home of the cult of monkeys is India, with its monkey god, Hanuman. In orthodox villages the life of the monkey is safe from harm, and its magic influence is implored against the

Togo, Africa, where the inhabitants of a village daily put meals for their benefit. The Kunamas and Bareas are also said to worship them (Int. Arch. xvii. 93). At Porto Novo, where twins are not killed, they are believed to have as tutelary spirits a kind which animate small monkeys; such children may not eat monkey meat (Miss. Cath. 1884, 249). Among the Hottentots the name of the monkey is tabu to the hunter (Zts. Geog. Ges. Thür. vi. 41). The Nkomis do not eat gorilla meat, and give three reasons: first, that their fathers did not; second, that the gorilla has no tail; and third, that it drinks the blood of the dead (Miss. Cath. 1894, 601). There is an ape tabu among the Battas (Tijdschr. T. L. V. xxi. 209). Among the Maxurunas a young mother may eat no ape meat (Spix, iii. 1188); and this tabu is extended to all women on the island of Nias (Tijdschr. xxvi. 282). In many cases the respect for the monkey is based on the belief that it is the abode of a human soul (Int. Arch. xvii. 93; Home and For. Miss. Rec. 1889, 302; v. Gennep, Tabou, p. 221); sometimes it is believed that a man who kills a monkey is turned into one after death (Hutchinson, Impressions, p. 163); the sacrosanct monkey is affirmed to be so only to certain families (Bastian, Bilder, pp. 145, 160). In Madagascar the babakoto is bought out of captivity, and in some parts the natives will not kill it or trap it (v. Gennep, Tabou, p. 214); the Betsimarakas bury dead monkeys, and call the babakoto their grandfather, holding it to be the abode of the souls of the dead (ib. p. 216). In some cases an ætiological myth is told to account for the respect shown by the Malagasy (ib. pp. 217-220). Among the Basutos the monkey is a totem (Casalis, The Basutos, p. 221; Arbousset and Daumas, p. 92; Folklore, xv. 112). Among the Hottentots the killer of a baboon has to sacrifice a sheep or goat and hang the lowest vertebra round his neck, or he will suffer from lumbago (Zts. Geog. Ges. Thür. vi. 42). The Tucunas of Brazil wear a monkey mask in some of their ce

Mouse.—The mouse was especially associated with Apollo Smintheus; in his temple at Hamaxitus a mouse was portrayed near his statue, and mice were actually kept in the temple (de Visser, Götter, pp. 158, 178, 181). Various stories were told to account for this association of the animal with the god, none of which is necessarily true. We need not assume that there was originally a mouse-cult at Hamaxitus; the association of Apollo and the mouse may be late. If the god was appealed to, as god of day, to drive away the mice, which come in the night, his statue might well symbolize his conquest of them by putting the figure of a mouse beneath his feet; from his power over mice might arise the belief that he was the god of mice; thence the custom of keeping mice in the temple. It does not seem necessary to regard Apollo as an anthropomorphized mouse, any more than Dionysus as a transformed fox, because he was known as Bassareus. (For a discussion of the question, and of myths of mice gnawing bow-strings, etc., see CIR vi. 413, etc.; Grohmann, Apollo Smintheus). The Dakotan explanation of the waning of the moon is that it is eaten by a multitude of mice (Riggs, D. Grammar, p. 165). The Chippewayans attribute a flood to the mouse having taken some of the bag in which the heat was stored, in order to mend his shoes, thus causing the snow to melt (Petitot, Traditions, p. 376). According to a Hucul

myth, the mouse gnawed a hole in Noah's ark, and is unclean (Kaindl, p. 95). According to the Haidas, the mouse contains the soul of a dead man; in every one's stomach are numbers of mice, the souls of his deceased relatives (JAI xxi. 21). In Germanic belief, in like fashion, the soul assumes the form of a mouse, and in this form assumes the form of a mouse, and in this form may come forth from a sleeper's mouth (Meyer, German. Myth. p. 64). In Celebes the tanoana soul is believed to turn into a mouse and eat the rice; the soul of a suicide is especially dangerous; if mice eat the rice, they take away its soul (Med. Ned. Zend. xliii. 221, 243). The name of the mouse is the rice of the mouse o is tabu in parts of Europe (Golden Bough, i. 455). The Huculs hold that it is unlucky for a 455). The Huculs hold that it is unlucky for a girl to kill a mouse (Kaindl, p. 73); and in India it is a sin to kill rats, which, if troublesome, must be induced to cease molestations by promise of sweetmeats (Campbell, Spirit Base of Belief and Custom, p. 267). In Bohemia a white mouse should not be killed; it should be taken out of the trap and fed, otherwise luck will desert the house and other mice increase in numbers (Grohmann, Abaral No. 405). Sometimes snells are used to Abergl. No. 405). Sometimes spells are used to keep down the number of mice (Golden Bough<sup>2</sup>, ii. 424); sometimes the same result is aimed at by catching a mouse and burning it (Med. Ned. Zend. catching a mouse and burning it (Med. Nea. 2ena. xxvi. 240). Elsewhere one or two mice are caught and worshipped, while the others are burnt; or four pairs of mice are married and set adrift, in the idea that this will cause the other mice to go away (Golden Bough², ii. 425). In England, shrews must be thrust alive into a tree trunk, to prevent Gotten Bough\*, 11. 425). In England, shrews must be thrust alive into a tree trunk, to prevent them from paralyzing the sheep or ravaging the lands (Hone, Tablebook, iv. 468). The belief that a shrew dies when it reaches a path is found among the Eskimos (11th Ann. Rep. Bur. Ethn. p. 273), and in Greece (Pauly-Wissowa, s.v. 'Aberglaube,' p. 80). The 'blind mouse' is a common name for 'Blind Man's Buff.' A mouse mask is used in an Austrian ceremony (Folklore, xi. 261, 263). Mice are an omen of death; they leave the house at the death of the master (Rochholz, D. Glaube, ii. 173, i. 157). Near Flensburg a white mouse is a death omen; in Wendish districts it is a good omen (MS notes). (For a discussion of the Mouse Tower of Bingen and similar stories, see Liebrecht, Zur Volkskunde, p. 1f.). Mice figure in the mythology of the Kamtchatkans, and are represented as playing many tricks on the stupid deity Kutka (Steller, Kamtch. p. 255). The mouse is an evil animal in Zoroastrianism, and the killing of one mouse is equal in merit to slaying four lions (Sad mouse is equal in merit to slaying four lions (Sad Dar, xlii. 9; cf. Plutarch, de Invidio et Odio). In Jewish folk-belief eating anything gnawed by a mouse causes loss of memory; whence cats, which eat mice, do not remember their masters (Horāyoth, 13a). For mouse myths and folk-tales see de Gubernatis, Zool. Myth. ii. 65-72.

Owl.—Although the owl is ominous in many

Owl.—Although the owl is ominous in many parts of the world, it does not seem to figure largely in mythology. The Kalmuks have a saga as to the owl's having saved the life of Jingis Khan, resembling the story of Bruce's'escape. From that time they are said to wear a plume of owl's feathers on their heads, and reverence the white owl. Whenever they celebrate any great festival, according to another account, they wear coloured owls' feathers. The Woguls are said to have had a wooden owl to which they fastened the legs of a natural one (Strahlenberg, Hist. Geog. Desc. p. 434). The owl was respected in Lithuania (Globus, Ixiii. 66) and Mecklenburg (Folklore, xi. 241), and is not killed by the Macusis of British Guiana, as being the familiar of the evil spirit (Waterton, Wanderings, p. 223). Some of the S.E. Bantus will not even touch it, probably on account of its association with sorcerers (Fleming, Southern Africa, p. 265).

Among the Bechuanas it is regarded as a great calamity if an owl rests on a house, and the witchdoctor is sent for at once; he scrambles up to the doctor is sent for at once; he scrambles up to the place where it has perched, and purifies it with his charms (Mackenzie, Ten Years, p. 392). In the same way the appearance of an owl in the Capitol demanded that the place should be purified with water and sulphur (Hopf, Orakeltiere, p. 101). According to the Talmud, it is unlucky to dream of an owl (JE ix. 452); while in Germanic folk-lore witches and cruel stepmothers amear in the form witches and cruel stepmothers appear in the form of this bird (Meyer, German. Myth. p. 112). The owl is particularly important among the Ainus; its cry may not be imitated, because it can bewitch (Batchelor, p. 409); the eagle-owl is regarded as a mediator, and is worshipped on the chase; its head and beak are worn at feasts (ib. p. 413); these owls are kept in cages, like the bear, and killed (ib. p. 414); they are regarded as unlucky, and the barn-owl may not be eaten (ib. pp. 424, 428). Many American tribes associated the owl with the dead; the bridge over which the dead had to pass in the Ojibwa belief was known as the 'owl bridge' (Dorman, Prim. Sup. p. 262). In Australia, the owl is a so-called sex-totem (Golden Bough<sup>2</sup>, iii. The Chinese offer owl's flesh roasted in oil when they dig up the phytolacca acinosa, whose properties are believed to be those of the mandrake; the object of the offering is to appease the soul of the plant (Toung Pao, vi. 342). The Buriats keep an owl, or hang up the skin of one, to protect children against evil spirits (Globus, lii. 252). It is one of the animals hunted in Europe (Folklore, xi. 250). Owls are frequently asso-252). It is one of the animals number in Europe (Folklore, xi. 250). Owls are frequently associated with magicians; the Zulus believe that they are sent by wizards (JAI xx. 115); among the Yorubas the owl is the messenger of sorcerers, who gather at the foot of a tree and send owls out to kill people; if one gets into a house, the inmates try the people; if one gets into a house, the immates try to catch it and break its claws and wings, believing that this injures the sorcerer (Miss. Cath. 1884, 249). The Ojibwas believe that within three days after the burial of a man the evil spirit comes in the form of an owl, shooting out fire from his beak, and takes out the heart of the dead man; they and takes out the heart of the dead man; they endeavour to drive it away before it effects its purpose (Manitoulin, p. 49). Among the Pawnees, on the other hand, the owl is the chief of the night, when it gives both aid and protection (22 RBEW ii. 21, 40). The Greek priests carried a stuffed owl as the badge of their profession (Brinton, Myths, p. 128), and in Brazil the appearance of an owl is accounted a proof of its connexion with supernatural beings (Martius, Zur Ethn. p. 78). In the Malay peninsula the owl is one of the messengers of the pontianak (Begbie, Malay Pen. p. 464). In of the pontianak (Begbie, Malay Pen. p. 464). In Madagascar the Antimerinas give the name lolo Madagascar the Antimerinas give the name lolo ('owl') to the souls of sorcerers (v. Gennep, Tabou, p. 262). Slightly different is the Californian belief that the great white owl is an evil spirit, on which account they wear its feathers as a cloak, to propitiate it (Cont. Am. Eth. iii. 143), or, more probably, as a countercharm, just as in Garenganze the use of a whistle made of the windpipe of the horned night-owl is held to avert the ill-luck it brings (Arnot, Garenganze, p. 238). On the same principle, possibly, the owl is frequently seen nailed to the barn or stable door.

The owl is sometimes used in magic. If its heart

The owl is sometimes used in magic. If its heart The owl is sometimes used in magic. If its near and right foot are laid on a sleeping person, it is said that he must confess all he has done. If an owl's liver is hung on a tree, all the birds collect under it (Wolf, Beiträge, i. 232). Sometimes, in spite of its character as a bird of ill omen, it is regarded as bringing good fortune. If the flies into a dovecot, it brings luck (Wolf, loc. cit.). Its cry frees from fever, and its feathers bring peaceful slumber (Globus, iii. 271). Its appearance near a

house where a pregnant woman is forecasts an easy delivery, among the Wends (Haupt, Volkslieder, ii. 258); or the birth of a boy, or other good fortune, in Dalmatia (Wiss. Mitt. aus Bosnien, vi. 593). In Athens, as the bird of Athene, it was auspicious (Pauly-Wissowa, s.v. 'Aberglaube,' p. 70). In India owl's flesh is an aphrodisiac, and at the same time causes loss of memory. On the other hand, eating the eyeballs of an owl gives the power of seeing in the dark, while, if an owl is fed with meat all night by a naked man. the latter acquires house where a pregnant woman is forecasts an easy seeing in the dark, while, if an owl is fed with meat all night by a naked man, the latter acquires magic powers. Nevertheless the owl is a bird of ill-omen in India (Crooke, i. 279, ii. 50). For the mythology of the owl see de Gubernatis, Zool. Myth. ii. 244-250.

Peacock.—Peacock-worship has often been attributed to the Yezidis. The latest account is that given by J. W. Crowfoot (Man, 1901, No. 122), who can his information from an Armenian It appears

got his information from an Armenian. It appears that the Malik Tā'ūs ('King Peacock') is shaped like a bird; it has a hole in the middle of its back with a lid to it. It is brought by the head of the village, wrapped in linen, and filled with water. The priest kisses the image and sips water through the beak, the others following his example. Five the beak, the others following his example. Five bronze images are sent round continually, and every Yezidi must visit the figure three times a year. An equation, Tā'ūs=Tammuz, has been proposed, which explains the rites as a survival of Tammuz worship, the peacock coming in through a piece of folk etymology, though the Yezidis themselves hold that 'Malik Tā'ūs revealed himself in the form of a handsome youth with a peacock's fail when he appeared in a vision before Sheit's in the form of a handsome youth with a peacock's tail when he appeared in a vision before Sheikh Aadi, the prophet of the faith' (Jackson, Persia, Past and Present, p. 12). Elsewhere in Asia Minor the peacock is regarded as the embodiment of evil (Man, loc. cit.; JAI xx. 270). According to a Javanese (Muhammadan) myth, the peacock was guardian at the gate of Paradise and ate the devil, thus conveying him within the gate (Med. Ned. Zend. xxxii. 237 ff.). On the other hand, in Kutch the peacock may neither be caught nor annoyed (Zts. Geog. Ges. Thür. xv. 59). In Europe, peacocks' feathers are considered unlucky; their cry is of bad omen. In Greek religion the bird was associated with Hera and was kept in her temple (de Visser, Götter, p. 175). In India the peacock is the totem of the Jats and Khandhs, and in the Panjāb snakebites are healed by smoking a peacock's feather in bites are healed by smoking a peacock's feather in a pipe. The feathers of the bird are also waved over the sick to scare disease-demons, and are tied on the ankles to cure wounds (Crooke, ii. 45, 150, 233, 250). For the mythology of the peacock see de Gubernatis, Zool. Myth. ii. 323-329.

Pig.—The pig is the most important sacrifice animal of Oceania, and is also a frequent victim in Africa (*Int. Arch.* xvii. 145). Its flesh is tabu to Muhammadans and Jews generally, to the males of S. African Bantus (JAI xix. 279), etc. It is a of S. African Bantus  $(JAI \times 1279)$ , etc. It is a frequent form of the corn-spirit in Europe  $(Golden Bough^2)$ , ii. 285;  $RHR \times 1279$ . There are good grounds for supposing that the cult of Demeter was in part developed from that of a porciform corn-spirit  $(GB^2)$ , p. 299). It is possible to explain features of the myths and cult of Attis and Adonis in a similar way (ib. p. 304), and Frazer has maintained the same of Osiris (ib. p. 310). Pigs were tabu in Egypt, and swine-herds might not enter a temple; but once a year pigs were sacrificed to a temple; but once a year pigs were sacrificed to Osiris (ib. p. 306). The Harranians abstained from pork (Dussaud, Hist. des Nosairis, p. 94), but ate it once a year (Chwolson, Die Ssabier, ii. 42). The Jews ate it secretly as a religious rite (Is 65° 663. 17). Pigs were worshipped in Crete (de Visser, Götter, p. 161). (For Greek facts see JHS xiv. 152-154). There is some reason for connecting the Celtic Ceridwen with the pig; in modern Welsh folklore

the pig figures as a bugbear for children, and is believed to appear at Allhallows (RHR, loc. cit.). Both in Madagascar and Polynesia the pig is tabu (v. Gennep, p. 224; Turner, Samoa, pass.; Codrington, Melanesians, p. 249, etc.). In European folklore we find the pig hunted at certain times (Folklore, xi. 252), there is a story of a pig ancestor in Wales (ib. 234), and the grunting of pigs is imitated during an eclipse of the moon (Panzer, Beitr. ii. 313). The pig is regarded as lucky in the towns of Germany, but its original augury was inauspicious. In Oesel, on the other hand, it is regarded as of good omen (Holzmaier, Osiliana, p. 43). In Germanic mythology the pig is associated especially with storms, and, as a fertility animal, with the harvest-time (Meyer, Germ. Myth. pp. 102 f., 286 f.). In Celebes the pig supports the earth, and causes an earthquake when he rests against a tree (Journ. Ind. Arch. ii. 837). The pig is sacrificed in India to propitiate the cholera-goddess and other disease-demons, as well as to certain sainted dead, and to ghosts to prevent them from molesting the living (Crooke, i. 126, 137, 197, 200, ii. 53). In Zoroastrianism the form of the boar is one of those assumed by Verethraghna, the god of victory (Yasht, xiv. 15). For the cosmogonic boar see ARW v. 374 f.

the living (Crooke, i. 126, 137, 197, 200, ii. 58). In Zoroastrianism the form of the boar is one of those assumed by Verethraghna, the god of victory (Yasht, xiv. 15). For the cosmogonic boar see ARW v. 374 f.

Pigeon.—Various species of pigeon are tabu in Madagascar (v. Gennep, Tabou, p. 266), India (Crooke, ii. 246), and Europe (Follilore, xi. 341; Ausland, Ivi. 1016, etc.). They are somtimes kept in houses for magical purposes (Liitolf, Sagen, p. 357), but are elsewhere considered unlucky (Rev. des Trad. pop. v. 601; Wiss. Mitt. aus Bosnien, vii. 349). In Albania a spring is said to be blessed annually by the descent of two doves (Hobhouse, Journey, p. 390). At Florence a pigeon of combustible materials is run along a line in the Cathedral at Easter (Folklore, xvi. 182; cf. Trede, Heidenthum, iii. 211; de Gubernatis, Zool. Myth. p. 571; Düringsfeld, Cal. Belge, p. 351). In Swabia it is carried in procession (Panzer, Beitrag, ii. 90). In Hohenzollern-Hechingen a nest with a living pigeon in it is put on a post at Carnival; a mock contest takes place, and the bird is finally carried off amid the lamentations of the people that 'the summer bird' is stolen; the thief is caught and thrown into the water, and the bird is solemnly set at liberty (Mannhardt, Myth. Forsch. p. 134). Among the Brāhmans of Bombay two pigeons are brought to the bride and bridegroom on the second or third day after the wedding; they oil them and smooth their feathers (Bombay Gaz. IX. i. 62). Pigeons are also given or eaten in European marriage customs (Baumgarten, Die komischen Mysterien, p. 312; Anthropologie, ii. 423, n. 1; Schönwerth, Aus der Oberpfalz, i. 123; Vaugeois, Hist. de l'Aigle, p. 583, n. 110). The pigeon is of good omen in Königsberg (Am Urquell, i. 123), and Russia (Erman, Archiw, p. 628), but forebodes fire in Styria (Zts. Oest. Volksk. iii. 12), and very frequently a death (Kehrein, Volksspr. p. 269; Gregor, Folklore, p. 146, etc.). The souls of the blessed dead are sometimes held to take the form of doves (Meyer, Germ.

In Greece the dove was associated with the cult of Aphrodite, and doves were kept in her temples (de Visser, p. 173). Similarly pigeons are attached to the shrines of Sakhi Sarwar in the Panjāb (Creoke, i. 209) and of Shakir Padshah in Khotan (Stein, Sand-buried Ruins of Khotan, pp. 179-180; for the mythology of the dove and pigeon see de Gubernatis, Zool. Myth. ii. 297-306). There is no proof that the priestesses of Zeus at Dodona were ever called 'doves' in the historical period; nor were dove-oracles known. Possibly Sophocles refers to some vague tradition when he speaks of the two

doves through which the oak spoke to Heracles (Farnell, Cutts, i. 38 n., 39 n.).

Quail.—The quail is one of the birds in Germany

Quail.—The quail is one of the birds in Germany which it is unlucky to kill (Wuttke, D. Abergl. p. 163; Strackerjan, Abergl. p. 45). In the Laustz it is held to protect the house against lightning (ib.). It is also tabu in Madagascar (v. Gennep, Tabou, p. 267). In Hungary it is an accursed bird (Jones and Kropf, Folktales, p. 1xi). It is one of the forms assigned to the corn-spirit in Silesia (Peter, Volkstüml. ii. 268), and is eaten by a newly married couple in Lithuania (Russ. Rev. xii. 268). In France the hearts of two quails are held to ensure the happiness of a married couple, if the husband carries that of the male, the wife that of the female (Rolland, Faune, ii. 343). Among the Greeks the quail was used in a game in which the players struck at it blindfold, exactly as the cock and other birds and mammals are used in Europe at the present day (Pollux, Onomastikon, IX. clviii.). The quail was sacrificed by the Phenicians at its return in the spring, and they explained the festival as a commemoration of the resurrection of Heracles (Athen. ix. 47); possibly the first quail was killed—a practice to which there are many European analogues. In Greek mythology Artemis seems to have been vaguely associated with the quail (Farnell, Cults, ii. 433; she was called Ortygia, which is also a place name). For the quail in mythology see de Gubernatis, Zool. Myth. ii. 276–278.

Seal.—Among the Eskimos, women stop work when a seal is taken, until it is cut up; when a ground seal is killed, they stop work for three days (5th Ann. Rep. Bur. Ethn. p. 595). The heads of seals and other marine animals are kept (ib. 8th Rep. p. 434). In Kamtchatka they do a piece of varieties macic heform they general februs described in the present they are seal februs of the present they are se

Seal.—Among the Eskimos, women stop work when a seal is taken, until it is cut up; when a ground seal is killed, they stop work for three days (5th Ann. Rep. Bur. Ethn. p. 595). The heads of seals and other marine animals are kept (ib. 8th Rep. p. 434). In Kamtchatka they do a piece of mimetic magic before they go seal fishing. A large stone is rolled into the court to represent the sea; small stones do duty for the waves, and little packets of herbs for the seals. A kind of boat of birch bark is made and drawn along the sand; the object of the ceremony is to invite the seals to let themselves be taken (Sébillot, Folklore, p. 125). In the west of Ireland and the islands north of Scotland there are certain people who believe themselves to be descended from seals, and who refuse to injure them (Folklore, xi. 232; Orkney and Shetland Folklore, pp. 170-189). The same belief is found in the Faroes (Antiquarisk Tidschrift, 1852, p. 191). A local legend records that they are the descendants of Pharaoh's army, which was lost in the Red Sea (Annandale, Faroes, p. 25). In the island of Rügen it is believed that the seal is descended from drowned human beings (Folklore, xi. 235). Among the Kwakiutls the chief group of dancers' societies is that of the seal (Report of United States National Museum, 1895, p. 419).

Serpent.—(For serpent-worship proper see separate article). The serpent is respected among many peoples who do not worship it in the sense of offering prayer or sacrifice to it; this is especially the case in South Africa and Madagascar. The Malagasy regard serpents as objects of pity rather than of veneration (v. Gennep, Tabou, p. 273), holding them to be the abode of dead men's souls. But the Antimerinas had a serpent idol, whose worshippers carried serpents (ib. p. 275); in the case of the Betsileos it is difficult to say whether we have to do with serpent-worship or not; they regard the fanany as the re-incarnation of a deceased ancestor, make it offerings of blood, and even tend it in an enclosure (ib. p. 277). If these attentions are offered it without arrière pensée and solely because it is one of the kin, we are hardly entitled to regard them as worship, which rather implies that an offering is not strictly disinterested.

Among the Zulus the souls of the dead are said to take up their abode in serpents, termed idhlozi (pl. amadhlozi). Various forms of the belief are recorded; according to one, the serpent form is assumed only by an ancestor who wishes to approach a kraal; another version, but slightly different, says that only the serpents which frequent the neighbourhood of a kraal are amadhlozi; a third authority says that the soul is not bound, as in some of the Malagasy beliefs, to the single soul-animal, but is incarnate in all the species, like the animal-gods of Samoa; a fourth account, probably unreliable, makes the idhlozi the soul-animal of the living (Int. Arch. xvii. 121; Man, 1904, No. 115; Golden Bough?, iii. 409, etc.). As in Madagascar, different classes of men, one for chiefs, another for the common people, another for women (Int. Arch., loc. cit.). Among the Masai, on the other hand, the difference of species marks a difference in the family of the deceased (Hollis, The Masai, p. 307). In Europe, the form of the serpent, like that of the mouse (see above), may be assumed by the soul of a sleeper (Meyer, Germ. Myth. p. 63f.). The serpent is respected over a large part of East Africa, sometimes as an ancestor of the tribe, sometimes as the soul-animal of deceased ancestors (Int. Arch., loc. cit.). Many of the tribes in New Caledonia never eat serpents, but no reason is given for this (Patouillet, Trois Ans. p. 113). In North America they were respected (Brinton, Myths, p. 129). In South America the Airicos believe themselves to be descended from serpents (Tirado, Estudios, p. 31; for other stories of descent see J. F. M'Lennan, Studies, 2nd series, p. 526). Serpents are respected over a large part of Europe, especially those which live in or near human dwellings—probably as a survival of ancestor-worship. In like manner, harmless snakes are tutelary household divinities in the Panjāb hills (Crooke, ii. 141 f.). The name of the serpent is also frequently tabu (Böcler-Kreutzwald, p. 120; Lloyd, Peasant Life, p. 230

It is only rarely that ceremonies of purification are prescribed for the killer of a serpent; the Amaxosa custom prescribed that the killer of a boa had to lie in running water for weeks together; during this time no animal could be slaughtered; finally, the body of the snake was buried close to the cattle-fold (Kay, Travels, p. 341). On the other hand, certain precautions are to be taken in Japan; if the head of the snake is not crushed when it is killed, more will come to take its place (Mitt. d. Ges. Natur- u. Vollerk. Ostas. xv. 282). In Bombay it is believed that barrenness is the penalty for killing a snake (Crooke, i. 226), while in Germanic mythology such an act causes the child of the house to waste away (Meyer, loc. cit.). The snake is commonly associated with water (see above), and said to reside in meta-bles.

The snake is commonly associated with water (see above), and said to reside in water-holes, rivers, etc. (Salvado, Memoirs, p. 280; Merensky, Beitrüge, p. 126; Philip, Researches, ii. 117; Church Miss. Rec. xiv. 30; Strahlenberg, Das N. u. O. Teil, p. 420; Brinton, Myths, p. 130, etc.). Snakes are likewise guardians of treasure in folk-lore generally (Crooke, ii. 134-136). Mythical serpent-monsters are also found as earth-carriers (see 'Earth-Carrier'), or destroyers of the human race (Mitt. d. Schutzgeb. xiii. 45), or Creator (see 'Creator'); in Chile one is connected with the Deinge myth (Medina, Aborigenes, p. 28 ff.), and the Miemacs place two on the road followed by the souls of the dead (Rand, Legends, p. 233); the Hurons made a monster-serpent the source of all maladies (Rel. des. Jés. 1678, p. 75), and for the natives of Victoria the serpent Mindi is the

cause of death (Parker, Aborigines, p. 25); for the Aruntas the Magellanic clouds are the teeth of a gigantic serpent, and silence is to be preserved when they are visible (R.G.S.A., S. Aust. Br. ii. 36). In America, according to Brinton, the serpent is often associated with the lightning (Myths, p. 135). Mention should also be made, in this connexion, of the 'snake-dances' of the Hopis, which are probably expressions of clan totemism, not of ophiolatry (19 RBEW 963 ff.). In South America, serpents are held to be the chief food of the dead

(Spix and Martius, ii. 695).

A good deal of mythical lore has gathered round the serpent in Europe. A king is their ruler (Ausland, Ixiii. 1031; Globus, iv. 333, etc.), and wears a crown which is coveted for its magical properties; the king is often white, and the skeleton of the white snake makes its possessor the owner of a familiar spirit (ib. xxvi. 203). There is a stone in the snake's nest which draws poisons out of a man's body (Jecklin, Volkstünl. ii. 153; cf. Crooke, ii. 141 f.). In Hindu belief serpents have in their heads jewels of marvellous properties (Crooke, ii. 143 f.). He who eats the great white snake understands the language of birds (Russwurm, Eibovolk, § 357), or of the raven (ib. § 400). If a snake is hung up head downwards, it will rain (FLJ v. 91; Wuttke, Volksabergl. § 153). St. Patrick banished all snakes from Ireland, and even Irish cattle have the gift of killing the snakes in the meadows where they are (Northumb. Folklore, F. L. S. p. 8). The snakes know a root by which they bring to life a snake that has been killed (Lepechin, Reise, ii. 105). The belief in the king of serpents is also found among the American Indians (Brinton, Myths, p. 137). Folklore likewise knows of many cases of the union of serpents with human beings (MacCulloch, 255-259, 264-267).

In the ancient world the serpent was associated with leechgraft (see Diverser

In the ancient world the serpent was associated with leechcraft (see DISEASE and SERPENT); the same idea is found in Madagascar (Int. Arch. xvii. 124), and also among the American Indians, perhaps because the snake is in America so often associated with the magician, who is also the leech (Brinton, Myths, pp. 132, 133). The snake is sometimes held to be unlucky (Globus, lxix. 72), but is more often welcomed as the 'Hausgeist.' A snake shot out of a gun is a charm against witchcraft (Liebrecht, Zur. Volksk. p. 332; Müllenhof, Sagen, p. 229); and a Huculian hunter carries a piece of snake to attract game (Globus, lxxvi. 274). In Sussex the first snake should be killed for luck (FLR i. 8). In Bulgaria and France the killing of a snake is a good work, probably because the snake is regarded as the incarnation of a witch (Strausz, Die Bulgaren, p. 34; Rolland, Faune, iii. 36). Snakes are burnt in the midsummer fire (Athenæum, 1869, July 24; Jones and Kropf, Folktales, p. lix). In North Africa the Aissaouas and other sects of fanatics eat serpents annually or at intervals during the year (Walpole, Memoirs, p. 396; Denon, Travels, i. 300; Pliny, HN vII. ii., vIII. xxv., xxv. x., xxvIII. iii.; Pausanias, IX. iv. etc.; ef. Bancroft. iii. 429).

North Africa the Aissaouas and other sects of fanatics eat serpents annually or at intervals during the year (Walpole, Memoirs, p. 396; Denon, Travels, i. 300; Pliny, HN VII. ii., VIII. XXV. XXV. XX, XXVIII. iii.; Pausanias, IX. iv. etc.; cf. Bancroft, iii. 429).

The serpent is commonly of good omen; so among the South African Bantus (Miss. Cath. 1896, 371; Merensky, Beiträge, p. 126), in Arabia (Nolde, Innerarabien, p. 96), and in mediæval Europe (Panzer, Beitrag, ii. 259). In Albania it is unlucky before sunrise and after sunset (Rodd, Customs, p. 158). In Silesia it is held to be lucky, but its appearance is a warning that misfortune is near (Peter, Volkstüml. ii. 33). In Suffolk it is a death omen (Suffolk Folklore, F. L. S. p. 32). On the other hand, there is an elaborate table of omens drawn by the Zoroastrians from the appearance of a snake on each of the thirty days of the month (Al-Birūni, Chronology of Ancient Nations,

tr. Sachau, p. 218); so, too, in Norway, when it crawls across the road (Liebrecht, Zur Volkskunde, p. 326). In Zoroastrianism the serpent is a most evil creature, and to be killed (Vendūdād, xiv. 5; Herodotus, i. 140); it was formed by Ahriman (Būndahishn, iii. 15). A similar horror of the serpent exists in Armenia (Abeghian, Armenischer Volkglaube, p. 30). For the serpent, see, further, de Gubernatis, Zool. Mythol. pp. 389-419, Pauly-Wissowa, s.v. 'Aberglaube,' p. 77, and JE xi. 203. Shark.—In New Calabar the shark is regarded as a god (Globus, x. 225). Sharks are sometimes re-

Shark.—In New Calabar the shark is regarded as a god (Globus, x. 285). Sharks are sometimes regarded as enchanted men (Wilson, Western Africa, p. 161). The shark was formerly protected by a death penalty inflicted on the killer of one, but this was subsequently abolished by a religious revolution (Bastian, Bilder, p. 160). Sharkworship is said to have existed in Huahine (Montgomery, Journal, i. 245). In the Solomon Islands the shark is addressed as 'grandfather' (Zts. Geog. Ges. Thür. x. 34). Sharks were worshipped in the Sandwich Islands; and if a man who adored them happened to have a child still-born, he endeavoured to lodge its soul in the body of a shark. In order to do this he flung the body into the sea, performing various ceremonies at the same time. There were temples with shark-idols; the priests rubbed their bodies night and morning with salt and water to give them a scaly appearance (Golden Bough?, it. 432). In New Georgia the shark is hope ('sacred'), because it eats men. It may not be touched in Rubiana, but in the eastern part it may be killed but not eaten (JAI xxvi. 386). Sharks are very often the form in which dying people announce their intention of re-appearing; offerings are made to them. In Saa special coconut trees are reserved for them, but men who intend to become sharks may also use the trees. Other men will join them sometimes and ask for coconuts with the voice of a shark-ghost (Golden Bough², ii. 434-435).

Sheep.—In Greek cult the ram was connected with Zeus; at Eleusis and elsewhere its fleece was used in rites of purification (Farnell, Cults, i. 65; Smith, Rel. Sem. 474). As a substitute for the eldest scion of the Athamantids, a ram was offered (Farnell, i. 94). A prayer for rain was offered to Zeus on Mount Pelion by youths clad in fresh ramskins (ib. p. 95). Zeus Ammon is derived from Egypt (ib.). In the cult of Artemis the sheep was sometimes tabued (ib. ii. 431). In a sheep-offering to Aphrodite in Cyprus the worshippers wore the skin (W. R. Smith, p. 474). Aphrodite is represented as riding on the ram (Farnell, ii. 675).

Although the sheep is one of the most important sacrificial animals (Int. Arch. xvii. 139, for Africa), it is only in Egypt that we find a sheep-god proper. Amon was the god of Thebes; his worshippers held rams to be sacred, and would not sacrifice them. At the annual festival of the god a ram was, however, slain, and the image of the god was clothed in the skin; they mourned over the body and buried it in a sacred tomb. Amon is represented as a ram-headed god (Golden Bough², ii. 368 f.). Among the Nilotic tribes the Madis practise an annual sacrifice of a lamb, possibly as a means of expelling the evils which have accumulated. They are sad before the ceremony, and show great joy when it is over. They assemble by a stone circle, and the lamb is led four times round the people, who pluck off bits of its fleece as it passes and put them in their hair; the lamb is then killed on the stones and its blood sprinkled four times over the people. It is then applied to each person individually. As each rises to go away, he or she places a leaf on the circle of stones. The ceremony is observed on a small scale at other times, particularly when trouble comes upon a family; it is also practised on joyful occasions, such as the return of a son

after a long absence (Proc. R. S. Edin. xii. 336). The piacular sacrifice of a ram is occasionally found in European folklore; near Maubeuge a ram is killed by one of the squires of the neighbourhood, and is believed to be laden with the sins of the people (Rolland, Faune, v. 206). But more commonly the sacrifice is performed without any specific reason being given for the ceremony. It is a common practice in Bohemia, Hungary, and other districts for a ram to be thrown from the church tower in the autumn in order to procure a good harvest in the following year (Mannhardt, Myth. Forsch. 139 n.). In Finland a lamb which has not been shorn since the spring is killed in the autumn; it must be slaughtered without using a knife, and no bones must be broken. When it is served up, water, which probably has taken the place of blood, is sprinkled over the threshold, and a portion of the meal offered to the house-sprits and the trees which will serve as May-poles in the following year (Böcler-Kreutzwald, Der Ehsten Aberg. Geb. p. 87). In East and Central Europe a lamb is commonly sacrificed at Easter or rather later, the day chosen being usually April 24th (Globus, xxvi. 158, xxx. 93, xl. 71, etc.; cf. Golden Bough? ii. 438). In West Europe there are traces of such a custom at Whitsuntide; in Hamburg, lambs, real and of wood, were on sale without the gate on the Friday before Whitsuntide; children received them as presents, and they were eventually consumed by the family (Schütze, Schleswig-Holst. Idiotikon, iii. 7); they were also brought as presents to the schoolmasters (Jahrb. f. Schl.-Holst. x. 29). In Virgen, a lamb is taken in procession on the Friday after Easter to a mountain-chapel and subsequently sold (Zts. Ver. Volksk. v. 205). The sheep also figures at the Carnival (Mannhardt, Antike Wald- und Feldkulte, p. 191 n.), the Kirmess or church festival (Pfannenschmid, Germ. Erntefeste, pass.), and at Christmas (Tradition, vi. 285; Mannhardt, op. cit. p. 196). In Wales, people dressed in sheep-skins went round on Al

In Madagascar the sheep is one of the animals in which are incarnated the souls of ancestors; various families are forbidden to eat its flesh (v. Gennep, Tabou, p. 236). In India there is reason to believe that the sheep was once a sacred animal (Crooke, i. 163 f., ii. 226). A large number of Chinese have a prejudice against mutton; the sheep is, however, regarded as a lucky animal, and its skull is hung over the door to prevent theft (Zool. Garten, 1900, 6). In France a lamb is blessed in the church at Christmas in Nouvion, and allowed to die of old age (Rolland, Faune, v. 160). In the same way rich Kalmuks consecrate a white ram under the title of 'the ram of heaven'; probably the object is, as in France, to provide the flocks with a tutelary animal (Golden Bough<sup>2</sup>, ii. 438).

The sheep is auspicious as an ominous animal. It is lucky to touch it (Desrousseaux, Mæurs, ii. 284). The skull of a sheep wards off evil (Wiedemann, Ehsten, p. 482; Russwurn, Eibovolk, ii. 281, 283, 402; Mélusine, viii. 33). The sheep figures in various European ceremonies connected with marriage; probably the rites are magical and performed as ceremonies of fertilization. In Poitou the newly married had to pursue a ram (Mem. Soc. Ant. France, i. 437); at Chatillon-sur-Seine the bride drove the animal thrice round a tub (ib. iv. 119). In Bulgaria and Russia the bride receives a lamb or sheep as 'Morgengabe' (Anthropologie, ii. 587; Holderness, New Russia,

The Gallas take an oath by the sheep 236).

(Pinkerton, Africa, i. 8).

Spider.—In the Creation myth of the Sias there was only one being in the lower world, the spider Sussistinnako; he caused men, animals, etc., to come into existence, and divided them into clans (10th Ann. Rep. Bur. Ethn. 1889–1890, p. 26 ff.) In like manner, among the Hopis the spider represents the 'medicine' power of the earth (21 RBEW p. 11). According to the Tetons, Ikto, the spider, was the first being in this world who attained maturity. He was the first to use human speech, and is more He was the first to use human speech, and is more cunning than man. All the animals are his kindred, and he commands them. In their myths the spider is deceived by the rabbit (Dorsey, Siouan Cults, p. 472). The Tetons pray to grey spiders. When they are going on a journey, they kill a spider if they see one, and pray; it is unlucky to let it pass or to kill it in silence. They tell it that the Thunder-beings killed it (11th Ann. Rep. Bur. Ethn. p. 479). In the mythology of the Akwapim, Anansi, the spider, is a sort of demiurge; he races the cat for the privilege of marrying the he races the cat for the privilege of marrying the daughter of the god; hence the cat and the spider are enemies (*Petermanns Mitt.*, 1856, 466; Frobenius, *Weltanschauung*, p. 294). Many of these myths are now found in the West Indies (P. C. Smith, Anansi Stories from Jamaica). The Adjahdurrahs believe that the islands were made by the spider R.G.S.A., S. Aust. Br. II. iii. 18). In another Australian myth the spider is a monster, and injures everything which the squirrel makes (S. Amer. Miss. Mag. xiv. 112). The Haidas also have a story of a spider who was the mortal enemy of man; he was overcome by T'skanahl, who threw him into the fire; he shrivelled up and became a mosquito (Smiths. Report, 1888, p. 326; cf. Ehrenreich, Myth. u. Legend. d. südamer. Urvölker, p. 33 f.). In a Kayowe myth, 'Old Spider' escapes the flood and is concerned with the sarrly history of the human reach (Ausland, 1890). early history of the human race (Ausland, 1890, 901). For the Flatheads the residence of their grandsies, the spiders, was in the clouds. Both in Australia (Howitt, Native Races, p. 388) and in America the spider's web is a means of getting up to the sky (Trs. Ethn. Soc. iv. 306). The Cherokees told how the spider brought fire on its web, but was captured before it reached the earth (Foster, Sequoyah, p. 241). It is held in several parts of Europe to be unlucky to kill the spider (Folklore, xi. 241; Zts. f. Oest. Volksk. ii. 252). In Tuscany it is the custom to kill a spider seen in the morning it is the custom to kill a spider seen in the morning (Andree, Ethm. Par. p. 8). It is also killed in Poland (Trad. iv. 355). The Southern Slavs use it in magic; a girl takes a spider and shuts it up, calling on it to show her the destined lover, and promising to set it free if it does so, and if not, to kill it (Krauss, Sitte, p. 173).

There is a curious diversity in the omens given by griders. in Ditmersher a small black grider is

There is a curious diversity in the omens given by spiders; in Ditmarschen a small black spider is a death omen (Am Urquell, i. 7). A spider in the evening is lucky, in the morning unlucky (ib. p. 64). In Stettin the reverse is the case (Balt. Studien, xxxiii. 169). In Jewish folklore the spider is hated (JE vi. 607). For other spider omens see John of Salisbury, i. 13; Wolf, Beitr. ii. 457; Meier, Sagen, p. 221; Birlinger, p. 119, etc. For the spider in folk-tales see de Gubernatis, Zool. Myth. ii. 161-164.

Stork.—The stork was sacrosanct in ancient

natis, 2006. Myth. 11. 101-104.

Stork.—The stork was sacrosanct in ancient Thessaly, and a killer of one was punished as though he were a murderer (de Visser, Götter, p. 157). It enjoys the same respect wherever it is found in Europe. It is also respected in Egypt (Globus, Ixix. 257), and in Morocco (Clarke, Travels, Travels III. i. 34 n.), where there is said to be a hospital for sick storks and a fund for burying dead ones. The stork is commonly said to bring the children. Its

presence brings luck to the house; in particular, it is a safeguard against the danger of fire; its efficacy is discounted by the stork's supposed practice of removing its nest from a house that is practice of removing its nest from a house that is shortly to be burned down. Occasionally the stork, however, is thought to bring bad luck (Wiedemann, Ehsten, p. 454), for, where one nests, one of the family or a head of cattle dies. So, too, in Bohemia, a stork settling on the roof, or twelve storks circling over a house, means fire (Grohmann, Abergl. Nos. 438, 439; cf. Meyer, Germ. Myth. p. 110). For other omens and beliefs see Globus xxiv 23. see Globus, xxiv. 23.

The stork is one of the migrants which must be

greeted when they appear in the spring; the house-stork must learn all that has happened in his stork must learn all that has happened in his absence. In other countries he is a man (Zts. deutsche Phil. i. 345). In spite of the sacrosanctity of the stork, it is used in magic (ib.; Grohmann, Abergl. No. 434), and its gall cures a scorpion's bite in Jewish folk-belief (JE xi. 559). For the stork in folk-tales see de Gubernatis, Zool. Myth.

ii. 261–262.

Swallow.—There seems to have existed a custom in ancient Greece of carrying a swallow round from house to house, singing a song (Athenæus viii. pp. 359, 360). Swallow songs sung at the appearance of the bird in spring are very common (Kuhn and Schwartz, Nordd. Sagen, p. 452). We find the swallow carried round in modern Greece, a wooden bird on a cylinder, and a song is sung (Rodd, Custom and Lore, p. 136; cf. p. 271). In Macedonia the wooden swallow is encircled with leaves. Eggs are collected and riddles are asked, the answer to which is 'swallow' (Bent, Cyclades, p. 434). The same practice prevails in Bulgaria and Little Russia, and the songs refer to the advent of spring (Miladinov, Bulgarski narodni

pesni, p. 522).

pesni, p. 522).

The swallow is everywhere regarded as sacred; it is unlucky to kill it (Kaindl, Huzulen, p. 104; Strackerjan, Abergl. p. 45; Globus, xl. 325; Brit. Ass. Ethnog. Surv. Scotl. Nos. 379-383; Alvarez, Folklore, i. 224, etc.); it may not be touched (Tradition, v. 100), or caught (Rev. des Trad. pop. iv. 229; Blätter für Landesk. N. Oest. ii. 101; Grohmann, Abergl. No. 489), and its nest may not be taken (ib. No. 494 f.; FLR i. 8). In the West of Scotland, however, it is feared as having a drop of devil's blood in its veins (Nanier, Falklore, p. 112). Scotland, however, it is feared as having a drop of devil's blood in its veins (Napier, Follilore, p. 112). Its presence is regarded as lucky (Zts. Ver. Vollsk. x. 209; Rochholz, D. Glaube, ii. 107). In spite of its sacred character, it is used in magic; in Bohemia the blood of the first swallow drives away freekles (Wuttke, D. Abergl. p. 159). The first swallow is important in other respects; it has long been the custom to draw omens from it (Pliny, HN xxx. 25; Hoffmann's Fundgrube f. Ges. d. Spr. u. Lit. i. 325, and many modern instances; Bartsch, Sagen, ii. 172; Germania, xix. 319). As a rule it is of good omen, but in Thuringia it means a death in the family if a young swallow is thrown out of in the family if a young swallow is thrown out of the nest (Zts. Ver. Volks. x. 209). A swallow in a room is a death omen (Erman, Archiv, p. 628). For other omens see Grohmann, Abergl. Nos. 496, 504, etc. Swallows are sold in Paris and elsewhere 504, etc. Swallows are sold in Paris and elsewhere and set free by the purchasers (Rolland, Faune, ii. 321; Rev. des Trad. Pop. iv. 229). A similar custom exists in Japan, and is especially practised at funerals (MS note). For the swallow see also Pauly-Wissowa, s.v. 'Aberglaube,' p. 79.

Swan.—In the opinion of Jacob Grimm, the goose has supplanted the swan in mythology to some extent; but the opposite view seems nearer the truth. Perhaps the same applies to the duck. In European folklore the swan is most prominent.

In European folklore the swan is most prominent in a class of Märchen to which it has given a name,
—'swan-maiden stories' (see 'Myths' above),—but in Picardy we find the duck taking the place of the swan (Romania, viii. 256). It may be noted that the subjects of transformation are not necessarily female (ib.; cf. Mannhardt, Germ. Mythen, pp. 378-379).

The swan is important in the religion of N. Asia (cf. Cochrane, *Ped. Journey*, ii. 163; Georgi, *Bemerkungen*, p. 282). Among the Tatars a man who catches a swan passes it on to his next neighbour and receives in return his best horse; its new possessor passes it on, and so on, until it is no longer presentable, when it is let loose (Castrén, Vorlesungen, p. 230). The oath by the swan was well known in the Middle Ages. In Moscow a swan is sometimes given to the newly married, who alone, in the continued the continued to the continued in the opinion of the common people, have a right to eat it (Rev. des Trad. Pop. iv. 324). In Germanic folk-lore the swan is associated with the Norns, who sometimes assume its form (Meyer, Germ. Myth. p. 168). Its cry foretells a thaw, and it is pre-eminently a bird of prophecy, often of coming ill (ib. p. 112).

Thunderbird.—Widely spread over the American ontinent is the belief in a great bird as the cause of thunder, which also figures in the Creation myths of some tribes, notably the Chippewayans, as the being which brought the world from beneath the waste of waters (Mackenzie, Voyage, p. cxviii; cf. Dunn, Oregon, p. 102). The Hare-skin Indians describe it as a gigantic bird which dwells in winter in the land of the dead in the West-South-West, together with migratory birds and animals. When the warm weather comes, it returns with the ghosts in its train. When it shakes its tailfeathers, it makes the thunder, and the flash of its detty (Petitot, Traditions, p. 283). The Iroquois believed that Onditachiæ controlled rain, wind, and thunder. The thunder they conceived as a man in the form of a turkey (?); the heaven was his palace, and he retired there in good weather; when it thundered he was collecting snakes and other 'oki' objects; he caused lightning by opening his wings (Rel. des Jés. 1636, p. 114; for other references see Bancroft, vol. iii. passim; Schoolcraft, Indian Tribes, etc.). In Vancouver Island the Ahts call the thunderbird Tootooch; his wings make the thunder, his forked tongue the lightning. Once there were four such birds, but Quawteaht, their great deity, drowned the rest in the sea (Sproat, Scenes, pp. 177, 213). The Dakotas say that the old bird begins the thunder, but the young birds keep it up and do the damage; the old bird is wise and good, and kills no one (Tylor, Prim. Cult.<sup>3</sup> i. 363). In Central America we find the bird Voc i. 363). In Central America we find the bird Voc associated with Hurakan, the god of the tempest (Brasseur de Bourbourg, Popol Vuh, p. 71). In South America the idea is found among the Brazilians (Müller, Am. Urrel. pp. 222, 271; but see also Ehrenreich, Myth. und Legend. d. südamer. Urvölker, p. 15). The same conception is found in West Africa among the Ewe-speaking peoples. Khebioso or So, the god of lightning, is conceived as a flying god, who partakes of the nature of a bird; his name means 'bird that throws out fire.' He casts the lightning from the midst of the black cloud: the thunder is caused by the flapbing of his He easts the ignthing from the minust of the mach cloud; the thunder is caused by the flapping of his wings. Various ideas of the same order are found among the Bantus. The Zulus think a brown bird is found at the spot where the lightning strikes; is found at the spot where the lightning strikes; the Amapondos say that the bird causes the lightning by spitting out fire; according to the Bomvanas, the bird sets its own fat on fire and causes the lightning. The thunder is the flapping of its wings; the female bird causes loud, crackling thunder, the male distant, rumbling sounds. In Natal they hold that a white bird is the cause of the lightning (Kidd, Essential Kafir, p. 120 f.;

cf. Moffat, South Africa, p. 338; Casalis, Basutos, cr. Monat, South Africa, p. 358; Casain, Basutos, p. 266; Callaway, Religion of Amazulu, p. 119). The conception of the thunderbird is also found in the Hervey Islands (Ellis, Researches, ii. 417; Williams, Enterprises, p. 93), and the Marshall Islands (Mitt. d. Schutzgeb. i. 66), and the Karens have a similar idea (Mason, Burma, p. 217).

Tiger.—A myth of descent from a tiger ancestor is found among the Bhils and Rainuts (Crooke

Tiger.—A myth of descent from a tiger ancestor is found among the Bhils and Rajputs (Crooke, ii. 211). It is associated with Siva and Durga, but tiger-worship proper is confined to wilder tribes; in Nepāl the tiger festival is known as Bagh Jatra, and the worshippers dance disguised as tigers (ib. p. 212). The tiger is likewise worshipped by the Santals (ib. p. 213), while in Mirzapur, Bagheswar, the tiger-god, is located in a bira tree, and is said to take human form at night and call people by name; those who answer fall sick (ib. i. 256 f., ii. 78). The Waralis worship Waghia ('lord of tigers'), a shapeless stone smeared with red lead and ghī, which is held to protect them from tigers (Home and For. Miss. Rec. 1839, 390; cf. Rec. of (Home and For. Miss. Rec. 1839, 390; cf. Rec. of Free Ch. vii. 252). In Hanoi a tiger-god is worshipped; a shrine contains an image of a tiger (XI. Cong. Orient. ii. 294); and a tiger-god is also found in Manchuria (Miss. Cath. 1895, 239). The tiger is represented in Sumatra as the abode of the souls of the dead (Marsden, p. 292; Junghuhn, Battaländer, p. 308), and a name-tabu is practised. A like custom is found in Sunda (Tijdschr. T.L.V. vi. 80) and parts of India, where the souls of those he devours sit on his head (Crooke, ii. 211). For other cases of name-tabu see Frazer, Golden Bough<sup>2</sup>,

i. 457.

The hunting of the tiger is naturally attended.

The Sumatrans attack with much ceremony. The Sumatrans attack tigers only when a friend or relative has been wounded, or in self-defence. The Menangkabauers try to catch them alive in order to beg their forgiveness before killing them; they show them other marks of respect; no one will use a path that has been untrodden for more than a year; at night they will not walk one behind another or knock the sparks off a firebrand (Golden Bough<sup>2</sup>, ii. 393 ff.). The people of Mandeling have a tiger claims to be spared by it; when a tiger has been shot, the women of the clan offer it betel (ib.). When the Battas have killed a tiger they bring its shot, the women of the clan offer it betel (ib.). When the Battas have killed a tiger they bring its corpse to the village with great ceremony; people of the tiger clan make offerings to it; a priest then explains why it has been killed, and begs the spirit to convey his message to the soul of the tiger, so that it may not be angry and do harm; after this a dance is held, and most of the body is buried, only those parts being saved which are useful in medicine; in particular, the whiskers are burnt off at an early stage, so that they may not be used as poison (Golden Bough<sup>2</sup>, ii. 394; Tijdschr.xxxiv. 172). Connected with the atonement for the death of a tiger is the Indian belief that a garden where a tiger has been killed loses its fertility (Crooke, ii. 212). Not only is it dangerous to kill a tiger, but being killed by one also has its perils; the 'tiger ghost' is worshipped (Crooke, p. 213). Among the Garrows a man who has been killed by a tiger is believed to appear in a dream and tell his relatives to change their names (Mission Life, N. S. x. 280). In North Aracan the ceremony of 'ya,' or tabu, is strictly enforced when any one has been killed by a tiger (JAI ii. 240). Connected with tiger-worship is the practice of taking an oath by it. The Juangs, Hos, and Santals are all sworn on a tiger skin (Miss. Cath. 1897, 369; Crooke, loc. cit.). Among the Gonds, two men, believed to be possessed by Bägheswar, appear at marriage ceremonies and fall upon a kid with their teeth (Crooke, ii. 216). Besides being the abode of the soul of a dead man, a tiger may be the temporary or permanent form of a living human being. In India a root is said to effect the transformation, and another root is the antidote (Crooke, ii. 216). In Central Java the power of transformation is hereditary, but the wer-tiger is held to be friendly, especially if his friends call his name; he guards the fields. For the variant of this belief which makes the tiger the soul of a dead, not a living man, see Tijdschr. xli. 568. The belief in the wer-tiger is also found in the Malay peninsula (Skeat, Malay Magic, p.

106) and China.

Closely connected with the wer-tiger is the familiar of the wizard in tiger form. A connecting link is found in the Thana belief that mediums are possessed by a tiger spirit (Bombay Gaz. XIII. i. 185). The Binuas of Johore believe that every pawang has a tiger subject to him, which is immortal (Journ. Ind. Arch. i. 276, 277). The Malays believe that the soul of the dead wizard enters the body of a tiger; the corpse is put in the forest and supplied with rice and water for seven days, during which the transmigration, which is the result of an ancient compact made by the pawang's ancestors, is effected. If the son of the pawang wishes to succeed his father, he must perform a ceremony to secure his soul (Newbold, ii. 387). The tiger is largely used in magic. In North India and Korea it is eaten in order to gain courage (Golden Bough?, ii. 356). In India the fangs, claws, and whiskers are used in love charms and as prophylactics against possession, especially in the case of young children (Crooke, ii. 214f.). The whiskers are regarded as poisonous in Sumatra (Tijdschr. loc. cit.) and in India (Crooke, loc. cit.). Tiger's flesh is burnt to keep blight from the crops (iö.). Some Dayaks keep a tiger's skull in the head-house; to move it is said to cause heavy rain, and to touch it is punished by death by lightning, while its complete removal would cause the death of all the Dayaks (JRAS, S.B. No. 5, p. 159).

Corresponding to lycanthropy in Europe, there is in India a pathological condition in which the sufferer believes that he is turned into a tiger (Sprengel, Auswahl, iii. 27). The Garrows say that the mania is connected with a certain drug, which is laid on the forehead. The wer-tiger begins by tearing the ear-rings out of his ears, and then wanders about, avoiding all human society. In about fourteen days the mania begins to subside. Although fits of this kind are not attributed to witches in India, the patients are said to be seen with 'their eyes glaring red, their hair dishevelled and bristled, while their heads are often turned round in a strange convulsive manner.' On the nights of such fits they are believed to go abroad and ride on tigers (Malcolm, Memoir of Central India, ii. 212). It seems, therefore, not improbable that the fit in question is of the same

nature.

Tortoise, turtle.—Both in Asia (Miss. Herald, xviii. 385; cf. Bastian, Bilder, p. 356; Crooke, ii. 255) and in America the turtle is one of the mythical animals on which the world rests. In the Iroquois myth the world was at first covered with water, and when Aataentsic fell from heaven, the animals held a conference to decide how she was to be received, and the turtle caught her on his broad back; with the aid of mud or sand brought up by water-fowl the earth was formed (21st Ann. Rep. Bur. Ethn. p. 180, etc.). The turtle is an important Iroquois totem, and the clan traces its descent from a turtle that threw off its shell (Frazer, Tot. p. 3). In like manner the tortoise is a totem of the Mundari Kols, and is also worshipped and sacrificed elsewhere in India (Crooke,

loc. cit.). In Zoroastrianism, on the other hand, the tortoise was an evil creature, and consequently was tortoise was an evil creature, and consequently was to be killed (Vendīdād, xiv. 5). A turtle tabu exists in Madagascar (v. Gennep, Tabou, p. 289), Java (Tijdschr. T.L. V. xxv. 573), and Pomotu (Rovings in the Pacific, p. 243); and the Kwapas were not allowed to lift a small water-tortoise by its tail, lest there should be a flood (Journ. Am. Folklore, viii. 130). The turtle was sacrificed in Pomotu (Miss. Cath. 1874, 378). The Zuñis have the turtle as one of their totems. Sometimes they send to fetch turtles with great ceremony, and apparently each family receives one; the day after it arrives the turtle is killed, its flesh and bones deposited in the little river, and its shell made into a dance rattle. object of the ceremony is obscure; Frazer suggests that the dead are fetched in the form of turtles and that the dead are retened in the form of turnes and sent back to spirit-land; it seems very probable that the turtle is killed in order that it may be a messenger; but it does not seem that the ceremony is performed only by the turtle clan; how far, is performed only by the turtle dair; how far, therefore, the kinship terms applied to it are merely complimentary it is impossible to say (Golden Bough<sup>2</sup>, ii. 371). Turtle-fishing is an occupation surrounded by many tabus; in Madagascar the fisher had to eat the turtle on the shore, and the shell had to be left there too; it might not be used. All the village took part in the turtle feast, and it was not allowable to eat other food with it. If these tabus are not observed, the turtles leave the shore (v. Gennep, Tabou, p. 287). In the islands of Torres Straits many magical ceremonies were performed to prepare a canoe for turtle-fishing. There were many tabus connected with the fishing, chiefly of a sexual character; turtle dances were also performed to ensure success in the fishing (Camb. Univ. Exp. Reports, vol. v. pp. 196, 207, 271, 330-336). For the myths and folk-tales of the tortoise see de Gubernatis, Zool. Myth. ii. 93-95,

Whale.—The Tongans regard the whale as the abode of certain deities, and never kill it; when they chance to come near one, they offer it scented oil or kava (*Prim. Cult.*<sup>3</sup> ii. 232). Among the Haidas the fin-backed whale is tabu, on the ground that a dead man's soul sometimes enters it (JAI xxi. 20). As a rule, however, the whale, like other large mammals, is feared but not exactly worshipped. In Madagascar they have a certain veneration for it, and have a special ritual for the whale fishery; before the voyage begins, both husband and wife submit to a certain number of tabus, of which chastity is one: the man remains in his hut and fasts regularly; in his absence his wife does the same. After various magical ceremonies, the boat is covered with branches by the magicians, the fishers sing supplications to the old whales, which they do not pursue, to give them their young ones. After bringing the whale to land, the canoe backs away from the shore and then returns at full speed, the harpooners in the bow; they harpoon the animal again, and are then seized and carried to their huts, where, as a part of the ceremonies, their continence at once comes to an end; the whale is then cut up, and preparations for a feast are made; the carcase is decorated with necklaces, and one of the fishers makes a long prayer or address. Thereupon the whale is divided, and each hut receives a portion (v. Gennep, Tabou, p. 254 ff.).

In preparation for the whale fishing the Aleutians celebrate a festival; after killing a number of dogs, they carry a wooden image of a whale into a hut with loud shouts, and cover it up so that no light can get in; then they bring it out again and shout together, 'The whale has fled into the sea' (Krachenninikow, ii. 215). The Kaniagmiuts consider whalers to be in communication with evil spirits,

ANIMALS

and fear them. They seem to have expiated the death of the whale as the Ainus do that of the bear. Whalers were initiated and lived in a special village; dead whalers were buried in caves, and were regarded as tutelary divinities; they were placed in positions resembling those which they took during the chase of the whale; offerings were made to them; it was believed that if a man put a piece of slate at the entrance to the cave the dead would prepare a spearhead (Rev. d'Anth. ii. 679-80). On the island of Thack whalers were tabu during the fishing season; before it began, they searched for eagles' feathers, bears' hair, etc., as talismans; when the season was over, they hid their fishing implements in the mountain caves with the dead bodies; they stole the bodies of successful fishermen, some said as talismans, others in order to prepare poison from them (Lisiansky, Voyage, pp. 174, 209). In Vancouver Island whale-fishers are carefully selected; for months before the fishery they abstain from their usual food, practise continence, wash three times a day, redden their bodies, etc. Any accident during the fishery is put down to a violation of these tabus, and punishment is inflicted (Sproat, Savage Life, p. 227). The whole of the village shares in the proceeds of the fishing (Rev. Sci., Nov. 4, 1899). A whale dance is performed at Cape Flattery (Swan, Indians, p. 70). In Nootka Sound a feast is held after the whale fishery, and the chief, before distributing the portions to the guests, performs a sort of pantomime, during which he imitates the blowing of a whale (de Saussure, New Voyages, ix.; Roquefeuil, p. 34). The great chiefs are buried in a special hut, which contains eight images of whales made of wood and placed in a line; after the bodies have been under ground some time, they dig them up, take off the heads, and place them on the backs of these images; the reason given is that it is done in memory of their skill in throwing the harpoon; but it has more probably a magical intention. When a whale is caught, the chief goes to the hut to offer some of its blubber to his ancestors and return thanks to the sun (?); after the festival mentioned above, the chief carves a wooden whale and puts it before the shed (ib. p. 102). The Eskimos of Greenland put on their best clothes for the whale fishery, because the whale cannot endure dirtiness; if they wore dirty clothes or some one took part in the chase who had touched a dead body, the whale would escape (Laharpe, xvi. 206; Egede, p. 18). The whale also in Norse folk-lore even associated with the dragon of Midgard (Meyer, German. Myth. p. 112f.). Among the Yahgans the initiants are bound to abstain from certain parts of the whale (South Am. Miss. Mag. iii. 117). In South Africa the Yaos make images of whales on the ground, at the initiation of young men (Macdonald, Africana, i. 131). The Antimerinas believe that earthquakes are due to whales (v. Gennep, Tabou, p. 257). The belief suggests that they, like the Russians and others, The belief hold that a whale supports the world. The Russians attribute a deluge to the death of one of the four whales (*Berl. Lesekabinett*, 1844, p. 210). On the Gold Coast the stranding of a whale is regarded as a presage of great misfortunes (Reclus,

A story resembling that of Jonah and the whale is a fairly wide-spread myth (Tylor, Prim. Cult. 3: 339). For the Dog-Rib Indians the swallowing of a man, and his escape through being drawn out by his sister's shoe-lace, form the introduction to a Deluge myth; the whale in his wrath raised great waves and inundated the earth (Petitot, Traditions, p. 319). The same incident of the swallowing is they bury it and give away the weapon with found among the Haidas and other tribes of the which it was killed. They believe that killing

North-West Coast (Am. Ant. xi. 298, x. 370; Swan, N.W. Coast, p. 68). One of the incidents of Manibosho's career is the victory over a monster who has swallowed him (Schoolcraft, Algic Researches, i. 138). At Eromanga a story is told of a man who fell into the water and was swallowed by a whale, but escaped because his ear-rings pricked the inside of the monster (Murray, Missions, p. 180; Turner, Nineteen Years, p. 496). The same incident is found in the Paumotu archipelago (Miss. Cath. 1884, 343). The Bechuanas attribute the destruction of all save one woman to a monster who swallows them (Casalis, Langue Sechuana, p. 97). Among the Warangis of East Africa it is a snake which comes out of the sea (Mitt. d. Schutzgeb.

Wolf.—Outside Europe, where the wer-wolf figures prominently in the popular belief of many countries, the wolf is, from a mythological point of view, comparatively unimportant. The Thlinkets have a god, Khanukh, whose name means 'wolf'; he is the head of the wolf phratry (Bancroft, iii. 101). It has, nevertheless, been denied that Khanukh the god has anything to do with the wolf (141 vrviii). god has anything to do with the wolf (JAI xxviii. a kind of image which they preserve with great care, as a safeguard from evil; one is in the form of a wolf's head (Miss. Herald, 1829, p. 368). This may, on the other hand, refer to the individual's tutelary deity; for it is a common practice to

carry an image of the manitou (Frazer, Tot. p. 54). In Europe the wolf was especially associated by the Greeks with Apollo, who was called  $\Lambda \acute{\nu} \kappa \iota \nu$  (Frazer, Paus. I. xix. 3). Probably the wolf was originally worshipped or received offerings, as was the case among the Letts (Golden Bough<sup>2</sup>, ii. 429); in process of time the cult was associated with that of  $\Lambda$  pollo and it was associated with that of Apollo, and it was supposed that he received his title from having exterminated wolves (ib.). Many stories connected Apollo with the wolf, some possibly due to a misunderstanding of his epithet hungren's (Riad, iv. 101, 119), probably meaning 'twilight-born' (Meyer, Handb. der griech. Etymologie, iv. 519), but interpreted by popular etymology as 'wolf-born.' In Delphi was a bronze image of a wolf; this was explained as commemorating the finding of a treasure with the aid of a wolf. Like Romulus and Remus, many children of Apollo by human mothers were said to have been suckled by wolves (Lang, Myth, ii. 220; Liebrecht, Zur Volkskunde, p. 18). The wolf was also associated with Zeus in connexion with Mount Lycœus, where a human sacrifice took place, succeeded by a cannibalistic feast, participation in which was believed to result in transformation into wolves; according to a later legend, one portion of the human flesh was served up among the other sacrificial dishes, and the eater was believed to become a wer-wolf (Lang, Myth, etc., ii. 263). At Rome the wolf was associated with Mars, and the Lupercalia is sometimes interpreted as a wolffestival; if the Luperci were wolf-priests, it is probably due to the connexion of the wolf with Mars and the wolf cave (Fowler, Rom. Fest.

pp. 310-321).
The Kamtchatkans celebrated a wolf festival and related an ætiological myth (Krachenninikow, p. 129). When the Koriaks have killed a wolf, they dress one of their number in its skin and dance round him, as they do round the bear, saying that it was a Russian who killed him (Golden Bough<sup>2</sup>, ii. 397); the Tunguses kill a wolf with fear (Erman, Archiv, xxi. 25). When the Kwakiutl Indians of British Columbia kill a wolf, they lay it on a blanket and wail over the body; each person must eat four morsels of its heart.

a wolf causes scarcity of game (Golden Bough2, ii. 396). In the same way in ancient Athens any one who killed a wolf had to bury it by subscription (ib.). Possibly the Cree custom of painting the faces of young wolves with vermilion or red ochre is a propitiatory ceremony (Hearne, Northern Ocean, p. 363), for there is a prohibition of killing wolves among them, which is not, however, universally observed (ib. p. 243). A neighbouring tribe, the Chippewayans, forbid women to touch a material Chip (Dance Carone, 102) tribe, the Chippewayans, forbid women to touch a wolf skin (Dunn, Oregon, p. 106). It is very common to use another name for the wolf than the ordinary one (Golden Bough<sup>2</sup>, i. 454; Rolland, Faune, i. 118; FLJ vii. 55, etc.). The Romans regarded the wolf as unclean, and purified the city with water and sulphur if a wolf got into the Capitol or the temple of Jupiter (de Gubernatis, p. 529). The wolf is frequently found among the tutelary primels of the developer respects excitation of North

animals of the dancing or secret societies of North America. The Nootkas relate that wolves once took away a chief's son and tried to kill him; failing to do so, they became his friends, and ordered him on his return home to initiate the other young men into the society, the rites of which they taught him. In the ceremony a pack which they taught him. In the ceremony a pack of wolves, i.e. men with wolf masks, appears and carries off the novice; next day they bring him back apparently dead, and the society has to revive him (Golden Bough<sup>2</sup>, iii. 434 ff.). Similar associations are found among the Kwakiutls (Report U.S. National Museum, 1895, 477–479), and among the Dakotas, by whom parts of the animal are used in magic, though they may not kill it (except, probably, at initiation), or eat it, or even step over or on it (Frazer, Tot. p. 50; cf. Schurtz, Altersklassen, p. 164; and for these societies in general, pp. 150, 390 ff.). In connexion with these societies may be mentioned a curious confratemity that may be mentioned a curious confraternity that existed in Normandy till late in the last century. A prominent part in the midsummer ceremonies was taken by the Brotherhood of the Loup Vert and its chief; they ran round the fire hand in hand, and had to capture (while belaboured by) the man and had to capture (while belaboured by) the man selected for the headship, to which was attached the title of Green Wolf, in the following year (Golden Bough<sup>3</sup>, iii. 282).

The corn-spirit is believed to take the form of a wolf (Golden Bough<sup>2</sup>, ii. 264 ff.), and the binder of the last sheaf is sometimes called 'the wolf.' The

wolf also appears at Christmas in Poland (ib. 266), and at the Carnival in Nuremberg (Mannhardt, Ant. Wald-und Feldkulte, p. 323). In Norse mythology witches and giantesses ride on wolves yoked with serpents (Meyer, Germ. Myth. p. 142), while the demonic Fenrir-wolf is too well known to require more than passing mention here. In Zoroastrianism wolves rank as most evil animals (Yasna, ix. 18), and should be killed (Vendīdād, xviii. 65). A wolf must be seen by a man before it spies him, or evil results will follow (Yasna, ix. 21)—a belief which has its parallels in classical lore and in modern Europe (Darmesteter, Etudes Iraniennes, ii. 244). In Armenia, in like manner, wolves are even more evil than serpents, and numerous charms are used against them (Abeghian, Armen. Volksglaube, 114-116).

As the last dangerous animal to survive in many parts of Europe, the wolf has given its name to the group of beliefs based on the idea of the temporary or permanent transformation of living men into wolves or other animals (see LYCANTHROPY). The people of the Caucasus say that women are transformed into wolves as a punishment for sin, and retain the form for seven years. A spirit appears to them at night bearing a wolf skin, which the woman has to put on; thereupon she acquires welfish tendencies, and devours children. At times she puts off the wolf skin, and if any one can burn

it the woman vanishes in smoke (Haxthausen, *Transkaukasia*, i. 323. For wer-wolves in general see Tylor, *Prim. Cult.* 3 i. 312; Hertz, *Der Werwolf*; Baring-Gould, Book of Werwolves). A very similar belief is found in Armenia (Abeghian, op. cit. 116-118). As an ominous animal the wolf is commonly see de Gubernatis, Zool. Myth. ii. 142-149. For the wolf see also Pauly-Wissowa, s.v. 'Aber-

glaube,' p. 81.

Wren.—All over Europe the wren is called the 'king of the birds' (Golden Bough<sup>2</sup>, ii. 442), and a German story tells how it gained the position in a contest with the eagle (de Gubernatis, ii. 208). In France and the strike lists it is accounted unlucky to kill a wren or harry its nest (Golden Bough<sup>2</sup>, loc. cit.), but there was also a custom of hunting it annually (Folklore, xi. 250; RHR xxxviii. 320; NQ, 6th ser. x. 492, xi. 177, 297; Croker, Researches in the S. of Ireland, p. 233) at Christmas or somewhat later. In the Isle of Man the bird was killed on the night of Dec. 24, and fastened, with its wings extended, to a long pole. It was then carried round to every house, and finally taken in procession to the churchyard and buried. The feathers were distributed, and certain lines sung which seem to indicate that the wren was formerly boiled and eaten. In Ireland and Wales the bird was sometimes carried round alive. In France the bird was struck down, and the successful hunter received the title of 'King' (Golden Bough', ii. 445). In Limousin the 'roi de la Tirevessie' was named, whereupon he had to strip naked and throw himself into the water. He then took a wren upon his wrist and proceeded into the town, where he stripped the bird of its feathers and scattered them in the air; finally, the wren was handed over to the representative of a squire (*Tradition*, iv. 166). Thereupon a wooden wren was attached to a high post and shot at; if it was not hit, a fine had to be paid. In Berry the was not int, a fine had to be paid. In herry the newly married took a wren on a perch to the squire; it was put on a waggon drawn by oxen (ib. p. 364; Rolland, Faune, ii. 297). At Entraigues the wren had to be set free (ib.). It is probable that these ceremonies are connected with a former annual expulsion of evils; in Kamtchatka a similar ceremony is performed in connexion with an annual mony is performed in connexion with an annual festival (Krachenninikow, p. 147); a small bird is captured in the forest, roasted, and tasted, and the remainder thrown into the fire.

The wren is considered of good omen in Japan (Chamberlain, Kojiki, p. 241 n.), and among the Ainus (Batchelor, p. 439); in the Isle of Man fishermen take one to sea (Rolland, Faune, ii. 295), and it is used in the Tyrol folk-medicine (Heyl, p. 139). Among the Karens it is believed to be able to cause rain (Miss. Cath. 1888, 261). In Australia the emu wren is a 'sex totem' (Golden Bough', iii. 416); near Tanganyika it seems to be a totem (Miss. Cath. 1885, 381). Both in Europe (Ann. Phil. Chrét. 3rd ser. ii. 148) and in Victoria (Dawson, Aust. Ab. p. 52) the wren is said to have brought fire from heaven or elsewhere. The wrens of one brood are said to be re-united on Christmas night (Ann. Phil. Chrét. 1f.). A song of the wren figures in the Pawnee Hako-ceremony (22 RBEW ii. 191f.).

LITERATURE.—The following is a complete list in alphabetical order (with date and place of publication) of the books mentioned throughout the article, with a few additions. Anonymous books and periodicals follow, also in alphabetical order.

I. BOOKS.—M. Abeghian, Armenischer Volksylaube, Leipzig, 1899; Abinal and La Vaissière, Vingt ans à Madagascar, Paris, 1885; J. Adair, History of the American Indians, London, 1775; A. U. Afzeitus, Swenska Folkets Sagohäfder—Fädernes, Landets Historia, Stockholm, 1839; L. Alberti, De Kaffers aan de Zuidkust van Afrika, Amsterdam, 1810; J. de Alencar, O Guarany, Rio de Janeiro, 1893; von Alpenburg, Alpenmythen, Zurich, 1857; C. J. Andersson, Lake Ngami, London, 1866; R. Andree, Braunschweiger Volkskunde, Brunswick,

1901, and Ethnographische Parailelen, Stuttgart, 1878, 1889; N. Annandale, The Haroes and Iosiand, Oxford, 1905; Arbousset, Pohiti et its iles adjacentes, Paris, 1867; Arbousset and Daumas, Relation d'un voyage d'exploration, Paris, 1822; Pour Control, Garenganz, London, 1883; R. P. Ashe, Tock Peterburg a Peten, Paris, 1875; J. Balloyen, Dep Ear in den Reitgionen des Altertums Basel, 1883; G. P. Badger, The Nestorians and their Ritual, London, 1852; A. Bässler, Sidssechilder, Berlin, 1895; M. M. Ballou, Under the Southern Cross, Boston, 1888; H. H. Bancroft, The Native Races of the Pacific States of North America, San Francisco, 1876-76; S. ANIMISM. — Definition and Scope. — In the language of philosophy, Animism is the doctrine which places the source of mental and even physical life in an energy independent of or at least distinct from the body. From the point of view of the history of religions, the term is taken, in a wider sense, to denote the belief in the existence of spiritual beings, some attached to bodies of which they constitute the real personality (souls), others without necessary connexion with a determinate body (spirits). For convenience in treating the subject, it will be of advantage to study Animism separately under the following three forms:—(i.) Worship of the souls of men and animals, manifesting itself above all as worship of the dead resting itself above all as worship of the dead (Necrolatry); (ii.) worship of spiritual beings who are not associated in a permanent way with certain bodies or objects (Spiritism); (iii.) worship of spiritual beings who direct the permanent or periodically recurring phenomena of nature (Naturism).

Animism in the sense just stated represents an attempt to explain in a retirement way all the feats.

attempt to explain in a rational way all the facts of the Universe. It is the religion and the philosophy of all non-civilized peoples. It predominates at the commencement of all the historical forms of

worship. Finally, it still shows itself, in its complete development, among the survivals of folk-lore.

In all probability, from the moment when man began to inquire into the cause of phenomena, external or internal, he thought to find it in the external or internal, he thought to find it in the only source of activity with which he was directly acquainted, namely, an act of will. Objects which moved, or which he believed capable of moving, gave him the impression either of bodies set in motion by hidden beings, or of bodies endowed, like himself, with will and personality. Our languages bear witness to a mental condition in which those who created them attributed life, personality and say to the forces of neture.\*

The imaginary personalities that controlled the sun, the moon, the stars, the clouds, the waters, etc., were not thought of separately from their

\*A similar conception is found at the present day among noncivilized peoples. 'The Ashivis or Zunis,' writes Mr. Frank
Cushing, 'suppose the sun, moon and stars, the sky, earth and
sea, in all their phenomena and elements, and all inanimate
objects as well as plants, animals and men, to belong to one
great system of all-conscious and inter-related life, in which the
degrees of relationship seem to be determined largely, if not
wholly, by the degrees of resemblance' (PBE, Smithsonian
Institution, vol. ii. [1883] p. 9). Again, Sir E. im Thurn relates
that the natives of Guiana look upon men and animals, the
heavenly bodies, atmospherical phenomena, and inanimate
objects, all as beings of the same nature, alike composed of a
soul and a body, and differing only in the extent of their
powers (JAI, vol. xl. p. 877).

visible garb, any more than the personality of a man was conceived of apart from his body. But it cannot have been long before a new inference made its presence felt. The experience of dreams led men to the conclusion that their ego was different from their body, that it could separate was different from their body, that it could separate itself from the latter—temporarily during sleep, finally at death—and yet continue to exist. Thus a native of Australia, being asked by a traveller whether he believed that his yambo could quit his body, replied: 'It must be so; for, when I sleep, I go to distant places, I see distant people, I even see and speak with those that are dead' (Howitt, 'On some Australian Beliefs' in JAI, vol. xiii.

[1884] p. 189).

i. Necrolatry.—It will of course be understood that, in employing the terms 'soul,' 'spirit,' 'personality,' we do not mean to attribute to savages any notion of immaterial entities, such as is arrived any notion of inimaterial entities, such as is arrived at by making abstraction successively of all the properties of matter except force. The soul is to them simply a being of a more subtle essence, generally invisible but not always intangible, sub-ject in a certain measure to all the limitations of

ject in a certain measure to all the limitations of human beings, but endowed at the same time with mysterious faculties.

Hitherto no people has been met with which does not believe in the existence and the survival of human souls, which does not admit the possibility of their intervention in the affairs of the living, and which does not seek to enter into relations with them by processes which are everywhere closely analogous—either by offering to them lations with them by processes which are everywhere closely analogous—either by offering to them anything of which they were fond during their lifetime, or by applying to them the methods resorted to by sorcery in order to avert or to control superhuman powers. The assertions of some authors to a contrary effect are due to incomplete observation, hasty generalization, or misunderstanding of the sense of the terms employed.

The souls of living beings are generally believed to be the pale and vague image of the body itself.\* It is the double, as it appears in dreams. Sometimes the soul is assimilated to the shadow

Sometimes the soul is assimilated to the shadow cast by the body ('the shades' of poetical language), or to its reflexion in water. At other times we find it confounded with the breath (Lat. anima, Gr. ἀνεμος, Skr. prâna, Heb. rûah=
'breath,' 'wind'), or with the beats of the heart
and the pulse. Again it may have a special form
attributed to it, borrowed from living beings or
what are viewed as such: birds, serpents, insects, ignes fatui, meteors, wreaths of vapour, etc. There are peoples who imagine that man possesses a plurality of souls, each with its distinct

Sesses a plutanty of sours, each with his character rôle.

Souls, it is supposed, may feel the counterstroke of wounds inflicted upon the body or of diseases which attack it. Again, the same body may become successively the seat of a number of souls, and, conversely, the same soul may inhabit in turn various bodies. Hence the magical processes, not uncommon among non-civilized peoples, whereby it is sought to replace the original soul by a superior one; and the custom, observed amongst the most diverse races, of putting to death, the moment he shows the first signs of mental or physical decrepitude, the personage—sorcerer, chief, or king—whom it concerns the tribe to preserve in the full possession of his faculties. In this way his soul is thought to pass yet unimpaired into the body of his successor.

What becomes of the double after death? In

\*The emperor Hadrian, when dying, gave a definition of his soul which well expresses this notion:

Animula vagula, blandula,

Hospes comesque corporis.

Adrianus, 'Adrianus,' c. xv., in Scriptores Historica Augusta).

general it is supposed to continue to haunt the corpse as long as any part of it remains, or to frequent the vicinity of the tomb. At times the notion of survival is limited to the more or less vivid recollection retained of the deceased.

'Ask the negro,' writes Du Chaillu (TES: 1.308), 'where is the spirit of his great-grandfather, he says he does not know; it is done. Ask him about the spirits of his father or brother who died yesterday, then he is full of fear and terror.'

At the end of a certain period, or as the result of

certain rites, the soul, as is sometimes held, reincarnates itself; or, more frequently, it is believed to take its departure to another world—situated under ground, beyond the sea, on the summit of a mountain, above the vault of heaven, in the stars, etc. There it leads a vague, colour-less, miserable existence (this is the peculiar quality of subterranean abodes, *Sheol* or *Hades*); or, it may be, an existence moulded more or less closely

may be, an existence moulded more or less closely upon the earthly life, each shade retaining his rank and his circumstances.

But, even upon this hypothesis of another abode, the soul is still supposed to intervene in the affairs of the living, especially when the deceased wishes to do a good turn to his descendants or to take vengeance upon his enemies. Hence the importance assumed by Ancestor-worship, a practice which has played so large a part, as has been shown by Herbert Spencer, in the consolidation of families and tribes. This cult has its origin at once in the fear of ghosts, in filial affection, and in the desire to preserve for the family tion, and in the desire to preserve for the family the benefits of paternal protection. Once it is ad-mitted that death does not interrupt the relations between men, it is logical to suppose that a father after his decease will retain a prejudice in favour of his descendants, and will seek to add to their welfare and to protect them against dangers at home or abroad. The children, for their part, in order to preserve his favour, will have to continue to show him the consideration he demanded in his lifetime; they must also maintain the organiza-tion of the family and assure the permanence of the home, so that this cult may never be inter-

the home, so that this cult may never be inverrupted.

By the side of ancestors, and at times above them, a place comes to be taken by the manes of illustrious personages who have profoundly impressed the popular imagination—chiefs, sorcerers, conquerors, heroes, legislators, and reputed founders of the tribe or the city.

The worship of ancestors sometimes includes the belief that all the members of a tribe are descended from some individual who is held to have possessed the form of an animal or, more rarely, of a plant.

the form of an animal or, more rarely, of a plant. This involves certain relations of consanguinity with all the representatives of this species. See TOTEMISM.

The notion that the lot of souls in the future life is regulated by their conduct in the present life belongs to a more advanced stage in the evolution of religious ideas. Its appearance and development can be traced in the majority of historical religions. The first stage is to accept the principle that souls have awarded to them a better principle that souls have awarded to them a better or worse existence according as they have or have not, during their sojourn on earth, deserved the favour of the superhuman powers. The last stage is reached when it is supposed that, upon the analogy of what happens in well ordered societies, the lot of the soul is made the subject of a formally conducted process of indement where good and ordered process of indements where good and ordered process of the good ordered and ordered process of the good ordered and ordered process of the good ordered and ordered a conducted process of judgment, where good and evil actions are weighed. The favourite titles to future happiness are at first services rendered to the gods, pious actions, sacrifices; afterwards they are services rendered to the community which it is the aim of the gods to protect. Thus the theory of retribution finds room by the side of the theory of continuation, and probably succeeds to it. But

even this method of regulating the destiny of souls after death does not exclude such an eventuality

as their temporary return to earth and entrance into relations with the living.

ii. Spiritism.—Once a start has been made by attributing to all living beings, and even to a great many inanimate objects, a mental equipment which differs from a man's own merely in the degree of activity and power, it is a logical inference that sculs may, in their turn, separate themselves temporarily from their bodies, and, if the latter be dissolved, may survive them. These souls assume, as a rule, the physiognomy of a double, or a form appropriate to their function, but always chosen so as to imply movement and life. Moreover, at this stage of intellectual development, man will cherish a belief in the existence as independent agents of a belief in the existence, as independent agents, of a multitude of analogous souls proceeding from beings and objects which he has not known. These souls, from the very circumstance that they have lost their connexion with particular bodies, acquire a fitness for assuming all aspects and performing all offices.

Such is the origin of *spirits*, to whose agency are finally attributed all phenomena which men can neither explain by natural causes nor set down to the account of some superhuman being with functions exactly defined. The most benighted savages, even when they have no idea of the distinction between natural and supernatural, per-ceive quite clearly that certain events are due to causes whose connexion is self-evident. They did not need to wait till a Newton came to reveal the law of gravitation, in order to convince themselves that, if an apple detached from a tree falls to the ground, there is nothing in this phenomenon but what is natural and capable of being foreseen. But everything that strikes them as unusual and un-expected—and this category includes the great expected—and this category includes the great majority of phenomena—seems to them due to the action of invisible powers acting through mys-terious processes. These powers bear, amongst all non-civilized peoples, a generic name which corresponds in their respective languages to our term spirits.

The disembodied spirits may introduce them-The disembodied spirits may introduce themselves into any body whatsoever. When they invade the body of a man, they take the place of his personality, or at least introduce disorders; to them are attributed the phenomena of possession, inspiration, second sight, intoxication, disease. All non-civilized peoples without exception ascribe diseases either to the entrance of a spirit into the body, or to wounds inflicted by a spirit from outside, or to the removal of the soul by a malevolent spirit. When spirits penetrate into a material object, they make it the vehicle or the organ of their own personality, and thus transform organ of their own personality, and thus transform it into a fetish. The fetish differs from the amulet (or the talisman) in that the latter owes its efficacy to a property transmitted from with-out, whereas the fetish itself always owes its virtue to the presence of a spirit lodged within.

When one begins to introduce something like order amongst the superhuman powers, spirits are grouped in classes according to the sphere which they inhabit or the function which they discharge. Thus we have spirits of the air, of the under world, of the waters, of fire, of plants, of flocks, etc.

The physical form attributed to them is generally one borrowed from living animate beings, but enriched with fantastic features.

iii. Naturism. — The souls of natural objects endowed with the character of permanence or of periodicity (such as the sky, the earth, the heavenly bodies, the elements, vegetation, etc.) often tend to assume a special importance. They are, none the less, regarded as distinct from their visible garb,

and likewise have a proper physical form assigned to them, which is ordinarily the human form or that of one of the higher animals. The genii so conceived of may temporarily leave their domain and even intervene in a number of affairs that have no connexion with their original function. They thus tend to encroach upon the sphere of the souls of ancestors and upon that of ordinary spirits. we look at them from another side, we note that, while the majority of spirits are regarded as mal-evolent, and are dreaded and treated accordingly, the genii of Nature are sometimes ill-omened and at other times propitious, like the phenomena over which they preside; and hence they tend to awake in their worshippers a mingled sentiment of fear and of affection, corresponding to this double aspect of their nature. We frequently note a aspect of their nature. We frequently note a disposition to exaggerate their benevolent side, and, above all, their power by the use of flatteries, unconscious or deliberate, which in the end are brought forward as the expression of the truth. Certain genii tend thus to outstrip the other superhuman powers, and to become man's allies in his conflict with the hostile forces of Nature.

537

To the above differentiation in the conception of To the above differentiation in the conception of souls there corresponds a certain variety in the forms of cult. Propitiatory acts—sacrifice, prayer, homage—predominate in the relations with the higher rank of the Divine Powers; on the other higher rank of the Divine Powers; on the other hand, it is acts of conjuration—evocation, incanta-tion, exorcism—that are employed by preference when spirits have to be dealt with. This explains why magic is the ordinary companion of Spiritism. Where the evolution of religion has developed neither veneration for the forces of Nature nor the worship of Ancestors, the cult consists almost exclusively—as we see in the case of the negroes, the Australians, the natives of Siberia and South America, etc.—of processes intended to avert or to subjugate the superhuman powers. Among these peoples the conception of the world as a domain abandoned to the caprices of arbitrary and malevolent wills makes of religion a reign of terror, malevolent wills makes of religion a reign of terror, weighing constantly upon the life of the savage, and barring all progress. On the other hand, where Animism develops into polytheism, it may be viewed as a first stage in that evolution which leads to making the Divine Power the supreme agent who seeks order in nature and the good of humanity. [The subject will be more fully dealt with under Soul and Spirit].

GOBLET D'ALVIELLA.

ANNAM (Popular Religion).—A characteristic

ANNAM (Popular Religion).—A characteristic of the Annamese is the multiplicity and variety of their cults. Influenced more by tradition than by conviction, they are only indifferently versed in the three great religions of foreign origin that prevail in their country—Chinese Buddhism (Phât giáo), which is celebrated in the pagoda (chùa); Confucianism (Nho giáo), in the temples of the educated (văn miêu, văn chi); and Taoism (Thờ tinh, thờ các ba), in the palace (phu dên). These are official cults, practised especially by the upper classes and the learned.

So also the cult of the Struend the Forth which

So also the cult of the Sky and the Earth, which allows no other celebrant than the sovereign, and the cult of the ruling Emperor receive from the Annamese only subordinate veneration. We shall not describe these cults, which are all of Chinese importation, but refer the reader to art. CHINA.

The masses retain their preference for ancestorworship (thờ ông bà ông vai), which the head of the family offers in a reserved part of the house (nhà tô); for the Genii and Spirits of all kinds, which are invoked in the chapels (mieu); and for the numerous magical performances (phép thuật), which have come from China, from India, and from the other races of the Indo-Chinese Peninsula, or which are simply autochthonous. No one has yet succeeded in finally deciding what belongs to each of these various influences. They all co-operate in perpetuating the old animistic beliefs, which have remained very deep-rooted in Annam as elsewhere where.

r. Animism.—To the inhabitant of Annam life is a universal phenomenon; it is the common possession not only of men and animals, but also of things-stones, plants, stars, and of the elements

earth, fire, water, wind, etc.
To all he gives a sex and a rank. The sun is male; the moon, his wife, is female; the stars send good fortune and bad from on high. Then some animals have been anthropomorphized or even deified, which implies fear and at the same time reverence for them; e.g. in Annam they always speak of 'Sir Tiger' (Ong Cop). Hence that worship, which is so strange, of the whale, the

dolphin, and the tiger.

The Annamese not only admits that life is common to all existing things, but conceives of that life not as isolated, but as collective; he sees it in groups, not in individuals. This difficulty in conceiving individualism is one which is not confined to the Annamese. It exists in almost all primitive races, and still continues among those of slow development, as in China, for example, where the idea of collective solidarity, the conception in groups, has legal consequences. When a crime is committed in China, not only is the guilty one punished, but his forestators his descendants his negative. but his forefathers, his descendants, his parents, his friends, and even his neighbours. In the collection of taxes, the upper classes in the community are always responsible to the treasury for the general crowd.

In addition to these two ideas of universality and collectivity of life, the Annamese believes in the contiguity and permeability of beings who do not form distinct categories, but can pass from one genus or species to another under certain condi-tions of space and time. Hence theriomorphism

and totemism.

and totemism.

The elephant was born from the star Giao Quang, the rabbit from the moon. A fox at the age of fifty years can change into an old woman; at a hundred years into a lovely maiden, very dangerous to her lovers; at a thousand years of age, if he happens to find in a cemetery a human skull which fits his head, he may become a spectre, or a being similar to the Hindu preta. Sows can go the length of changing into courtezans.

The fish afters thousand years becomes a dragon, the rat at the end of a hundred years a bat, and the bat after another hundred years as swallow. Any one who can catch it at the time of its metamorphosis and eat its fiesh becomes immortal.

Tigers' hairs may give birth to worms. Even plants are capable of similar transformation: the chuld tree (a kind of banana), on reaching a thousand years of age, becomes a blue goat. The people maintain that a banyan tree (Ficus indica, Linnaeus) which grew within the precincts of a temple near Hanol, on being cut down, became transformed into a blue buffalo. Then go-dong (Eleococcu vernicitra, Linnaeus) has the power of changing itself at night into a ghost with a buffalo's head. These transformations, possible to plants and animals, are still more so to supernatural beings, and even to man. The fairies (bà tiên, nang tiên) often take the shape of butterflies, the genii those of men and monkeys. The mother of an Annamese king of the Trân dynasty (1226-1402) appeared in the form of a red serpent on the altar on which the first sacrifice to her manes was being offered. Some sorcerers have a still more extensive power: certain of them create swarms of bees from grains of rice, with which they can at will transform into a donkey and then change back to its original state.

In this reciprocal and continuous intermingling of the life of all heings, pairing cannot be determined.

In this reciprocal and continuous intermingling of the life of all beings, pairing cannot be deter-

mined or limited by species. The legend of the founding of Cô-loa tells of the union of a maiden with a white cock. Dinh-bô-Lãnh, at one time a drover in the Ninh-binh mountains, who founded the national Annamese dynasty in the 10th cent., is said to have been the son of a woman and an These totemic legends enable us to understand such names as the Fox clan, the Dragon clan, the clan of the Red Sparrow-hawks, assumed in semi-historical times by the tribes among which Annam was divided. The Annals state that, down to the 14th cent., the kings of Annam tatued their bodies with the representation of a dragon,

in allusion to their legendary origin.

For a similar reason, but with a more practical object, the inhabitants of fishing villages used to tatu themselves with the figure of a crocodile in order to establish their relationship with the numerous crocodiles of their shores, and to be spared by them. Others in the same way used to adorn their bodies with a serpent, in order to avoid being bitten by those formidable reptiles.

Union was possible not only between men and animals, but also between human beings and supernatural beings, genii, or vampires, especially as vampires often assume the appearance of men, to be better able to deceive the women they wish to possess. O-loi, a famous personage at the court of the Hanoï kings, was, the legends affirm, the son of the genius of the Ma-la pagoda and the wife of Si-Doang, Annamese ambassador to the court of

China.

The phenomenon of conception, in the popular beliefs of the Annamese, not only does not always presuppose the identity of species of the two parents, but can even be accomplished without sexual intercourse between them. Nearly all the heroes of the semi-historical period in Annam, as well as China, are the result of miraculous fertilization. The mother of the assassin of king Dinh -Tien -Hoang, who ascended the throne in 968, became pregnant after dreaming that she was swallowing the moon. Another king was born from a fresh egg that his mother had taken from a swallow's nest and eaten. The legends abound with analogous cases in which fertilization is due to springwater, the touch of a handkerchief, the fall of a star, etc.

Another result of this absence of limits to beings

Another result of this absence of limits to beings and things is that everything that resembles a certain individual, in however small a degree, may at a given moment be regarded as the individual. and undergo the treatment that was to befall him. Here we come upon the spells often practised by the Annamese sorcerers. The effigy or the sign may replace the thing signified so effectually that they sacrifice to the genii of epidemics the effigy of the person whom they wish to see dead. By analogous reasoning, they burn at the graves paper representations or even merely a list of all the objects (clothing, furniture, jewels, houses, etc.) that the dead man is supposed to take away with

Similarly, any particular condition is transmissible by contact, without regard to the person's own will. That is why a person who wants to avoid all misfortune has to keep constantly in the shade. pregnant woman must be careful not to accept betelpellets from a woman who has already had a mis-carriage, under penalty of abortion. She must not eat double bananas if she does not want to give birth to twins. A person carrying straw must avoid passing a field of rice in blossom; the rice would change to straw. They believe also in the contagion of death, and several parts of the funeral

ceremony aim specially at guarding them from it.

Lost in the midst of the universal life which surrounds him, haunted by the terrible and manifold forms that that life can take to destroy him, the Annamese lives constantly on the defensive. If he tries by sacrifices and offerings to gain the favour of the good spirits, he seeks still more to appease the malignant ones, under whatever form they appear, and to foresee, and consequently to

avoid, all the misfortunes which may befall him. Hence the cults of the good and evil genii, of certain animals and of souls, the belief in magic and presentiments, and a whole series of prophylactic ceremonies before each important event in life,

especially birth, marriage, and death.

2. Good Spirits.—In the first rank of good spirits is Dôc-Cu'ô'c, the one-footed Spirit, whose worship, the Annamese assert, was brought from Nam-quan in China to Tonkin by a Taoist priest. He flourished chiefly in Nghê-An, but he has worshippers throughout the whole of Tonkin. Dôc-Cu'ô'c assumes the form of a warrior of noble bearing, assumes the form of a warrior of none bearing, brandishing an axe in his only hand, which is always represented in profile. His body, cut in two lengthwise, rests on a single foot. A prayer taken from the ritual of the spirit praises his merits thus: 'The one-footed Spirit has only one eye and only one foot, but he is swift as lightning and see all the hoppers in the world. and sees all that happens in the world. He sees afar the evil spirits who bring plague, ruin, and misfortune. He calls to his aid the millions of celestial soldiers. He protects and avenges men. Tigers and demons dread him. He sends good or bad weather as he chooses, makes the sun to shine or the rain to fall, and cures all diseases.'

bad weather as he chooses, makes the sun to shine or the rain to fall, and cures all diseases.'

An inscription in memory of the erection of his temple in the hamlet of Ngo-ru'ou (Tonkin) eulogizes him in these words: 'The one-footed Spirit is powerful; he protects the country. Every one fears, loves, and reveres him. Armed with a golden are, he hovers on the clouds and socurs the country, always present though invisible. By his favour the student is successful in his examinations, the farmer is assured of his crop, the buffaloes are strong and active, the farmyard is prosperous, gold and silver are amassed in the coffers, there are no longer any poor people in the village. All this is due to the influence of the one-footed Spirit, because he is pleased with our homage, and glad to see his temple erected in a propitious place.'

To obtain a favour from the one-footed Spirit they trace a formula on a white paper, and place the paper on his altar with a small sum of money (generally equal to about 1s. 6d.), where it must remain for one hundred days.

The ritual of the one-footed Spirit contains a series of formulas which, written in a certain way on paper or on shells, form precious charms for the most diverse cases: invisibility, toothache, barrenness, different diseases; they banish malidous powers, ensure the sex of a child during pregnancy, silence children who cry through the night, ward off nightmares and ghosts, prevent demons from entering the mouth of the celebrant when he is invoking the one-footed Spirit, and from replying instead of him.

Doc Ou'ô'c can, moreover, transfer a part of his power to small figures of straw, wood, or paper made by his priests. These figures can then go to the places to which they are sent, in order to work as much harm as possible to men, animals, and objects chosen for their vengeance, who are not long in being struck down by death, disease, ruin, or destruction.

In the same way, in cases of demoniacal possession, the priest of the one-footed Spirit can, by his exorcism,

good spirits (thân lành), who preside over the events of life in general. The tutelary genii of the village (thân kh) and the patron guardians of the home and the family (thân tù') are also worshipped. These spirits are infinite in number, as every action and even every object is, for the Annamese, placed in dependence upon a superior power, whose favour they must win, especially to thwart the continual temptations of the ma, or evil spirits.

spirits.

It is for this reason that, during the first three days of a new year, when all Annam is rejoicing, each Annamese workman, after worshipping his ancestors, whose special festival it is, seeks to gain the favour of the spirit who presides over his special work. The peasant offers a sacrifice to the spirit of the buffalces in the stable or in the fields. The offerings consist of cooked rice, a little salt, palm-sugar, incense, leaves of gilt paper, and as many large cakes as the farmer has cattle. The shape of these cakes varies according to the sex of the animal. The female buffalces' cakes, which are square and flattened, contain other smaller cakes, intended for the young buffalces which they are supposed to carry in the womb. The buffalces have their horns decorated with gilt paper, and into each of their mouths is put a little of each offering, the remainder being left to the drovers. Then each buffalc is led out to trace three furrows.

Thus also the blacksmith sacrifices to his forge, or rather to the spirit of his forge, after having adorned his bellows with gilt

paper. The limeburner sacrifices to his limekiln, the hunter to his nets and snares, the merchant to his hampers, and the master of the house does not forget the three hearthstones and the lime jug, which are also covered with gilt paper. The lime jug is filled to the brim so that it may have abundance, and that in return its spirit may see to the welfare of the family. Invocation and sacrifice take place also when in a new house the head of the family installs the lime jug, whose contents will be used in the composition of the national masticatory of the natives of the Far East—betel-pellets. In it the guardian of the house (chu nhà) is incarnated. Its premature end would forebode the death of one of the members of the household, whom they wish to see crowned with hoary hairs, as the jar itself is with lime. When, in spite of all precautions, it breaks, a new one is bought, but great care is taken not to throw the other into the ashpit. Its spirit would dearly avenge such irreverence. They go and place it with great ceremony on the branches or trunks of certain trees near the pagodas, either to serve as an offering to the wandering souls who come to take shelter in these trees, or to be delivered there to a spirit which is powerful enough to prevent it from taking vengeance on the inmates of its former home.

When hunters catch an animal in their nets,

When hunters catch an animal in their nets, they kill it and then pull off a part of its left ear, which they bury in the spot where the animal was which they bury in the spot where the animal was caught, as an offering to the Spirit of the soil (Thô Thân). Then the prey is flayed and dismembered. Its heart, cut up into small pieces, is cooked on burning coals. These pieces are then laid on broad leaves on the ground; and the chief of the hunters, prostrating himself four times, informs Thô Thân that such and such a band of men from such and such a village has taken the liberty of such and such a village has taken the liberty of denviving him of such and such an animal. The depriving him of such and such an animal. animal is then divided among all the hunters.

In fields of eatable or market-garden plants cucumbers, water-melons, etc.), they often erect a miniature chapel of straw to the Lord of the earth (*Thô Chu*). In this way the field is placed under the protection of the spirit; and thieves are far more afraid to come near it, for it is Thô Chu, and not the owner, that they dread having anything

to do with.

For the same purpose of protection, travellers, on leaving the river for the sea, make offerings of gilt paper at the mouth of the river, in order to travel by land throw them at the turnings of the road to avoid accidents, especially the teeth of the

road to avoid accidence, especially, the tiger.

There are also female spirits (chu' vi), who inhabit forests, springs, thickets, and certain trees.

At their head are the five great fairies:

(1) Thuy-Tinh-công-Chúa, 'Star of the Waters.'

(2) Quinh-Hoa-công-Chúa, 'Hortensia Flower.'

(3) Quê-Hoa, 'Camellia Flower.'

(4) Bach-Hoa, 'White Flower.'

(5) Hoàng-Hoa, 'Yellow Flower.'

Their goodwill is secured through the intermediaries bà-dông, or priestesses, who correspond to

aries ba-dong, or priestesses, who correspond to the sorcerer-priests of the evil spirits.

Then the people also render regular worship to the Ba-Dŵc-Chùa, or the Three Mothers, whose three images, dressed in red, are set up in a side chapel in nearly all Buddhist and Taoist temples. They represent, according to the Annamese, the Spirit of the Forests, the Spirit of the Waters, and

spirit of the Forests, the Spirit of the Waters, and the Spirit of the Air and Sky.

3. Evil Spirits.—Far more numerous and more dreaded are the maleficent powers, which, for the Annamese, inhabit all space. They include the whole of the  $M\alpha$  and the Qui, evil spirits or devils, hobgoblins, vampires, and ghosts, which are constantly adding to their number by recruiting from the millions of the wandering souls of the dead.

Physical and moral pain endemics, ruin, and

Physical and moral pain, epidemics, ruin, and accidents come from them. There is the Spirit of Cholera, of Small-pox, of Bad Luck, etc. It is for this reason that the Annamese seek by every means to appease them, and are far more deeply concerned about them than about the good spirits. For, whereas the good spirits harm human beings only when they are offended or slandered by them,

Commence of the state of the

the evil spirits are incessantly trying to work mischief. They can be disarmed only by means of sacrifices, or rendered harmless by the protection

of the good spirits.

In the first rank we must place the worship rendered to the spirits of the autochthones (chu'ngu), the original possessors of the soil, which wander about famished, because their descendants are no longer alive and cannot offer them sacrifices, and look with a jealous eye upon others possessing their goods. Not only are they granted a share of the oblations which are made at stated times by the bonzes, sorcerers, or private individuals, but every year each landowner, in one of the first three months, offers a sacrifice to them. And if unfore-seen evils befall the farmers or their cattle, if they are the victims of misfortune, it is evident that the anger of the chu' ngu is affecting them. They must appease him by a sacrifice (generally an expensive one), in which they buy or hire his land from him, in order to live peaceably with him. With the help of a medium they enter into communication with the spirit and make him sign the contract of this mystical sale, the amount of which they pour out to him in imitation paper money. Hencefor-ward the landowner has nothing to fear from the chu' ngu.

Of a more dangerous kind are the Ma-lai, 'wandering demons, who have all the signs of life, and often assume the form of a pretty girl; but at night their head, followed only by the complete alimentary canal, becomes separated from the body and goes about feeding on excrement and taking part in a kind of infernal witches midnight orgy. The prosperity of a house which has been entered by a Ma-lai is very soon affected by it.

It is well also to guard against the *Ma-tro'i* or ignes fatui, which, thin and worn, wander through the fields quite naked, with dishevelled hair, walking a foot above the ground; and also against the Continh, or spirits of young maidens who have died prematurely—spirits which are of the most malicious kind. They hide in trees, from which they are heard laughing with a weird laugh and calling. The passer-by who is so imprudent as to answer their call feels his soul fly from his body and becomes mad. One must also beware of the Ma-gia, or spirits of the drowned who have not received burial. They sit in trees at night, and try either to attract passers by or to cause boats to sink. It is the Ma-gia that sends the fatal cramp to the swimmer, which paralyzes him and causes him to drown. The best means of appeasing this spirit is to call back the soul in order to construct a tomb for it (chieu hon dap nem).

struct a tomb for it (chieu hôn dap nêm).

This ceremony consists in re-making a body for the person who has disappeared, and in re-uniting the soul of the drowned person to this body by means of magical ceremonies, after which the funeral is celebrated. This artificial body, whose bones are made from mulberry branches, its entrails from five threads of different colours, its flesh and viscers from earth and wax, and its skin from flour pancakes, is dressed in the most beautiful clothes of the dead person, and put into a coffin. The ceremony of fixing the soul in this new body requires the aid of a sorcerer and of a medium who is provided with three sticks of incense and a coat that had belonged to the deceased. These two men go in a boat to the real or supposed place where the person was drowned, the medium stretching out the hand in which he holds the coat. If this hand begins to tremble, they conclude that the spirit of the dead man (vià) is re-instating itself in the coat. The medium then jumps into the water, and after a time comes up, saying that he has succeeded in getting possession of the spirit of the drowned man. They put the coat that was used in the ceremony into the coffin, which is then shut, and they proceed with the burial.

The Ma-loan, or spirits of soldiers who have died

The Ma-loan, or spirits of soldiers who have died in the wars of the Empire, are recognizable by their hurried and unintelligible whisperings. The Magiau, Ma-dziua, Ma-dzem, Ma-riu, or phantoms which mislead people in the night, form a ring and turn round about the traveller, or talk in front of him until, struck by illusion and exhausted with

following the phantoms, he falls in some lonely spot to which he has been lured. A magical ceremony is necessary to bring back life or reason to the victims of these treacherous phantoms.

The Matrôt-trôt, or souls of beheaded persons, are the cause of whirlwinds. The Annamese scare these demons away by calling out 'Chem! Chem!'

('I behead you').
The Ma thân-vòng, or souls of those who have hanged themselves, try to entice to another attempt at suicide those who have been saved when attempting to hang themselves. For these the charm is broken by cutting the string, not by undoing it. If this precaution has been omitted, the danger may still be obviated by a ceremony in which a Ma thân-vòng is represented with a rope in his

thand. They burn this little figure, and then the rope of the hanged man is cut in pieces.

The Con-hoa, the souls of those who have perished in fires, glide under the roofs in the form of bluish smoke on the anniversary of the day of their death, or at fixed times, and cause spontaneous fires very

difficult to extinguish.

The Con-sac, or vexatious spirits, are especially fond of tormenting young children, in whom they cause frights, convulsions, head eruptions, etc. Twelve in number, they each rule an hour of the day. An offering of twelve red handkerchiefs, twelve mirrors, and twelve fans, while the mother and the child are under a bamboo frame, wards off their evil influence. Amulets, such as tigers' claws, vultures' vertebræ, or a tiger's skull, hung above

the children's cradles, drive away the Con-sac.

The Moc-chân dwell in trees, and continue to live in them even when their dwelling-place has been cut down and used as material for building houses. These demons, lying down on people when asleep,

give them nightmare.

It is well to beware also of the Ma-dun, gigantic ghosts of buffaloes and elephants, and especially the Co-hon, or abandoned souls, who, having died a violent death, return to torment the living. They are appeased by offerings of leaves of imitation gold or silver, or counterfeit bank-notes. The wandering souls which have not had burial take shelter by 'millions and tens of millions' in the shade of shrubs and trees. At night they come in crowds to attack people passing on their way, and they send misfortune to those who forget them. So large is their number and so sad their lot, that small temples of wood or plaited bamboo are erected for them, or small stone altars, sometimes formed simply by a stone at the foot of a tree. The individual whose business is in danger tries to gain the favour of these miserable souls by oblations, which almost always consist of paper representa-tions of bars of gold or silver,\* paper shoes, and rice. The rice is scattered broadcast to the four cardinal points, while the offerer says: 'This is for the miserable souls who wander among the clouds, at the mercy of the winds, and whose bodies have rotted by the wayside or under the water. Let each single grain of rice produce one hundred. Let each hundred produce ten thousand, and let the wandering souls be satisfied.' The souls then hasten forward under the supervision of two spirits, one of which notifies them by ringing a bell, while the other, sword in hand, sees to the

just division of the rice among the hungry souls.
4. Animal-worship.—From their ancient animal-cult the Annamese have retained some forms of worship, as well as a veneration born of fear, for a certain number of animals. The animal most dreaded is Ong Cop, a title of respect equivalent

\*The bar (nén) is a parallelopipedal ingot used as money. The bar of gold (nén vàng) weighs 390.5 gr., and is worth 1386.80 francs. The bar of silver (nén bạc) weighs 382 gr., and is of

to 'Sir Tiger.' This awe-inspiring feline is worshipped in many places, and has special priests or soreerers, the thay-dong. Small stone temples are erected to him, provided with two altars, the one a little back and on the top of the other. On the lower one a huge lamp burns in honour of the spirit who is the real patron of the temple. At the foot of this altar, *Ong Cop* is painted on a screen, seated, with bristling whiskers and sparkling eyes. Sometimes the temple has nothing on its altar except a stone tiger.

The thây-dông, by means of a medium called dông, enter into communication with the spirits, and in their name exorcize, cure, give advice for the success of such and such a matter, etc.

This tiger, although so greatly respected, is nevertheless, in practical life, hunted with great keenness; and the Annamese, while eagerly pursuing it, from fear of being devoured by it, are careful to honour it and to speak of it with the most reverential fear. Among them fear or horror is often expressed by such exclamations as: 'Ma cop,' 'Tiger's ghost!' 'Cop lai,' 'The tiger is coming!' etc.

To excuse the unreasonableness of this conduct, they imagine two kinds of tigers: those which feed on human flesh, are always on the outlook for slaughter, and which men should kill mercilessly; and the real tigers, creatures which are endowed with supernatural powers, have a horror of human flesh, and live in solitude at the foot of the

mountains.

mountains.

Being devoured by a tiger implies predestination or heredity. Predestination would come from a misdeed committed in a former existence, and thus avenged by the tiger. Heredity would be explained in another way: the soul and spirit of a man devoured by the tiger become, as it were, the tiger's servants, and even slaves. They must accompany him everywhere and beat down his prey before him. They entice prey by imitating the cry of an abandoned child, thus causing men to lose their way in the mountains, and they always attach themselves preferably to members of their own family. Hence, when the father is devoured by the tiger, there is every likelihood that the son will have the same fate. For this reason, when a person has perished by the teeth of the tiger, he is not buried in the family tomb, and his relatives cover themselves with talismans or prophylactic amulets.

The hairs of the tiger's whiskers may be used for making very dangerous poisons. So they are burned whenever the animal is caught. The tiger's claws ward off evil spirits. From his bones and teeth an efficacious cure for hiscough is derived.

They have a very great regard also for Ong-Voi,

They have a very great regard also for *Ong-Voi*, 'Sir Elephant,' who is considered as strong as he is modest, and for Con tram nu oc, 'the water buffalo,' a fabulous animal which causes the waters to divide before it. The person who holds a hair of this buffalo in his hand can cross a river dry-shod.

The dolphin (Cá nu'o'c, Cá voi) is very much revered, especially by the maritime population. He is believed to save shipwrecked sailors by carrying them on his back. They also give him the title of Ong, 'Grandfather,' 'My Lord,' 'The Venerable.' They make use of a periphrasis to announce his death, or say that he is dead and has received the official name of 'Spirit with the jade

The dead body of a dolphin encountered at sea is a presage of good fortune. It is taken ashore and buried with ceremony. The captain of the vessel that discovers it becomes the 'son of the dolphin,' conducts the obsequies, and wears the prescribed mourning. The bones of the dolphin, exhumed after three months and ten days, are laid in a sanctuary, this being a guarantee of prosperity for the whole village. Every boat, too, during its voyages, is on the outlook for the death of a dolphin. A village which possesses several dolphins' tombs may give one of them to a less fortunate village. The transference takes place with solemn rites, after the consent of the dolphin has been obtained in a ceremony with sacrifices.

Ong Tt, 'Sir Rat,' is invoked both by farmers, that he may not devour the rice which is being sown, and by sailors, that he may not gnaw their boat of woven bamboo.

Ong Tam, 'Sir Silk-Worm,' is treated with the greatest deference during its breeding, in order to

counteract the great mortality of its species. To Ong Cha, 'Sir Stag,' the peasants offer sacrifices, and beg of him not to devastate the fields of rice which they have planted in a newly-cleared corner of a forest, since normally the stag has every

right to regard this very place as his home.
Ong Chang, 'Sir Boar' or 'Sir Wild Buffalo,' is
implored in the same way to spare the harvests.

Serpents are the object of a worship equal to the fear which they inspire. They and the tigers are the great animal powers dreaded by the Annamese.

To meet a serpent is a bad omen. If they succeed in killing the serpent, they must be careful not to cut off its head with a knife, since it would escape and pursue them. So also, when holding a serpent by the tail, they must not let it wriggle about in the air, for feet would immediately grow on it. Pythons' fat (con trām) makes a very good depilatory.

Certain millepeds have in their mouths a bright stone, the possession of which renders a person invulnerable to serpent bites.

bites.

The leech is the symbol of immortality, because it is indestructible. When killed it lives again; when cut in pieces it multiplies; if it has been dried, it becomes re-animated whenever it is put into water; if it is burnt, from its moistened ashes is born a crowd of young leeches. There is only one way of getting rid of it, to put it into a box along with some honey; then it disappears. There is reason to beware of the leech; for, if put into a person's ear, it creeps into the brain, multiplies in it, and devours it.

Pircons have the crit of reading the future and foreseeing.

Pigeons have the gift of reading the future and foreseeing misfortune. When they abandon a house, it is a very bad

misrotune. When they abandon a house, it is a very bacomen.

The little gecko, or ceiling lizard (Hemidactylus maculatus, Dum. and Bib.), is dreaded because of its bite, which causes fatal suffocation. To avoid the consequences, the person must snatch a cornelian button from the first one he meets, rasp it in water, and swallow the beverage thus obtained.

The skink (Eugrepes rufescens, Shaw) also causes a serious wound that may be cured by drinking the blood which escapes from a black cat's tail, the end of which has been cut off. When cooked, the skink is an excellent remedy for asthma and quinsy (mumps) in pigs.\*

A mad dog inflicts bites which are fatal, unless some one manages to pull the three dog hairs that grow soon after on the bitten man's head; then he may recover.

Certain vegetables, material objects, and even the elements, require reverential treatment, for they may be receptacles of a mysterious power.

Certain vegetables, material objects, and even the elements, require reverential treatment, for they may be receptacles of a mysterious power.

When a junk or a house is built, the sorcerer is sent for before it is occupied, and he exorcizes the spirits which might still be dwelling in the pieces of wood and might bring misfortune.

Before putting a new junk into the water, the sailors sacrifice to \$Cng Ha Ba, 'Lord of the River.' If, during their voyage, they notice in the middle of the water a tree-trunk which might knock against and caspsize their vessel, they immediately sacrifice to \$Cng Gcc, 'Sir Tree-trunk.' They treat \$Cng Thot, 'Sir Wind, with equal consideration. If Annamese children, during their play, want to reach the fruit on a tree, they throw their sticks up at it and call on 'Sir Wind' to help them.

Aerolites (\$Cam set\$), or 'meteoric stones,' are the objects of great reverence. They are supposed to be intimately associated with the lightning. They fall at each lightning flash followed by a thunder-peal, sink into the ground, and after three months and ten days't come out of it again.

The possession of an aerolite is a guarantee of good luck Aerolites chase away the evil spirits, which are terrified at their fall, and which at each peal of thunder run to take shelter under the hat or umbrella of the people they meet. Accordingly, at every peal of thunder the Annamese take care to raise their hats or umbrellas a little to guard against their intrusion.

Aerolite powder mixed with water keeps children safe from evil spirits. In smallpox it ensures regular and favourable suppuration.

The skull of a male (more especially of a child or a youth) who

suppuration.

The skull of a male (more especially of a child or a youth) who has been struck by lightning, which afterwards has had formulas recited over it, becomes a useful charm, and even a very good

5. Priest-sorcery.—Beliefs so numerous and so entangled produce very complicated cults. All the various kinds of spirits have different requirements, and in order to secure their favour it is necessary to be fully aware of what they desire and of the offerings which they prefer. The common people are quite at a loss among their numerous charms, magical songs, exorcisms, and sacrifices. Hence arises a body of special priest-sorcerers among the Annamese.

The most numerous class is that of the thây phù thuy, 'the masters of amulets and purificatory \* Needless to say, the virulence of the hemidactyl is a fable,

and the skink seldom bites.

† The length of time of nearly all magical occurrences among

ALL AND CONTRACTOR AND ADMINISTRATION OF

the Annamese.

waters,' who have no regular temples, and who, when they go home, take their altar and the cult-objects with them. Some of them are the cele-brants in temples erected by individuals. They officiate there at certain anniversaries, or when a person is imploring the intervention of the spirit

of these temples.

Another class, of a higher order, the thay-phap or thay-dong, practise only in their homes. Having a very numerous clientèle, they are often able to build stone temples in which to officiate, and which are their own property. They are assisted by a day, or 'suppliant,' who acts as a medium between the invoked spirit and the petitioner; for hypnotism, real or feigned, plays the chief rôle in these ceremonies. All these sorcerers derive their power their power than the petition of the power than the petition of the power than the petition of from certain good or evil spirits, to which they have dedicated themselves, and which, after being raised, remain in direct communication with them, possessing them and speaking through their voices. The soreerers can not only command the spirits, but are also able to influence the normal order of occurrences in nature. They raise the dead, cast lots, practise spells, and send telepathic suggestions to persons whom they wish to employ against others. They can instantaneously change the nature of beings and substances, transform a savoury dish into filth, or change a dog into a cock; they can send diseases, defects, or pains to whomsoever they choose.

They can also employ their power to do good. It is they who cure illnesses, exorcize people possessed and houses haunted by demons, cause rain to fall or to cease, and find out treasures. They do not all have an equal amount of power, and when any one is annoyed by the spite of a sorcerer, the only thing to do is to set a more powerful sorrerer against him.

The sorcerers still manufacture love philtres and talismans, for ensuring success in love, from the bodies (which are difficult to get) of two serpents that have died while fighting with each other, and one of which has been half swallowed by the other. To achieve the same end the ordinary people make use of less complicated charms, which consist in scorching in a pan the whole or part of a garment belonging to the person by whom they wish to be loved.

wish to be loved.

Some sorcerers are regular spell doctors, who perform their spells by the use of tubercules (ngdm-ngat). They themselves are called thdy-ngat, and have great skill in killing, causing illness, and inspiring love or hatred. They secretly cultivate the tubercules in their garden or their house, or in some isolated place, and then go and choose the one that they need at the appointed hour. While uprooting it, they recite incantations over it, informing it of the cruel design to be accomplished and of the hour at which it is to take place. Then, either directly or by means of a third person, who in most cases knows nothing about the part which they are making him play, they endeavour to bring the least particle of ngat into contact with the enemy whom they wish to harm. The latter is immediately struck by disease, and may die unless he happens to get the better of it, or unless the hatred of the avenger does not go the length of death. Only another sorcerer can cure him.

A popular superstition claims that these thdy-ngat are not the only persons who threaten the safety of the people; that

A popular superstition claims that these thay-ngai are not the only persons who threaten the safety of the people; that there are in existence some families of professional poisoners, who, on various pretexts, slip into their houses and poison their provisions, especially the water. These persons poison from fillal piety, because one of their ancestors poisoned somebody. His descendants must imitate him at least once a year, to pacify his spirit. If they did not succeed, they would have to sacrifice one of their own kin. That is the reason why, when their odious practices have achieved the slightest success, they stop them and go away, having thus performed their duty. On account of this fear, the Annamese take great care that strangers do not get near the family provisions, especially the jars where they keep the water.

they keep the water.

6. Fortune-telling.—The Annamese have also fortune-tellers (thây-bôi), who are nearly always blind, and rather poorly remunerated. They cast nativities by means of copper coins, whose position, heads or tails, determines the prediction.

In the temples the divining logs and rods may be

interrogated. The logs are two pieces of lacquered wood, like cotyledons, which give an affirmative answer when both fall on the same side, and a

The rods, about thirty in number, have figures in Chinese characters, which, on being referred to a horoscope, give the reply of destiny. Ot books are read by means of wooden dice. Other oracle

The Annamese practise cheiromancy, physiognomy, and phrenology. Several fortune-tellers, instead of examining the hand of the querist, obtain their prognostications from a cock's or hen's foot. Others tell fortunes from the lines of the hand, the lines of the face, and the protuberances of the head all at once.

7. Superstitions.—Is it necessary to add that the Annamese believe in signs and omens? The following is a list of the most common superstitions:

They must begin the year with a lucky transaction if they want to make sure of ending it in luck. It is for this reason that during the first days of the year shopkeepers sell cheap in order to sell much, and thus guarantee a regular sale all the year. On the other hand, they all that their doors until midday on the first of the year, in order to avoid seeing or being visited by people bringing bad luck.

Meeting an old woman is a sign of failure.

Meeting a pregnant woman has the same significance. If they have come out on business, it is wise, after such an omen, to go back to the house.

back to the house.

back to the house.

A tradesman who enters a house where there is an infant less than a month old, is followed by misfortune for three months and ten days, unless he wards it off by burning a handful of salt immediately on his return home.

Every son whose father has died a violent death is threatened with the same fate if he does not appease the evil spirits. If a person who has weak eyes enters a room where a husband and wife are lying, he becomes totally blind.

The wick of a lamp burning well means work and prosperity. If it gets blackened and sputters, beware of thieves.

Numerous gossamers announce a bad crop; in the eye, cominc blindness.

Numerous gossamers announce a bad crop; in the eye, coming blindness.

A singing fire means discord in the house.

To walk on paper with writing on it is in itself a serious fault. If there are Cambodian, Shan, or Arabo-Malayan characters written on it, misfortune will certainly follow; and if it is a pregnant woman that commits the fault, she will miscarry.

A lamp that goes out, a broken cup, and girls or women looking into a gambling-house without playing, are omens of loss for the banker.

When young people of either sex who have not arrived at the age of puberty there the unformed flowers or fruits of mango or banana trees, they cause them to fall.

When trees persist in yielding no fruit, it is necessary, in order to obtain it, to threaten, on the fifth day of the fifth month, to cut them down. Every year some cuts are made with a hatchet in the mango trees to persuade them to produce fruit. A locust flying low, a cawing crow, and a croaking frog, are

A locust nying low, a cawing crow, and a change noe, all signs of rain.

A buffalo coming into a house, a bird flying round about it, and a spider at the end of a thread, are presages of misfortune.

A fish leaping into a boat signifies a bad catch, unless it is immediately cut in two and thrown back quickly into the

water. Fishing for the porpoise, the messenger of the demons, rouses their anger.

The cry of the khāch bird (Crypsirhina varians), heard in the East, foretells a visit; in the West, news.

The cries of the gecko, 'Tokkê! tokkê!' an odd number of times are of good omen; an even number, of bad omen.

The cry of the musk-rat foretells a visit that evening or the following day.

times are or good omen; an even number, or hear other. The cry of the musk-rat foretells a visit that evening or the following day.

The prolonged whining of dogs signifies a calamity.

The crowing of a cock at midday gives rise to fear that the daughters of the house will become ill.

The cry of night-birds announces illness or death.

The grating or cracking of inanimate objects foretells their future. If it is a coffin that cracks, it means that it is going to be bought. If it is a safe, it means that it is to receive money.

Do not open a safe during the night for fear of attracting thieves. Do not open it on the last day of the year, or the first three days of the next year. It is a sign of expense.

When a sword appears in a dream, it is a sign that one will soon have to be used. When it strikes against the wall, it means that an execution is near.

Guns that shake denote the approach of the enemy. Guns are, besides, regarded as being endowed with a sort of life. The Annamese sometimes think them ill, and give them medicine.

8. Diseases.—It is quite natural that, in a country where diseases are supposed to result from the malevolence of a spirit or the vengeance of a sorcerer, the popular medicine should consist of empirical remedies and magical performances.

The doctor and the sorcerer attend the invalid in turn, and it is not the former that is most listened to. The people try to prevent misfortune and its visitations by amulets and sacrifices to the spirits. If these precautions fail, they have recourse to the doctor (and they do not pay him unless he succeeds in curing the patient); and in grave cases they nearly always call in the sorcerer instead.

The two most terrible diseases that the Annamese have to do with are cholera and smallpox. Quite special talismans are needed against the demon of cholera, those which serve in ordinary illnesses being insufficient. The frightful rapidity of the disease does not allow of lengthy therapeutics.

Smallpox, which is even more frequent, is perhaps dreaded still more. It is never spoken of except in periphrases, and its pustules receive the reverential designation of 'Ong.' Smallpox is attributed to evil spirits, and especially to the souls of persons who have already died of smallpox (Con ma dâu). The latter are responsible for all the serious cases. The mild cases are due to predestination. Whenever a sick person is attacked by smallpox, he is isolated, not from fear of contagion, but from fear of the evil spirits which have taken possession of the invalid. Nevertheless, especially if a child is the victim, the family never leave him alone, and they surround him with a net to prevent the approach of the Con ma dâu. Smallpox, which is even more frequent, is per-

When the disease takes a serious turn, many of the physicians abandon their patients, not so much, perhaps, to avoid attempting an impossible dâu. In fact, one of their proverbs says: 'If you cure smallpox, it will have its revenge; if you cure phthisis, it passes over to the curer.' It is believed that the children of doctors die from the smallpox from which their father has saved others.

smallpox from which their father has saved others. During times of epidemic, if a family has already lost a child from smallpox, they are afraid that he will come and take away his surviving brothers and sisters, and they sacrifice at his grave to prevent him from leaving it. Amulets and witchcraft are the only cures for smallpox.

During the course of the illness they place under the bed of the smallpox patient a cd tre, a fish with a smooth green skin, of the siluridæ genus, which is believed to become impregnated with the venom of the smallpox until it stiffens with it.

In order that the erythematous stage may pass quickly into the pustular, and to favour the further formation of crusts, the patient eats shrimps and crabs. On the other hand, when desquamation has set in, he eats fish with scales in order to help the peeling-off process. Vermicelli is expressly prohibited, for it would change into a multitude of worms in the softened liver and lungs of the patient.

So also, if the smallpox patient wishes to prevent a relapse when convalescent, he must avoid walking baredoxed on hens' dung.

when convalescent, he must avoid walking barefooted on hens' dung.

Lastly, when smallpox (or any other epidemic) is raging, everybody sacrifices to the crowd of maleficent spirits known by the generic name of quan-on, the primary cause of all ills. For these sacrifices, at the beginning of the hot season, when the death-rate is highest, they manufacture or buy paper figures representing the people whom they wish to be saved, and burn them in the village square. The offerings intended to appease the evil spirits are placed in little paper boats, which they send off at the edge of the water.

9. Birth.—The Annamese, who are a very prolifice are anxious to have numerous posterity.

race, are anxious to have numerous posterity. They try above all to avoid miscarriages, stillborn children, and infant mortality. In their eyes still-born or prematurely born children are special spirits in short successive incarnations, denoted by the name of  $Con\ lon\ ($ 'entering life'). The mother of a  $Con\ lon\$ is considered contagious. No young woman would accept a betel-pellet from her. They even avoid speaking about her.

Successive miscarriages are believed to be re-incarnations of the same spirit. In order to get rid of this evil influence, when a woman who has had one or more miscarriages is about to be confined again, a young dog is killed and cut in three to the birth-goddesses takes place. Then they

pieces, which are buried under the woman's bed; and with the blood of the dog amulets are traced, which are taken to the future mother.

The evil spirit which presides at these premature deaths is called Me con rank, 'the mother of abortions.' It is represented in the form of a woman in white, sitting in a tree, where she rocks her

To drive away this demon from the body of the pregnant woman, they exorcize it. For this purpose they make two small figures representing a mother with a child in her arms, and burn them, after the sorcerer has adjured the evil spirit with threats no longer to torment the family which is performing the exorcism.

performing the exorcism. When a woman is pregnant, there is a very simple way of determining beforehand the sex of the child. Some one calls the woman, and she turns to reply. If she turns to the left, a boy will be born; if to the right, a girl. At the time of her confinement the woman is subjected to a special diet of dry salted food, and a fire (ndm bep) is kept burning under the bed—a custom which is common to all the Indo-Chinese. They invoke the twelve goddesses of birth and other delties.

If the parturient woman is in danger, the father prostrates himself and entreats the child to be born. Immediately after the birth the young mother is trampled under foot by the matron who has been attending her, and then fumigations and washings

who has been attending her, and then fumigations and washings take place.

The part of the umbilical cord that is close to the section is preserved. It is, according to the Annamese, a powerful febriuge for the use of children. Then they fix the prohibition post (cdm kham) before the door. It is a bamboo cane, on the top of which is placed a lighted coal, the burning side turned towards the inside for a boy, towards the outside for a girl. It gets its name from the fact that it prohibits from entering the house women whose confinements have been difficult or followed by accidents, and who might bring bad fortune.

Thirty days after the birth, during which the mother has been isolated all the things belonging

mother has been isolated, all the things belonging

to her are burnt.

Various ceremonies then take place, with offerings of fowls, bananas, rice, etc., to thank the goddesses of birth, and afterwards to give fluent speech to the child. They take special care not to pronounce any words of evil omen, as, e.g., speaking of illnesses, among others of thrush, for fear of giving it to the child. They also avoid frying anything in the house. That would cause blisters on the mother and the newly-born child.

As it is not quite customary to enter the room where the mother and the child are lying, each member of the family, in order that the child may make his acquaintance and not cry on seeing him, dips a part of his coat in a little water, which is

given to the child to drink.

Towards the end of the first month after the birth, they sacrifice to the birth-goddesses and give the child a name. As far as possible, this name must never have belonged to any member of the father's or the mother's family. The rice that is offered on this occasion is tinted in five colours:

white, black, red, blue, and yellow. Each of the invited guests presents a gift to the child.

The child that sucks the milk of a pregnant woman soon dies (of mesenter atrophy), because that milk is supposed not to have reached its

It is supposed that, on awakening in the morning, a person's bite is venomous, though it ceases to be poisonous when the vapours which cause the venom have passed away. In order to avoid such a bite, the Annamese mother does not suckle her infant until it cries.

When a child remains sickly and difficult to bring up, to baffle the evil spirits which are tormenting it, the parents pretend to sell it either to the spirit of the hearth, or to the sorcerer, or to the Buddhist bonze. It then receives another name and is re-sold to its parents, as if it were a strange child.

spread out playthings and tools before the child. From his choice they infer his future aptitudes.

From his choice they infer his future aptitudes. When a child less than a year old sneezes, they call to him 'Com cd' '(rice and fish!'). The same cry is raised when he taints, or when he starts nervously in his sleep.

When a child is subject to hiccough, they stick on his forehead the end of a betel-leaf bitten off by the teeth.

When a young child is taken away on a journey, they make a stroke or a cross on his forehead with a cinder from the hearth, so that the spirit of the hearth may protect him from the evil spirits during the journey.

When they cannot take a child under seven years of age away on a journey, they stick a little wax on his head in order that he may not regret his parents.

10. Marriage.—Marriage does not admit of so many magical rites. But when a marriage has been arranged and presents exchanged, the engaged couple consider themselves as married; and if one of them were to die, the other would wear mourning.

Misconduct of the girl before her marriage is strictly forbidden. In case of pregnancy, she is compelled to name her seducer. If he denies his guilt, he is retained until the birth of the child. An official proof by blood then takes place, which is called *thich man*. They link one of the infant's fingers with one of the suspected person's, make a slight incision in each, and catch the blood in a If the two kinds of blood form two separate clots, the accused is declared innocent; if they mix, he is guilty, and receives punishment.

11. Death.—Funerals are as complicated as they

are long and expensive. That is why certain families are not able to celebrate them until five or six months after the death, and are obliged to

inter their dead provisionally.

The funeral rites include the putting on of mourning garments and the beginning of the lamentations. At the head of the funeral pro-cession which conducts the dead man to his last resting-place walks the bonze; next come men bearing white streamers, on which are inscribed the virtues and the name of the deceased; next, under the shade of a large umbrella, the hearse of the soul, a small winding-sheet which is supposed to contain the soul, sometimes replaced by the tablet of the deceased; then, in grand funerals, a puppet, dressed in beautiful clothes, representing the deceased; and last of all the hearse, followed by the family and friends. All along the road they throw gold and silver papers representing money, to attract the attention of the evil spirits and secure an uninterrupted passage. The coffin, after being lowered into the grave, is not covered with earth until the sorcerer has ascertained, by means A lengthy of a compass, the best orientation for it. and pompous sacrifice, which only the rich can afford, terminates the ceremony.

Fresh sacrifices take place after seven weeks, then after a hundred days, one year, two years, and twenty-seven months after the death. About three years after the death, the corpse is exhumed in order that its bones may be enclosed in the regular tomb, after which there is an anniversary sacrifice—a ceremony in which they burn a copy of the imperial diploma conferring a posthumous title, and a new ceremony, of Buddhist origin, called the great fast or deliverance of the souls, which will obtain for the deceased the remission of all his sins. The sacrifice concludes with offerings

to the wandering and hungry souls.

ANTOINE CABATON.

ANNIHILATION. — It has been a matter of dispute whether anything once brought into existence can ever be utterly annihilated; and further, that possibility being conceded, whether this fate is in store for the souls of the impenitent wicked. Of these questions the first is purely theoretic and academic, appealing only to the interest of the few; the second, like other eschatological problems, has been keenly and widely debated. It is a remarkable example of the divergence in point of view between East and West, that the destiny which in the one hemisphere has been propounded as the final reward of virtue should in the other be regarded as the extremest penalty of obstinate wickedness. Where the theory of annihilation has found favour with Christian believers, its acceptance has usually been due rather to a recoil from the thought of the eternal duration of future punishment, than to the influence of the positive philosophical and theological arguments which can be urged on its behalf. Distracted between an equal reluctance to accept the eternity of hell or to admit the universal salvation of all men, some thinkers have found a way out of their difficulty by questioning the truth of the exclusive alternative between eternal blessedness and eternal woe hereafter. Thus they have been led to examine a third possibility, viz. the complete extinction of the wicked. The discussion of the problem belongs to that region of thought where both philosophy and theology have a claim to be heard. Whether the nature of the soul is such that the cessation of its existence is conceivable, is a question which cannot be argued except upon a basis of philosophical principles; what may be the bearing of the teaching of the Bible and of the commonly received tradition of the Church upon the point can be determined only by exegesis and by study of the history of

I. The question stated.—Obviously, the controversy concerning annihilation, so understood, arises only among those who are at least agreed as to the fact of survival after death. It is legitimate, therefore, at the outset to dismiss from consideration those theories which represent death as being of We are not necessity the end of individual being. here concerned to rebut the opinions of the materialist, who holds life to be a function of matter, or of the pantheist, for whom death is the moment of the re-absorption of the individual life into the common fund of existence. Subsequent, however, to agreement as to survival after death comes a parting of the ways, according as men accept or reject the view that the life so prolonged is destined to continue for ever. That it must so continue is the opinion of believers in the natural immortality of the soul. Nor must those who hold this view be accused of making an extravagant claim on behalf of human nature, as though they maintained the soul's independent and absolute immortality. Admitting that the life of the soul, though prolonged to infinity, must always rest upon the sustaining power of God, they contend that this relation of dependence is outside the bounds of time, and everlasting. By the annihilationist, on the other hand, the opinion of the soul's natural immor-tality, even in this restricted and legitimate sense, is considered a dangerous error, the root out of

which has grown a false eschatology. In place of the conception of an immortal life belonging essentially and inalienably to the soul, he would substitute that of an existence naturally destined to extinction, except under certain specified conditions. Upon this denial of the soul's natural immortality he bases his theory, and, though professing a positive creed and ready to give an account of it, he justly claims that, logically, the onus probandi as to immortality lies rather with those who affirm than with himself who denies that doctrine.

2. The natural immortality of the soul called in question.—This is not the place in which to state at any length or with any completeness the argument for the immortality of the soul. It will be sufficient if we so far indicate the grounds of belief as to render intelligible the objections which have been urged on the other side. Undoubtedly, the strongest force working in favour of a general acceptance of the belief in natural immortality has been the dominant influence of Platonism in the earlier stages of the development of Christian doctrine. 'Our creeds,' it has been said, 'are the formulæ of victorious Platonism.'\* And though that statement may stand in need of some qualification, yet it is true in the main of the belief in immortality. The conclusion of the *Phædo* has become the accepted tenet of the Church. Moreover, it is remarkable how comparatively insignificant are the additions which have been made to Plato's argument since it was first constructed by his genius. In the reasons commonly urged to-day for belief in immortality we may recognize the main features of his proof, if only due allowance be made for the translation of his thought from the modes of ancient Greece to those of the present age, argument, it will be remembered, is threefold.

argument, it will be remembered, is threefold.

It begins with insistence on the fact that in nature there are no absolutely new beginnings, but an alternation from one state to its opposite, as from motion to rest and from rest to motion. Since, in the history of the soul, life and death are thus related to one another as alternations, the latter, he argued, cannot possibly be a state of non-existence. Secondly, the soul's capacity for the recognition of truth is compared with memory, and is brought forward as proof of her pre-existence before union with the body. Hence may be inferred her continued existence after the dissolution of that union by death. Thirdly, the kinship of the soul with the ideas of which she is cognizant, and her identification with the idea of life, render self-contradictory, and therefore inconceivable, the thought of her annihilation.

The three lines of Plato's argument supply us with a classification under which the modern pleas for immortality may be arranged. Parallel with the first division of his proof is the modern appeal to the principle of the conservation of energy. As in the physical world energy is neither created nor destroyed, but transformed, so it is inferred that psychical energy likewise must be subject to transformation rather than to annihilation. Secondly, all idealist philosophers have found their most powerful exerument for the immortality of the scale powerful argument for the immortality of the soul in the fact that she apprehends truth by means of powers which transcend the limits of time and space. The a priori forms of thought are taken as proofs of the immortal nature of the soul. Thirdly, Plato's insistence on the relation of the soul to the eternal and unchanging ideas is parallel to the appeal of religion to the kinship of the soul with the eternal and unchanging Divine Being. Lastly, the practical and ethical value of the belief in immortality and in the prospect of future rewards and punishments has been keenly appreciated alike in ancient and modern times

Is it possible along these lines to establish a certain conclusion in favour of the soul's natural immortality? In that case, the theory of annihilation would be barred at the outset. But the required certainty is not forthcoming. However firmly convinced the student may be in his own mind of the

\* Inge, Personal Idealism and Mysticism, 1907, p. 67.

fact of human immortality, he must nevertheless admit that, technically, the philosophic proof of the doctrine is far from reaching the standard of demonstration. The history of human thought enforces the admission. Even among the immediate inheritors of the Platonic tradition there were many to whom the opinion of the master on this point carried no conviction. Still less was the tenet of individual immortality acceptable to Peripatetics, Stoics, or Epicureans. And as in ancient times the world remained unconvinced, so to-day the philosophic arguments for individual immortality, however combined and expanded, are by no means universally admitted.

nowever combined and expanded, are by no means universally admitted.

If we take the arguments in the order given above, we shall find that each in turn has been subjected to damaging criticism. Energy (it is retorted) cannot indeed be destroyed, but it may be dissipated. What reason, therefore, have we for thinking that the force which underlies the individual life will be exempt from the general law of dissipation? If the premises of the idealist philosophy be conceded, there is, doubless, a legitimate inference to the existence of an immortal element in the human spirit, but that conclusion does not decide the question of the destiny of the individual. Even the admission of the kinship of the soul with the Divine Being is consistent with the denial of individual immortality. The ethical instinct which demands that the injustices and inequalities of the present life shall be rectified in the future—certainly by far the most powerful influence in inducing the belief in immortality—might be satisfied by the conception of a survival not necessarily endless. 'In truth,' writes Lord Macaulay, 'all the philosophers, ancient and modern, who have attempted without the aid of revelation to prove the immortality of man—from Plato down to Franklin —appear to us to have failed deplorably.' \* Whately is of a like opinion. 'That the natural immortality of man's soul is discoverable by reason may be denied on the ground that it has not been discovered yet.'† Were it necessary, it would be easy to multiply quotations to the same effect.

That there is a living principle in man which cannot be affected by bodily death is a proposition from which few but declared materialists would

from which few but declared materialists would dissent. That this living principle will manifest itself in a prolongation of the individual life is a conclusion for which there is a large measure of philosophic probability, though no demonstrative proof. That the life so prolonged will continue for ever is a tenable hypothesis, but it cannot be presented as an informed from universally admitted presented as an inference from universally admitted premises. Hence, in the absence of any proof of the conviction of natural immortality, theories of annihilation must obviously be given a fair hearing. They cannot be dismissed in limine on the plea that they are in contradiction to one of the accepted truths of natural religion.

3. Arguments for annihilation.—The hypothesis of annihilation has in its favour the following considerations.—(a) Cosmological. If the souls of the wicked are eventually to be annihilated, then the process of creation and redemption may be represented as destined to issue in unqualified success. When all that is evil shall have been finally removed, nothing will remain but light and love; whereas every theory of everlasting punishment involves the admission that a shadow of impenetrable darkness will hang for ever over a portion of the universe.

of the universe.

It was maintained by some mediaval theologians that the existence of this shadow would intensity by contrast the enjoyment of the light by the saved. A more humane age recoils from the suggestion of such a reason for the everlasting duration of misery, and indeed takes precisely the opposite line, holding that the happiness of the saved could not be complete while other members of their race were suffering (cf. Rothe, Dogmatik, iii. § 48). Even though evil be regarded as powerless and fettered, stripped of all its capacity for assault and intrigue, yet its continued existence would seem to constitute a protest against the Divine government—a melancholy proof that the perversity of free will had in some measure frustrated the Divine intention. Advocates of the theory of annihilation maintain that the improbability of the everlasting continuance of evil in any shape gives the measure of the probability of the total destruction of the wicked.

(b) Psychological. A further argument in the same direction is derived from the nature of the \* Essuys, iii. 211 (pop. ed. 1870, p. 549).

† On the Future Life, p. 17; cf. E. White, Life in Christ, p. 84.

† Thomas Aquinas, Summa, iii. sup. xciv. 1.

VOL. I.—35

soul and its relation to moral evil. All evil is self-contradictory, and therefore tends to be self-destructive. The wicked soul is not only at enmity with others, but divided against itself. And if the doctrine of natural immortality be abandoned, what is there to prevent the internal discord from accomplishing the work of disintegration, and ending in the final dissolution of the individual being? That evil is in its essence negative rather than positive, has been a widely accepted theory. It would seem to suggest the conclusion that the soul which identifies itself with this principle of non-being will become less and less alive, until it passes out of existence altogether. Sin, it has been said, may be regarded as a 'poison to which the vital forces of the soul must in the end give way by passing into sheer extinction' (cf. Gladstone, Studies subsidiary to Butler, 1896, p. 218).

(c) Practical. So strong is the tendency towards Pragmatism at the present day, that little objection is raised when the acceptance of a theory is justified by an appeal to its supposed beneficial effects upon practice. To judgments of value, as distinct from judgments of fact, is assigned a special validity of their own. In accordance with special validity of their own. In accordance with these principles, annihilationists have pointed to the influence of their doctrine upon the moral life of man. The prospect of annihilation for the wicked, and eternal life for the righteous, provides (they tell us) a legitimate appeal alike to the hopes and to the faces of manlind. Nothing can be a and to the fears of mankind. Nothing can be a greater inducement to moral effort than the hope of acquiring an immortality otherwise unattainable; acquiring an immortality otherwise unautamane; nothing a greater deterrent than the threatened doom of total extinction. If capital punishment upon earth arouses in the highest degree the fears of the criminal, the thought of an execution in which soul as well as body shall be involved in a common destruction is sufficient to appal the most indifferent and the most hardened.

4. Counter arguments.—Counter considerations to the above arguments are not wanting, and have been brought forward with effect by critics of the theory. (a) Whatever plausibility there may be in the argument that sinners must cease to exist in order that the final state of the universe may be altogether holy, is greatly lessened by reflexion on the obvious truth of our profound ignorance with regard to the whole problem of evil. Where the mystery is so impenetrable, it is well to remember that any inference must be hazardous in the ex-treme. And, after all, the ultimate and inexplicable riddle of the world lies in the present fact of evil rather than in the questions concerning its origin and its end. If we cannot reach even an inkling of the solution of the mystery of evil, present though it be before our eyes and lodged

tion into the universe, and the likelihood of its final removal therefrom. Though confession of ignorance is never a very acceptable conclusion to

in our own hearts, we are in no position to indulge

in rash speculations as to the mode of its introduc-

any argument, yet along this line we can arrive at no other result

(b) Nor, again, does the argument from the nature of the soul produce conviction. Advocates of the theory of annihilation are too apt to confuse absence of proof with proof to the contrary. Right as they may be in questioning the demonstrative cogency of the commonly received arguments for the immortality of the soul, they go beyond the mark in thereupon assuming its mortality. The positive arguments which can be produced to prove that the soul is subject to decay are at best conjectural. Ultimately they depend upon the assumption that the nature of the soul is complex, and therefore capable of disintegration. And that assumption is as much an unproved hypothesis as |

is the contrary theory of the soul's indiscerpti-

(c) Lastly, the utilitarian arguments in favour of annihilation suffer from the weakness inherent in all considerations of that type. In spite of the stress which Pragmatists lay on the will to believe and on the credit due to judgments of value, it still remains true that the claims of the pure reason in speculation cannot be disregarded with impunity. A strong sense of the beneficial effects which will follow from a given belief may properly lead the inquirer to a diligent search for arguments pointing that way; it cannot dispense him from the obligation of finding them. Hence, though it be admitted that threatenings of hell-fire and neverending torments belong to a stage of theological thought now outgrown, and have ceased to exercise a deterrent effect upon sinners; and though it be granted that a crude presentment of the theory of universal restoration may deaden the conscience and encourage a lamentable slackness of moral effort; and though it were true that an obvious way of avoiding these opposite dangers might be found in the adoption of the doctrine of annihilation, yet such a case would still be lacking in solid support. And, indeed, whatever be thought of the first two admissions, it cannot be denied that the last of the three is dubious in the extreme. Even where temporal interests only are concerned, it is one of the hardest problems of practical government to calculate correctly the deterrent effects of different punishments. A fortiori must it be a hopeless task to discover the comparative deterrent effects of the fear of eternal punishment and the fear of total extinction. If the theory of annihila-tion fails to commend itself on the grounds of reason, it can hardly hope to win general acceptance as a judgment of value.

5. Annihilation and Biblical eschatology.—In the literature of annihilation a great deal of space is devoted to the examination of passages of Scripture supposed to bear more or less directly upon the subject. In this article no attempt will be made to deal with particular passages and texts; it will be sufficient to point out why neither in the OT nor in the NT can we expect to find an explicit negative or affirmative answer to questions as to natural immortality. The gradual emergence of the hope of a future life among the Jews has formed the subject of prolonged and minute study leading to some generally accepted results. Belief in a future life, beginning in Prophetic times as little more than a dim and uncertain hope, developed under the stress of national suffering and disaster until it succeeded in establishing itself as an integral part of the national creed. Long as the process was, yet throughout its whole course the issue of the soul's natural immortality seems never to have been raised.

never to have been raised.

Nor is this surprising, when the conditions under which the belief grew up are recognized. Belief in immortality did not supersede a definitely formulated view to the contrary, viz. a belief in the soul's mortality. In early times the Israelites had shared the common Semitic conceptions of the destiny of man after death. They had looked forward, not to annihilation; but to a shadowy existence in Sheol. It is maintained by Dr. Charles (Critical History of the Future Life, p. 47 fl.) that the gradual development of their monotheistic religion actually deepened the fear of death among them. The conclusion is less paradoxical than it appears at first sight. Believing the blessing of communion with God to be confined to this life, the more highly they came to rate that blessing, the more they dreaded its termination in death, the darker and drearier became the prospect of Sheol. In contrast with the state of the living, the abode of the dead was the land of forgetfulness, of darkness, and of emptiness. This gloomy view of death was still current among the Jews in the time of Christ, and we find it pressed to its logical conclusion in the Sadducean denial of the resurrection. Yet life in Sheol, however bare of all that makes life desirable, was better than nothingness.

Except in the latest books of the OT canon,

Except in the latest books of the OT canon, where we may already trace the influence of Greek

thought at work, the possibility of complete annihilation is not contemplated in the OT. Hence, though it is true that in the OT there is no declaration of belief in the soul's natural immortality, yet it is equally true that there is no counter declaration of its possible extinction. The question whether the soul could or could not die entirely had not yet been asked. To attempt to find in the language of the writers of the OT a definite 'yes' or 'no' is to be guilty of an anachronism.

In the NT the situation is somewhat different.

Contact with Greek thought and with the prevalent scepticism of the heathen world had by this valent scepticism of the neather world had by this time familiarized Jewish thinkers with the philosophic aspect of the problem. So far there is no reason why any NT writer should not deal with the question of the nature of the soul's life, and with the possibility of its death. In some Apocalyptic writings of earlier date than the Christian era, the annihilation of the enemies of Israel is foretold as one of the events of the last days (cf. Enoch xxxviii. 5, 6, Apoc. Bar. lxxii. 4-6; Charles, op. cit. pp. 240, 305). But in the NT the indications as to the ultimate fate of the wicked are of doubtful interpretation.

doubtful interpretation.

Nor is the reason far to seek. Apostles and Evangelists were concerned primarily not with the theory of human destinies, but with the practical task of propagating the faith. In their preaching, a doctrine of the last things undoubtedly occupied a prominent place; but the time for any discussion of the presuppositions of Christian eschatology had not yet arrived. It was enough for them to insist on the glorious certainty of eternal life through Jesus Christ, and on the inevitable penalty of the wrong-doer in the hereafter. The language of which they make use must not be treated as though it were deliberately chosen in view of possible differences of opinion as to the duration of the future life of the wicked.

When due allowance is made for the inexactitude

When due allowance is made for the inexactitude of popular language, it will appear that the NT no less than the OT leaves the question of the soul's natural immortality altogether undetermined. On the one hand, the expression 'immortal soul' is notably absent, and, so far as it goes, this is evidence of the absence of the idea from the cycle of primitive Christian conceptions. On the other hand, the words 'death' and 'destruction,' freely employed in the NT to describe the fate of the wicked, cannot carry the weight of inference which the annihilationists desire to place upon them.

beyond the reach of controversy.

6. Annihilation and Patristic eschatology.—
The eschatological thought of the Early Fathers was influenced alike by the ideas which Christianity inherited from Judaism, and by conceptions as to the life and nature of the soul generally current in the ancient world. The difficulty which they experienced in harmonizing conceptions gathered from different sources into one consistent view, reveals itself in the occasional ambiguity of their language on this matter. They do not speak with unequivocal clearness as to the natural immortality of the soul. Christianity stimulated and encouraged that keen sense of the value of individual existence which made the Greeks turn with abhorrence from the thought of extinction.

How vehement was their antipathy is indicated in a well-known passage in Plutarch. 'I might almost say,' he writes, 'that all men and women would readily submit themselves to the teeth of. Cerberus and to the punishment of carrying water in a sieve, if only they might remain in existence and escape the doom of annihilation.'\*

Yet, notwithstanding the force of this feeling against extinction, the denial of its possibility contained in the Platonic doctrine of the soul's natural immortality did not find general acceptance. It was rejected, for example, by Justin Martyr (Tryph. vas telescent to example, by attain that yi (17 ym. v.), by Tatian (ad Græcos, xiii.), by Theophilus of Antioch (ad Autolyc. II. xxxii.), by Irenæus (adv. Hær. II. xxxiv.), and by the Clement. Homil. (III. vi.). At the same time it must be remembered that many of these denials may be most naturally interpreted as repudiations of the theory that the soul is independently and inherently immortal, and must not therefore be taken to be identical with an assertion of belief in the eventual extinction of wicked souls. This explanation, however, will not hold good in every case. In Arnobius, for example, there is no possibility of misunderstanding. He is

there is no possibility of misunderstanding. He is unmistakably an annihilationist.

It is remarkable how closely Arnobius anticipates many of the modern arguments, insisting on the ethical value of his theory, and maintaining that the doctrine of an ineradicable immortality, no less than the supposed prospect of immediate extinction at the moment of death, renders men careless of the rewards and punishments of a future life; whereas no more powerful influence can be brought to bear upon the character than the offered alternative between life and death (adv. Nation. II. xxxii.). The extinction which he foretells is to be the inevitable result of the punishments which the wicked will justly incur hereafter: 'Hace est hominis mors vera, cum anima nescientes Deum per longissimi temporis cruciatum consumentur igni fero, in quem illas jacient quidam crudeliter sævi, et ante Christum incogniti et ab solo sciente detecti' (c. xiv.).

But Arnobius stands alone in his development of this theory. Platonic conceptions as to the nature

this theory. Platonic conceptions as to the nature of the soul and its essential immortality became predominant. To this result Augustine contributed the weight of his immense influence. He is, however, careful to warn his readers against attributing any independent immortality to the soul.

any independent immortality to the soul.

Commenting on the Biblical account of the creation of man, he writes: 'Cavendum est ne anima non a Deo facta natura sed ipsius Dei substantia tamquam unigenitus filius, quod est verbum eius, aut aliqua eius particula esse credatur, tamquam illa natura atque substantia qua Deus est quidquid est commutabilis esse potest' (Epp. ccv. 19).

7. Annihilation and Scholastic philosophy.

In later centuries, the Schoolmen discussed the abstract question whether it is conceivable that anything should ness absolutely out of avaitables.

abstract question whether it is conceivable that anything should pass absolutely out of existence. Thomas Aquinas answered in the negative. His argument, briefly recapitulated, is as follows:

In theory it is possible that God should annihilate His creatures, i.e. there would be no self-contradiction involved in His so doing. As He brought them into existence under no compulsion, but by the free act of His will, so might He by a similar free act reduce them again to nothingness. Not, indeed, that He, the source of life, could directly cause the death of anything; but inasmuch as the creature continues in existence only through the Divine conservation, the mere withdrawal of that support would be equivalent in effect to an act of annihilation. Having thus conceded the possibility of annihilation, he denies that it takes place in fact, on the following grounds: No natural process can end in annihilation; for in the case of material things the component parts will still continue in existence after the disintegration of the composite whole; and as to immaterial beings, 'in eis non est potentia ad non esse.' Further, the idea of a miraculous act of annihilation is rejected on the ground that the object of a miracle is to manifest the Divine grace; and the Divine goodness and power are revealed rather by the maintenance of things in life than by their annihilation (Summa, 1. civ. 3, 4).

These metaphysical considerations, abstruse as

These metaphysical considerations, abstruse as they sound, bring out the real difficulty of introducing the conception of a Divine act of annihilation into a consistent and coherent view of the universe. At the same time there were other and more direct arguments by which the Schoolmen were led to a belief in the indestructibility of the soul. To them it appeared that the truth was sufficiently indicated, if not asserted, in Scripture. Inspired writers (so they contended) would not have asserted the survival of the soul after separation from the body so unconditionally, had that survival been due not to the nature of the soul, but to some miraculous interposition (cf. Suarez, Anima, I. x. 9). The balance of authority inclined strongly towards the doctrine of natural immor-

<sup>\*</sup> Non poss. suav. vivi sec. Epicur. 1104.

tality. At the 5th Lateran Council in 1513 A.D. Leo X. condemned in set terms the opinion of the mortality of the soul, and at the same time strictly commanded all and sundry philosophers, in their public lectures at the universities and elsewhere, to rebut and disprove that opinion.\* It was not until the crisis of the Reformation had broken the fetters upon free speculation, that a theory of annihilation, not unlike that which had been expounded by Arnobius, was once again suggested

and defended.

8. Annihilation in post-Reformation thought. In this matter, as in so much else, Spinoza displays his originality and independence. His writings reveal a marked change of opinion in the course of this life. In the Cogitat. Metaphys. he had upheld the doctrine of the soul's immortality on the ground that the soul being a 'substantia' could not pass away. In the treatise, de Deo, etc., he takes up a different position, affirming that the destiny of the soul will be determined by her decision between alternative courses. She may unite herself either with the body of which she is the idea, or with God the source of her existence. In the first case she perishes at death, in the second her union with that which is unchangeable will confer upon her that which is unchangeable will conter upon her the privilege of immortality (de Deo, etc. II. xxiii., Suppl. 209, 211). 'It is obvious,' writes Dr. Mar-tineau, 'that an immortality no longer involved in the soul as substance, but depending on the direction of its love, passes from the necessary and universal to the contingent and partial.'† The influence of Hobbes was also making itself falt in the green direction. However, with

felt in the same direction. However little credit he deserves for sincerity, he is sufficiently explicit in his denial of the natural immortality of the

'That the soul of man is in its own nature eternal and a living creature independent of the body, or that any mere man is immortal otherwise than by the resurrection in the last day, except Enoch and Elias, is a doctrine not apparent in Scripture' (Works, Lond. 1839, vol. iii. p. 443).

On the ground of a careful examination into the various Biblical passages bearing on the subject, he sums up in favour of a theory of the annihilation of

the wicked:

'Though there be many places that affirm everlasting fire and torments into which men may be cast successively one after another as long as the world lasts, yet I find none that affirm there shall be an eternal life therein of any individual person, but to the contrary an everlasting death which is the second death. . Whereby it is evident that there is to be a second death of every one that shall be condemned at the day of judgment, after which he shall die no more' (ib. p. 451).

Locke also conceived of the soul as being, under present conditions, subject to the law of death. In the short treatise, On the Reasonableness of Christianity, which exercised so profound an influence on the course of religious speculation in the next generation, he begins by insisting that the con-sequence of the Fall of man was to reduce him to a condition of mortality, the death-penalty involving the destruction of both body and soul. Through Christ alone is the doom reversed, and man becomes capable of immortality. Those who obey His precepts and imitate His example are delivered from death, and rewarded with the gift of life; and life and death are interpreted in their plain meaning of existence and non-existence. Thus Locke, in his attempt to recover the original simplicity of Christianity and to free it from the supposed accretions of theology, substitutes a doctrine of annihilation for the traditional doctrine of inherent immortality. Moreover, he seems to feel no doubt of his success in discovering evidence of the truth of the theory in the words of Scripture. His opinion gave occasion to some controversy on the point at the beginning of the 18th century.

\*Labbe, Concilia, tom. xiv. col. 187. † Study of Spinoza, p. 291. † Ct. H. Dodwell. Emistalama Discount

But the question of the particular fate in store for the wicked was soon lost sight of in the in-terest of the wider discussion between Deists and orthodox as to the essence of Christianity. It was not until the middle of the 19th cent. that the topic came again into prominence. From that time forward the conception of annihilation has formed the underlying presupposition of all theories of conditional immortality, and guesses have been hazarded as to the nature of the process which will end in this result. While some writers have imend in this result. agined a bare continuance of existence together with a loss of consciousness, others have adopted the more thorough hypothesis of entire extinction. Some, again, have assumed a future interposition of the Divine power in a sudden act of annihilation, others have preferred the idea of a gradual dilapidation of the soul. And the various theories about annihilation have been put forward with very various degrees of confidence. Cautious thinkers, like W. E. Gladstone and J. Agar Beet, have not ventured beyond the assertion that the Christian revelation certifies indeed the finality of the Judgment, but makes no pronouncement as to the duration of the pains of the lost. More eager advocates have believed that they can find positive proof of their theories in reason and Scripture (see art. Conditional Immortality).

9. Impossibility of comparison with Buddhist doctrine of Nirvana.—Between the theory which we have been considering and the Buddhist doctrine of Nirvāna there is some superficial resemblance. Both involve the conception of annihilation; both assert survival after death together with the possibility of ultimate extinction, the total loss of individual existence. But the resemblance is more apparent than real, and affords little help in the elucidation of the problem. which are entirely heterogeneous not only cannot be compared, but cannot even be contrasted. And the difference between Christian and Buddhist religious conceptions amounts to heterogeneity. The two systems are committed to radically opposite interpretations of the universe, the one looking for the solution of all problems in the knowledge of God, the other ignoring His existence; the one regarding life as the great boon every increase of which is to be welcomed, the other as the great evil in deliverance from which the reward of virtue will be found. When views about God, the world, and the self are thus essentially divergent, no true relation of comparison can be established by the mere fact that in East and West alike some sort of annihilation of the individual is contemplated. Comparative Religion is a fascinating study, but it is well to remember that the religious conceptions of different nations are often incommensurable; and, even when similar terms are used, the underlying ideas may be very far from coincident. This is notably the case with the respective eschatologies of Christianity and Buddhism. See NIRVĀŅA.

10. Conclusions.—Metaphysical and ontological considerations must of necessity enter into any estimate of the theory of annihilation, although it is notorious that the present age is impatient and distrustful of abstract reasoning. Arguments based upon the supposed unity and simplicity of the soul carry less weight to-day than when the sour carry less weight to-day than when the methods of philosophy were in more general use and favour. This is perhaps one of the reasons why the theory of annihilation has rapidly acquired a considerable popularity. Owing to the temper of the age, the philosophic difficulties have been interesting the considerable of the considerable popularity. insufficiently recognized. It is not easy to deny the contention that the doctrine of annihilation tends

is a Principle naturally Mortal, 1706; reply by John Norris,

in some measure to lower that high conception of the value and dignity of human personality which has been the direct outcome of traditional Christian teaching as to the nature of the soul. Man destined sooner or later to eventuate in a blank nothingness, such as is commonly supposed to await the animals, is widely different from a being Divinely endowed with the supreme gift of immortality. He stands on an altogether lower level. To make immortality dependent on response to the action of the Divine grace is to leave the position of man as man vaguely indefinite in the scheme of or man as man vaguery incentive in the scheme of creation. So vast a gulf divides beings endowed with immortality from those for whom final extinction is the natural end, that the difficulty of conceiving a creature 'capable of both' may well seem insuperable. And yet there are doubtless many to whom a difficulty of this kind is less than that of admitting evil to be an ineradicable and eternal element in the universe. They see no They see no escape from the conclusion that, if evil is irreformable, its annihilation is inevitable. If pressed for an answer as to the mode in which this result will be attained, it is doubtless open to any one to fall back on the conception of the Divine omnipotence, and to believe or hope that, by some Divine act analogous to creation but opposite in its effect, evil will be utterly abolished from the final state of the universe. By taking this line certain difficulties are avoided. The act of annihilation, so conceived,

is an exceptional interposition discontinuous from the rest of the Divine action upon the created world, and therefore ex hypothesi not admitting of explanation. But the hypothesis of Divine interpositions becomes less and less acceptable as men realize, alike in the kingdoms of nature and of grace, the presence and action of the unchanging God. Hence, for the most part, preference has been given to that theory of gradual annihilation which has been under discussion. It is a solution of the problem which has commended itself to many; it may probably secure even wider acceptance in the future; but even its advocates will admit that the difficulties involved in it deserve to be more fully faced and met than has yet been done.

difficulties involved in it deserve to be more fully faced and met than has yet been done.

## ANOINTING.

Introduction (A. E. CRAWLEY), p. 549. Buddhist.—See ABHISEKA. Christian.—See Unction.

ANOINTING.— I. Unction,\* anointing with oil, is a minor act of ritual, which possesses, however, considerable significance for the history of sacramental religion. Its forms correspond generally to the practical purposes for which, in early culture, animal and vegetable fats and oils were so largely employed, while in both principle and practice it has connexions with painting and dress, decoration and disguise, nutrition and medicine, lustration and the various uses of water and blood.

2. The application of unguents to the skin and the hair has obtained, as a daily cosmetic practice, in most, if not all, sections of the human race, from the Tasmanians to the ancient Greeks and Romans. The material varies, in both secular and sacred uses, from crude animal fat to elaborate and costly perfumed vegetable oils. Among the lower races, animal fats are employed, frequently in combination with ochre, occasionally with such substances as charcoal, soot, and ashes. Higher stages of culture prefer vegetable oils, with gums, balsams, vegetable pastes and powders, such as turmeric, sandal and mustard, sawdust and flour, or the sap and pollen of plants, some of which are occasionally used without oil. Perfumes were usually prepared in the form of ointments. Lastly, the term 'unguent' is in most languages made to include, by analogy, such substances as blood, saliva, honey, mud, pitch, and tar. (See art. Blood. For anointing with blood see H. C. Trumbull, The Blood Covenant [1887], s.v.)

3. Anointing usually follows washing or bathing, and completes the toilet of the skin. The action of oil is to produce a sensation of comfort and wellbeing. Some peoples regard it as conducive to

\* The etymological identifications, still to be met with in dictionaries, of Eng. salve, etc., and Lat. salvus, etc., and of Lat. unquo, etc. and Gr. äyos, etc. are unfounded. F. W. Culmann in his Das Salven im Morgen-und Abendlande (1876) has discussed the etymology of 'anointing' in Indo-European and Semitic languages.

Ethnic.—See Introduction. Hindu (A. E. CRAWLEY), p. 554. Semitic (M. JASTROW), p. 555.

suppleness of the muscles and joints. The Australian aborigines relieve the languor consequent on a long and tiresome journey by rubbing the limbs with grease (W. E. Roth, Etinological Studies among the North-West-Central Queensland Aborigines [1897], 114, 162). Oil closes the pores of the skin, and partially represses perspiration; hence the use of unguents by the Greeks and Romans before exercise, and after the bath which followed. Similarly, the Hindu anoints himself before bathing. In extremes of heat and cold these properties have an increased value, and anointing is almost a necessary of life in very hot and very cold climates. Being a bad conductor, oil protects the skin against the sun, and also prevents the escape of body heat. It is a useful emollient for burnt or chapped skin, and a valuable food for the nerves.

4. The cosmetic use soon acquired æsthetic associations. The gloss produced by oil has itself an æsthetic value, which is heightened by the addition of coloured substances. Of the majority of early peoples it may be said that grease and ochre constitute their wardrobe. The use of unguents as the vehicles of perfumes became a luxury among the Persians, Hindus, Greeks, and Romans, while among early peoples generally it is a common practice on both ordinary and ceremonial occasions, the object being to render the person attractive. Thus the natives of West Africa grease the body, and powder it over with scented and coloured flour. On the Slave Coast, 'magical' unguents, supplied by the priests, are employed for such purposes as the borrowing of money and the obtaining of a woman's favour. Swahili women use fragrant unguents in order to render themselves attractive. Similarly, Homer describes how Hera, when desirous to obtain a favour from Zeus, cleansed her skin with ambrosia and anointed herself with fragrant oil. In the islands of Torres Straits, the boys, at the close of initiation, are rubbed with a pungent scented

substance, which has the property of exciting the female sex. The Ewe-speaking peoples of West Africa scent the bride with civet, and make her skin red with the bark of the to-tree (F. Ratzel, The History of Mankind [Eng. tr.], ii. 397, iii. 108; A. B. Ellis, The Ewespeaking Peoples, 94, 156; Velten, Sitten und Gebräuche der Suahili, 212; Homer, Il. xiv. 170 ff.; A. C. Haddon in JAI xix.

412).

5. Anointing thus stands for physical refreshment, well-being, and personal attractiveness. It is, therefore, naturally regarded as being essential on festal occasions. The Australian native, we are told, is fond of rubbing himself with grease and ochre, especially at times when ceremonies are being performed. Among the ancient Egyptians, Greeks, and Romans, unguents, as representing the com-pletion of festal attire, were offered to guests. In the Homeric age, bathing and anointing formed an indispensable part of welcome. The use of anointing as a mark of honour naturally ensues. Thus, when a Ceramese warrior has taken his first head, he is anointed with fragrant oil by the young women of his village (Spencer-Gillen 1, 38; Wilkinson, i. 425; W. R. Smith, 233; Homer, Od. iii. 466, viii. 454; J. G. F. Riedel, De sluik- en kroesharige Rassen tusschen Selebes en Papua, 118).

Parallel to the cosmetia peo of fate and in the cosmetia people in the cosme

Parallel to the cosmetic use of fats and oils is their application to food-stuffs as a 'dressing'

their application to food-stuffs as a 'dressing'; to tools, utensils, weapons, furniture, and buildings, as a lubricant, preservative, or polish; and to perishable substances as a preservative (E. F. im Thurn, The Indians of Guiana, 314; K. Langloh Parker, The Euchtayi Tribe [1905], 123; Roth, op. cit. 102).

6. In the magical-religious sphere a further principle makes its appearance. In addition to their cosmetic, sanative, decorative, and other merits, unguents now develop a more potent, though not specifically distinct, virtue. The principle may be put thus: according to primitive psychology, organic matter and, to some extent, inorganic organic matter and, to some extent, inorganic also, is instinct with a Divine force or vital The chief centres of this are sacred persons, objects, and places; later, the gods and their temples, their representatives and apparatus. This essence, with its gifts of life or strength, and magical essence, with its gifts of life or strength, and magical or supernatural power, is transmissible by various methods, primarily contact. Inasmuch as its most obvious and convenient source is the flesh and blood of men and animals, the most direct method of assimilation is provided by eating and drinking; but an equally certain method is external application—a method which, in the form of anointing, is peculiarly adapted to the case of fats and oils. Unction is thus based upon the same sacramental principle as the practice of eating the sacramental principle as the practice of eating the flesh and drinking the blood of sacred persons and animals. The Divine life is transmitted, and com-munion with the sacred source attained, by anointing the worshipper with the sacred essence. Fat is the most primitive unguent, and is regarded in early thought as a very important seat of life. Ideas of sacredness are perhaps implicit even in its ordinary use, inasmuch as it is animal-substance. (Ernest Crawley, The Mystic Rose [1902], passim, also The Tree of Life, A Study of Religion [1905], 110, 223; W. R. Smith, 383). Where the idea of the sacredness of animal life has been developed to an extreme, as amongst the Hindus, animal fat is tabued.

To take illustrations: the Arabs of East Africa anoint them-To take illustrations: the Arabs of East Africa anoint themselves with lions' fat, in order to acquire courage. The Andamanese pour melted pigs' fat over children to render them strong. The Namaquas wear amulets of fat. The Damaras collect the fat of certain animals, which they believe to possess great virtue. It is kept in special receptacles; 'a small portion dissolved in water is given to persons who return home safely after a lengthened absence. . . The chief makes use of it as an anguent for his body.' The fat of the human body possesses a proportionately higher sanctity and potency. It is especially

the fat of the omentum that is regarded as possessing this vital force (Becker, La Vie en Afrique, ii. 866; E. H. Man, The Andaman Islands, 66; C. J. Andersson, Lake Nyami, 830, 283; W. R. Smith, op. cit. 833). The Australian savage will kill a man merely to obtain his kidney-tat with which to anoint himself. It is believed that the virtues of the dead man are transfused into the person by anointing. It is a regular practice throughout Australia to use for this purpose the fat of slain enemies. These natives also employ it to make their weapons strong; sick persons are rubbed with it in order to obtain health and strength. In India a prevalent superstition relates to the supernatural virtues of momita, an unguent prepared from the fat of boys murdered for the purpose. Grease made from the fat of boys murdered for the purpose. Grease made from the fat of boys murdered for the purpose. Grease made from the fat of boys murdered for the purpose. Grease made from the fat of boys murdered for the purpose. Grease made from the fat of boys murdered for the purpose. Grease made from the fat of a corpse is a potent charm among the Aleuts (R. B. Smyth, Aborigines of Victoria, 1 102, ii. 289, 313; J&I xxiv. 178; C. Lumholtz, Among Cannibals, 272; J. Dawson, The Australian Aborigines, 68; W. Crocke, The Popular Religion and Folk-lore of Northern India, ii. 176; H. H. Bancrott, Native Races of the Pacific States, iii. 145). A piece of human kidney-fat, worn round the neck, was believed by the Tasmanians to render a man proof against magic influence. The virtues of human fat as a curative and magical ointment are well known throughout the world. By its use love may be charmed, warriors rendered invulnerable, and witches enabled to fly through the air. Transformation into animals, as related in folklore, is effected by magical ointments, originally the fat of the animals in question (J. Bonwick, The Tasmanians, 179; Apuleius, Metam. iii. 2. 1; Lucian, Lucius, 12).

7. There are two further considerations to be taken into account in treating of the origin of unction. Sacred fat, in the first place, may be regarded as too holy, and therefore too dangerous, to be eaten. External application is a safer method of assimilating its virtues. In the second place, neither fat nor oil is, properly, an article of food in and by itself (W. R. Smith, 232, 386), but rather a medium or vehicle. Even in its cosmetic uses, oil is frequently a vehicle only, and when used alone would be regarded as the medium of a hidden wirtue. In its sacred applications, therefore, we may take it that the oil of anointing is the vehicle of a sacred or Divine life or vital-essence, which is either inherent in the material or induced thereinto. When the primitive conception of the virtues of human and animal fat decays, the Divine essence is, as it were, put in commission, and may be transmitted to any unguent by various methods of con-secration. Apart from the sacredness which it carries, a holy unguent is distinguished from other vehicles chiefly by its original cosmetic, decorative, sanative, and other properties.

The sacramental principle is thus the controlling factor in the theory of anointing; but it is always possible to trace the connexion between the essence and the accidents of holy oil, between the magical force or supernatural grace and those material properties which, to quote a Catholic theologian, well represent the effects of this Sacrament; oleum enim sanat, lenit, recreat, penetrat ac lucet (P. Dens, Theologia Moralis et Dogmatica [1832], vii. 3). Ceremonial unction in all religions satisfies the condition laid down by Catholic theology for the Catholic rite of unction; the differentia of the sacrament consists in the fact that the sign of the sacred thing, the visible form of invisible grace' (Augustine), should be 'such as to represent it and bring it about.'

The methods of transmitting the sacred essence to the unguent are material contact, magical and religious formulas, intention, blessing, and prayer. The results of unction develop from the decorative The results of unction develop from the decorative and sanative through the magical stage to a supernatural consecration, which imparts spiritual refreshment and strength—in Christian doctrine, grace and the gifts of the Holy Spirit.

8. In the very widely spread use of fats and oils for the treatment of the sick, physical, magical, and religious ideas shed off into one another impart religious ideas shed off into one another imparts.

and religious ideas shade off into one another imperceptibly. Some typical examples will illustrate the range and the working of these ideas. Thus the Australians use various fats to assist the healing of wounds and sores; but to cure a sick man it is necessary to 'sing' the grease with which his body is rubbed (K. Langloh Parker, *The Euchlayi* 

Tribe, 38; Spencer-Gillen\*, 250, 464; Roth, op. cit. 157, 162). The shamans of Asiatic Russia charm the blubber, reindeer-fat, or bear's grease with which the body of a patient is anointed. So, more definitely, the Melanesian medicine-man immore definitely, the Melanesian medicine-man imparts mana, magical or spiritual force, to the unguent. On the other hand, the most powerful unguent in the Chinese pharmacopæia owes its virtues to gold-leaf. Gold is considered to be the most perfect form of matter, and this unguent transmits life to the human body. The unguent employed by the priests of ancient Mexico, when employed by the priests of ancient Mexico, when sacrificing on the mountains or in caves, contained narcotics and poisons. It was supposed to remove the sense of fear, and certainly soothed pain. It was used in the treatment of the sick, and was known as 'the divine physic.' The holy oil of Ceram Laut may be manufactured only by a boy and a girl who are virgins. A priest superintends and repeats formulas over the oil. The Amboynese offer oil to the gods. What is left over is returned, offer oil to the gods. What is left over is returned, and now possesses Divine virtues. It is used to anoint sick and sound alike, and is believed to confer all manner of blessings (V. M. Mikhailovskii in JAI xxiv. 98; R. H. Codrington, The Melanesians, 198 f.; J. J. M. de Groot, The Religious System of China, iv. 331 f.; Acosta, History of the Indies [Hakluyt Society], ii. 365-367; J. G. F. Riedel, De sluik- en kroesharige Rassen tusschen Selebes en Papua, 179; F. Valentijn, Oud en nieuw Oost-Indien, iii. 10). To return to magical ideas, variations of method are seen in the practice of anointing the weapon which dealt the wound: in anointing the weapon which dealt the wound; in the East Indian custom, whereby fruits and stones are smeared with oil, and prayer is made that the bullets may rebound from the warriors as rain rebounds from what is covered with oil; and in the Australian superstitions connected with bonethe Australian superstitions connected with bone-pointing. Here it is possible for the user of the magical weapon to release his victim from the wasting sickness he has brought upon him, if he rubs the apparatus or his own body with grease, in some cases giving what is left of the unguent to the sick man. On the principle of sympathy, a mother will grease her own body daily while her son is recovering from circumcision (J. G. Frazer, GB<sup>2</sup> i. 57 ff.; C. M. Pleyte in Tijdschrift van het Nederlandsch Aardrijkskundig Genootschap (1893), 805; Langloh Parker, op. cit. 32; Spencer-Gillen<sup>b</sup>, 466. also <sup>a</sup>. 250).

466, also \*, 250).

9. The ancinting of the dead is based on the principle that, as the Chinese say, the dead man may depart clean and in a neat attire from this world depart clean and in a neat attire from this world of cares.' Africa, North America, and the Fiji and Tonga Islands supply typical examples of the custom. The corpse is washed, oiled, and dressed in fine clothes (J. J. M. de Groot, op. cit. i. 6, 20; F. Ratzel, The History of Mankind, i. 328; Williams and Calvert, Fiji and the Fijians, i. 188; J. Adair, History of the North American Indians, 181). The ancient Egyptians, Greeks, and Romans thus prepared their dead for the last vites. The Egyptians pared their dead for the last rites. The Egyptians also oiled the head of the mummy; the Romans poured perfumed oils over the ashes and the tomb. At the annual commemoration of those who fell at Platæa, the Archon washed the grave-stones with water and anointed them with oil. The Greeks placed in the tomb vessels (λήκυθοι) containing unguents for the use of the dead. The Kingsmill Islanders, like many other peoples, preserved the skulls of dead relatives. These were oiled and garlanded; food was offered to them as if they were alive (Wilkinson, iii. 363; Servius on Virgil, Æn. v. 219, ix. 483; Lucian, de Luctu, 11; Schömann, Gr. Alterthümer, ii. 595, 600; Wilkes, U.S. Exploring Expedition, 556). The pious affection shown in such customs is elsewhere very commonly developed into practices which aim at a closer union At the annual commemoration of those who fell at developed into practices which aim at a closer union

with the departed. Thus in Australia we find a prevalent custom among mourners of anointing themselves with oil made from the decomposing fat of the corpse. This practice has typical examples in the Dutch East Indies, Africa, and North America. The Creek Indians anoint themselves with oil mingled with the ashes of the dead. A curious custom obtains in the Aru Islands of the curious custom obtains in the Aru Islands of the Dutch East Indies. As soon as a man is dead, his widow runs round to the houses of all his friends and smears the doors with oil (Spencer-Gillen<sup>b</sup>, 530; Fison and Howitt, Kamilaroi and Kurnai, 243; Riedel, op. cit. 308; First Report BE, 145, 155; Riedel, 268). The Catholic rite of Extreme Unction doubtless derives from the general principle of specific the cick but care to form the ciple of anointing the sick; but, apart from such customs, there would seem to be no definite case elsewhere of the practice of unction immediately before death.

10. It will be convenient at this point to draw out the connexion between ceremonial ancinting and the principles of tabu. In the first place, grease, oil, and fat are convenient vehicles for the application of ashes, charcoal, and other marks of mourning, and of the red paint that denotes such persons as the shedder of blood and the menstruous woman. as the shedder or blood and the menstruous woman. These states, being tabu, possess one form of sanctity; but it is a general rule that anointing proper, together with decent apparel, should be discarded during their continuance. Similarly, anointing, with other aids to well-being, is renounced by the ascetic. Differences of cosmetic custom produce exceptions to the rule; thus, among the ancient inhabitants of Central America among the ancient inhabitants of Central America it was the custom to smear the body with grease as a mark of fasting and penance. During the penitential season which preceded the New Year festival, every man was thus anointed daily; the festal use of paint was resumed as soon as the feast commenced (H. H. Bancroft, op. cit. ii. 690, 696). In the second place, we have to recognize the cleansing powers of unction. Anointing is positive, lustration negative; but this original distinction is not kept intact, for consecrated water not only cleanses, but imparts the Divine life of not only cleanses, but imparts the Divine life of which it is the vehicle (W. R. Smith, 190); and consecrated oil, conversely, both imparts virtue and cleanses, by the action of the Divine life which and cleanses, by the action of the Divine life which it carries within it. Early peoples, it must be noted, employ fat and oil-refuse as a detergent. Anointing thus not only produces the sanctity of consecration, but also removes the sanctity of tabu. In the latter case, its result is re-admission to the normal life (which itself possesses a measure of sanctity [W. R. Smith, 426]), and to that extent it brings about a reconsecration of imperiod sanctity. brings about a re-consecration of impaired sanctity. The following cases show how unction and lustration tend to assimilate. The  $gh\bar{\imath}$  of the Hindus is held to purify by virtue of its sacred essence, while the sprinkling with sacred water which constitutes the abhiseka, or anointing of a king, possesses not only the name but the function of ordinary anointonly the name but the function of ordinary anointing. The Yoruba 'water of purification' is really an unguent, prepared from shea-butter and edible snails. The 'neutralizing rice-flour' of the Malays has both positive and negative virtues (A. B. Ellis, The Yoruba-speaking Peoples, 141; W. W. Skeat, Malay Magic, 77, 376, 385). Lastly, in the very widely spread ritual of blood, the material is either purificable like water, powered like all or spreads sprinkled like water, poured like oil, or smeared like ointment, while the results of the ceremony are both to cleanse and to confer a blessing.

rx. The examples which follow illustrate the use of anointing to remove tabu, and comprise various principles of ceremonial unction. In the Ongtong-Java Islands all strangers are met by the priests immediately on landing. Sand and water are sprinkled about, and the visitors themselves are sprinkled with water, anointed with oil, and girt with pandanus-leaves. Galla warriors on returning home are 'washed' by the women with

fat and butter, and their faces are painted red and white (R. Parkinson in Internat. Archiv für Ethnographie, x. 112; P. Paulitschke, Ethnographie Nordost-Afrikas, 255). Before starting on a journey the Wanjamwesi smears his face with a sort of porridge, and the ceremony is repeated on his return. The Australian who has smitten his enemy with sickness by the use of 'the bone' may release him from the curse by rinsing the magical weapon in water or by rubbing it with fat. Similarly, as noticed above, the operator may produce this result by greasing his own body. The customs connected with war and slaughter supply remarkable cases of this form of unction. In Ceram Laut, when war is decided upon, the chief anoints the feet of the aggrieved person with oil. It is a kind of consecration. The man then raises the warcry and rouses the people. The Illapurinja, 'female avenger,' among the Central Australians, is rubbed with grease and decorated. On her return, her husband removes the decorations and rubs her afresh with grease. The Fijians observed an elaborate ritual for the son of a chief after slaying his first man. He was anointed from head to foot with red turmeric and oil. For three days he lived in seclusion with several other youths, anointed and dressed like himself. They were forbidden to lie down, or sleep, or change their clothes, or enter a house where there was a woman (F. Stuhlmann, Mit Emin Pascha ins Herz von Afrika, 39; Roth, op. cit. 157; Riedel, op. cit. 158, Spencer-Gillen, 466-468; Williams and Calvert, op. cit. 155. In the cases cited above many principles of early thought may be discerned. It is sufficient to note that war is a holy state, and that it must be inaugurated and concluded with ceremonial observance.

12. The removal of tabu coincides with the renewal of normal life and normal sanctity, and anointing is employed here no less regularly than for the inauguration of a highly sacred state. Thus mourners are anointed, as in Africa and North America, when their period of sorrow is ended. Throughout Africa it is the custom to anoint the mother with fat and oil shortly after anoint the mother with fat and oil shortly after child-birth. The practice is common throughout the world, after sickness generally, with women after the monthly period, and with children after the ceremonial observances at puberty. The practice in the last instance often takes a peculiar form. In Australia, for instance, and the Andamans, a boy is made free of a forbidden food by the process of having fat rubbed over his face and body (J. Shooter, The Kaffirs of Natal, Lond. [1857], 241; I RBEW, 146; Maclean, Compendium of Kaffir Laws and Customs, 94, 99; D. Macdonald, Africana, i. 129; Dennett, Folklore of the Fjort, 137; Spencer-Gillen\*, 386; E. H. Man in JAI xii. 134; Howitt, ib. xiii. 455, xiv. 316).

13. Passing now to cases of consecration proper, we find anointing used to inaugurate periodic sacredness, as in rites corresponding to baptism and con-

13. Passing now to cases of consecration proper, we find anointing used to inaugurate periodic sacredness, as in rites corresponding to baptism and confirmation, in marriage and in worship. The customs last noted tend to merge into these. (a) It is a custom of wide extension that the new-born child should be rubbed with oil (Roth, op. cit. 183; Ratzel, ii. 286; Williams and Calvert, i. 175; Caron's 'Japan' in Pinkerton's Voyages and Travels, vii. 635; Ellis, Yoruba-speaking Peoples, 141). This practice soon becomes ceremonial, and suggests baptismal analogies. The Ovaherero ceremony of naming the child combines so many principles that it may stand for a typical summary. The rite takes place in the house of the sacred fire, and is performed by the chief man of the village. He first takes a mouthful of water, and spurts this over the bodies of mother and child. Then he addresses the ancestors thus: 'To you a child is born in your village; may the village never come to an end.' He then ladles some fat out of a vessel, spits upon it, and rubs it over his hands. He next rubs more fat in his hands, spurting water upon it. Then he anoints the woman. In doing this he crosses his arms, so as to touch with his right hand her right side, and with his left hand her left side. The process is repeated with the child. Finally he gives it a name, while touching its forehead with his own (E. Dannert in South African Folklore Journal, ii. 67). ii. 67)

(b) The anointing of boys and girls as a preliminary to the ceremonies observed at puberty is of wide extension; it is most prominent in Australia

and Africa. In Central Australia the candidate is rubbed with grease at various times during the protracted ceremonial. At the circumcision festival of the Masai the boys were allowed to gorge them-selves with beef. They rubbed the fat over their bodies, much as a Dayak rubs himself with the blood

bodies, much as a Dayak rubs himself with the blood of a pig, or as a carnivorous animal rolls in the flesh of his prey (Spencer-Gillenb, 93, 135, also a, 242; JAI xxiv. 418; C. J. Andersson, Lake Ngami, 465).

(c) In the ceremonial of marriage we find typical examples of anointing. The Central Australian, for a few days after receiving his wife, rubs her daily with grease and ochre. A few days before marriage the Angola bride is anointed with oil from head to foot, and until she is handed over to her husband is treated like a queen. The custom is frequent in Africa, and occurs in Fiji. The Malays anoint both bride and bridegroom. In what amounts to a ceremony of re-marriage, performed after the birth of the first child, the Basuto pair are anointed by a medicine-man with a mixpair are anointed by a medicine-man with a mix-ture of roots and fat. In Australia we find the cus-

ture of roots and fat. In Australia we find the custom of anointing pregnant women (Spencer-Gillen's, 135, 606; G. Tams, The Portuguese Possessions in South-West Africa [Eng. tr.], i. 175; Williams and Calvert, i. 169; Skeat, 385; ZE [1877] 78).

(d) As a preliminary to worship, anointing is frequently incumbent on the people, more frequently on the priest. In ancient Greece, those who consulted the oracle of Trophonius were washed and anointed with oil. When a native of the Slave Coast worships the guardian spirit who resides in his head, he rubs his head with oil; the priests anoint themselves before entering the house of the god. The priests of Mexico and Central America were anointed from head to foot with a sacred unguent, which was also applied to the images of the gods. Returning to Greece, we learn that in the feast of Dionysus the men who carried the sacred bull to the temple were anointed with oil. sacred bull to the temple were anointed with oil. Similarly, the Luperci at Rome were anointed and garlanded. An interesting side-light on the theory of anointing reaches us from Fiji and the Dutch East Indies. At shamanistic ceremonies the person into whom the god is to enter is anointed with into whom the god is to enter is anointed with fragrant oil, by way of rendering him attractive to the deity (Pausanias, viii. 19. 2, ix. 39. 7; Ellis, Yoruba speaking Peoples, 126, also Evve-speaking Peoples, 76; Acosta, History of the Indies, ii. 364; Bancroft, Native Races, ii. 323, iii. 341; Lactantius, Inst. i. 21. 45; G. A. Wilken, Het Shamanisme bij de Volken van den Indischen Archipel, 479 f.; Williams and College of the 1994.

de Volken van den Indischen Archipel, 4791.; Williams and Calvert, op. cit. i. 224).

14. For the special consecration of priests, anointing is a not uncommon piece of ritual, obtaining in various parts of the world. The Slave Coast of Africa provides a typical case. The candidate's body is smeared with a decoction of herbs. Then body is smeared with a decoction of herbs. Then the priests who officiate anoint his head with 'a mystical unguent,' and ask the god to accept him. If he is accepted, the deity is supposed to enter into him. A new cloth is put upon the ordained novice, and a new name conferred. Among the Buriats a shaman is consecrated by being anointed with the blood of a kid. In North America, among the Chikasaws, the candidate fasted for some time, and was consecrated by a bath and unction with bear's grease. The Toltees and Totonacs of Central America consecrated their pontiffs with an unguent made of india-rubber oil and children's blood. For the anointing of their spiritual king, the Aztecs employed the unguent used at the enthronement of their temporal monarch. The priests of ancient Egypt were consecrated with holy oil poured upon JAI xxiv. 89; Adair, 122; Bancroft, ii. 214, iii. 433, ii. 201; Wilkinson, iii. 360).

15. The anointing of kings, with which Semitic

and Christian custom has familiarized the world, is a spectacular rite of rare occurrence outside the sphere of Hebrew tradition. It is found, however, in a more or less perfect form among the ancient Egyptians, the Aztecs, and the Hindus ancient and modern. The Pharaoh was anointed after investimodern. The Pharaoh was anointed after investi-ture with the sacred robes. The monuments give representations of the ceremony, and in the Tell el-Amarna letters the king of Cyprus sends to the king of Egypt 'a flask of good oil to pour on your head, now that you have ascended the throne of your kingdom.' The Aztec ceremony of royal head, now that you have ascended the throne of your kingdom. The Aztec ceremony of royal unction preceded coronation. The king-elect went in procession to the temple of Huitzilopochtli. After paying homage to the god, he was anointed throughout his whole body by the high priest, and sprinkled with holy water. He was then clothed in ceremonial robes, and about his neck was hung a gourd containing powerful remedies against sorcery, disease, and treason. The unguent used was the black oil with which the priests anointed their own bodies and the images of the gods. Its name is variously given, ulli, or ole, and its chief constituent was india-rubber juice. The Quichés and Cakchiquels bathed the king at his coronation, and anointed his body with perfumes. Candidates for the order of Tecuhtli, the Garter of the Aztecs, were anointed with the same sacerdotal unguent

the order of Tecuhtli, the Garter of the Aztees, were anointed with the same sacerdotal unguent (Wilkinson, iii. 360; W. M. Flinders Petrie, Syria and Egypt from the Tell el-Amarna Letters, 45; H. Winckler, The Tell el-Amarna Letters [Eng. tr.], 87; Bancroft, ii. 144 f., 641, 196, iii. 385).

The anointing of kings and priests combines several principles, and is not to be explained on one separate line of development. It is, in the first place, a part of the festal dress essential on such occasions (W. R. Smith, 233, 453). Secondly, we have the various ideas connected with consecration,—the transmission of sanctity, power, and new life (ib. 383 f.), on the one hand; and, on the other, the 'hedging' of a dedicated person with sacredness, for his protection and the performance of his office.

office.

16. The anointing of sacrifice and offering, the alter and the temple, and the sacred apparatus generally, supplies many details of ritual which fall into line with the main principles of religious unction, while giving prominence to such as are more closely connected with worship. The human sacrifices of the ancient Albanians of the Caucasus, of the Aztecs, and of the people of Timor, were anointed before being slain. The last case has to do with coronation. The princes of Kupang in Timor kept sacred crocodiles, and believed them-selves to be descended from this animal. On the day of coronation, a young girl was richly dressed, decorated with flowers, and anointed with fragrant oil, to be offered as a sacrifice to the sacred monsters. In the remarkable human sacrifice of the Khonds, the *Meriah* was anointed with oil, the Khonds, the Meriah was anointed with oil, ghī, and turmeric, and adorned with flowers. He received 'a species of reverence which it is not easy to distinguish from adoration.' Every one who could touched the oil on the victim's body and rubbed it on his own head. The oil was regarded as possessing the same virtue as his flesh and blood conferred on the fields (Strabo, ii. 4. 7; Bancroft, iii. 333; Veth, Het eiland Timor, 21; S. C. Macpherson, Memorials of Service in India, 118; J. Campbell, Wild Tribes of Khondistan, 54 f., 112). The custom of 'dressing' offerings with oil was regular in the worship of the ancient Greeks. When the natives of West Africa sacrifice an animal.

the natives of West Africa sacrifice an animal, they sprinkle it with palm-oil by way of attracting the spirits. At the festival of the New Fruits among the Creek Indians, the priest took some of each sort and smeared them with oil before offer-ing them to the spirit of fire. The people of Gilgit

drench with wine, oil, and blood the branch of the sacred cedar used in their agricultural ceremonies. Similarly the Malays, in their ceremony of bringing home the Soul of the Rice, and the Javanese, in ing home the Soul of the Rice, and the Javanese, in the Marriage of the Rice Bride, anoint the rice with oil (Schömann, ii. 236; Pausanias, viii. 42; A. B. Ellis, The Yoruba-speaking Peoples, 155; Adair, 96; Biddulph, Tribes of the Hindu Kush, 106; Skeat, op. cit. 235; Veth, Java, i. 524).

The natives of Celebes on great occasions anoint the flor and other or blongs of state. The Santals

the flag and other emblems of state. The Santals anoint their cattle when celebrating the harvest-home. The Shans of Indo-China and the natives home. The Shans of Indo-China and the natives of Celebes purify with water and anoint with oil the plough used in their ceremonial ploughing of the rice-fields (G. K. Niemann in Bydragen voor de Taal-Land- en Volkenkunde van Nederlandsch Indië, xxxviii. 2. 270; W. Crooke, op. cit. ii. 308; E. Aymonier in RHR xxiv. 272; B. F. Matthes, Bijdragen tot de Ethnologie van Zuid-Selebes, 93).

When we pass to cases more definitely representative of worship, we find a development of two ideas: first, that the sacred life immann to exact a symbol or in second symbol or i

sentative of worship, we find a development of two ideas: first, that the sacred life immanent in the sacred symbol or image needs periodical renewing; and, secondly, that the spirit connected therewith requires conciliation; anointing the sacred object renews its vigour and also brings the worshipper into union with the deity. When the Wawamba of Central Africa or the Australian of Queensland anoints his sacred stone with fat when asking it for rain, we may infer that the sacred object is supposed to be revived and rendered gracious by the cosmetic virtues of unction. Similarly the Central Australians rub their churinga with fat and ochre whenever they examine them. The churinga is supposed to have human feelings, and the process of anointing is said to 'soften it' (F. Stuhlmann, op. cit. 654; Roth, op, cit. 158; Spencer-Gillen', 255, 265, 270, also's, 161). Here the use of grease for utensils combines with cosmetic anointing. In many cases it is natural to find these ideas merging in the notion of feeding the divine object; but it would be incorrect to derive the anointing of sacred stones from the practice of feeding the god. The custom of smearing blood upon sacred symbols and images is of wide extension, but it is not a survival from any practice of pouring the blood into the mouth of an image. The practical primitive mind does not confuse anointing with nutrition, though well aware that the two are allied. As illustrating the extension of the custom, a few examples are here brought forward. The Greeks and Romans washed, the two are allied. As illustrating the extension of the custom, a few examples are here brought forward. The Greeks and Romans washed, anointed, and garlanded their sacred stones. The δμφαλόs of Delphi was periodically anointed and wrapped in wool (Schömann, ii. 236; Lucian, Alex. 30; Apuleius, Flor. i. 1; Minucius Felix, Octav. iii.; Pausanias, x. 24, and J. G. Frazer, Commentary on Pausanias, v. 354 f.). The Malagasy anoint sacred stones with fat or oil or the blood of righting. anoint sacred stones with fat or oil or the blood of victims. The Wakamba neat-herd anoints a rock with oil and offers fruits, in order to get his cattle through a difficult pass (J. Sibree, *History of Madagascar*, 305; ZE x. 384). This combination of nutrition and unction is found among the Kei islanders; every family here possesses a sacred black stone, and to obtain success in war or trade a man anoints this with oil and offers fruits to it. In Calches sacred images apparatus and buildings In Celebes, sacred images, apparatus, and buildings are smeared with oil by worshippers. The ancient Egyptians anointed the statues of the gods, applying the unguent with the little finger of the left hand. The Arval Brothers anointed the image of their goddess, Dea Dia, on festival days. At the ceremony of mourning for the dead god, the stone image of Attis was anointed. This was probably the unction of the dead. When the image was brought out from the tomb on the day of Resurrec-

tion, the priest anointed the throats of the worshippers. The religion of ancient Greece provides a curious instance of the meeting of the practical and the religious spheres. The old temple-statues of the gods, made of wood, were rubbed with oil to preserve them from decay, while to preserve the magnificent creations of gold and ivory, such as the image of Zeus at Olympia, oil was run in pipes throughout the statue (Riedel, op. cit. 223; Matthes, op. cit. 94; Wilkinson, op. cit. iii. 361; CIL vi. 9797; Firmicus, de Errore, 23; Pausanias, v. 11, and Frazer's Com. ad loc.).

17. The principle of communion with the deity by means of anointing the sacred symbol or the worshipper himself is more apparent in the elementary stages of worship. The Assimboins, we are told, venerate the bear, and try to keep on good terms with him. They pray to him when they wish to be successful in a bear-hunt, and so to secure a good supply of bear's flesh to eat and The religion of ancient Greece provides

to secure a good supply of bear's flesh to eat and of the bear's grease with which they are always anointed. The natives of Central Australia, at the Intichiuma ceremony for maintaining the supply of kangaroos, eat a little of the flesh of this animal and anoint their bodies with the fat. In order to obtain success in hunting euros, they rub them-selves with stones supposed to be parts of that animal. Similarly, before eating snakes they rub their arms with snake fat. At a higher stage of development we find the West African negro anointing that part of his own body where his guardian spirit resides (de Smet, Western Missions and Missionaries, 139; Spencer-Gillen, 206, also, 182, 255; Ellis, Yoruba-speaking Peoples, 126 f.).

18. The oil of anointing, as we have seen, trans-

mits the sacredness latent within it in either of mits the sacredness latent within it in either of two directions—to the worshipper or to the god. If we look at the controlling source of its virtue, the potentially sacred substance of the human body, and compare the earliest forms of consecra-tion, we see that the theory of anointing leads us back to pre-theistic and even pre-fetishistic times. The elementary stages of dedication illustrate the less common direction of anointing, in which the worshipper or the priest confers sanctify instead of worshipper or the priest confers sanctity instead of receiving it. The dedication, more or less informal, of sacred buildings and apparatus by anointing obtained in Egypt, Greece, and Italy; it is remarkably prominent in India, ancient and modern, but ably prominent in incl., ancient and inclein, but does not appear to have been general elsewhere. It is, of course, connected with the use of oil for tools, utensils, and furniture, but also has associations with fetishistic methods of making gods (Crawley, with fetishistic methods of making gods (Grawley, The Tree of Life, A Study of Religion [1905], 232). The ritual of renewing the sacred vigour of a sacred symbol has already been referred to; here we note the original induction. Thus every man on the Gold Coast makes for himself a suhman, or tutelary deity. When he has made it, he anoints it with butter. Among the Bataks the guru inducts a spirit into the fetish with various ceremonies, chief among which is the application of a monies, chief among which is the application of a vegetable unguent (Ellis, Tshi-speaking Peoples, 100 f.; Hagen in Tijds. v. Taal-Land- en Volkenk. van Ned. Indië, xxviii. 525; Matthes, op. cit. 94). But the Central Australian, rubbing a newly made *churinga* with fat, is an unconscious exponent of the embryonic stage of consecration by unction.

pressed the Soul of the Universe upon it as an unction in the form of a x (Justin, Apol. i. 60: Plato, Timœus, 36).

In conclusion, the history of anointing in its connexion with religion shows that of all sacramental media the sacred unguent is the most spiritual, and that from beginning to end holy unction is the least material of all purely physical

modes of assimilating the Divine. Its characteristic is soul.

A. E. CRAWLEY.

ANOINTING (Hindu) .-- Unguents have been in regular use from the earliest times for every form of cosmetic, luxurious, medicinal, and ceremonial unction. Cosmetic and medicinal oils and pastes are found in greater number and variety pastes are found in greater number and variety in India than in any other country, though animal fats are there, of course, prohibited. Scented and coloured preparations are frequent; for ceremonial purposes, sandal-paste or oil, oil and turmeric, and ghī are chiefly used. Sandal-oil is popular on account of its fragrance; ghī and turmeric are extensively employed in medicine and cookery; turmeric and mustard-oil possess invigorating properties. Oil is applied to the head and ating properties. Oil is applied to the head and body before and frequently after the bath. The practice is said to invigorate the system, and it is noted in the ancient literature that diseases do not approach the man who takes physical exercise and anoints his limbs with oil. Infants are well rubbed with mustard-oil, and are then exposed to the sun; it is asserted, on scientific authority, that the sun; it is asserted, on scientific authority, that the practice is a preventive of consumption. The hair is always well pomaded, coconut-oil being chiefly used. Sandal- or rose-water is offered to guests; and this custom (mālaya-chandana) is the ancient arghya. During mourning and sickness anointing is discontinued, also on fast-days, on visits to sacred places, by Brāhmans in the stage of life as student or ascetic, and by women during menstruation. At the conclusion of her period a woman is rubbed with saffron-oil; and anointing, more or less ceremonial, marks recovery from sickmore or less ceremonial, marks recovery from sickness and the end of mourning.

Magical unquents, to which potency was given by mantras, were and still are used to inspire love, and to prevent or cure evil and disease. A still prevalent superstition is that of momia, the essential element of which is an unguent prepared from the fat of a boy murdered for the purpose. Int of a boy murdered for the purpose. This is believed to heal wounds and to render the body invulnerable. The ampta oil made men strong and women lovely; it ensured offspring, averted misfortune, promoted prosperity, and guaranteed long life. Its manufacture was preceded by purificatory rites. The Brāhman, when about to anoint himself, should think of the Chiranjivins ('the long lived'), seven half-divine persons.

At the hair-parting ceremony (signation navaged)

At the hair-parting ceremony (simantonnayana), performed during pregnancy, the woman is bathed and fragrant oil is poured on her head. Immediately after birth the child is rubbed with warm mustard-oil. The tonsure (chāula) takes place at the age of three; the child is anointed with oil

inction.

19. In its latest developments anointing passes into a theological metaphor of quasi-doctrinal import. Spiritual unction carries with it from the sacramental to the ethical-religious plane the various gifts of consecration, leaving in its course such traces of mysticism as 'the White Ointment from the Tree of Life,' found in the baptismal formula of the Ophites, and Justin's adaptation of Plato's fancy, to the effect that the Creator im-

and washed. Girls, on arriving at puberty, are decorated and anointed with oil, or oil and turmeric (haridrā). Brāhman boys, on investiture with the thread, are similarly anointed with oil and haridrā.\* The ceremony of gātra-haridrā is performed during the preliminary marriagerites and on the wedding-day. Bride and bridegroom are anointed with oil and turmeric. The 'sandalwood stone,' which they have to touch with their feet, is rubbed with oil. The bride's prother smears the heads of the bride with chi brother smears the hands of the bride with ghi, and sprinkles parched rice upon them. Yānādi wedding the mothers of the contracting parties anoint them with oil, turmeric, and sandalpaste. They then bathe and put on new clothes. Among the Kannādiyans the village barber sprinkles ghī over the heads of the bridal pair, who afterwards take an oil bath. For the sin-dūrdām, sandal-paste, blood, or vermilion are chiefly used. Oil or paste is a common medium for sacred marks.

After death, the body is washed and anointed with sandal-paste, oil, and turmeric, or ghī. In some cases the chief mourner touches each aperture of the body with his lips, repeats a mantra, and pours ghī on each. The forehead of a dying man is, if possible, smeared with the sacred mud of the Ganges. At the burial of the urn the chief

nourner anoints himself with ght.

At the ordination of a Buddhist priest, his hair is touched with oil before being cut.† The important ceremony of abhiseka (wh. see), the royal barrians are considered in the contract of baptism or consecration, is in principle a form of unction; the holy water, with its numerous ingredients, consecrates rather by infusion of divine force than by lustration. This rite was celebrated towards the close of the protracted ceremonies of the rājasūya. The proper time for its celebration was the new moon after the full moon of Phālguna, i.e. about the end of March. Eighteen ingredients were necessary, the chief being the water of the sacred river Sarasvatī. The others included ghī, milk, cow-dung, honey, sugar, sandal-water, perfumes, earths, turmeric, and rice-meal. The adh-varyu mixed them from eighteen pitchers in a bucket of udumbara wood, repeating a mantra at every stage, e.g., 'O honeyed water, whom the Devas collected, thou mighty one, thou begotten of kings, thou enlivener; with thee Mitra and Varuna were consecrated, and Indra was freed from his enemies; I take thee. 'O water, thou art naturally a giver of kingdoms, grant a kingdom to my Yajamāna' (naming the king). 'O honeyed and divine ones, mix with each other for the strength and vigour of our Yajamāna.' The king, after a preliminary sprinkling, put on a bathing-dress, the inner garment of which was steeped in ghī, and took his seat on a stool covered with a tiger-skin, facing the east, and, as the pouring commenced, raised his arms. On his head was a rose-head of gold, through which the sacred liquid was to spread in a shower. The contents of the one bucket were transferred to four; these the adwaryu, the Brahman priest, a ksatriya, and a vaisya poured in turn over the head of the king from their respective positions. Mantras were recited, such as-

'O Yajamāna, I bathe thee with the glory of the moon; may you be king of kings among kings. . . . O ye well worshipped

Devas, may you free him from all his enemies, and enable him to discharge the highest duties of the Ksatriya. . . . . At the close the Brāhman said, 'Know ye that he has this day become your king; of us Brāhmanas Soma is the king.'\* Noteworthy details are the prayers to 'the divine Quickeners,' the belief that the gods consequented the king, and that through the gods consecrated the king, and that through the rite he was filled with divine force. The essence of water is vigour; this and the vitalizing essence of all the ingredients of the sacred liquid enter into him. One mantra states that he is sprinkled with priestly dignity. † The hair of the king was not to be cut until a year had elapsed. Three forms of abhiseka are mentioned—abhiseka for kings, pūrņābhiseka for superior kings, and mahābhiseka for emperors. According to the Vārāha Purāna, a man may perform the ceremony on himself in a simplified form: 'He who pours sesa-

himself in a simplified form: 'He who pours sesamum-seed and water on his head from a right-handed sankha destroys all the sins of his life.'

A modified form of abhişeka is still employed at the coronation of Rājahs. In Assam, for instance, the water for the ceremony is taken from nine holy places, and is mingled with the juices of plants. A similar account is given of coronation in Mysore. In Rājahustāna the ceremony is unction rather than baptism. A mixture of sandal-paste and attar of roses is the unguent employed, and a little of this is placed on the forehead with the middle finger of the right hand. The royal jewels are then tied on.;

As in Vadic times the Brāhman weshes and

As in Vedic times, the Brāhman washes and anoints himself with oil or ghi before performing religious duties. The institutor of a ceremony also anoints himself. On the first day of the festival Sankranti it is the custom for every one to take a bath, in which rubbing the body with oil forms a conspicuous feature. In the nirūdhapaśubandha rite the tree from which the sacrificial post was to be cut was anointed, and the victim, after being rubbed with oil and turmeric and washed, was anointed with ghī just before the sacrifice. In the Yayfa sacrifice the ram is rubbed with oil, bathed, covered with aksatas, and garlanded § At the Durgā-pūjā festival a plantain tree is bathed and anointed with several finds of scented oils.

The consecration of buildings by means of unction is a well-developed feature of Hindu ritual. There is a ceremony analogous to the laying of foundation-stones, in which a piece of wood (sunku) is decor-ated and anointed, being thereby animated with the spirit of the god Västupurusha, who becomes the tutelary deity of the house. Again, when the principal entrance is put up, the woodwork is anointed with sandal oil and worshipped. The same ceremony is performed over the ridge-plate and the well, and for the house generally, when

first entered.

The images of the gods in the temples are bathed, anointed, and dressed by the priests daily. Unguents for this purpose (vilepana) are one of the 'essential offerings' presented by worshippers. Sacred stones are also anointed and decorated; and the worshippers of Siva anoint the linga.

The principle of consecration is well brought out in the Hindu ritual of anointing, while the allied principles of decoration and purification are fully A. E. CRAWLEY. recognized.

ANOINTING (Semitic).—If we find traces of anointing among the Arabs in pre-Islamic days,

we must perforce assume that, though still clinging by force of habit and tradition to rites and practices that fall within the category of primitive religious customs, resting upon distinctly primitive beliefs, they had advanced beyond these beliefs sufficiently to cause the rise among them of the longing to come into direct touch—not merely through the mediation of a special body of men with the higher powers. A custom of this kind is vouched for in the pre-Islamic period in connexion with the visit to the old sanctuary at Mecca, known as the Ka'ba, when the worshippers, in order to acquire and take, as it were, into their own person some of the sanctity associated with the deities of the place, rubbed their hands over the images of the gods (Wellhausen, Reste Arab. Heid.<sup>2</sup> p. 105) or pressed themselves against the edifice itself. Although no unguent which we commonly associate with anointing appears to have been employed, it is significant that the verb used to express this pressing (takarrub) comes from the stem that in both Heb. and Assyr. embodies the idea of 'offering,' while the rubbing (tamassub) is from a stem that in Hebrew becomes the generic term for anointing, and in the form  $m^{s\bar{s}}$  ah (Messiah) becomes one of the most significant terms in the religious nomenclature of both

Judaism and Christianity.

Unless the kissing of the gods or of sacred objects, as, e.g., the 'black stone' at the Ka'ba, be included, the ancient Semites do not appear to have gone further than to symbolize in these rites of pressing and rubbing the desire to reach out to the sanctity associated with images or objects. The use of wine and oil belongs to a still later stage of religious custom, and, when they are met with in ancient Arabia, are probably due to external influences. On the other hand, the antiquity of the blood with a secondary used in covernation. the blood-rite as a ceremony, used in covenanting, being vouched for (Trumbull, Blood Covenant, ch. i.), some of the uses to which blood is put in the sacrificial ritual of the ancient Semites may properly be classed under the category of anointing. To be sure, the custom of pouring or rubbing ing. To be sure, the custom of pouring or rubbing the blood of a sacrificial animal over a sacred stone the blood of a sacrificial animal over a sacred stone on which the slaughtering is done, is not looked upon as a species of anointing, for the purpose of the act is to symbolize that the deity, represented by the stone, or supposed to reside in it, has accepted the animal by receiving the blood as the vital element (Wellhausen, L.c. p. 113). However, in the ancient Semitic method of covenanting by dipping the hands in blood (Trumbull, L.c. ch. i.) a union of the contracting parties is symbolized, and if the deity is introduced into the act by rubbing the blood also over his symbol—whatever it may be—it is with the view of making the deity a party to the covenant, and in so far the thought of a direct union with the deity—a blood relationship—is present. Yet even here a direct transfer of sanctive from the deity to his archivery leads to the covenant. of sanctity from the deity to his worshippers does not appear to take place, as would be involved in anointing, viewed as a religious rite. It is significant, as Wellhausen (l.c. p. 99) points out, that the 'black stone' of the Kaba is not smeared with blood. This may be taken as a proof that communion with the deity had its decided limitations among the arriest families. tions among the ancient Semites, so that the sprinkling of blood over the door-posts and lintels, or the threshold of a dwelling, and such other practices as are instanced by Curtiss and Doughty as survivals of primitive religion among the inhabitants of Syria and Arabia, in which the blood is rubbed or sprinkled on animals or fields or newly erected or newly occupied dwellings as a protection against demons (jinn), or, in more positive terms, 'for a blessing' (Curtiss, Primitive Semitic Religion To-Day, ch. xv.; Doughty,

Arabia Deserta, i. pp. 136 and 499, ii. p. 100, etc.), are not to be interpreted as anything more than the placing of the objects in question under the control of the gods invoked through the sacrificial animal. The use of blood in the Hebrew netal animal. The use of blood in the riebrew ritual, such as the sprinkling over the worshippers (Ex 24), or over the altar and the sanctuary (Lv 4), for which Robertson Smith (Rel. of Sem.<sup>2</sup> p. 344) may be consulted, embodies the same general idea. Considerations of this nature lead us to the conclusion that the prominent rôle played by anointing among the Hebrews, with the application

of unguents to sacred objects or to persons inor unguents to sacred objects of to persons in-vested with sanctity, as priests and kings, is an expression of considerably advanced religious beliefs, in which the symbolical transfer of qualities associated with the Divine essence enters as a prominent factor. That this use of unguents in religious rites represents the transfer to the sphere of religion of originally secular rites, marking the adornment of one's person, may be granted; but this view, so brilliantly set forth by Robertson Smith (l.c. p. 232 ff.), must not blind us to the fact that in the transfer something more than the mere desire to show honour to sacred objects or persons was intended. The act was meant actually to symbolize the sanctity bound up with such objects and persons, and was to be understood as the investiture with such sanctity. The use of oil and wine as unguents-both symbols of luxury accompanying a more advanced culture—seems at all times to have been bound up with anointing among the Hebrews as among the other nations of antiquity, and is practised to this day in the Roman and Greek Churches for the consecration of sacred edifices. We have in this way instances of the anointing of altars, as, e.g., the stone at Bethel (Gn 28<sup>18</sup> 35<sup>14</sup>); and, incidentally, it may be noted that the reference to oil, which a wanderer like Jacob could hardly have carried with him, indicates the projection of a late custom into the remote past. A similar projection is to be seen in the statement that the furniture of the Tabernacle and the Tabernacle itself were anointed with oil (Ex 30<sup>26</sup> 40<sup>10</sup>). Similarly, the high priest was anointed with oil, sprinkled and poured on his head (Lv 8<sup>12</sup>), while in the case of the ordinary priests, the oil was only sprinkled on them (Lv 8<sup>30</sup>). The anointing of kings represented the formal investiture with an office that was always regarded one among the Habrews. We have as a sacred one among the Hebrews. as a sacreu one among the Hebrews. We have explicit references to such anointing in the case of Saul (1 S 10<sup>1</sup>), David (1 S 16<sup>13</sup>, 2 S 2<sup>4</sup> 5<sup>3</sup>), Solomon (1 K 1<sup>34</sup>), Joash (2 K 11<sup>12</sup>), Jehoahaz (2 K 23<sup>30</sup>), and we may therefore assume that the rite was a general one from the beginnings of kingship among the Hebrews. That the act indicated has deather the Hebrews. That the act indicated, besides the purely formal investiture, the actual transfer of Divine powers to the person anointed, may be concluded from the explicit statement in connexion with the anointing ceremony, that 'the spirit of Jahweh' rested with the anointed one; so in the case of David (1 S 16<sup>18</sup>). Correspondingly, the Divine Spirit leaves Saul (v. 14) as an indication that he is the spirit server of the spirit server in the spirit that he is no longer in touch with the Divine Essence, i.e. is deposed from his sacred office.

In the further spiritualization of the fundamental idea underlying the rite of anointing, namely, the transfer of sacred or Divine qualities to an object or individual, the prophets are naturally viewed as the 'anointed' ones (Ps 10515), even though the ceremony itself was not performed, except possibly in the single instance of Elisha, and even in this case the order given to Elijah to perform it (1 K 19<sup>16</sup>) may be intended only as a metaphor to indicate the transfer of the Divine Spirit to Elisha. The metaphorical application is clear in the case of Cyrus, who is called the

'anointed' of the Lord, to indicate that he acts in accordance with the Divine quality with which he is imbued. The same interpretation is to be put upon the appellation 'anointed' employed in a late Psalm (105<sup>15</sup>). From this it was a natural step to designate Israel as the chosen people of Jahweh, as His 'anointed' one (Ps 84<sup>9</sup> 89<sup>38.51</sup>, Hab 3<sup>13</sup> etc.), in which case 'anointed' has become a synonym for holy, i.e. endowed with the holy Essence. The final stage is reached in the doctrine of the Messiah as the 'anointed' one to bring alvation to His people and to mankind in general. In Christianity, Jesus becomes the 'Messiah' par excellence (Gr. Χριστόs), while Jewish theology in rejecting Jesus as the Redeemer of mankind was gradually led to abandon the doctrine of a personal Messiah, and to accept in its stead the outlook towards a Messianic age. The association of anointing with the Divine Spirit passed over into the Christian Church, which, to emphasize the descent of the Holy Spirit on all believers (2 Co 1<sup>21</sup>, 1 Jn 2<sup>20, 27</sup>), instituted the practice of anointing with oil in conjunction with the rites of baptism and confirmation.

As yet no traces of anointing as a religious rite have been found in Babylonia and Assyria, though this does not preclude the possibility of our yet coming across the rite in cuneiform documents, especially for those periods when kingship and Divinity were in close union, as appears to have been the case in the days of Sargon, and during the reign of the Ur dynasty (c. 3000 to c. 2400 B.C.). In later times we have the pronounced tendency towards the secularization of the office of royalty, with a concomitant centralization of Divine prerogatives in the priesthood; and it would appear that among the Phœnicians likewise the position of the king, under the influence of the late Bab. -Assyr. conception, became a distinctively secular one, connecting itself with that of a lay-judge rather than with that of a priest-king. As for anointing as a secular rite among the Semites, there is every reason to believe that its origin is bound up with the use of unguents as medicinal remedies. In the medical prescriptions preserved on the cuneiform tablets of Asurbanipal's library, copied from tablets of Asurbanipal's library, copied from originals that probably date from as early as 2000 B.C., oils of various kinds to be applied to the skin are mentioned. The frequent mention of unguents as remedial agents, both in the OT and NT (Is 1°, Ezk 16°, Lk 10³4, Mk 6¹3, and especially Ja 5¹4), points in the same direction, and forms the basis of the Roman Catholic sacrament of Extreme Unction, and the Greek and (previous to 1552) Anglican anointing of the sick. The cleans-1552) Anglican anointing of the sick. ing qualities of unguents appear also to have been recognized at an early period in Babylonia, as well as their power in the prevention of diseases of the skin, so common in hot and moist climates. The use of unguents thus became at once a part of the toilet and an adornment of the person, like dress and ornaments. With the increase of luxury, expensive and highly scented oils were used, and, as a natural corollary to this stage of the custom, anointing became a symbol of prosperity (Ps 9210), while the general tendency in mourning rites to return to the customs of an earlier age led to the view that anointing was not appropriate during the prescribed period of lament for the dead, so that it was discontinued at such times. In the Anselm (HN 186).

Semitic Orient popular customs are apt to become hardened into ceremonial obligations, and thus the anointing of a guest takes its place as a ceremony of greeting and hospitality, and also as a means of bestowing honour. The account of Mary's anointing Jesus with precious nard is an illustration of the observance of the ceremony down to a late period. Anointing oneself before paying Semitic Orient popular customs are apt to become

ceremonial visits falls under the same category (Ru  $3^3$ ).

'Anointing.' See also Jacob at Bethel by A. Smythe Palmer (1899), pt. iii., 'The Anointing,' with some references to literature given there. MORRIS JASTROW, JR.

## ANSELM OF CANTERBURY.-

MORRIS JASTROW, JR.

ANSELM OF CANTERBURY.—

1. Life.—Anselm was born of noble parents at Aosta (not Gressan) in 1033. After a sheltered youth spent in study, on the death of his mother he crossed the Alps, and after three years of wandering settled in 1059 at the abbey of Bec in Normandy, newly founded (1039) by the saintly Herlwin. There Lanfranc was then at the zenith of his fame as a teacher. In 1060, on the death of his father, Anselm took the cowl, and when Lanfranc removed to Caen (1063), Anselm was elected his successor as prior. The fame of Bec as a school grew greater still. Anselm's genius as a teacher was remarkable; his gentle methods mark an epoch in pedagogics (see esp. Eadmer, Vita, i. cc. 10, 11, 22). On the death of Herlwin (Aug. 1078) the reluctant Anselm was appointed abbot. One result of this election was of far-reaching consequences. Bec had been endowed with vast estates in England, and Anselm's journeys in their interest brought him into touch with both the Conqueror and William II., and endeared him to the whole nation. On the death of Lanfranc (May 28, 1089) all men looked to Anselm as his successor. But Rufus, whose settled principle was the spoliation of the Church by keeping sees vacant and claiming their revenues, refused to appoint a new archbishop. In 1093 the king fell ill at Gloucester, and in one of his spasms of remorse sent for Anselm, and after some delay appointed him archbishop (March 6, 1093). To procure Anselm's acceptance violence was almost necessary, but once nominated, the 'furious bull, 'already repentant of his penitence, discovered that the 'weak old sheep' (Ead. Hist. Nov. [HN] 38) was more than his match. Anselm missted on the restitution to Canterbury of all its estates, and on the recognition of Urban II. (already recognized in Normandy) as the true pope. To this last William II., who had taken advantage of an anti-pope (Clement III.) to selze Peter's pence for himself, was driven to verbal consent by Anselm's threat of retiring to Bec. At last Anselm was ent

Darrosh woul, chieny acrough the support given him by the barons (1905).

On the outbreak of other disputes, and the impossibility of obtaining any reformation, Anselm appealed to Rome—a procedure as yet unheard of in England (Oct. 1097). His journey thither was, however, useless, and after two years he left, 'having obtained nought of judgment or of advice' (HN 114). Urban, in fact, had troubles enough of his own, and his prelates (Ead. HN iii.; cf. Will. Malm. Gest. Pont. 34) seem to have been won over by William's gold. But the two years were not lost, for during the summer heat Anselm finished at Schiavi (modern Liberi), in the Alban mountains, his Cur Deus Homo. At Urban's request he also attended the Council of Bari (Oct. 1098), and vindicated before the Greeks the Latin doctrine of the Procession of the Holy Spirit. From Rome Anselm, retured to Lyons, but on the death of Rufus (Aug. 2, 1100) was summoned back to England by Henry I. To his influence, in fact, Henry owed his crown in his struggle with his brother Robert. A new dispute on the subject of lay investitures soon broke out. In England this was undoubtedly an innovation on Anselm's part on the 'customs.' In reality it was a part of the great conflict on the matter on the Continent, first started by Hildebrand, which after a struggle of 56 years, in which 60 battles were fought, was settled at last by the compromise of Worms (Sept. 23, 1122). After many attempts on the part of Henry to win over pope Paschal II., Anselm journeyed once more to Rome to defend his own views. He was forbidden by Henry to return to England (Christmas, 1103). For eighteen months he lived in banishment at Lyons, but on his preparing to excommunicate Henry, the king, influenced by his English queen, Eadgyth or Mand (whose marriage was due to Anselm), gave way, and on August 1, 1107, a compromise was agreed to, virtually a victory for Anselm (HN 186).

Before the peace was made, Anselm had returned to England (Aug. 1106), and was received with enthusiasm by king and On the outbreak of other disputes, and the impossibility

ready been enrolled by a greater than Alexander among the immortals (Dante, Par. xii., last lines). His feast day is April 21 (Acta Sanct., s.v.).

2. Character and place in history.—In character Anselm was a true saint, whose mingled sanctity and sagacity, gentleness and firmness, tenderness and austerity, acted as a charm on all who came and austerncy, acced as a charm on an who came under his influence, from the rudest brigands (Ead. HN 89), the Conqueror (Vita, i. 31), and Duke Roger's Apulian Saracens included (Vita, ii. 33), to the most obstinate novice (Vita, i. 10) or the pious saint. He possessed that personal magnetism invariably associated in the Middle Ages with miracutous gifts (Eadmer, Descript. Miraculorum (R.S.), 425 ff.). His unfeigned humility in all circumstances was the natural result of that mystical detachment which gives abiding interest to his

Anselm's place in the ecclesiastical history of England cannot be exaggerated. Hitherto England had been but loosely connected with Rome, and as a Church had possessed her own customs and a considerable degree of independence. This independence the Conqueror was prepared to continue, as we see from his famous letter of 1076, in reply to Hildebrand (Freeman, Norman Conquest, iv. 433). The Conqueror insisted on the complete subordination of Church to State; the modern conge deline was with him the invariable rule. The powers of convocation were limited by his pleasure; papal letters could not be received unless they had first obtained his sanction (cf. Eadmer, HN i. 9). That William I.'s successors could not maintain his position was due to the stand taken by Anselm. This Italian of Aosta, by the force of his piety, character, and learning, succeeded in imposing upon the English Church the ideals of Hildebrand, and one engusn couren the ideals of Hildebrand, and bringing the Church in England into close relation with the Church abroad. In many aspects the Reformation was but the rude undoing of his work and a return by the Tudors to the policy maintained by the Conqueror.

3. Writings and place as a thinker and theologian.—Anselm's writings may be classified as follows:—

(i.) Four books of EPISTLES. — These letters (over 400 in all) are proof of a wide correspondence, and of the singular regard in which Anselm was held as a director of souls by all sorts and classes. While of value for the details of his life, and for their revelation of his character, there is scarcely a reference in them to the stirring events of the day—another sign of his philosophic detachment of soul.

(ii.) DEVOTIONAL AND HORTATORY.—Of these the most important are his Orationes (Migne, PL clviii. 855 ff.) and Meditationes (ib. 710 ff.). This last has singular charm; Anselm's mystic communings with his own soul breathing throughout a

passionate love for Christ (cf. Med. xii. and xiii., both worth reading).

(iii.) POETICAL.—That he wrote certain hymns for canonical hours may be reasonably accepted. Much also may be said for assigning to him the Mariale, a poem in honour of the Virgin sometimes extributed to St. Express of a contraction of the stributed to St. Express of the contraction of the stributed to St. Express of the contraction of the stributed to St. Mariale, a poem in honour of the Virgin sometimes attributed to St. Bernard, and commonly known as the Prayer of St. Casimir of Poland (Rigg, Anselm, 97-103; first published in full by Ragey, Lond. 1888). But neither in the Carmen de Contemptu Mundi (Migne, PL clviii. 687 ff.), with its amazing indifference to quantities, nor in several rude poems on the Virgin attributed to him (ib. 1055 ff.), is there any evidence of his authorship save some late and vague traditions. That he had the Italian's passion for the Virgin is however, clear from his Orationes (cf. Rigg, 48-36; Migne, PL clviii. 942 ff.).

[iv.] THEOLOGICAL AND PHILOSOPHICAL.—Of these the most important are—

these the most important are-

(a) Monologion de Divinitatis Essentia. - In this work, written about 1070, when still prior at Bec (Epp. iv. 103), he gives the famous so-called a priori proof of the existence of God which has thence found its way into most theological treatises. It is really an application of the Platonic Ideas to the demonstration of Christian doctrine by a logical ascent from the particular to the universal. In the world of experience we are confronted by transitory imperfect phenomena which inevitably lead the mind upward toward an eternal necessary perfect Being. Our recognition of goodness, for instance, in phenomena, drives us to believe in a supreme nature that is good per se, and which must be the final causa causans, the supreme objective reality in whom our 'ideas' inhere. Thus the existence of God is implicit in ordinary experience.

implicit in ordinary experience.

The criticism of this argument, which rests on certain Realistic presuppositions, would take us too far into philosophical discussions. But we may point out here a criticism that applies to all Anselm's works—his extreme anxiety to satisfy reason ('oredo ut intelligam,' Proslog. c. 1 fin.; cf. Cur Deus, i. 25, last answer of Boso). Anselm in this is akin, though with a difference, to Abelard rather than Bernard (see Abelard, p. 14, for turther discussion of this). He attempts to establish on rational grounds not merely the Trinity, but also the Incarnation; but all knowledge, he holds, must rest on faith.

(b) The Proslogion, so called because it is in the

(b) The Proslogion, so called because it is in the form of an address to God, is an extension of the a priori argument to an attempt to prove the existence of God by a single deductive argument, instead of, as in the Monologion, by a long inductive chain. The fool's very denial of God, he argues, involves the idea of God, and of this idea existence is a necessary part. In other words, thought leads by an inherent necessity to the postulate of the Absolute, an argument substantially the same as that employed 600 years later by Descartes. To this reasoning Count Gaunilo († c. 1083), a monk of Marmoutier, replied in his Liber pro Insipiente or Apology for a Fool (printed in Migne, clviii. 242-8) that the idea of the fabled Isles of the Blest does not posit their existence (c. 6). Anselm replied briefly in his Liber Apologeticus that there is all the difference between the idea of the Summum Cogitabile, or eternal necessary idea, and any particular empirical idea of things which had a beginning, and will have an end (c. 9); contingent existence as such contradicts the idea of the Summum Cogitabile, which cannot form of an address to God, is an extension of the the idea of the Summum Cogitabile, which cannot

the idea of the Summum Cogitabile, which cannot be conceived save as existing.

The after history of those ontological arguments of Anselm belongs to the history of philosophy. They were too Platonic to be accepted by the Aristotelian schoolmen, with the exception of Duns Scotus (I. Sent. D. il. 2 ii.), but have found their way in various forms into the systems of Descartes, Spinoza, Leibniz, and Hegel. Their most effective critic is Kant (Pure Reason, i. (2) ii. (2) iii. (4)). Anselm's obligations to Augustine are also most clear (e.g. de Trin. viii. c. 3).

(c) de Fide Trinitatis, an answer to Roscellin's denial of universals as 'empty words,' was composed in 1098 at Schiavi. Roscellin's denial led him practically to the choice between Sabellianism

him practically to the choice between Sabellianism and Tritheism; for the Trinity is itself a universal in respect of its comprehension therein of a three-fold personality. Anselm meets Roscellin's monism by pointing out that it is a fallacy to suppose the universal and the individual to be repugnant inter se. Those who care for ingenious similitudes to the doctrine of the Trinity will find, in words that remind us of the Athanasian Creed, a parallel between a 'fountain, river, and lake,' each of which may be called the Nile (c. 8).

(d) To one great doctrine of the modern Roman

Church Anselm gave a powerful impulse in his de Conceptu Virginali. In this work (c. 18), as well as in the Cur Deus (ii. 16), he argued for the congruity of the entire sanctification of the Virgin before she conceived of the Holy Ghost. Between this and the doctrine of the Immaculate Conception there is but a step, which he himself may have taken in his last thought (see the tractate of

his nephew on the matter, Migne, PL clix. 302 ff.). According to Mansi (xxv. 829), Anselm inaugurated in England the Feast of the Immaculate Conception (cf. Ragey, ii. 243-7). In this treatise (cc. 25-28) Anselm defends most rigorously the damnation of all unbaptized children—a logical deduction from his views on original sin.

(e) de Veritate, a short work which reminds the student of Malebranche. Truth is the accurate per-

ception of the archetypal ideas in the mind of God.

(f) de Libero Arbitrio. — Mere freedom is not the power of choosing between alternatives, but of persevering in righteousness for its own sake (c. 13)—a doctrine afterwards more fully developed (c. 13)—a doctrine afterwards more fully developed in Kant's Metaphysic of Ethics. It is of importance to notice that Anselm points out that original sin need not involve total depravity. Man is still left in possession of an impaired but real 'natural' freedom (c. 3) and the power of will be covern motives (co. 5, 6).

to govern motives (cc. 5, 6).

(g) Cur Deus Homo (begun in 1094, finished in 1098).—In this most important of his works, which marks an epoch in the development of doctrines of the Atonement, Anselm destroyed once for all (i. 7) the old conception of a ransom paid to the devil. [This theory, propounded by Origen (in Matt. xvi. 8, ed. Lommatzsch, iv. 27) was developed by Gregory of Nyssa, Ambrose, and Augustine (de Lib. Arbit. iii. 10), and dominated the Church from Gregory the Great to Anselm.] In place of this he substitutes a conflict between the goodness and justice of God, familiar in all forensic ideas of the Atonement, and which reminds the student of Roman doctrines of lese majeste. The defects of this theory (which may be described in brief as the interpretation of the relationship between God and man in terms of the Roman law familiar to Anselm—of Teutonic law Anselm would know nothing—), in addition to its tendency to destroy, as in much current theology, the essential ethical unity of the Godhead, lie in the essential opposition between God and the external world which it posits, leading to the idea of arbitrariness on the part of God, and the absence on the part of the individual of his own personality as an essential factor. This last, we may remark, is a common defect of scholastic Realism. The immanence of God can find no place, and the Pauline mystical conception of union with the Risen Christ (Rom. vi. esp. v. 5) is left out of consideration. This is the more remarkable, inasmuch as the Pauline idea would have appealed strongly to Anselm's cast of thought, if he could have freed himself from juridical bondage. But instead we have the superabundant payment by Christ, the substituted sin-less God-man, of a debt due from man to the justice of God (i. 12, 23), which debt man, by reason of his original sin, cannot discharge. The keynote of the treatise is thus the paradox man must, man cannot' (ii. 6: 'quam satisfactionem nec potest facere nisi Deus, nec debet nisi homo; necesse est ut eam faciat Deus Homo'). Anselm's theory est ut eam raciat Deux Homo'). Anseim's theory of the Incarnation in this treatise is far from satisfactory. In his anxiety to avoid conceptions now known as kenotic, he limits the sufferings of Christ to His human nature (i. 8: 'Divinam naturam asserimus impassibilem'). The digression on the restoration from among men of the number of the angels who have fallen (cc. 16-19) is characteristically mediæval.

(h) de Processione Spiritus Sancti.—This great work, the outlines of which were given at Bari and completed shortly before his death, moves in the main on lines traced out by St. Augustine's de Trinitate. The unity of God is absolute save so far as limited by His threefold Personality. The procession of the Holy Ghost from the Son ('Filioque') is more consonant with this absolute

unity than the Greek doctrine, which rends the co-inhesion in the unity of the Godhead of the Three Persons (see esp. c. 29).

co-inhesion in the unity of the Godhead of the Three Persons (see esp. c. 29).

Literature.—(1) Life of Anselm: We are primarily dependent on his Letters (in Migne, PL, see below) and his secretary Eadmer's Historia Novorum and de Vita Anselmi, two most conscientious records (best ed. by Martin Rule in Roll's Series, 1884, to which all references have been given; also in Migne, PL). Of other sources, William of Malmesbury, de Gest. Pontif (R.S.), and Ordericus Vitalis, Hist. Eccles. (ed. Le Prevost, Paris, 1838-55), are of most value. Of modern lives, the best by far is that of J. M. Rigg, Anselm of Canterbury (1896), especially valuable for the philosophy; Martin Rule's St. Anselm (2 vols. 1838) is a good storehouse of facts, far from judicial in tone. Freeman has dealt at length with Anselm in his Norman Conquest, and more fully in his William Rufus. For the general reader, who is indifferent to Anselm's position as a theologian, Dean Church, St. Anselme (1814 et al. 1873, often reprinted), may be commended. Of foreign works the best perhaps is Ch. de Remusat, St. Anselme (2nd ed. 1868). Ragey's Eadmer (1892) and S. Anselme (1877, and abridged ed. 1891) are also of service. The Life of Anselm by Dean Hook, Archbishops (1860-76), is a valueless Erastian caricature. Dean Stephens' account, English Church, vol. 2 (1901), is judicious and sympathetic.

(2) EDITIONS.—The first complete edition was that of Gerberon (Paris, 1721), still often quoted. The earliest dated printed ed. would appear to be at Nuremberg, 1491. All editions, save for Eadmer (see above), are now superseded by that of Migne (1858), PL civili. and clix, including Eadmer and many spurious works. There are many reprints of the Cur Deus Homo.

(3) REVIEWS of the philosophy of Anselm are many. The student should consult Ueberweg, etc. Attention may also be drawn to Cremer's contention that Anselm owed much to Teutonic law conceptions as distinct from Roman. See Cremer, SK, 1880, 759. On the other side Loofs, Dogmengeschichte, 273 n.; Harnack, Histo

ANTEDILUVIANS.—The term 'antediluvian' (Lat. ante diluvium) was formerly applied to men or races who lived before the Flood, the latter being regarded as a Deluge universal in extent, and destroying all men excepting Noah and his family. But the term also came to be used by some ethnologists to describe certain races which were believed to have survived the Deluge, the latter being supposed by them to be concerned only with a single race of men, those descended from Adam. This pre-Adamite theory, as it was called, found many advocates during last century. Thus George Catlin referred the American Indian tribes to an antediluvian genus or family called Anthropus Americanus (O-kee-pa, London, 1866; for a later exponent of this view, see Alex. Winchell's Pre-Adamites, Boston, 1880). Now that the belief in a universal Deluge has been generally given up, the name 'antediluvian' has come to have a literary, or it may be a mythological, rather than an ethnological significance. The purpose, then, of this article will be to inquire into, and to some extent compare, the beliefs of various nations concerning those who lived before the great Deluge, especially where that event has come to be part of a definite traditional belief.

1. The Bible antediluvians.—(a) The traditions of J (and secondary elements  $[J^s]$ ).—Man is moulded out of the dust of the ground, and becomes a living being by the inspiration of the breath of Jahweh being by the inspiration of the breath of Jahweh (Gn 27); woman is made out of a rib taken from the first man while he slept (221, 22). He lives at first on the fruit of the garden (216), in the simple innocence of childhood (222). He learns sexual knowledge as a consequence of disobedience, and his sense of shame sets him to provide a form of dress (37) much like what is still used by the pigmy women of the African Ituri Forest. On his expulsion from Eden this is exchanged for clothes of skin, implying the slaughter of animals (v.21). Their use for sacrifice from this point is implied in the story of Cain and Abel (Gn 4 J<sup>3</sup>), though the staple food is still vegetables and cereals, which can be obtained only through hard labour—in evident contrast to the fruit of the garden produced by Divine agency (317-19). A more important result of the Fall is that man becomes mortal (319; cf. Ro 512, 1 Co 1521). On the other hand, 322-24 (J2) seems to imply that man was naturally mortal, and that immortality could be acquired; but this passage does not accord with 38. 17, which speaks only of one forbidden tree, and is probably a separate tradition incorporated with J (see Oxf. Hex., ad loc.).

with J (see Oxf. Hex., ad loc.).

The primitive industries are tillage (3<sup>19</sup>), and also pasturage (4<sup>2,3</sup> J<sup>3</sup>). According to J, pasturage and the nomad life were first introduced by Jabal, the son of Lamech (v.<sup>20</sup>). The same generation witnessed the invention of musical instruments, and

nessed the invention of musical instruments, and the art of smelting brass and iron (vr. 21. 22). The art of building, on the other hand, is primitive, the first to build a city being Cain (v. 17).

The attitude of the antediluvians towards religion and morality is more difficult to determine, and here again differences between J and 12 and aven between different positions of 12. Js, and even between different sections of Js, show themselves. The statement that in the time of Enoch men began to call on the name of Jahweh (428 Js) is hardly consistent with the story of Cain and Abel (Js). 410 is too ambiguous to help us much. The story of the origin of the Nephilim from the unnatural union of the 'sons of God' and the daughters of men (6<sup>1,2,4</sup>), in its present connexion with 6<sup>3,5,8</sup>, appears to be a reason for the depravity and violence which were the cause of the Deluge. But it is at least possible that this story was originally quite independent of the Deluge story, and that the latter belongs to a later cycle of traditions (J<sup>2</sup>), inconsistent, as it obviously is, with 4<sup>20, 21</sup> (see Oxf. Hex. and art. Deluge). If so, the term 'antediluvian' is not strictly applicable so far as J, as distinguished from J<sup>2</sup>, is concerned.

The names of the antediluvians according to J (+J<sup>3</sup>) are Adam, Seth, Enosh (4<sup>25, 26</sup> J<sup>3</sup>), Cain, (Abel), Enoch, Irad, Mehujael, Methushael, Lamech (Adah and Zillah), Jabal, Jubal, and Tubal-Cain (4<sup>35, 26</sup> J). Of these Abel dies childless; Adah and Zillah are the wives of Lamech; Jabal, Jubal, and Tubal-Cain are Lamech's three sons. The rest appear in two genealogical lines, (1) Adam—Enosh, (2) Cain (the elder son of Adam)—Lamech, who is

the seventh in the line.

(b) The antediluvians of P.—The first were made out of nothing by a direct flat of God, in God's image and after His likeness, male and female simultaneously (Gn 1<sup>26, 27</sup> 5<sup>2</sup>); were appointed the lords of creation (1<sup>26, 28</sup>); and were vegetarians till after the Deluge (1<sup>29</sup> 9<sup>3</sup>). The names of the ante-diluvians are given in one line only (Gn 5). Their relation with those of J can best be seen by the following table:

	P (5) Adam Seth Enosh	Js (425. 26) Adam Seth	J (Adam)
		Enosh	4(16-18)
	Kenan (קינן) Mahalalel (מהללאל)		Cain (קין) Enoch
	Jared (ירר) Enoch		(עירד) Irad (עירד) Mehujael (מחויאל),
			(מחייאל)
,	Methushelah (מתושלה) Lamech		Methushael(מתושאל) Lamech
	Noah		Dameon

A comparison of these lists makes it evident that P has combined the two lists of J(+J), merely transposing the names of Mahalalel and Enoch. The changes in the form of the names are no more than we find in other parallel lists, and were probably due originally to copyists' errors. P has ignored the tradition that Cain was a son of Adam. Of these antediluvians, Seth is described as behim' (5<sup>24</sup>), meaning probably that he was translated (for the first phrase cf. 6<sup>5</sup>, where it is used of Noah). From this it has been inferred that there is a hint of the translation of Noah comparable to that of Sttnapišti in the Sumerian Deluge story (see DELUGE).

There is no trace given of the progress of civilization, or any suggestion of a physical difference before and after the Deluge, except that the age of man, which, but for Enoch, had been on an average about 900 years, began to decline rapidly.

2. The Babylonian antediluvians [see Fragm. of Berossus in Eus. (Migne, 1857) Chron. Bk. I. ch. i. (2); Driver's Gen. in loc.]. Berossus agrees with P in giving (1) 10 antediluvians, and (2) these in one line. (3) Some writers, especially Hommel and Sayce, have found a further agreement in the meaning of some of the names occupying the same place in the two records. Thus, in their opinion, Amelon=Bab. amilu='man'=Enosh (אונאן), and Ammenon=Bab. ummānu='artificer'= Kenan Ammenon = Bab. ummānu = 'artificer' = Kenan (pp) 'smith.' A more probable identification is that of Evedoracus or Edoranchus with Enoch. Evedoracus is believed to be another form of Enmeduranki, a legendary king of Sippar, a town sacred to the sun-god. This god called Evedoracus to intercourse with himself, taught him secrets of earth and heaven and instrumental him secrets of earth and heaven, and instructed him in divina-tion, and thus he became the mythical ancestor of diviners. This identification is confirmed by the 365 years of Enoch's life, which, though having no soo years or knoch's the, which, though having no parallel in Berossus, appear to have some con-nexion with the 365 days of the solar year. (4) A further point of contact lies in the fact that the sum of the reigns of the Babylonian antediluvians amounts to 432,000 years. If a soss (a period of 5 years) be substituted for a week in the Bible 5 years) be substituted for a week in the Bible record, the period before the Deluge in the latter, 1656 years, will agree with the Babylonian (see Oppert, art. 'Chronology' in JE; Driver, Genesis, pp. 78-81).

On the other hand, it is difficult to reconcile this probable connexion of Berossus and P with the obvious derivation of the latter from J (+J<sup>s</sup>).

The difficulty may be got over on the supposition

The difficulty may be got over on the supposition that P indeed took his list of names from  $J (+J^s)$ , and altered the position of Enoch to agree with that in the list of Bab. antediluvians; that the agreement of the number 10, if it existed in the Babylonian traditions of P's time, was a fortunate coincidence; and, further, that P derived his date of the world's history from a Babylonian tradition, dividing the time among the antediluvians according to a method of his own. It must be admitted that apart from Enoch the identifications of names are ingenious rather than convincing. It must also be borne in mind that Berossus may very probalso be borne in mind that Berossus may very probably have himself departed from ancient Babylonian tradition by substituting a soss for a week, and possibly even the number 10 for an earlier 7. The translation of the 7th antediluvian, Enoch, Gn 5<sup>24</sup> (like that of Sîtnapišti, the Sumerian Deluge hero), suggests the possibility that according to ancient tradition there were only 7 antediluvians, the last being Enoch = Lamech = Noah = Sîtnapišti.

2. Antediluvians in the mythological grategy of

3. Antediluvians in the mythological systems of other races.—It is not necessary to say much concerning these. It may suffice to remark that, whereas among Semitic peoples the antediluvians are, if indeed somewhat super-normal, at least human beings, among many other races they are described as more or less abnormal, and not infrequently as monsters, and that the purpose of Of these antediluvians, Seth is described as begotten in Adam's likeness and his image, implying that the Divine nature of Adam is reproduced in his offspring (5<sup>3</sup>, cf. 5<sup>3</sup>). Of Enoch it is said that he 'walked with God: and was not; for God took in the Deluge was to do away with them. Thus the antediluvians of a Tibetan legend were ape-like creatures (Andree, Die Flutsagen, § 6). In a Fiji legend two races were destroyed by the Deluge, one consisting of women only, the other of men

with dogs' tails (Andree, § 37). The Quiché Indians of Guatemala have a curious story connected with the origin of the tribe. Men were first made of clay, but they had neither speech nor intelligence, and were destroyed by a flood of water. Then the gods made another race, the men of wood and the women of resin. These could speak, but only in a senseless fashion, and were destroyed by a storm of burning resin and an earthquake, except a few who became wild asses. The third time men were made of white and yellow maize, and were so perfect that the gods themselves were afraid of

perfect that the gods themselves were afraid of them. They therefore took away some of their higher qualities, and they became normal men (Andree, § 73). See, further, Deluge.

Literature.—See the literature at Deluge and Ages of the World; also the Commentaries on the early chapters of Genesis, esp. S. R. Driver, The Book of Genesis (London, 1904), Introd. D. xxxi ff.; A. Dillmann, Genesis (Eng. tr., Edin. 1897); F. Delitzsch, New Com. on Genesis (Eng. tr., Edin. 1888-9); M. M. Kalisch, Genesis 'in. Sho'; T. K. Cheyne, Traditions and Beliefs of Ancient Israel (London, 1907); H. G. Mitchell, The Book of Genesis (London, 1807); T. K. Cheyne, Traditions and Beliefs of Ancient Israel (London, 1907); H. G. Mitchell, The World before Abraham (London, 1901); A. R. Gordon, The Early Traditions of Genesis (Edin. 1908); A. H. Sayce, 'The Antediluvian l'atriarchs' in ExpT, vol. x. (1899) p. 3521.

## ANTHROPOLOGY.

[R. Munro].

Definition and scope.—Anthropology ('the science of man,' from  $\tilde{\alpha}\nu\theta\rho\omega\pi\sigma$ s, 'man,' and  $\lambda\delta\gamma\sigma$ s, 'discourse'), in the modern acceptation of the term, treats more particularly of man's origin and place in the animal kingdom; his development as an individual (Ontogeny) and as a race (Phylogeny); the physical and mental changes he has undergone during his career on the globe; his new departure in the organic world as an implement-using animal; and finally, the development of articulate speech and the principles of religion, ethics, altruism, and sociology, which, at the present time, constitute the great landmarks of human civilization. The claims of Anthropology to be recognized as a separate science were for some time successfully opposed on the ground that the phenomena bearing on the history of mankind were already fully dealt with under the sciences of Biology, Anatomy, Physiology, Psychology, Theology, Ethics, Philology, and Philology, about the beginning of the second half of last century, which culminated shortly after the publication of Darwin's Origin of Species (1850) in the general Darwin's Origin of Species (1859) in the general acceptance by scientific men of the theory of organic evolution, conclusively proved that there were ample materials in this new field of research which were by no means covered by any of these which were by no means covered by any of these sciences. While, therefore, Anthropology may be justly regarded as comprising all the elements of a comprehensive monograph on mankind—all that they are, or have been, or have done, since their generic founder came into existence—, practically it is restricted to an investigation of the earlier stages of humanity, leaving the details of its later phases to be worked out by these other sciences, on the principle of the division of labour. But, even after this limitation of the scope of Anthropology, its remaining materials, which are rapidly increasing in number and variety, present a greater attraction to the philosophic mind than those of any other department of speculative knowledge, because they are so impregnated with human interest that it is felt as if they were data intimately affecting one's own origin and pedigree.

In order to present a brief but reasoned summary of the conclusions to be derived from a study of so fascinating a science, it becomes almost necessary

to arrange its scattered materials along certain well-defined lines of investigation, which may be thus categorically stated: (1) Man's physical characteristics; (2) his fossil remains; (3) his handicraft products; (4) his mental superiority over other animals; (5) his social evolution; (6) and lastly, some concluding remarks.

I. Man's Physical Characteristics.—So long as the *Hominida* were believed to occupy a higher

platform in the organic world than other animals, in virtue of specially created endowments, no one apparently thought of looking for evidence of their origin and history in the obscure vistas of pre-historic times. The long-cherished traditions and myths which had gathered around the problem left little room for any other hypothesis than that man's appearance on the field of life, as a fully equipped human being, was the last and crowning achievement of a long series of creative flats which brought the present world-drama into existence. But to eliminate man altogether from the processes of organic evolution is not only an un-warranted assumption, but is unsupported by any evidence that can be characterized as scientific. No fair-minded person who is conversant with the close anatomical and physiological resemblances between the structural details of man and those of the anthropoid apes—every bone, muscle, nerve, and blood-vessel being virtually the same—and the striking analogy between the complex mechanism of their organs of sense, can seriously deny their community of descent, at least from the purely physical aspect of the subject.

But even the accountment of the second orthodox

But even the acceptance of the so-called orthodox view, viz. that a male and female were originally specially created, from whom all the present varieties of mankind have descended, would by no means get rid of the evolution theory. For, since Huxley's time, it has generally been admitted that the gulf between civilized and savage man is wider than that between the savage and the highest ape. If, therefore, the ancestors of the white-, black-, and red-skinned people of to-day were originally one undivided stock, why should it be regarded as improbable that that primitive stock itself was a branch of an older stem which included also the ancestors of the anthropoid apes of to-day? The causes of variation which evolved the typical Negrito and Caucasian from one common ancestor were quite adequate to evolve that ancestor from

the anthropoid stock in the Tertiary period. The striking analogy between the bodily structure of man and that of the nearest of the anthropoid apes becomes still more apparent when we consider the phenomena of the fœtal life of animals. Not only does the human embryo start from an ovule similar to, and indistinguishable from, that of many other animals, but its subsequent changes follow on precisely the same lines. All the homologous organs in full grown animals, as the wing of a bird, the flipper of a seal, and the hand of man, are developed from the same fundamental parts of the embryo.

'It is,' says Professor Huxley (Collected Essays, vol. vii. p. 92), 'only quite in the later stages of development that the young human being presents marked differences from the young ape, while the latter departs as much from the dog in its development as the man does.

'Startling as the last assertion may appear to be, it is demonstrably true, and it alone appears to me sufficient to place beyond all doubt the structural unity of man with the rest of the animal world, and more particularly and closely with the apes. the apes.

The illustrious von Baer, who first directed special attention to the importance of embryology. formulated a law to the effect that structural differentiation in feetal development was from a general to a special type. Haeckel, looking at the same phenomena from a different standpoint, came to the conclusion that the development of the

VOL. I.-36

individual is a recapitulation of the historic evolution of the race. If this astounding generalization be true, the study of embryology should supply the anthropologist with a method of reaching the goal of his inquiry, by making the progressive stages of man's development the subject of experimental illustrations within the precincts of the laboratory. But, until greater progress is made in this special branch of morphological research, we have few data to guide us in forming precise conclusions on the subject. Meantime, it may be remarked that, if embryology is as conservative of energy as other organic processes, it would be expected that, in course of passing through a series of progressive increments, some of the minor links would ultimately drop out altogether. Nature is full of short cuts. As a parallel instance in ordinary life may be cited the instinct which leads the common honey-bee to fix always on a hexagonal cell instead of the simpler globular form used by the humble bee. Here we have an act of practical intelligence which must have been originally acquired through the ordinary processes of natural selection, but which is now directly transmitted through heredity—thus altogether skipping over its intermediate evolutionary stages.

The theory of man's descent from the lower intermediate and the stage of the

animals is also greatly strengthened by a number of vestigial, or so-called rudimentary, organs described by anatomists as being normally present, or occasionally to be met with, in the human body. Such organs as canine teeth, the coccyx, inter- and supra-condyloid foramina of the humerus, the cacum and appendix vermiformis, fibrous traces of various muscles, etc., are apparently useless in the human economy, while their homologues in other animals have well-defined functions assigned to them. But, indeed, the homological structure of the entire human body is utterly inexplicable on

any other hypothesis.

any other hypothesis.

'Thus we can understand,' writes Mr. Darwin, 'how it has come to pass that man and all other vertebrate animals have been constructed on the same general model, why they pass through the same early stages of development, and why they retain certain rudiments in common. Consequently, we ought frankly to admit their community of descent; to take any other view is to admit that our own structure, and that of all the animals around us, is a mere snare to entrap our judgment. This conclusion is greatly strengthened, if we look to the members of the whole animal series and consider the evidence derived from their affinities or classification, their geographical distribution and geological succession (Descent of Man, p. 25).

But if the races of mankind are as closely related

But if the races of mankind are so closely related both in structure and mode of development to the anthropoid apes, what, it may be asked, are the essential characters which differentiate them from the latter? Flower and Lydekker, in Mammals Living and Extinct (p. 740), thus answer the question:

ing and Extract (p. 740), thus answer the question:

'The distinctions between the Hominide and Simiide are chiefly relative, being greater size of brain and of brain-case as compared with the facial portion of the skull, smaller development of the canine teeth of the males, complete adaptation of the structure of the vertebral column to the vertical position, greater length of the lower as compared with the upper extremities, and greater length of the hallux, or great toe, with almost complete absence of the power of bringing it in opposition to the other four toes. The last feature, together with the small size of the canine teeth, is perhaps the most marked and easily defined distinction that can be drawn between the two groups.'

Of the above distinctions it will be seen, from various passages in this article, that we have assigned the chief place to the erect attitude, because its attainment was the means of setting free the fore-limbs for the development of their higher functions as tool-making organs, which constitute the true starting-point of humanity. Throughout the animal kingdom there are many morphological changes which strike one as remarkable instances of the adaptation of special means to special ends, such, for example, as the evolution of the fore-limbs into fins and wings so as to make them suitable for locomotion in the different media

of water and air. But nature's operations will be searched in vain for a series of phenomena comparable to those which ushered man on the field of life as a skilled craftsman. The preliminary step in this great event was the attainment of the erect attitude which to this day distinguishes him from all other vertebrates. This divergence from the pithecoid group of animals took place sometime in the Tertiary period, and was finally completed by the adjustment of certain muscles and bones so as to balance the upper part of the body on the spinal column, and facilitate bipedal locomotion, which henceforth became man's normal mode of pro-

gression.

The organic changes involved in the transforma-tion from the semi-erect attitude of monkeys to that of men cannot be regarded as a very arduous piece of work; so that the assumption of bipedal locomotion, and the differentiation of the hands and feet, would have been effected in a comparatively short period. It was, however, very different with mental evolution, as the formation of brain substance in response to the progressive stimuli of the manipulative organs is a much more elaborate process—a process which has no limits, and indeed is still in operation. Hence, the time requisite to complete the former, or transition, period in the evolution of man is by no means comparable, in point of duration, to the long ages which have elapsed since he became a tool-maker. The evolutionary stages of organic life often run in grooves, and may be long or short in proportion to the facility afforded by the exciting causes in the environment and the benefits conferred by the change. Moreover, it is probable that the attainment of the erect attitude, together with its attendant morphological changes, was completed attendant morphological changes, was completed within a comparatively small area on the globe, so that the chances of finding the fossil remains of a typical specimen of the human representative of this early period are extremely small. On the other hand, the probability of discovering erect beings, with crania in all grades of development, from a slightly changed simian type up to that of civilized man, is enormously greater, not only because of the great length of time since they came into existence, but also because of their increased into existence, but also because of their increased numbers and wide distribution on the globe. Whatever may have been the precise circumstances which induced the first anthropoid animals to resort to bipedal locomotion, the perpetuation of the habit soon became hereditary; and it has continued ever since to be one of the most distinguishing characteristics of man.

It will be observed that the angle which the axis of the spine of a vertebrate animal makes with the axes of its supporting limbs varies from 90° to zero. In man alone this angle reaches the vanishing point, because the vertebral axis has actually come to coincide with the vertical direction of the two lower limbs, which in his case exclusively support the body. The erect attitude is thus not only peculiar to men, but the ultimate goal of all only peculiar to men, but the ultimate goal of all improvements in the advance of vertebrate life, since the bilateral parts of the body are nicely balanced on the spinal column and the two posterior limbs. It is, therefore, the most conspicuous physiological line of demarcation that exists between man and the lower animals. Moreover, it was indirectly the measure of professed. over, it was indirectly the means of profoundly affecting the subsequent career of mankind on the globe; for the exclusive appropriation of the fore-limbs to manipulative purposes virtually inaugurated a new phase of existence, in which intelligence and mechanical skill became henceforth the dominating factors. The co-operation of these two factors was the starting-point of the long series of inventions and ingenious methods by

which mankind have gradually worked out the elements of modern civilization and acquired dominion over all other animals.

Linnæus, in his Systema Natura, described the genus *Homo* as comprising four primary varieties, viz. Negro, Mongolian, Caucasian, and American, all of which were connected by numerous intermediate forms. To these Blumenbach added the Malay, as a fifth variety. On the other hand, Cuvier reduced them to three, viz. Caucasian, Mongolian, and Ethiopian,—a classification adhered to by M. Verneau in his Races Humaines. The description of these various races of mankind, their relation to each other and distribution on the globe, form the special domain of Ethnology and Ethnography (wh. see). For precise details of the anatomical changes consequent on the attainment of the erect attitude, readers are also referred to special works on the subject (see Memoirs of John Goodsir, 1868, vol. i. pp. 207-280).

With regard to Cuvier's division of the *Primates* into quadrumana and bimana, it may be observed that he is only partially accurate; for, although anatomically the four limbs of the former are truly prehensile organs, yet the upper two are decidedly more differentiated as hands than the lower. Even in the apes the distinction between hands and feet had already begun. In man the structural difference between the upper and lower limbs has greatly widened in two opposite directions, the former becoming exclusively adapted for prehensile and manipulative purposes, and the latter as exclusively adapted for

II. Some remains of fossil man.—With the completion of the bodily changes involved in the attainment of the erect attitude, the evicution of the present human form, with the exfortion of some remarkable modifications in the ranianium, facial bones, and probably the larynx jaw, practically completed. As soon as bipedalusculation became habitual and firmly secured on y memical bases, there was no apparent reason why ossil seous characters of the lower limbs should be85, sibly affected by any subsequent increase in the quantity or quality of brain-matter. For example, the femurs, which had henceforth to support the entire weight of the body, would not be in the least degree affected by the nature of the com-ponent ingredients of that load. It would, however, be very different with the brain-case and its attachments. For, by the substitution of manufactured weapons in lieu of nature's means of self-defence, the subsequent well-being of these novel bipeds became absolutely dependent on their skill in converting the laws and forces of their environment into useful mechanical appliances. As soon as they recognized that the reasoning faculties were the true source of such inventions, no doubt a premium would be put on useful discoveries. In this way strong motives for the production of more perfect weapons, tools, and other appliances were constantly coming within the scope of their daily avocations, the result of which would be a progressive increase in intelligence and a corresponding increase in brain substance. Now, according to the well-established doctrine of the localization of brain function, the additional brain molecules and cells thus acquired had their seat of growth for the most part somewhere in the cerebral hemispheres, which lie well within the anterior portion of the brain-case. The mere mechanical effect of this increment to the physical organ of thought would be to increase the weight of the anterior half of the head, and so to upset its finely equipoised position on the top of the spinal column. But, as any interference with the free and easy rotatory movements of the head would manifestly be disadvantageous to the individual in the struggle of life, it became necessary to counteract the influence of this disturbing element by the action of some other concurrent morphological process, which would not be prejudicial to

the general well-being of the human economy. This object was partly attained by a retro-cession, or contraction, of the facial bones, especially the jaw-bones, towards the central axis of the spinal column, and partly by a backward shifting of the cerebrum over the cerebellum. As the gradual filling up of the cranial cavity progressed pari passu with those cranial alterations, we have, in the facial angle of Camper, a rough mechanical means of estimating the progress of mental development during the period of man's existence as a human being, i.e. since he attained

the erect attitude.

One of the results of this retrocession of the facial bones was the gradual contraction of the alveolar borders of the jaws, thereby diminishing the space allotted to the teeth,—a fact which plausibly accounts for some of the peculiarities differentiating the older fossil jaws from modern specimens. Thus, in the dentition of the former, the last, or third, molar is the largest, whereas in the latter it is the smallest. Not only so, but among some European races of to-day the last four molar (wisdom) teeth make their appearance at a later date in the individual's life than in early prehistoric times (a fact which has also been noted in a few Neolithic specimens), so that the so-called wisdom teeth seem to be on the highway to become vestigial organs. It is interesting to note that this shortening of the dental portion of the human jaw attracted the attention of Darwin, who, however, attributed it to 'civilized men habitually feeding on soft, cooked food, and thus using their jaws less.

Another peculiarity of civilized races is the greater prominence of the chin, a feature which may also be due to the contraction of the alveolar ridges, and the more upright setting of the incisor teeth in their sockets. But whatever the precise cause may have been, there can be no doubt that the gradual formation of the chin has had a striking parallelism with the progressive stages in man's intellectual development ever since he started on

his human career.

The evidence on which these views are founded consists of a few fossil skulls and other portions of human skeletons (necessarily fragmentary owing to the ordinary processes of decay). A short description will now be given of one or two of the more

interesting specimens.

(1) Java skull.—Perhaps the oldest and most controverted of such remains are a calvaria, two molar teeth, and a left femur, found in 1891-1892 by Dr. Eugène Dubois in Upper Pliocene strata in the island of Java. After comparing these bones with the corresponding parts of other human skeletons, both fossil and modern, and of some anthropoid apes, Dr. Dubois published, in 1894, a very complete memoir on the subject, with descriptive details and photogravures of each bone. In this memoir (Pithecanthropus erectus: eine menschenähnliche Uebergangsform aus Java, Batavia, 1894) he assigns these remains to an animal having an erect attitude like man, and a brain-case with mixed characters, partly simian and partly human, to which he gave the name Pithecanthropus erectus. Unfortunately these bones, though found in the same horizontal strata, were not close together,—
the skull-cap being 15 mètres from the femur—and consequently there is room for the objection that they did not belong to the same individual. Expert opinion was greatly divided as to the conclusions to be derived from these relics. Most of the anatomists who critically examined the femur pronounced it human—the late Prof. Virchow being almost alone in maintaining that it might have belonged to one of the anthropoid apes. As to the two molar teeth, there was so much difference of opinion among specialists-some regarding them as

simian and others as human—that it is quite unnecessary to advance any further proof of their intermediate character. But the 'bone of contention,' par excellence, was the calvaria, with regard to which some twenty experts of various nationalities ranged themselves into three groups, according as they held it to be human, simian, or a transition form (see Munro, *Prehistoric Problems*,

pp. 165-168).

The following is a brief description of its prominent characters:—External surface generally smooth and without any marked ridges; sutures almost entirely obliterated; frontal bone slightly keel-shaped in the line of the frontal suture; glabella, supra-orbital ridges, and occipital pro-tuberance strikingly prominent; cranial vault de-pressed, and on section (antero-posterior) showing an arch intermediate between that of the anthropoid apes and that of an average European man. Its general dimensions may be thus abbreviated:

Antero-posterior diameter (max.) 185 mm. 130 Transverse diameter (behind the orbit) 90 Height in the parietal region (max.). ,, 62 ,,

the great prominence of the supra-orbital ridges and the occipital protuberance, and its remarkably low and retreating forehead. In the absence of the facial bones, we can only surmise that, to be in keeping with the above simian characters, the individual who owned this skull presented a highly prograthic appearance, something approaching to that of *Hylobates*, to which Dr. Dubois compares it. But whatever views may be held as to the anthropological value of this *calvaria*, the femur found in the same stratum conclusively proves that there had then been in existence a being of the genus Homo which had assumed the erect attitude as its normal mode of progression, i.e. at a time prior to the advent of that great landmark in the physical history of the northern hemisphere known as the Glacial period.

(2) Neanderthal skull. — In 1857, Prof. Schaaff-hausen and Dr. Fuhlrott published an account of a skeleton found, the year before, in the cave of Feldhofen, situated at the entrance to a small ravine called Neanderthal, on the right bank of the river Düssel. The cave has long been quarried away, but its dimensions are reported to have been about 16 feet in length, 11 feet in breadth, and 8 feet in height. On its uneven floor lay a mass of consolidated mud, about 5 feet in depth, without stalagmitic deposits, but sparingly mixed with rounded fragments of chert. On this deposit being removed, the human bones in question were discovered. No other animal remains, with the exception of a bear's tooth of which neither the position nor character was determined, were found in the cave.

The Neanderthal human remains, especially the skull, presented such remarkable peculiarities that, when they were first exhibited at a scientific meeting at Bonn, doubts were expressed by several naturalists as to whether they were really human. The limb-bones were characterized by great thickness, with unusual development of the elevations and depressions for the attachment of muscles, and the ribs had a singularly rounded shape and abrupt curvature—all characters indicating great muscular power. The left humerus was more slender than the right—a fact which suggested the idea that the two did not belong to the same individual; but this peculiarity was shown to have been the result of an injury during lifetime. The cranium, which was of great size and thickness, was characterized

by a long elliptical shape, a low retreating forehead, excessive development of the frontal sinuses. and a great projection of the occipital region. The sutures were nearly obliterated, and the line of the frontal suture was marked by a slight ridge. Its dimensions were as follows:

Antero-posterior diameter (max.) 200 mm. Transverse 144 ,, (min.) 106 Frontal ,, ,, 122 Frontal (max.) ,, ,, Cephalic index 72

Estimated cranial capacity (Huxley) . 1330 c.c.
With regard to this skull, Professor Huxley,
writing in 1863, says:

writing in 1865, Says:

'There can be no doubt that, as Professor Schaaffhausen and Mr. Busk have stated, this skull is the most brutal of all known human skulls, resembling those of the apes not only in the prodigious development of the superciliary prominences and the forward extension of the orbits, but still more in the depressed form of the brain-case, in the straightness of the squamosal suture, and in the complete retreat of the occiput forward and upward, from the superior occipital ridges' (Lyell's Antiquity of Man, p. 84).

Hare also as wes the assa with the Tays calculus

Here also, as was the case with the Java calvaria, we have no means, owing to the absence of the facial bones, of judging of the degree of prognathism of this very pronounced pithecoid specimen

of humanity.

of humanity.

(3) Les Hommes de Spy.—In 1886 two human skeletons were found deeply buried in undisturbed débris at the entrance to a grotto called Belcheaux-Roches, at Spy-sur-l'Orneau, in the province of Namux Belgium. The interior of the grotto had beer b vamined more than once, but in front of it thereaffor a terrace, projecting 13 yards, which had nonenth previously excavated. It was in this terrace Mo MM. Lohest and de Puydt made excavation of theich unearthed these skeletons. The outer at Mon was found at a distance of 26 feet outer at mton was found at a distance of 26 feet outer no mich was round at a distance of 20 lever from a conentrance to the cave, under a mass of rubbite ch2; feet in depth and composed of four distinct strata, none of which appeared to have been hitherto broken through. It lay on the right side, across the axis of the cave, with the hand resting on the lower jaw, and the head towards the east. The other was 8 feet nearer the present east. The where was a feet hearer the present entrance to the cave, but its position was not determined with so much accuracy as the former. Associated with these skeletons were worked flints of the type known as Moustérien, and some animal remains representing the following fauna:

presenting the following faun Rhinoceros tichorhinus (abundant). Equus caballus (very abundant). Cerous elephas (rare). Cerous tarandus (very rare). Bos primigenius (pretty abundant). Elephas primigenius (abundant). Ursus spelaus (rare). Meles taxus (rare). Hyæna spelae (abundant).

Immediately over the skeletons was a hardened layer composed of chippings of ivory and flint, pieces of charcoal, and some angular stones of the surrounding limestone rock. Above this there was a reddish deposit containing remains of the same fauna, but the worked objects indicated a decided advance in civilization—awls and borers of flint, together with needles, beads, and ornaments of bone and ivory. Above this was a bed of yellowish clay, in which were still found bones of the mammoth and various flint implements; and lastly, a mass of clay and fallen rocks, without relics of

any kind.

The osteological characters of one of the Spy erania correspond in a remarkable degree with those of the Neanderthal skull, as may be seen from the following measurements by Professor Fraipont (Congrès international d'Anthropologie et d'Archéologie préhistoriques, Paris, 1889, p. 333):
Spy. Neanderthal.

Spy. 200 mm. Antero-posterior diameter (max.)
Transverse 200 mm. 140 ,, 144 "

Spy. Near 104 mm. 106: 114 ... 122 580 ... (571?) 590 70 ... 72 Neanderthal. Frontal (min.) 106 mm. (max.) Horizontal circumference . Cephalic index 72 "

As regards the great development of the superciliary prominences, the low retreating forehead, and the depressed and elongated form of the cranium, both these skulls present a more brutal appearance than any human skull known up to the

time of the Java discovery.

According to M. Fraipont, the entire anatomical characters of the Spy skeleton are in harmony with the same lowness of type shown by the skull. The jaws are deep and powerful, the chin slopes away from the teeth downwards and backwards, while the teeth and alveolar border have a striking prognathic appearance. The last molar teeth are not smaller than those immediately in front of them. The long bones are materially different from those of the normal Belgians of the present

day, being generally shorter and stouter.

It is, however, only just to note that the pithecoid characters of the other Spy skull appear to be
less pronounced, the cranial vault being more
lofty and the cephalic index at least 74.

It has already been surmised that the individuals to whom the Java and Neanderthal skulls belonged had prognathic profiles, on the ground that this feature harmonized with their other observed simian characters. It is, therefore, particularly interesting to note that the jaws of these Spy men are highly prognathic—a fact which greatly strengthens the inference as to the two former.

(4) Naulette jaw.—Among isolated cranial bones occasionally discovered, the lower jaw, being merely attached to the skull by muscular and ligamentary tissues, is most frequently met with. Perhaps the most instructive of these fossil jaws is the Naulette machoire, discovered in 1885, in the Trou de la Naulette, by M. E. Dupont, Director of the R. N. H. Museum at Brussels. The cave known under the above name is situated on the left bank of the river Lesse, near Dinant, and contained much debris and remains of the Quaternary fauna, among them being this jaw, at a depth of 450 metres beneath its final or modern floor. Though in a fragmentary condition, it presents certain peculiarities which strongly differentiate it from the corresponding bone in modern civilized man. Its characteristics, according to M. Dupont (L'Homme pendant les Âges de la Pierre, p. 99), may be thus stated :

(a) Its small height, in proportion to the thickness of the body, gives it an exceptionally stumpy

appearance.

(b) The chin, instead of projecting forwards, slopes backwards; and the 'genial tubercules' (apophyse géni) on its inner surface are wanting.

(c) The posterior molars are larger than the others, and present the appearance of having five roots, as shown by the size of the sockets, all the teeth being absent from the mandible when discovered.

Dr. Broca came to the conclusion that the Naulette jaw, in its anatomical characters, approached the simian type more than any previously known.

Nown.

'Nous serons autorisés à conclure,' he writes, 'que cette mâchoire, dont l'antiquité prodigieuse remonte au temps du mammouth, est de tous les restes humains que l'on connaît jusqu'ici celui qui se rapproche le plus du type des singes' (Congrès International, etc., Paris, 1887, p. 401).

With respect to the retreating slope of the chin and the character of the teeth, he considered that the individual who owned the Naulette jaw held

an intermediate place between man and the anthropoid apes; and in support of this view he exhibited a sketch of a number of human mandibles showing a regular upward gradation from the ex- in this cave was that, a little more than 2 ft.

tremely sloping chin of a chimpanzee up to that of a modern Parisian (ib. p. 399). These facts go far to establish the generalization that, as men ad-These facts go vanced in intelligence, the prognathism which they inherited from their simian-like ancestors became gradually smaller, until the face assumed the almost straight and classic profile of modern times. view is further strengthened by evidence derived from a comparison between the skulls of modern civilized people and those of the lower races still inhabiting the globe. This method of inquiry has yielded some striking results as regards the degrees of gnathism and frontal development which they respectively exhibit. The extent of this difference is well illustrated by Professor Owen (Comparative Anatomy, vol. ii. pp. 558, 560), in a comparison which he makes between the cranium of a native Australian and that of a well-formed European, from which it will at once be seen that the former has a low retreating forehead and a highly prognathic profile. The characters of the European skull, which present a very marked contrast to the former, are thus described by the Professor:

'In more intellectual races the cranial cavity is relatively larger, especially lottier and wider. The fore-parts of the upper and lower jaws, concomitantly with earlier weaning, are less produced, and the contour descends more vertically from the longer and more prominent nasals. The ascending ramus of the mandible is lottier. The malar is less protuberant, and

the mastoid more so.'

(5) That other crania supposed to be of great antiquity have been recorded whose anatomical features do not, apparently, harmonize with these views so well as do those of the Java, Neanderthal, and Spy specimens, need not cause any surprise, considering the difficulty which sometimes occurs in correctly estimating their antiquity. Thus, the famous skull of the old man of Cromagnon, long regarded as originally belonging to one of the hunter-artists of the late Palæolithic period, shows a decided approach in all its characters to the normal type of civilized man. Its cephalic index is 73.6 and its capacity 1590 c.c. The height of its original owner was 1.82 mètres. The lower jaw has a large ascending ramus, behind which, on both sides, the third molar is partly hidden. These two teeth are also smaller than the other molars, being in this respect more allied to the dentition of Neolithic and modern races. For these reasons, as well as for the fact that the Cromagnon skeletons were found on the surface of the Palæolithic débris of the rock shelter of Cromagnon, some anthro-pologists maintain that this old Cromagnon man belonged to the early Neolithic period. But between the latest phase of the life of the Palæolithic artists of middle Europe and the earlier Neolithic people there was probably no great interval of time. Although the Cromagnon human remains were lying over the true culture débris of the Moustérien period, the amount of superincumbent talus under which the skeletons lay shows that they could not have been much later than the transition period. Moreover, there are other human remains with regard to which no such doubts have been raised, such as the skulls of Chancelade and Laugerie Basse, both found in the Dordogne district, which show equally advanced cranial characters.

(6) The recent discovery of two skeletons in the Grotte des Enfants near Mentone, which Dr. Verneau describes as belonging to a race intermediate between the Neanderthaloid and Cromagnon races, marks an important addition to fossil craniology. They belonged to a young man and an aged female of small stature, and lay on a hearth-layer at a depth of 7.75 mètres. The cephalic index of the former is 69.72 and of the latter 68 58, and both have prominent negroid jaws. But the interesting feature of the discoveries

higher up in the débris, another skeleton of the rightr up in the debris, another sketcoil of the Cromagnon type was found, measuring 6 ft. 3 in. in height and with a cephalic index of 76-26 (L'Anthropologie, vol. xiii. pp. 561-583). That these two distinct races should be thus brought nearly on the same chronological horizon by no means discredits Dr. Verneau's theory, as it is not improbable that, while a higher race was being developed, individuals of an older and lower race still survived in Europe. In corroboration of this we have the record of two skulls, of a distinctly negroid type, having been found among Neolithic remains in Brittany (BSAP, ser. v. vol. iv. p. 432). But, even accepting the Cromagnon race, whose skulls indicate a great stride in mental capacity over those of Spy and Neanderthal, as belonging to the latest phase of the Reindeer period in France, it does not appear to the present writer that they disclose a greater brain-case than would be expected of a people who displayed such artistic feeling and mechanical skill as the authors of the art gallery of the Reindeer period (see § III.).

(7) Some forty or fifty human skulls, more or less imperfect, and supposed to date back to Quaternary times, have been recorded up to this date from almost as many different localities throughout Europe, occasionally in alluvial deposits, but more frequently in the accumulated debris of caves and rock-shelters. Some years ago (Crania Ethnica, 1873-1879), MM. Hamy and de Quatrefages carefully examined all the fossil remains then known, and classified them under the names of the localities where the most typical specimens were found. Among dolichocephalic, or long-headed, they described two distinct races, one represented by a portion of a calvaria found at Canstadt and the other by the skull of the old man of Cromagnon. The brachycephalic, or broad-headed, were made to represent four races, under the generic designation of Furfooz, the name of a cave in the valley of the

of Furfooz, unc.
Lesse, thus:

1. The race of Canstadt,
2. The race of Cromagnon,
3. The race of Jar, Purfooz,
Furfooz,
3. The race of Jard, Grenelle,
4th, La Truchère, 

It was subsequently ascertained that these Furfooz skulls were the osseous remains of Neolithic interments, which shows both the difficulty and the danger of making chronological classifications

on imperfectly observed data

As the outcome of this short review of fossil craniology, perhaps the most important outstanding feature is that the three skulls above described as typical examples are all dolichocephalic. The as typical examples are all dolichocephalic. The race of Cromagnon was, in all probability, separated from the Neanderthal and Spy troglodytes by an interval of time which can be only approximately measured by the duration of the larger part of the Glacial period. The appearance of brachycephalic races in Central Europe only at the beginning of the Neolithic period is an ethnological problem not yet satisfactorily explained. It has been abundantly proved, by the contents of dolmens and other sepulchral tombs, that two races, one dolichocephalic and the other brachycephalic, lived contemporary with each other in races, one donenocephane and the other brachy-cephalic, lived contemporary with each other in the South of France (RAnth, 1873; Materiaux pour l'histoire primitive et naturelle de l'homme, vol. xii. 1877, etc.). From the remains in the artificial caves of Petit-Morin, investigated and described by Baron de Raya (Archéologie Prédescribed by Baron de Baye (Archéologie Pré-historique), the two races seemed to have more or less coalesced. From the amalgamation of these varied races the highly mixed populations of modern Europe can be readily accounted for; but

remains a controverted problem. These passing glimpses of the early races of man in Europe support the hypothesis that two peoples widely separated had come into contact in Southern France, and perhaps elsewhere in Europe, at the close of the Reindeer period. Of these the dolichocephalic appear to have been long indigenous to the locality, and were probably the direct descend-ants of the Palæolithic men whose skeletons were

found in the caves of Spy and Neanderthal.

III. MAN AS A TOOL-MAKER. — Man may be differentiated from all other animals by the fact that he is a skilled mechanic, and manufactures a great variety of objects which he largely utilizes instead of the organs of offence and defence with which nature originally endowed him. In lieu of the specially developed teeth, claws, horns, hoofs, etc., used more or less for these purposes by other animals, man has provided himself with a multiplicity of knives, axes, swords, spears, arrows, guns, etc., through the instrumentality of which his self-preservation is more efficiently main-

tained.

(1) Looking at the accumulated products of man's mechanical ingenuity, which have been gathered on the highways and byways of his primeval life, from an archæological standpoint, there can be no doubt that they are characterized by successive increments of improvement, both in technique and execution, from the rudest forms up to the most perfect appliances of modern times. That, during the transition period, broken pieces of wood and natural stones would be used as missiles, without being fashioned into any par-ticular shape, may be assumed as a corollary to the theory that man passed from a state of existence in which tool-making was unknown; also that, in the course of time, such missiles would that, in the course of time, such missies would give place to stones so slightly worked as not to be readily distinguished from the accidental operations of nature. Objects which come under this category are named *coliths* ( $\dot{\eta}$  is, 'dawn,' and  $\lambda l\theta$  os, 'stone'). They are recorded as having been found among gravels on chalk plateaus in various parts of the South of England, notably on the Kent plateau. Mr. Read, who describes and figures some of these coliths in his Guide to the Antiquities of the Stone Age in the British Museum, thus refers to them (p. 10):

refers to them (p. 10):

'It is not the province of this Guide to enter into the arguments which have been brought forward against or in favour of the artificial character of Eoliths, but it may be said that, whether their claims can be substantiated or not, the existence of implements of a ruder kind than those of the drift is in itself not improbable. For no invention reaches perfection suddenly, and each stage of advance is attained by an infinitely slow progress from the simple to the more complex. The majority of the drift implements are clearly something more than the first efforts of an unpractised hand: they show, on the contrary, signs of a comparatively long development, and it may be fairly argued that their ruder prototypes must exist somewhere. It was only to be expected that they should have escaped notice for a longer time than the typical Palsocitish; if only because they must necessarily be more difficult to distinguish from naturally fractured fiints.'

(2) The recognition, even among anthropological savants, that some peculiarly shaped flints, now known as paleoliths, were manufactured by man and used as implements, is scarcely half a century old. A fine pear-shaped flint of this type was found along with an elephant's tooth at Gray's Inn Lane, London, about the end of the 17th century, but, though described in the Sloane Catalogue and preserved in the British Museum, its true significance became known only when Sir W. Franks pointed out its identity with those found in the Valley of the Somme (Ancient Stone Implements, varied races the highly mixed populations of modern Europe can be readily accounted for; but whether the brachycephalic were developed from the dolichocephalic people at an earlier period still bones of extinct animals, at a depth of 12 feet in brick-earth at Hoxne, in Suffolk. He was so much struck with the situation that he gave a precise account of the circumstances, and he regarded the implements as belonging 'to a very remote period indeed, even beyond that of the present world' (Archæologia, vol. xiii. p. 204). Mr. Frere presented specimens of the Hoxne implements to the Museum of the Society; yet here they lay, un-heeded and unsuggestive, till 1859, when Sir John Evans, on his return from Amiens and Abbeville, recognized them as similar to those in the collec-

tion of M. Boucher de Perthes.

(3) It was about the beginning of the second quarter of last century that Kent's Cavern, near Torquay, first became a subject of archeological interest, owing to the researches of the Rev. J. MacEnery, who asserted that he found in it flint implements, associated with bones and teeth of extinct animals, beneath a thick continuous sheet of stalagmite. But the legitimate inference from these facts, viz. that man was contemporary with these animals and lived before the deposition of the stalagmite, had little chance of being accepted when opposed by the teaching and authority of so famous a geologist as Dr. Buckland, author of Reliquiæ Diluvianæ and of the Bridgewater

Treatise on Geology and Mineralogy.

The facts on which Mr. MacEnery based his conclusions were verified by fresh excavations made by Mr. Godwin-Austen, F.G.S., in 1840, and subsequently by a committee appointed by the Torquay Natural History Society in 1846. Papers embodying the results of these investigations were read at the Geological Society of London and at the meeting of the British Association in 1847. But, according to the late Mr. Pengelly, F.R.S., the reception given to these researches was not encouraging, and the inconvenient conclusions arrived at 'were given to an apathetic, unbelieving

world.'

(4) Another discovery of a similar character was the Windmill-Hill Cavern at Brixham, explored in 1858, under the auspices of a committee appointed by the Royal and Geological Societies of London. The first paper on the result of this investigation was read by Mr. Pengelly in September 1858, at the meeting of the British Association, then held at Leeds, in which it was announced that 'eight fiint tools had already been found in various parts of the cavern, all of them found in various parts of the cavern, all of them inosculating with bones of mammalia at depths varying from 9 to 42 inches in the cave-earth, on varying from 9 to 42 inches in the cave-earth, on which lay a sheet of stalagmite from 3 to 8 inches thick, and having within it and on it relics of the lion, hyæna, bear, mammoth, rhinoceros, and reindeer.' This paper, to use the phraseology of Mr. Pengelly, produced a decided 'awakening,' besides indirect results of the highest importance.

cesides indirect results of the fighest importance.

(5) The discovery by M. Boucher de Perthes of rude flint implements, associated with bones of the mammoth and other extinct animals, in the ancient gravel beds of the valley of the Somme, at various levels considerably above the present highest flood-marks of the river, equally failed to attract scientific attention. An account of his researches, under the title Antiquités Celtiques et Antélibusiennes the title Antiquités Celtiques et Antédiluviennes, was published in 1847, but for upwards of ten years it lay absolutely unheeded. Nor can there be any doubt that the ultimate recognition of the importance of his discoveries was one of the indirect results of the less sceptical tone prevalent in scientific circles in Britain in consequence of the exploration of the Brixham Cavern just re-

ferred to.

Excluding the coliths as too controversial a subject to be discussed in this brief review, it would appear that certain flint implements found at various depths in the higher gravels of our I man could produce a flake of any required size and

present river systems are the oldest evidence of man's handicraft in Europe. These gravels had been left high and dry long before the rivers had excavated the winding valleys at the bottom of which they now flow. The Hoxne implement, excavated the winding variety at the bottom of which they now flow. The Hoxne implement, above referred to, is a typical specimen of what French archæologists call the coup de poing, probably the earliest type of hand-implement known, which came to be widely imitated among the earlier races of mankind. Implements of the coup de poing type vary considerably both in form and in size, the degree of variability being, however, strictly compatible with their function as handtools. They have been discovered in widely separated localities in Europe, Asia, and Africa; and nearly all possess the peculiarity of being made by chipping a nodule so as to convert it into a suitable hand-tool—the flakes struck off being

apparently of no use.

The original manufacturers of these Palæolithic tools are supposed to have entered Europe from Africa at a time when there was easy communica-Artica at a time when there was easy communication between the two continents by several land bridges across the basin of the Mediterranean. The climate being sub-tropical, these naked nomads appear to have inhabited the wooded banks of rivers, living on fruits and the smaller fauna, till the advent of the Glacial period forced them to take shelter in cases and to protect their hedies by take shelter in caves and to protect their bodies by skins of animals. It is difficult to realize how much the severe climate which then supervened contributed to the improvement of their physical and mental attributes. It roused their dormant energies to the pitch of being able to adapt their mode of life to the changing conditions of their environment—for the adage that necessity is the mother of invention was as applicable then as now. The natural food productions of a warm climate gradually disappeared, until finally there was little left but wild animals,—mammoth, reindeer, chamois, horse, bison, etc.—many of which came from arctic regions. To procure necessary food and clothing in these circumstances greatly taxed the skill and resources of the inhabitants. The difficulty was ultimately solved by the manufactions. difficulty was ultimately solved by the manufacture of special weapons of the chase, with which they successfully attacked the larger wild animals which then occupied the country. The coup de poing, which for a long time served all the purposes of primitive life, gradually gave place to spear- and lance-heads fixed on long handles, together with a great variety of minor weapons when the Palæolithic people finally emerged from this singular contest with the forces of nature, they were physically and mentally better than ever equipped for the exigencies of life. A greater power of physical endurance, improved reasoning faculties, an assortment of tools adapted for all kinds of mechanical work, and some experience of the advantage of housing and clothing, may be mentioned among the trophies which they carried away from that long and uphill struggle.

Of the kind of life which these early people of

Europe led we have remarkably precise evidence in the food-refuse, and the lost, broken, and worn-out implements, weapons, and ornaments which have been discovered by excavating the caves and rock-shelters they had from time to time inhabited. The result of these investigations has disclosed a steady progress in the manufacture of industrial implements, weapons of the chase, and personal ornaments. When it was ascertained that the larger flakes could be utilized as sharp cutting tools, attention began to be directed to the art of producing them for teleological purposes. After some experience, it was found that a skilled workshape. By subjecting these flakes to secondary chipping, implements of great variety and efficiency were in the course of time abundantly produced. This was indeed an important step of advance in flint industry, evidence of which is to be found in the fact that henceforth flakes were the useful products, while the residuary core was rejected as waste. The worked flints found in the earlier inhabited caves of France and Belgium, such as

inhabited caves of France and Belgium, such as Moustier and Spy, show that secondary flaking was already in progress—thus proving that their habitation was later than the formation of the river-drift gravels containing worked flints.

From a careful inspection of the handiwork of these troglodytes, it will be seen that it is characterized by a gradual development from simple to more complete forms. Implements, tools, and weapons were slowly but surely made more efficient, thus evincing on the part of their manufacturers a progressive knowledge of mechanical principles. Art and ornament, too, had taken deep root among these primitive hunters, and deep root among these primitive hunters, and before the end of their civilization they evinced a remarkable artistic taste and power of execution. remarkable artistic taste and power or execution. Hence G. de Mortillet classified their industrial remains in chronological sequence into Mousterien, Solutréen, and Magdalénien, — a nomenclature which he founded upon the names of the most typical stations then explored. The earliest of the Palæolithic stations was Le Moustier, situated on the right bank of the Vezère (Dordogne). During its habitation by man the climate was cold and damp, and among the contemporary fauna were its habitation by man the climate was cold and damp, and among the contemporary fauna were the mammoth, woolly rhinoceros, cave-bear, and musk-ox. The special features of the industrial remains of this period were the scarcity of the coup de poing—which was so characteristic of the older river-drift deposits—and the splitting up of flints into smaller implements, such as scrapers, trimmed flakes, etc. The next typical station in ascending order was the open-air encampment of Solutré (Saône-et-Loire).

The stage of culture here disclosed was character-

The stage of culture here disclosed was characterized by great perfection in the art of manufacturing flint implements, especially spear- and lance-heads in the form of a laurel leaf, and by the abundance of horses and reindeer used by the inhabitants as food. The climate was mild and dry, the great glaciers were on the wane, and the rhinoceros seems to have disappeared from the scene. The third and last of the typical stations was the well-known rock-shelter of La Madelaine, characterized by the abundance of objects made of bone and horn, the development of a remarkable artistic talent, the predominance of a northern climate and fauna, and the extinction of the mammoth The stage of culture here disclosed was characterand fauna, and the extinction of the mammoth towards the close of the period.

The civilization thus developed represents the outcome of a system of human economy founded on the application of natural laws to mechanical on the application of natural laws to mechanical purposes, but little affected by the principles of religion or ethics. The mysteries of the supernatural had not then been formulated into the concrete ideas of gods and demons. The notions of good and evil, right and wrong, were still dominated by the cosmic law that might is right. Neither gloomy forebodings nor qualms of conscience had much influence on the conduct of these people. Their philosophical and sentimental speculations, if they had any control avaluation to the habits

mandement. Upon the whole, it would appear as if their minds were engrossed with the chase and its exciting scenes and incidents, for the relics of their domestic economy indicate little more than the art of roasting or broiling the flesh of the captured animals, and of converting their skins into garments. Possibly some round pebbles, abundantly found in the débris, may have been used as 'potboilers,' but a few stone mortars, which occasionally turned up, would seem to have been used only for mixing colouring matter to paint their bodies. Of agriculture, the rearing of domestic animals, the arts of spinning and weaving, and the animals, the arts of spinning and weaving, and the manufacture of pottery, they appear to have been absolutely ignorant. But yet, in an environment absolutely ignorant. But yet, in an environment of such primitive resources and limited culture associations, these wild hunters developed a genuine taste for art, and cultivated its principles so effectually that they have bequeathed to us an art gallery of over 400 pieces of sculpture and engraving, many of them being so true to their original models that they bear a favourable comparison with analogous works of the present day. They adorned their persons with perforated teeth, shells, coloured pebbles, and pendants of various kinds. They depicted the animals with which they were familiar, especially those they hunted for food, in familiar, especially those they hunted for food, in all their various moods and attitudes, often with all their various moods and attitudes, often with startling fidelity. Harpoons, spears, and daggers of horn and bone were skilfully engraved, and sometimes their dagger handles were sculptured into the conventional form of one or other of their favourite animals. In several instances they also adorned the walls of the caverns they frequented with incised outlines of the neighbouring fauna and made actual colour-paintings of them in black and ochre, or in one of these colours.

The other characteristic feature in the lives of

The other characteristic feature in the lives of these people was that they lived exclusively on the produce of the chase, for without agricultural and pastoral avocations they could do little else than organize daily hunting and fishing expeditions. During the later stages of Palæolithic civilization During the later stages of Palæolithic civilization their principal prey consisted of reindeer and horses, which then roamed in large herds throughout Western Europe, thus rendering themselves more liable to be ambushed, trapped, or speared by their wily enemies. The weapons used by these hunters were harpoons, generally made of reindeer-horn; spear- and lance-heads of flint; and short daggers of bone or horn. It is not likely that with these weapons they would take the initiative in attacking the hyæna, lion, or cavebear, except in self-defence. That, however, these formidable creatures were occasionally captured by them, is suggested by the fact that their canine teeth were highly prized and used as personal ornaments, or as mementoes of their prowess in the chase.

When the physical conditions which called these human accomplishments into existence passed away, and the peculiar fauna of the Glacial period disappeared from the lowlands of Central Europe, -some by extinction, and others by emigration to more northern regions or to the elevated mountains in the neighbourhood—we find the inhabitants of these old hunting grounds in possession of new and altogether different kinds of food. Findmuch influence on the conduct of these people. Their philosophical and sentimental speculations, if they had any, centred exclusively on the habits of the animals they hunted, and on the strategic means by which they could be waylaid and captured. During this time they made great progress in the manufacture of mechanical appliances, as shown by the number of flint implements—saws, borers, scrapers, etc.—with which they made needles, pins, ornaments, weapons, and other objects, including the so-called bâtons de comdebatable question. At any rate, it was eminently successful, and may be regarded as the starting-point of Neolithic civilization. In the course of time these Neolithic people cultivated a variety of fruits, wheat, barley, and other cereals; they reared oxen, pigs, sheep, goats, horses, and dogs; they became skilled in the ceramic art, and dogs; they became same at the continued much the same as in the later stages of the Palæolithic period, but in addition to chipping they now ground stone implements so as to give them a sharp cutting edge; in hunting the forest fauna of the period they used, besides spears, lances, and daggers, the bow and arrow; they built houses, for both the living and the dead— thus showing that religion had become an active and governing power among them. But of the artistic taste and skill of their predecessors they had scarcely a vestige, and what they did by way of ornament consisted mainly of a few scratches, arranged in some simple geometrical pattern. The fundamental principles of the two civilizations are really so divergent that the Neolithic can hardly really so divergent that the recomming can harry be regarded as a direct development from that of the Palæolithic period in Europe, although there are several instances on record in which their characteristic remains were chronologically superimposed, without any apparent break in continuity, as at Campigny, Reilhac, Mas-d'Azil, etc. The probability is that, while the reindeerhunters were still in existence, people beyond this area, possibly of the same stock, were passing through the evolutionary stages which connected the two civilizations.

IV. Man's MENTAL ENDOWMENTS.—The great

superiority of man's mental manifestations over those of all other animals is too patent to be called in question by any serious worker in the field of anthropology. Indeed, according to some eminent psychologists, the gap between them cannot be bridged over by the doctrine of organic evolution. On the other hand, evolutionists in general believe that it is explicable on the ordinary principles of physiology and psychology. If, then, it is to be held that man, like other animals, is a product of the ordinary organic forces of the Cosmos, it may well be asked why, and by what means, he has so far out-distanced all other beings in the struggle of life. The attempt to minimize this remarkable disparity between man and brute has not met with much support from any class of investigators. Anti-Darwinians have no object in discussing this question, their argument being that no speculation founded on materialism can account for it. Accordingly, various hypotheses have been formulated by way of explaining this psychological enigms, which now fall to be noticed.

That there is a physical stratum, common to man and some of the higher mammalia, which brings them both within the domain of organic evolution, has already been advocated in these pages (§ I.), and may be accepted as beyond controversy. This being so, we have to investigate the two following propositions: (1) What are the mental faculties common to both?; and (2) What psychological phenomena are peculiar to man? On these problems Mr. G. J. Romanes writes thus:

these problems Mr. G. J. Romanes writes thus:

'If we have regard to Emotions as these occur in the brute, we cannot fail to be struck by the broad fact that the area of psychology which they cover is so nearly co-extensive with that which is covered by the emotional faculties of man. In my previous works I have given what I consider unquestionable evidence of all the following emotions, which I here name in the order of their appearance through the psychological scale—fear, surprise, affection, pugnacity, curiosity, jealousy, anger, play, sympathy, emulation, pride, resentment, emotion of the beautiful, grief, hate, cruelty, benevolence, revenge, rage, shame, regret, deceitfulness, emotion of the ludicrous.

'Now, this list exhausts all the human emotions, with the exception of those which refer to religion, moral sense, and

perception of the sublime. Therefore I think we are fully entitled to conclude that, so far as emotions are concerned, it cannot be said that the facts of animal psychology raise any difficulties against the theory of descent. On the contrary, the emotional life of animals is so strikingly similar to the emotional life of mem—and especially of young children—that I think the similarity ought fairly to be taken as direct evidence of a gentle continuity between them' (Mental Evolution in Man. D. 7).

Similarly, Mr. Romanes deals with Instinct, Volition, and Intellect, and strongly argues that there is only a difference of degree between their respective manifestations in man and other animals. far these views have been more or less accepted by leading psychologists; but at this stage a serious divergence of opinion crops up among them, some holding that the principles of evolution are in-adequate to account for the origin and working of the higher faculties of man. But these dissentients are seldom in agreement as to the precise nature of their objections. The eminent French anthropologist, Professor de Quatrefages, regarded man's entire organization, physical and mental, with the exception of the faculties of conscience and religion, as the work of evolution. Others extend the range of their objections so as to include the intellectual faculties. Mr. St. George Mivart, while denying that the principles of evolution are applicable to man, makes the following admissions as to the resemblance between the mental actions of men and animals:

of men and animals:

'I have no wish to ignore the marvellous powers of animals, or the resemblance of their actions to those of men. No one can reasonably deny that many of them have feelings, emotions, and sense-perceptions similar to our own; that they exercise voluntary motion, and perform actions grouped in complex ways for definite ends; that they to a certain extent learn by experience, and combine perceptions and reminiscences so as to draw practical interences, directly apprehending objects standing in different relations one to another, so that, in a sense, they may be said to apprehend relations. They will show hesitation, ending apparently, after a conflict of desires, with what looks like choice or volition: and such animals as the dog will not only exhibit the most marvellous fidelity and affection, but will also manifest evident signs of shame, which may seem the outcome of incipient moral perceptions. It is no great wonder, then, that so many persons little given to patient and careful introspection, should fail to perceive any radical distinction between a nature thus gifted and the intellectual nature of man' (Presidential Address at Biological Section, British Association, 1879).

Professor Huxley thus expresses his views on

Professor Huxley thus expresses his views on this phase of the subject:

this phase of the subject:

'I have endeavoured to show that no absolute structural line of demarcation, wider than that between the animals which immediately succeed us in the scale, can be drawn between the animal world and ourselves; and I may add the expression of my belief that the attempt io draw a psychical distinction is equally futile, and that even the highest faculties of feeling and of intellect begin to germinate in lower forms of life. At the same time, no one is more strongly convinced than I am of the vastness of the gulf between civilized man and the brutes; or is more certain that whether from them or not, he is assuredly not of them. No one is less disposed to think lightly of the present dignity, or despairingly of the future hopes, of the only consciously intelligent denizen of this world' (Man's Place in Nature, p. 109).

On the other hand, Mr. Alfred Wallace, F.R.S.

On the other hand, Mr. Alfred Wallace, F.R.S., who holds such a distinguished position in this special field of research, has promulgated a most remarkable theory. This careful investigator, an original discoverer of the laws of natural selection, and a powerful advocate of their adequacy to bring about the evolution of the entire organic world, even including man up to a certain stage, believes that the cosmic forces are insufficient to account for the development of man in his civilized capacity.

'Natural selection,' he writes, 'could only have endowed savage man with a brain a few degrees superior to that of an ape, whereas he actually possesses one very little inferior to that of a philosopher' (Natural Selection and Tropical Nature,

The present writer has elsewhere made the following comments on Mr. Wallace's position with regard to the application of the doctrine of evolution to man:

'This deficiency in the organic forces of nature he essays to

supply by calling in the guiding influence of a "superior intelligence." In defending this hypothesis from hostile criticism, he explains that by "superior intelligence" he means some intelligence higher than the "modern cultivated mind," something intermediate between it and Deity. But as this is a pure supposition, unsupported by any evidence, and merely a matter of personal belief, it is unnecessary to discuss it further. I would just, en passant, ask Mr. Wallace why he dispenses with this "superior intelligence" in the early stages of man's evolution, and finds its assistance only requisite to give, as it were, the final touches to humanity? (Prelitatoric Problems, p. 103).

That mind in its higher psychical manifestations has often been looked upon as a spiritual essence, which can exist independently of its only known physical basis, need not be a matter of astonishment, when it is considered how ignorant we are of the machinery of thought—how the pleasing abstractions of the poet, the fascinating creations of the novelist, and the profound speculations of the man of genius come forth as from a hidden cavern, without exciting any suspicion of having behind them not only a physical equivalent of brain matter, but also a laboratory in which thoughts are evolved. It is this marvellous power of volitional reflexion in summoning ideas from the materials stored up in the various localized portions into which the brain is divided, and utilizing them for other and nobler purposes than mere animality, that gives a prima facia plausibility to this theory. From this point of view abstract reasoning, imagination, conception, idealization, moral sense, altruism, etc., may be regarded as byproducts of mental operations which have their chief stimuli in the external environment.

Leaving, however, the field of speculation aside, and reverting to the opinions of the four eminent authorities quoted above, it is manifest that they all recognize the magnitude of the psychological gulf which separates humanity from the rest of the animal world. Nor does Professor Huxley himself give any clear ideas as to how it is to be bridged over—certainly it has never been shown that this is possible on the Darwinian principle of the 'sur-

vival of the fittest.'

Such were some of the leading opinions on this particular phase of the evolution theory, as applied to man, when the present writer ventured to refer to the subject in his Presidential address to the Anthropological Section of the British Association in 1893. In that address (Prehistoric Problems, ch. ii.) he advocated the hypothesis that one of the main factors in the production of the higher braindevelopment of man was the conversion of the upper limbs into true hands. From the first moment that the being recognized the advantage of using a club or a stone in attacking his prey, or defending himself from his enemies, the direct incentives to a higher brain-development came into existence. He would soon learn by experience that a particular form of club or stone was more suitable for his purposes; and if the desiderated object were not to be found among the natural materials around him, he would in the course of time proceed to manufacture it. Certain kinds of stone would be readily recognized as better adapted for cutting purposes than others, and he would soon learn to select his materials accordingly. If these were to be found only in a special locality, he would visit that special locality whenever the prized material was needed. Nor is it an un-warrantable stretch of imagination to suppose that circumstances would lead him to lay up a store for future use. The power to make and wield a weapon was a new departure in the career of man, and every repetition of such acts became an effective object-lesson, and an ever-accumulating training force for further progress. The occupation of these primitive tool-makers, once fairly in opera-tion, afforded frequent opportunity of comparing the

merits and demerits of their respective mechanical products—thus supplying a fruitful medium for the development of abstract reasoning. In this way the function of the hand and the function of the brain became intimately correlated, the conjoint result of their long-continued action being a larger brain, greater intelligence, and a more highly specialized manipulative organ than were ever before seen among the products of the organic world

That there is an amount of cortex cerebri in the human subject, corresponding to his greater mental powers, cannot be seriously controverted, as the size of the human brain, relatively to the rest of the body, is enormously greater than in any other animal. According to Sir William Turner, the cranial capacity of an average European is about 1500 c.c., while that of the gorilla, which is a larger animal, does not exceed 590 c.c. (Journ. Anat. and Physiology, vol. xxix. p. 436). That the largest portion of this increase in the substance of the human brain is to be correlated with the higher mental powers of man, as cause and effect, seems therefore to be indisputable; nor, in our opinion, can there be any doubt that its chief stimulus, at least in the earlier stages of human development, was the function of the hand. That subsequently there were other powerful factors working in the same direction is not denied, as will be seen from the following remarks on articulate speech.

Next to the invention of mechanical appliances, the use of articulate speech was, undoubtedly, the most potent factor in the mental evolution of man, especially when conjoined with its later offshoot, the art of writing. By articulate speech is meant the faculty of uniformly associating certain words or sounds with definite ideas, so that these ideas can be understood by those previously instructed in the process. Of course, the members of a family or tribe would be conversant with it from birth. Spoken language is virtually an extension, or rather a concentration, of the power which many of the more intelligent animals possess, in common with the Hominidæ, of giving expression to emotions and simple sensations by various ejaculatory sounds, grimaces, and gestures. The acquisition of full human speech was, unquestionably, the result of slow growth; for there is no known race, however low and savage, but 'has an articulate language, carried on by a whole system of sounds and meanings, which serves the speaker as a sort of catalogue of the contents of the world he lives in, taking in every subject he thinks about, and enabling him to say what he thinks about it' (Tylor, Anthropology, p. 132).

Of the importance of articulate speech in the

Of the importance of articulate speech in the intellectual and social development of man it is unnecessary to produce detailed evidence, as its elaboration must have proceeded pari passu with the higher development of the brain almost since man entered on his human career. 'A complete train of thought,' writes Mr. Darwin, 'can no more be carried on without the aid of words, whether spoken or silent, than a long calculation without

the use of figures or symbols.

As to the stage in the evolution of man to which articulate speech is to be assigned, there is little agreement among anthropologists. Darwin regarded it as having an early origin in the stem line of humanity, while Romanes made it subsequent to the art of manufacturing flint implements.

'For my part,' says Professor D. J. Cunningham, in his Presidential address to the Anthropological Section of the British Association, Glasgow, 1901, 'I would say that the first word uttered expressive of an external object marked a new era in the history of our early progenitors. At this point the simian or brute-like stage in their developmental career came to an

end, and the human dynasty, endowed with all its intellectual possibilities, began.

Professor Haeckel, in describing the evolutionary stage of *Pithecanthropus erectus*, thus writes:

'The brain is considerably enlarged. Presumably it is still devoid of so-called articulate speech; this is indicated by the fact that children have to learn the language of their parents, and by the circumstance that comparative philology declares it impossible to reduce the chief human languages to anything like one common origin' (Last Link, Lond. 1898, p. 72).

One of the latest contributions on the subject is from the pen of Professor D. J. Cunningham (Huxley Lecture, 1902), who thus expresses himself:

I have already hinted that by the study of the early conditions of the cerebral cortex in man, information may be attained regarding the evolution of function. . . We have seen that the bulging of the arm-area in the human cerebrum occurs very early—somewhere about the middle or end of the sixth month. The portion of cortex devoted to speech assumes shape much later. Indeed, it does not appear until shortly before birth, and is not fully developed until the end of the first year of infancy. This might be considered to give some basis of support to Dr. Munro's plea that man attained the erect attitude, and that the arm was set free for the development of its higher functions, before articulate speech was elaborated.'

There are two well-attested general observations

There are two well-attested general observations which appear to throw some light on this obscure point, viz.—(1) that none of the apes of the present day have even the rudiments of articulate speech; and (2) that language (as quoted above from Mr. Tylor) is well developed among all the Hominide. The present writer's interpretation of these facts is that the origin of articulate speech was subsequent to the separation of the genus Homo from the simian stem, but prior to the development of the races of mankind—a view which places it subsequent to the attainment of the erect posture and

the development of the human hand.

V. Man's social evolution.—It has now been amply shown that, from whatever standpoint we contemplate the great drama of human life, it stands forth as a unique development in the organic world. Starting, possibly as early as the organic world. Starting, possibly as early as the Miocene period, with a progenitor whose physical and mental attainments were on a par with those of existing anthropoid apes, his successors, the Hominidæ of to-day, have gradually forged their way into what is virtually a new world—the world of ethics and moral responsibility. Almost from the world beginning they acquired morally as they are the acquired morally as the contribution. from the very beginning they acquired manipula-tive methods, with latent capabilities which (as we can now realize) were tantamount to a new force in the organic world, viz. the art of manufacturing tools and using them for the advancement of their own welfare. Unlike the more helpless creatures own welfare. Unlike the more helpless creatures around them, who were largely at the mercy of a fickle environment, these implement-using animals soon learned to accommodate themselves to all its vicissitudes. With a knowledge of the use of fire, the skill to manufacture garments, and, ultimately, the art to construct houses, they braved the rigours of frost and snow with comparative impunity. As they became more and more conversant with the laws and forces of nature and their own power over them, they laid a usurping hand on the reins of Cosmic evolution itself, by the cultivation of selected plants and animals, and the destruction of others which were found unsuitable for their own purposes.

The far-reaching consequence of securing food supplies by means of agriculture and the domestication of animals, led to more social and sedentary habits. The appearance of large communities concurrent with the development of various trades and professions was but a matter of time, the outcome of which is now a vast system of international commerce. Already the greater portion of the earth capable of being cultivated is converted into gardens and fields, whose choice productions are readily conveyed to all the chief

towns of the civilized nations of the globe. Flesh diet is everywhere abundant, but it is no longer necessary to hunt the animals in their primetal haunts. Skin-coats, dug-out canoes, and the coup de poing are now lineally represented by woven fabrics, Atlantic liners, and Long Toms.

Concurrently with their ever-increasing inroads into the secret areana of nature, these skilled artizans became religionists as well as legislators, and founded social institutions and laws for the guidance of a rapidly increasing population. In the course of their long sojourn on earth they had no doubt many difficulties to overcome before they succeeded in establishing the great landmarks of civilization as they now present themselves to us, not only in works of art, architecture, engineering, electricity, etc., but in constructive philology, religion, ethics, altruism, and the sense of honour, all of which may be said to be still in process of development, though their sources reach far back into pre-historic times.

Some of the lower animals have accompanied man so far on the road to reasoning intelligence as to be able to associate certain natural results with their natural causes, as crows do when they keep at a safe distance from a man with a gun. But none has ever reached the stage of being able to adjust the circumstances so as to produce the desired effect. Man not only sows the seed, but waters the field should the fickle environment refuse the seasonal showers. No other animal in a state of nature has attempted to do anything comparable to this simple act of practical ratioci-

nation.

It is probable that religion came first to the front as a modifying influence to the stern decree of the survival of the fittest. Some grounds for this suggestion may be seen in the readiness with which the early races of mankind identified the obscure forces of nature with supernatural spirits who were believed to have control over human destinies, and were, therefore, worshipped as gods or demons; and in the prevalence among savages of magic and fetishism. But such polytheistic notions, as well as the pretended art of magicians to control the so-called supernatural agencies, are rapidly giving way to the precise methods of scientific research. Nevertheless, it must be admitted that for many ages religion has proved a weighty influence in mitigating the harsh effects of the Cosmic law that might is right, which is implied in the doctrine of the survival of the fittest. As already stated (§ III.), there is little evidence in support of the belief, advocated by some, that religion was practised by the Palæolithic people of Europe, at least to the extent of making a display of idolatry, so that the development of this governing force in the institutions of men is comparatively late. In Neolithic times its predominating influence throughout Europe is attested by a whole series of memorials of the dead—ossuaries, chambered graves, cairns, cists, urns, etc. That the Neolithic people believed in a life beyond the grave somewhat similar to the present may be inferred from the character of the grave-goods,—vessels with food and drink, implements, weapons, favourite wives and animals, often being buried along with the body.

Next to religion in point of importance, if not also in chronological sequence, comes the moral faculty, or conscience, which regulates judicial and ethical actions. Its position in psychology may be aptly compared to that of instinct in the organic world,—the point of analogy being that their sudden actions appear to be the outcome of an impulse rather than a deliberate act of ratiocination. The most rational explanation of this peculiarity, in both conscience and instinct, is that the suc-

cessive increments of reasoning on which their respective injunctions were originally founded have more or less lapsed in the course of time.

But perhaps the most important formula which has hitherto emanated from the laboratory of ethics is altruism (which see), which may be described as a product of conscience and the acquired sense of equity. Its object is the relief of suffering humanity, and for this purpose it has received the support of the civilized world. Many regard the motives of all such good deeds as having been instilled into the Cosmic mind by a revelation from heaven; but this is an unnecessary assumption; for in the accumulated deliberations of wise men during long ages we have an adequate pabulum for its birth and maturation. But whether heaven-born or earthborn, altruism has become a sine qua non in human civilization. So long as the laws of our wisest Solons are liable to error, and the environment contains a residuum of unexplained forces, ment contains a residuum of unexplained forces, there will be a certain proportion of failures among yearly births, whose fate can be mitigated only by altruism. Under this category come the deaf, the blind, the lame, the poor, the friendless, and, in short, all who are ushered into the world without the means of successfully entering on the struggle of life. Our original interference with Cosmic methods by living in large communities under the most imperfect sanitary arrangeties under the most imperfect sanitary arrangements, has greatly increased the number of such wastrels. Hence their immediate relief, so far as wastreis. Hence their immediate refler, so far as that is possible, is a moral obligation on all who derive benefit from the social government under which they have inherited or acquired wealth, position, and influence, possibly without any effort on their part. On this phase of the subject there is a conflict between Cosmic methods and those of the others. the ethical code of humanity. The influence of the one is directed to the survival of the fittest; that of the other to 'the fitting of as many as possible to survive.' The former has left man with the garb and qualities of a savage; the latter has endowed him with mental culture, the refinement of civilization, and moral responsibility for his actions towards his fellow-creatures.

VI. CONCLUDING REMARKS.—The Hominidæ of the present day not only possess more highly developed brains than those of their early ancestors, but also derive great advantages in their life struggle from the accumulated experiences of their predecessors in the form of all sorts of mechanical inventions, organized institutions for scientific re-search, altruistic laws, and other ethical enactments acquired as results of their progressive culture. Thus they at once start on a higher rung in the ladder of human life. It is by these means that they have come to hold such a predominating position in the organic world; and it is through the general diffusion of such attainments that further progress can be expected. Among the more urgent reforms by way of rectifying past mistakes and safe-guarding the future interests of the race, may be mentioned the eradication of obsolete doctrines and pernicious superstitions, the enforcement of just and equitable laws, the prevention of crime, the popularization of scientific methods, and especially strict attention to sanitary improvements. There is, however, a limit to human improvements. There is, however, a limit to human powers over the laws of environment, for occasionally the most learned communities find themselves helpless amidst the operations of nature. But yet it is in this direction alone that prospects of future

betterment lie.

From various data advanced in the previous sections, it will be seen that there are two distinct lines on which investigations into the past history of mankind may be profitably conducted. The first

relates to man as a biological entity, and comprises, in addition to his ontogenetic and phylogenetic development, a few fragments of skeletons of his predecessors which by some fortuitous ciror his predecessors which by some fortuitous circumstances have to this day resisted the disintegrating forces of nature. This department is generally known as *Physical Anthropology*. The evidential materials to be gathered along the second line of research consist of the remains of man's handicraft works, which, being simply preserved impressions of his skill in the different stages of culture through which he has passed may be of culture through which he has passed, may be characterized as *Cultural Anthropology*. The successive modifications which these respective materials have undergone during a long series of ages, though different in kind, are found to bear a decided ratio to the progress of human intelligence. Thus, taking the human skull at the starting-point of humanity as comparable to that of one of the higher apes, we know, as a matter of fact, that during the onward march of time it has underthat during the onward march of time it has undergone some striking changes, both in form and capacity, before reaching the normal type of modern civilized races—changes which can be classified in chronological sequence. Similarly, the products of man's hands show a steady improvement in type, technique, and efficiency—commensurate with his progressive knowledge of the laws of nature and his ability in applying them to mechanical and utilitarian purposes. Indeed, the mechanical and utilitarian purposes. Indeed, the trail of humanity along its entire course is strewn with the discarded weapons and tools which, from with the discarded weapons and tools which, from time to time, had to give way to others of greater efficiency. Between these two departments, though separated by a strong line of demarcation, there is a striking affinity which, in the words of Mr. W. H. Holmes (Report of United States National Museum, 1901, p. 256), is thus stated: 'If the physical phenomena of man include all that connects him with the brute, his culture phenomena include all that distinguishes him from the brute.'

nects nim with the brute, his culture pnenomena include all that distinguishes him from the brute.' These remarks will give some idea of the interesting and profound problems embraced by the science of Anthropology. Not since the material world became an object of human study and reflexion has there been accomplished such a complete and for resolving revolution in current philosoph. and far-reaching revolution in current philosophical opinion. From the standpoint of evolution, the entire organic world, not excluding man, reveals a unity, a harmony, and a grandeur never before disclosed under any system of speculative philo-

What may be the outcome and destiny of humanity on the lines of modern civilization lies within the deepest shadow of futurity. One thing alone appears certain—that since human govern-ment on the anthropo-cosmic principles of ethics and altruism became a matter of real concern among the civilized nations of the world, there is no turning back from its behests, no alternative but to strengthen the ethical fabric by every means that human ingenuity can suggest. Above all, a national esprit de corps, with the motto 'Honour bright,' must be fostered among the members of each community; for if the steersman once relaxes his hold on the wheel, he and his freight may again be swept into the vortex of Cosmic evolution.

be swept into the vortex of Cosmic evolution.

Interature.—Owing to the number of works more or less bearing on the natural history of man, all that can be attempted here is to make as judicious a selection as possible:—Broca, Instructions générales pour les Recherches Anthropologiques, 1865, Caractère physique de l'Homme Préhistorique, 1868, etc.; Cartailhac, La France Préhistorique, 1889; Boyd-Dawkins, Cave Hunting, 1874, Early Man in Britain, 1880; Darwin, Origin of Species, 1859, Descent of Man, 1871; Duckworth, Morphology and Anthropology, 1905; Draper, Intellectual Development of Europe, 1863; Dubois, Pithecanthropus erectus, 1894; Dupont, L'Homme pendant les Âges de la Pierre?, 1872; Sir J. Evans, The Ancient Stone Implements, Weapons, and Ornaments of Great Britain, 1872; Fergusson, Rude Stone Monuments in all Countries, 1872; Falconer,

Palæontological Memoirs, 1868; Frazer, The Golden Bough?, 1900; J. Geikie, Prehistoric Europe, 1880; Haeckel, Anthropogenie, 1874, Evolution of Man, 1904; E. T. Hamy, Précis de Paléontologie Humaine, 1870; Hartman, Anthropoid Apes, 1865; Huxley, Man's Place in Nature, 1863; Keane, Man, Past and Present, 1899; Keller, The Lake Dwellings of Switzerland, 1866; A. Lang, Myth, Ritual and Religion, 1887, Magic and Religion, 1801; Lubbock (Lord Avebury), Prehistoric Times, 1890, Origin of Civilization, 1902; Sir Ch. Lyell, Antiquity of Man, 1863; Manouvrier, 'On Changes consequent on the assumption of Erect Posture' (Revue Scientifique, 1896, p. 297), also numerous contributions to anthropological societies; G. de Mortillet, Le Préhistorique, 1883; Munro, The Lake Dwellings of Europe, 1890, Prehistoric Problems, 1897; Pengelly, Literature of Kent's Cavern, 1868; Pouchet, Plurality of the Human Race, 1864; Prichard, The Natural History of Man, 1848; de Quatrefages, Hommes Foscies & Homen (conjointly with E. T. Hamy), 1878-1879; Religuice Aquitanice (Report of excavations in the Dordogne caves by Lartet and Christy), 1865; Romanes, Mental Evolution in Man, 1888, Scientific Evidences of Organic Evolution, 1882, etc.; Schmerling, Reherches sur les Ossements fossiles découverts dans les Cavernes de la Province de Liège, 1833; Schmidt, The Doctrine of Descent and Darwinism, 1881; Schrader, Prehistoric Antiquities of the Aryan Peoples, 1890; Spencer, Principles of Sociology, 1876; Topinard, Eléments d'Anthropologie Générale, 1885; Tylor, Researches into the Early History of Mankind, 1865, Primitive Culture 1890; Spencer, Principles of Sociology, 1876; Topinard, Eléments d'Anthropology, 1881; Verneau, Les Races Humaines, 1891; Anthropology, 1881; Verneau, Les Races Humaines, 1891; Anthropology Issi; Verneau, Les Races Humaines, 1891; Anthropology Issi; Verneau, Les Races Humaines, 1891; Anthropologie Générale, 1885; Thior, Researches into the Early History of Mankind, 1864; Wailtae, Contributions to the Theory of Natural Sele

ANTHROPOMORPHISM.—Generally, and perhaps always in the past, man has believed that there are powers other and greater than he. He has felt it not only desirable, but possible, to enter into communication with them; that is to say, he has taken it as a fact that they can understand him when he addresses himself to them; that he can more or less understand them; that he can win their sympathy and assistance, if he sets about doing so in the right way. Further, he has believed at some times that these powers possess the shape of man; at other times, that their shape is that of beasts or of plants; at others, that they are visible in and as the sun, moon, or stars, or audible in the storm, the earthquake, or the rustling of leaves. That deities have been supposed in all stages of human development, from that of the Fuegians to that of the ancient Greeks, to possess human form is a truth which needs neither demonstration nor illustration. Indeed, Xenophanes (frag. 17, ed. Bergk) even went to the length, whether in jest or earnest, of supposing that cattle, lions, and horses, were they able, would make the gods in their own likeness. It is also obvious that deities originally theriomorphic tended to become anthropomorphic: the Egyptian gods which have gained human bodies and limbs, but retained their animal heads, are an obvious instance of this tendency. And the human form given by Greek sculptors to Helios suffices to show that nature powers, if not originally conceived in human form, tend eventually to take it.

1. Physical anthropomorphism.—The belief, then, that deities have bedies and limbs like those of men is a belief which has had a beginning and an end. Religion has survived its disappearance; and though it is impossible to prove that before its appearance religion was, it is in the same way impossible to prove that religion then was not. We may therefore reasonably be influenced by the fact that though theriomorphic deities become anthropomorphic, as in Egypt, the reverse process never takes place; anthropomorphism is in some cases preceded by theriomorphism, but theriomorphism is never generated out of anthropomorphism. We may then, perhaps, assume that there was a pre-anthropomorphic stage in the history of re-

ligion. But if we make that assumption, we can do so only by limiting the term 'anthropomorphism' to the sense in which it means that deities have bodies and limbs like those of men, and by excluding from the content of the term the sense in which it implies that deities have thoughts, emotions, and wills like those of men, though transcending them. Further, it may be said that to limit the meaning of the term to the first of the two senses which may be put upon it is to break, or rather to ignore, the continuity which is characteristic of-indeed, essential to-evolution in all its forms, whether evolution of religion or of anything else; whereas, by including in the meaning of the term the second sense as well as the first, we are enabled to grasp the principle which underlies and runs through the

whole evolution of the idea of God.

2. Psychical anthropomorphism. — From this point of view, then, man has always ascribed, and does now ascribe, to Deity thought, emotion, and will. He may originally have worshipped animals, or even stocks and stones, as the fetish-worshipper does; but if he did so, it was because he ascribed to those objects thought, emotion, and will; and the characteristics so ascribed were none the less human because they were ascribed to the deity in a transcendent degree. In the second stage of this evolution, not only did aniconic objects of worship become iconic, not only did pictures and statues of the gods in human form supplement, and more or less drive out, the stocks and stones which were the object of the older cult, but the very concepthe object of the older cult, but the very conception of the god, as it existed in the mind of the worshipper, became more and more definitely human—and did not in the process become more divine, as the example of Ares and Aphrodite in Homer will show. The third stage in the process of evolution is reached when religion comes to denounce the idea that the deity has a body or denounce the idea that the deity has a body or limbs like a man or an animal; but though religion in this stage becomes iconoclastic, and ceases to be anthropomorphic in the narrower of the two senses of the word, it continues to believe, in this stage as in the previous stages, in a personal deity. In this stage of evolution the same impulse that leads religious minds to deny that the deity can be conceived, or ought to be portrayed, as possessing bodily form, also leads to the conclusion that some human virtues cannot be ascribed to a deity: thus it would be degrading, if it were not unmeaning, to ascribe to deity the temperance or the courage which Ares ought to have possessed—the reason being that those qualities, and others of the same kind, imply defects which have to be overcome in the persons of whom they are predicated; and such defects are ex hypothesi excluded from the concept of a perfect being. This line of argument may, however, be continued, apparently in the same direction, until it brings us to a fourth stage in the evolution of the idea of God. It was, indeed, so continued in one of the arguments considered in Cicero's de Natura Deorum (iii. 15), where it is argued that knowledge of good and evil cannot be ascribed to a good God, 'for he who can do no evil requires no such knowledge'; and in the same way reason cannot be ascribed to Him—'shall we assign reason which makes dark things plain? But to a god nothing can be dark.' In modern times the same feeling finds expression in the doctrine that the cause of all things is the Unknowable, to which we are not warranted in ascribing thought, emotion, or will. If we seek so to ascribe them, we land ourselves in self-contradiction. In the interests of clear thinking, therefore, we must abstain from so ascribing them. Power, indeed, must be assigned to this Unknowable cause—but not personality. The anthropomorphism which has characterized religion from the beginning characterizes it to the end. In the progress of human thought, anthropomorphism tends gradually to be sloughed off; at first, indeed, the tendency is to provide the gods more and more definitely and precisely with human limbs and bodies; but that tendency is eventually defeated by its own realization—when fully realized, it becomes intolerable, as it was to Plato, and then is doomed. Next, the tendency is for religion to insist on investing the deity with the mental and moral qualities of man; and that tendency too—on this theory—eventually reveals its own inner and essential self-contradictions. When this, like the previous form of anthropomorphism, comes to be felt untenable and intolerable, religion, in any ordinary sense of the

word, becomes impossible.

3. Origin of anthropomorphism.—Looked at 3. Origin of anthropomorphism.—Looked and from the point of view of evolution, the fate of the belief in anthropomorphism was determined from the beginning. If it is seen in the end to be logically incoherent and impossible, it is so because it has carried within itself the seed of its own destruction from the very beginning. We own destruction from the very beginning. We have only, it is argued, to consider its origin in order to see its want of validity. The tendency to personify objects is exhibited by children-and even by animals—at play. Such personification, indeed, in the case of both children and dogs, may be involuntary and a source of terror; and the terror may be removed when the object personiterror may be removed when the object personified is shown not to be a living thing. The same tendency is shown by the African negro, who, starting out on some business, happens to have his attention arrested by some object, say a bright pebble, and, immediately associating it with the business he is engaged on, picks it up as a fetish, regarding it as a personality which has the power, if properly treated, of understanding what he wants and of giving him assistance. The same tendency to personify objects and to associate them with the fortunes of the man who discovers their personality, will account for the fact that an their personality, will account for the fact that an object thus personified by the father of a family or the most influential member of a clan comes to receive the worship of the whole family or clan, and thus becomes not a personal fetish but a family god or a tribal god; and may possibly survive and eventually become a national god. But the African negro may find out that he gets no assistance from the object he picked up; and then, though he may cast it away as not being really a fetish, still he usually keeps it, even though he pays it no worship, because it may perhaps after all turn out to be an operative fetish. In the same way, amongst the African negroes and elsewhere, we find traces of gods who, though the names and the memory of them linger on, receive no worship, because they are no longer believed to do good or evil. The belief in such gods, and in such fetishes, evidently has a lessening degree of validity; or perhaps it never was really valid at all—its want of validity has was really valid at all—its want or validity has merely grown more and more patent. That is to say, the origin, as well as the history, of the belief shows that it has no validity; the tendency to personify objects—whether objects of sense or objects of thought—which is found in animals and children as well as in savages, is the origin of anthranomorphism which is merile therefore in children as well as in savages, is the origin or anthropomorphism, which is puerile therefore in character as well as in origin. The evolution of the idea of God, on this argument, is simply the process by which a childish error is developed slowly to its fullest extent, and now that its inherent inconsistencies and self-contradictions are coming to be fully recognized, is being cast off. It is a case in which the psychological 'projection of the self' into the world is made the basis of an attempt to explain all things, and is ultimately

found to afford no explanation which is satisfactory,

morally or intellectually, of the not-self.

4. The method of science.—From this point of view, the not-self, the world around us, must be accepted on its own terms, so to speak, and must be studied objectively; we must not make the mistake of assuming it to be a subject, or the expression of a subject's reason or will. We must not assume its ways to be our ways or to be expected by the problem of the problem of the problem of the problem. plicable by them or by analogy with them. We must take them as they are and study them as they are given, without presuppositions and without assumptions. In a word, we must take as our method that of science, the objective method. So we shall escape from the error of foisting on the facts an anthropomorphic explanation which they will not tolerate.

Now, the object of science is to understand the world; and it may fairly be said that any attempt to explain the world assumes the course of the world to be explicable. It is assumed not only that the course of things is or may be to some extent intelligible to the human reason, but also that it is fundamentally rational; every problem that presents itself to science is attacked by science with the firm conviction that there is a solution. Such a problem is a challenge to science; and the challenge is never declined on the ground that the problem is insoluble. The challenge is ever presenting itself; the problems submitted are continually being solved. The course of the world is continually being exhibited by science as more and more intelligible; and science is perpetually being confirmed in its fundamental assumption of the rationality of things. The world becomes daily more and more intelligible, on the assumption that the reason of things and the reason in things is

intelligible to the human reason.

5. Objective rationality.—Are we then to say that science also is anthropomorphic, or are we to deny it? In the one case we shall say that science, like religion, starts from the human reason, and persists in measuring everything by it and interpreting everything in conformity with it. In that case, if we hold that anthropomorphism eventually breaks down in the hands of religion, and proves in the long run to be but a previle and proves in the long run to be but a puerile 'projection of the self' into the external world, then the anthropomorphism of science, its assumption or presumption to read reason—human reason—into things, may, like the anthropomorphism of religion, pass muster for a while, but eventually must be found untenable and intolerable. Indeed, it may be said, science as well as religion has already come to that pass. It is vain to deny the possibility that being may be rational only in a very narrow sphere, and that it might some day turn towards us another side, about which we could build no structure of connected and practical thought' (Höffding, The Problems of Philosophy, p. 114). Not only does the reason in things cover only a very narrow sphere, but its hold on that sphere is wanting in security. 'With the same right with which we reason from the possibility of rational knowledge to a unifying force in Being, we might, apparently, reason to an irrational power in Being, to a cosmological principle that prevented the elements of Being from standing in a rationally determinable relation to one another' (ib. p. 135). If Being is fundamentally irrational, science's explanation of things is purely anthropomorphic. If, on the other hand, the reason which science professes to discover in things is really found there, and not put there, by science, then the reason so found is not human reason; nor does the fact that it is intelligible to man avail to prove that it is human. It is intelligible because it is reason, not because it is human. Science, therefore, in postulating that the world is intelligible to man is not guilty of anthropomorphism; it does not assume that the reason which it strives to understand is human, and it does not make the reason which it finds. But even so—granted, that is, that to some extent, so far as it has gone, science finds in things a reason which it does not put there—the possibility remains that Being may any day turn to us another side, displaying no reason, but irrationality. The possibility indeed remains, but science scouts it or systematically ignores it; or, perhaps we may rather say, faith in science forbids us to acknowledge it. No unsolved problem in science is admitted to be insoluble. In other words, if the rationality of things, so far as it has been discovered by science, is a fact and not an assumption, still it is an assumption so far as it has not yet been discovered. It is not, of course, discredited by the fact that it is an assumption, for we must begin with an assumption—by assuming either that things are or that they are not, or that they partly are and partly are not, rational. And the assumption that things will continue to reveal a reason which, though it is not man's, is intelligible to man, is at any rate harmonious with the discoveries which science has thus far made, even though it be an assumption and an act of faith.

But, granting that we make the assumption and show the faith which science demands, we have only got thus far, viz. that the power which dis-plays itself in things is rational in the sense that it is logical. More, indeed, we could not expect to get than this, for science aims at nothing more: its position is that things are logically comprehensible; its coherence is a logical coherence which it finds in things and does not put into them. Even then, if we take it that reason and logic are possible only to a mind, and that a mind must be selfconscious, the utmost that we can get out of science, or hold to be implied by science, is that there is a self-conscious mind whose power acts logically; and even if we grant that there is nothing anthropomorphic in this,—on the ground that the reason and logic in things are found in them and not imputed to them by science-still the mind or power thus revealed as superhuman is revealed as merely logical. It is distinctly not revealed as moral, or as recking aught of man. Its laws extend to, just as its rain descends on, the unjust and the just alike; and science affords not the slightest ground for holding that the ultimate working of the laws which it discovers favours the just rather than the unjust.

If, then, man can discover and does discover in things a logic and a reason which he does not put there, if the logic and reason so found are objective, and are not created by him, are not images of his own making,—are not, in a word, pieces of anthropo-morphism,—can we go further and discover in man's experience anything else which is similarly given to him and not created by him? The fact that a thing is comprehensible by man is no proof that it is the work of man's reason; if a reason, partially intelligible to man's reason, is found in things by science,—which looks only for logic and reason,—can man and does man, when he looks for more, find more than mere reason? Does science exhaust objectivity, or does the realm of objectivity include other things than reason? Is man's experience of the universe that it discloses reason alone to him? Man's experience has been that he has found something more in it than a reason partially intelligible to him; he has found in it the workings of a power which awakes in him a sense of gratitude, of duty, of awe, and of fear.

But the experience in which these workings of this power are thus disclosed or felt is distinguishable, if not distinct, from the experience, or from

the aspect of experience, of which science is the interpretation or the expression. Whether we term the aspect of experience with which science has to do sense-experience or experience of the physical or the external world, it is, however defined, at any rate marked off from the rest of man's experience, as being but a part and not the whole of human experience. Or, if we go so far as to say there is nothing in human experience which may not be investigated scientifically, we still indicate by the adverb 'scientifically' that the point of view of science is only one point of view, and that the aspect of reality which science confronts is not the only aspect which human experience presents to man. One and the same set of facts, for instance, may be viewed psychologically by science, may be pronounced valid or not valid from the point of view of logic, may be estimated right or wrong from the standpoint of morality, holy or sinful in the eyes of religion. The scientific aspect is not the only aspect of our experience. The scientific is not

the whole account of that experience.

6. Ethical qualities.—If, then, the reason which science finds in things is not the creation of science, is not made after the image of human reason, and is not put into things by science, but is found in them and is found to be partially intelligible to man, then the same experience, which when studied by science reveals a reason which is not man's, may, when regarded in its entirety, or even when regarded from other points of view than that of science, reveal yet other aspects of that reason in things which is studied by science. If that power when studied by science is seen more and more clearly, the more it is studied, to be rational and self-consistent, it may, when regarded from other points of view, disclose other aspects than that of logical rationality. It may disclose ethical qualities. It may disclose qualities, in the apprehension of which by the heart, and not merely by the in-tellect, religion consists. Whether it does, as a matter of objective fact, disclose such qualities is not the question now before us for discussion. The point is that, in thus interrogating experience, we are no more guilty of anthropomorphism than is science when it interrogates experience. The question, in the case both of religion and of science, is what experience discloses when interrogated. Science discovers in things the operations of a reason which is not human reason; religion discovers in the experience of man the operations of a power whose ways are not the ways of man. Above all, religion discovers the operations of a personal power. The personality of that power is only partially disclosed in those of its operations with which science concerns itself; and it is disclosed only partially, because science is concerned with only a partial aspect of its operations. Even when we attempt to view its operations from a more comprehensive point of view than science pretends to offer, the conception we then form of it is, doubtless, shaped to some extent by our human limitations, and may be, nay, has been, generally distorted by those limitations. Of course, every apprehension must, to whatever extent, be so shaped, but it does not follow from this that nothing is apprehended. A follow from this that nothing is apprehended. A thing to be misapprehended, even, must be apprehended; and, to be apprehended, it must be there. Will it, then, be said: Granting heartily that it must be there, still it can be apprehended only by being anthropomorphized? The statement, then, is, first, that the power is not personal or spiritual; and next, that, owing to the infirmity of the human mind, it can only appear, or be conceived, as personal. In other words, the religious experience of God as a person is alleged to be not experience, but an interpretation of experience—a false interpretaan interpretation of experience—a false interpretation, and an interpretation which, from the nature

of the case, must be false. What, then, are the grounds on which we can say,  $\alpha$  priori, that this interpretation, if it is an interpretation, must be false? They can only be that we know something which proves that it is false; that we know, to start with, that the power is not personal. But that is precisely what we do not know; that is precisely the point which is at issue. The allegation, on the one side, is that in religious experience God is known as personal. If, on the other side, that is denied, then the dispute is as to the nature of religious experience, and the dispute can be settled only by reference to that experience; it cannot be settled by assuming the point at issue, by begging the question. The question, then, becomes whether the personality of God is a fact of experience, or an inference-possibly a false inferencefrom experience. Now, those who have not had a given experience—for instance, a blind man who has not had experience of colour—are, obviously, on unsafe ground if they allege that other people have not had that experience, e.g., of colour, but have had some other experience, e.g., such as touch, which the blind man also enjoys, and from it have drawn the inference that they see. No blind man is, of course, so foolish as to argue in this way. He accepts the fact that sighted persons are blessed with an experience which he has not; he may be unable to form any idea of what the sensation of colour is, but he does not make his incapacity a reason for disbelief, or for arguing that sight is not an experience, but an inference—a false inference —from experience.

7. Testimony of experience. — We are, then, thrown back upon the necessity of interrogating experience, of asking what is found there. who is not accustomed to a microscope will not see what is undoubtedly to be seen through it; and we cannot accept the fact that he sees nothing as proof that nothing is to be seen. So, too, in the interrogation of religious experience we must accept what is found there, and not deny that it is objectively there because some of us fail to see it. The position that religion rests on the existence of God as a fact given in experience, and not reached by a process of inference, which may or may not be correct, is a position which this article assumes and has not to prove; here we have to consider simply in what sense, if any, religion is anthropomorphic. Now it is undeniable that the existence and the personality of God may be, and in many or most of the stages of religious development have been, anthropomorphized: He has been pictured in human form, as indeed also in animal form; and, even when this misrepresentation has been cast aside, He has been depicted as having passions which are specifically human. But though this is perfectly true, it is equally true, and philosophically more important, that this process of anthropomorphism has also been combated by the highest religious minds as incompatible with the personality of God as revealed in the religious consciousness; and its incompatibility, when thus pointed out, has been recognized by others as true to the facts of that religious consciousness. Thus, as a mere matter of historic fact, it appears that anthropomorphism has been, and is recognized to be, a limit and a hindrance to the comprehension and realization of the personality of God as revealed in the religious consciousness. That being so, the attempt to exhibit anthropomorphism as 'a producing condition of this Personality' is manifestly at variance with the facts; it is not a producing condition, but a distortion of the personality of That the distortion should be greatest in the least mature minds and the lowest forms of religion is a point which it is easy to recognize, and the recognition of which is compatible with-

indeed assumes—the recognition that there is something there to start with which can be distorted, that is to say, anthropomorphized. That misinterpretation precedes recognition of the facts as they really are is illustrated by the history of science quite as fully as by the history of religion. But that the facts were not there, at the beginning, to be recognized is a position which neither science nor religion can take up. If it be said that science, starting from things as they appeared to the mind of primitive man, has eventually come back to pronounce them very different from what they then appeared, it is also true that some of the things are discovered to have been really facts by the science which eventually discerns their right relations. So, too, the growth of religion would have been impossible if there had not been at least one fact the personality of God—which it not merely started from, but to which it constantly returns, and in which, properly understood, it finds its constant touchstone of truth. From this point of view, the proper understanding of the personality of God is a test of religious truth; and that personality is not properly understood so long as it is interpreted on the analogy of human personality-so long, that is, as it is interpreted anthropomorphically. So long as it is thus interpreted, or rather misinterpreted, the limitations of the finite are necessarily, and self-contradictorily, imposed on the Infinite. Escape from the self-contradiction is possible only so far as we reverse the process, and recognize, with Lotze, that 'perfect Personality is in God only; to all finite minds there is allotted but a pale copy thereof.' When that is recognized, anthropomorphism is seen for what it is—a misinterpretation of what is given in consciousness, leading necessarily, if slowly, to the assertion that God is not revealed in consciousness for what He is, but is given either for what He is not—the Unknowable or is not given at all.

It may perhaps be said that human knowledge, to be human, must be contained in human minds. and, being so contained, it must be shaped by that which contains it; in fine, that in admitting it to be human we are asserting it to be anthropomorphic; in denying it to be anthropomorphic we are denying that it can be known to man. Thus, whatever knowledge is poured into human minds must be shaped by the mould into which it is poured, and so must be anthropomorphic. But this argument seems to assume both that the mould is shaped before anything is poured into it, and that the shape is purely human. It fails to consider the possibility that the vessel is plastic, and may be shaped in part by that which is put into it; and that consequently, even if the vessel is human, it may take a form more or less divine, if that which informs it be divine. It tacitly assumes that man makes God in his own image; or, at any rate, that man cannot possibly, under any circumstance of inspiration or aspiration, mould himself on the image of God: all he can do is to make God in his own image. But the assumption that man can shape the facts with which he comes in contact, but cannot in the least be shaped by them, is one which will scarcely bear examination. The facts cannot, of course, shape him if they are unsubstantial. But if they are unsubstantial, neither can he shape them. Scepticism at once emerges from this line of argument; it starts by crying of the facts, 'They are naught! And as long as it continues to do so, it is condemned to immo-

But if we use the metaphor of the vessel,—whether it be a vessel of clay or of skin, whether it shapes or is shaped—we should remember that it is a metaphor; and if we cannot speak without metaphors, we may at least vary them. We speak

of rising above ourselves, and a fact, fortunately, is expressed thereby; in morality and in religion we may rise above ourselves, even as, from the metaphysical point of view, we may 'transcend self.' These facts, or rather the metaphorical expression of them, may serve to remind us that we do not merely receive facts and shape them into our own likeness, but that we go forth into a world of reality and there encounter things which we have not made, which are not in our likeness, but

on which we may model ourselves.

8. Testimony of feeling.—We have considered the question of anthropomorphism thus far, rather from the point of view of knowledge than of feeling. But no answer will afford permanent satisfaction which appeals to knowledge only and not to feeling. Practically, the question is one of feeling rather than of knowledge; it is: Are we to doubt the goodness and love of God, and to suppose that it is by the fallacy of anthropomorphism that we ascribe them to Him? To that question the only answer is that we do not doubt God's love; we know it. But the 'knowledge' is not purely or primarily or essentially intellectual; and if it be said that then His love is not a matter of knowledge but of feeling, the simple and sufficient reply is: How else is love to be known? If it were a matter of knowledge, it might be a matter of inference; and the inference would be subject to examination, and therefore to doubt. It might be represented as an inference from the love of man for God, and so as anthropomorphic, as a human quality ascribed to Him. But an essential quality of it-without which it would not be what it is -is that it is experienced as His, and not as something which remains as it is, whether ascribed to Him or not. As a fact of experience, it must be accepted on the evidence of those who experience it, that our love is a response to His, and that it is His which calls forth ours. It is so felt. Beyond that, or behind it, it does not seem possible to go. Feelings, after all, are facts.

9. Testimony of action.—Feeling and knowledge issue in action. Omniscient love must, from the religious point of view, be the source from which all God's actions flow. From the religious point of view, therefore, nothing can be ascribed to Him save that which issues from such a source. Human actions, on the other hand, have other springs; and anthropomorphism is exhibited when actions are ascribed to God, or to the gods, which cannot without self-contradiction be imputed to a love that is omniscient. Human actions proceeding from human passions are essentially characteristic of anthropomorphism—more essentially indeed than are human parts. The gods of Greece were as anthropomorphic in their passions and actions as in their forms; and only in their forms were they typical of human beings at their best. The cowardice of Ares, the incontinence of Aphrodite, the lusts of Zeus, were doubtless a bequest to Greek civilization from barbarous or savage times; and they were a damnosa hereditas. If the bequest was not rejected but tolerated, with more or less acquiescence, by most of those who were born to it, the reason doubtless was that the philosophy summed up in the sentence, 'Man is the measure of all things'—πάντων μέτρον ἄνθρωπος—was characteristically Greek: even the gods were made in man's image, and they did not do credit to it. Xenophanes spoke bitterly when he said that the gods of men were anthropomorphic, just as the gods of animals, if animals believed in gods, would be theriomorphic. He failed to note, apparently, that anthropomorphic gods do not always even stay anthropomorphic, but revert to theriomorphism and to bestial conduct. Where a plurality of gods is believed in, the gods are necessarily conceived as objects, as items in the world of objects, and there-

fore as limited and circumscribed in their action and reaction. The action of any one of them is liable to be frustrated by the action of the rest; and behind and over-topping them all there tends to rise the vague figure of destiny or fate, to which all are subject; omnipotence cannot remain in the hands of any anthropomorphic god. If anthropo-morphism were a fallacy which infected religion alone, the position of those who see in religion nothing but that fallacy would be stronger than it is. On reflexion, however, it is manifest that science, as well as religion, has had that fallacy to contend with; in the animistic period of man's history, the tendency is to account for the action and behaviour of all—even inanimate—things by the assumption that their action is anthropomorphic, and to influence their behaviour by proceedings based on that assumption. Only when that assumption is discredited or ignored does it become possible to study the interaction of things scientifically-rerum cognoscere causas-to discover in them a reason not modelled on man's, though intelligible to it, provided that we reject the fallacy of anthropomorphizing their action. Religion, also, as well as science, has to throw off the fallacious tendency to anthropomorphize God's action. Polytheism is rendered by its very structure incapable of rejecting the fallacy. Monotheism escapes from it only by degrees; not only is vengeance the Lord's, but the worshipper may pray Him of His goodness to 'slay mine enemies.' The tendency to assume that God's ways are as our ways is the essence of anthropomorphism. To yield to the tendency and to follow it out to its logical extreme is to make God after man's own image. Science, by studying its facts objectively, succeeds in escaping from anthropomorphism. Religion succeeds in making the same escape only where it similarly renounces the a priori method of interpreting God's action, and further renounces the desire to utilize it as a means to making man's will be done. Religion rises for the first time clear of anthropomorphism when the prayer goes up from the heart, 'Thy will be done.' Then, and not till then, does the will of God become a fact presented to the religious consciousness, a fact which for the religious mind possesses as much objectivity as for the scientific mind do the facts studied by science, and for the non-religious mind is as meaningless as for the non-mathematical mind a mathematical formula is. The difference may be illustrated by contrasting the petition, 'Slay mine enemies,' with the command to love our enemies: the former is properly addressed to an anthropomorphic god; the latter could only proceed from a very God, and be accepted as of objective validity only by a religious mind. The fact that religion is not anthropomorphic is shown by the way in which the Christian revelation set as ideals before mankind lines of action (such as humility, love of enemies) which were paradoxical and foolish in the eyes of the world, though wise to those who had eyes to see. And the motives suggested were to do God's will, to be like unto Him, to be pure even as He. Should it be objected that validity is accorded even by non-religious minds to the precept of loving our enemies, we may use another illustration: the command to give your coat also to him who takes your cloke is one which cannot be justified on the principles of any non-religious system of ethics, and is one which is not accepted as valid by common sense: it is one which no anthropomorphic deity could self-consistently enunciate. The words in which the command is couched are, of course, intelligible to all; the value of the command is for the nonreligious mind naught; only for him to whom it is revealed as God's will, as the course of action which will be followed by him so far as God's will operates through him, does it become an objective fact possessing the same objectivity for him that fact possessing the same objectivity for him that the facts of science have for the scientific mind. It is not that the same thing is presented to the religious and the non-religious mind and produces different effects in the two cases: it is that the will of God is accepted by the one and rejected by the other, and that for him who accepts it all things become new—God is no longer anthropothings become new—God is no longer anthropomorphic. To allege that religion is necessarily belief in an anthropomorphic god is to close our eyes to the fact that the point on which the fate of practical religion turns is whether God's will shall be done or man's. In the one case God—if a God be believed in — is anthropomorphized; in the other, man is conformed to God. If he be so conformed, God's will acts in him and through him. So far as he is thus conformed, God's kingdom comes, His will is done. It is in his action, when it is directed to doing God's will, that man shows likest God.

10. In conclusion, the view that religion is anthrocomorphic seems to be based on an assumption, viz. that reason and love, because they occur in man, are limited to man. If that assumption be conceded, then it necessarily follows that to find reason and love elsewhere is a piece of pure anthro-pomorphism; the reason and love thus projected pomorphism; the reason and love thus projected on to the clouds are, ex hypothesi, merely phantas-magoric, whether they be the reason proclaimed by science or the love proclaimed by religion. The reason thus projected is human reason; the love, human love. We may have soared for a while into the clouds, but the string of anthropomorphism all the time was round our feat and brings us head to the time was round our feet, and brings us back to the facts we started from,—there they are just as they were when we started. We never have got clear of human limitations, never have lost ourselves in the Divine Love. We may have lost sight of self; but we come down to earth, and recognize that it was the self who imagined that self was transcended or lost. We have simply seen ourselves, our form, our human form, projected on to the clouds. Yet, after all, it is merely an assumption—and not the only possible assumption—that reason and love, because they occur in man, are limited to man. It may equally well be that reason and love are not limited to man, but revealed to him. And the question then becomes one of fact whether the question then becomes one of fact, whether such revelation is experienced. As a question of fact and of feeling, it can be answered only by experience and with reference to the experience. Those who have not the experience must make some assumption with regard to it; those who have it need make none. Experience excludes hypothesis.

hypothesis.

Coe, 'Necessity and Limitations of Anthropomorphism' in New World, viii. (1899) p. 447.

ANTICHRIST.—I. The name dvrlxpurros occurs for the first time in *Christian* literature (1 Jn 222 43, 2 Jn 7). The ideas which are associated with this name, in particular the conception of a God-opposing tyrant and ruler of the last times, reach opposing tyrant and ruler of the last times, reach back with certainty to the most flourishing period of Jewish Apocalyptic literature. It is most likely that they have their deeper roots not in definite historical phenomena and experiences, but in a

mythological and speculative idea, namely, the idea of the battle of God with the devil at the end of the world.

of the world.

This conception seems to have arisen in the Persian eschatology (the battle of Ahura Mazda with Angra Mainyu; cf. Bousset, Rel. Judnetumes, 854 ft.), and to have penetrated from this source into the Jewish Apocalyptic literature. The opposition between God and the devil, who is introduced under the names Beháap, cravava, bidboks, wreipa åepov, is the chief of the leading ideas of the Jewish source of the Testaments of the Twelve Patriarchs, which undoubtedly arose in the Maccabaan period. Even here Beliar appears as the enemy of the last times. It is said of the Messiah (Levi 1812) 'And Beliar will be bound by Him, and He will give His children power to trample on the evil spirits.' In the same way, the description of the last great battle in Assump. Mos. (102) begins as follows: 'And then will His (God's) rule over all creatures be manifest, then will the devil be brought to naught.' The same thought is also to be found in the Gospels (Mt 1228, Lk 1120, Jn 1231 1420 1611; cf. Rev 1226: 1316. 1613 2012. 7-10; Bousset, Rel. d. Judentums? 283 ff., 383 ff.).

It is very likely that 'Antichrist' is originally nothing else than the incarrate devil, and that the idea of the battle of God with a human opponent, in which all devilish wickedness would become incarnate, arose under the influence of definite historical conditions.

historical conditions.

2. In fact it is very probable that the roots of the conception of Antichrist are even more wide-spread. We shall have to assume that the idea of

spread. We shall have to assume that the idea of the battle of God with the devil was closely interwoven with related mythological funcies regarding the battle of God with a dragon-like monster.

Traces of these ideas, which probably take their rise from the Babylonian battle of Marduk with Tiamst, are already to be tound in all parts of the OT (of. Gunkel, Schöpfung und Chaos, 1885). In this way the figure of the devil and the dragon-like monster of chaos are combined into one (of. Rev 12). Thus we need not be surprised if the figure of the devil incarnate, the figure of Antichrist, here and there bears distinct traces of the features of that mythical monster, and manifests a ghostly superhuman character which cannot possibly be explained from the definite historical situations of the separate predictions. Thus even in Dn 8 the figure of Antichus IV. is depicted with the superhuman features of the monster, where we read that the little horn raised itself against the host of heaven and cast down some of them to the ground. In the same way Pompey in the song of triumph over his death (Ps. Sol. 2) is described as the dragon of Chaos, whom God destroyed because he rose up against Him. It is also a significant fact that Antichrist in series of later passages receives the name which in the older

dragon of Chaos, whom God destroyed because he rose up against Him. It is also a significant fact that Antichrist in a series of later passages receives the name which in the older sources (Test. Patr., etc.) was applied to the devil—Beliar (acc. to Fs 185 in all probability originally a god of the under world); cf. 2 Co 6<sup>15</sup> (f) Ascens. Is. 4<sup>22</sup>, Stbyll. ii. 63 ft., ii. 167.

3. The idea of Antichrist itself can be traced back to the 2nd cent. B.C., and appears first of all in the Book of Daniel, which belongs to the Maccabæan age. The historical figure whose features have in the first place been attributed to Antichrist is the Syrian king Antiochus IV. Epiphanes, the persecutor of the Jews. In particular, the representations of Dn 78. 19-25 89-12 1121-25 have been of lasting influence. That Antichrist ('the king of the North,'1140) will appear as a mighty king with great armies, that he will destroy three kings (the 'three horns,' 78. 25), that Edomites, Moabites, and Ammonites are to be spared by him (1141), that Libyans and Cushites will follow in his train (1143), that he will persecute the saints (728), (1141), that Libyans and Cushites will follow in his train (1142), that he will persecute the saints (725), that he will reign  $3\frac{1}{2}$  years (725 etc.), and that he will set up in the Temple the 'abomination of desolation' ( $\beta\delta\delta\delta\lambda\nu\gamma\mu\alpha$   $\tau\eta\hat{s}$   $\delta\rho\eta\mu\omega\hat{s}\sigma\delta\omega$ ,  $8^{18}$   $9^{27}$   $12^{11}$ )—all this belongs, from this time onward, to the standing requirements of the Antichrist legend. The end predicted by 'Daniel' did not come, but his book received a place in the canon: and thus the faithful received a place in the canon; and thus the faithful still expected the fulfilment of his predictions in the future, and handed them on from generation to generation. In this process the figure of 'Antichrist' came to be separated from the historical figure of Antiochus IV., and became the type of the God-opposing tyrant who was discovered now in this and now in that historical character.

To the author of the Paalms of Solomon, it is Pompey, the captor of Jerusalem, the blasphemer of the sanctuary of God, that is the Divine adversary, the 'dragon' of the last times; and his destruction is celebrated in triumphant strains by the writer as a great act of his God (2<sup>262</sup>). In the Assumption of Moses (ch. 8) a remarkable prophetic picture of the cruel tyrant is

outlined; and, if minutely examined, it seems to be a figure possessing the mixed features of Antiochus Epiphanes and Herod the Great.

In the Roman period the character of the Emperor Caligula (A.D. 37-41) influenced the history of the legend. The fearful time of anxiety, when Caligula, embittered by the revolt of the Jews at Jamnia, gave the order to the governor Petronius to erect his statue in the Temple, recalled afresh the prediction of Daniel. The prediction regarding the \$8\$\tilde{e}\t

4. Christianity took over from Judaism this whole cycle of ideas, and we meet numerous traces of these conceptions in the NT. In the eschatological chapters (Mk 13, Mt 24) we have in all likelihood, as has already been indicated, a in all likelihood, as has already been indicated, a small apocalypse of Antichrist, interwoven with words of Jesus, if we are entitled to interpret the βδέλυγμα τῆς ἐρημώσεως (Mt 24<sup>15</sup>, Mk 13<sup>14</sup>), which stands in the holy place, in terms of 2 Thess 2<sup>4</sup>. In particular, the predictions of the Revelation of John borrow their fundamental tone from the fancies regarding Antichrist. The eleventh chapter, with its prediction of the beast rising from the abyss (a mythical idea), who, as a hostile tyrant, sur-(a mythical idea), who, as a hostile tyrant, surrounded by great armies, appears in Jerusalem and kills the witnesses of God, is entirely on the lines of Jewish Apocalyptic prophecy. Finally, if the beast, who is called up by the devil (Rev 13<sup>12</sup>), and who rises out of the sea, is regarded as indicating the Roman empire, or more particularly a Roman ruler, we have here, too, the character of

koman ruler, we have here, too, the character of the Antichrist, the God-opposing tyrant, preserved.

5. A strongly marked transformation of the whole idea, from a specifically Christian standpoint, is indicated by the discussion in 2 Th 2, which the present writer, in spite of renewed and energetic opposition on the part of Wrede (TU, new ser. lx.2), prefers to ascribe to St. Paul himself. Certainly here, too, the figure which controls the Jewish Apocalyptic thought forms the funda-Jewish Apocalyptic thought forms the fundamental conception, as is proved by the names (2<sup>3L</sup>) δ ἀνθρωπος τῆς ἀνομίας (perhaps Beliar; cf. the OT ½½½¬½), δ ἀντικείμενος, as well as by the play upon Dn 11<sup>36</sup>, which is found here. But, on the other hand, the Antichrist is no longer the God-opposing tyrant, but a seductive agency, which works by signs and wonders, and seeks to obtain Divine worship. Antichrist here is a false Messiah, a prophet who, it is assumed, will call forth the faith of those Jews who have rejected the true Messiah (2<sup>10-12</sup>). At the same time the idea is raised still further into the realm of the superhuman (24, αποδεικνύντα έαυτόν, ότι έστιν θεόs). Accordingly, this false Messiah is now for the first time in a real and proper sense regarded as the opponent of the true Messiah. By means of the latter his destruction shall be accomplished, and this is described in 2<sup>8</sup> in the words of Is 11<sup>4</sup> (καὶ ἐν πνεύματι διὰ χειλέων ἀνελεῖ ἀσεβῆ. . . . The Targum on the passage, too, interprets the 'lawless one' as Antichrist). A remarkably puzzling trait is the 'sitting' of the  $d\nu\theta\rho\omega\pi\sigma\sigma$   $\tau\eta$ s  $d\nu\sigma\mu\omega\sigma$  in the temple of God—probably, as we saw above, a reminiscence from the time of Caligula. But this trait also fits into the new comprehensive picture of the seductive personality. If, finally, the enigmatic reference to a power which still keeps the appearance of Antichrist in check (τὸ κατέχου, ὁ κατέχων) be correctly interpreted as referring to the | tion of Jerusalem [?]; καὶ ἐκ τοῦ αἴματος τῶν μαρτύρων Roman empire, then the separation of the idea of Ιησοῦ is a later addition). In the 5th Sibylline, which

Antichrist from the political tendency, which up to this time adhered to it, comes more clearly to the front. Accordingly the significant change, which 2 Thess. has effected in the idea of Antichrist, consists in this, that here out of the God-opposing tyrant the seductive adversary of the last times has been developed, so that, while the original idea led to the proclamation of the Roman empire or of a Roman emperor as Antichrist (Revelation of John), here the figure of the drivetheros obtains a non-political, purely ideal signification. In this process of re-moulding, which has become of world-wide historical importance, the genius of St. Paul is in all worldshiller manifested or in any case the all probability manifested, or in any case the genius of youthful Christianity, freeing itself from Judaism and placing its foot in the world of the Roman empire.

This new conception seems to have found acceptance in wide-spread Christian circles. of the Fourth Gospel, too, appears to give expression to the thought that the Jews, because they have not believed on the true Christ, who was sent of God, will place their faith in the false Messiah, who will come forward in his own name (542). From this point of view we are enabled to understand how, in the *Epistles of John*, Antichrist is connected with false teaching (1 Jn 2<sup>18.22</sup> 4<sup>3</sup>, 2 Jn 7), and how in general the appearance of false teaching is thought of as one of the signs of the last time as the crowning point of Satanic malice (1 Ti 41,

2 Ti 3<sup>1</sup>, 2 P 3<sup>3</sup>).

2 Ti 3', 2 P 3').

The Διδαχὴ τῶν ιβ' ἀποστόλων, 16', in its description of Antichrist, manifestly borrows from 2 Th. (καὶ τότε φανήσεται ὁ κοσμοπάνος ὡς νίὸς τοῦ θεοῦ καὶ ποιεῖ σημεῖα καὶ τέρατα). In the Christian Sibyllines, iii. 63 fl., probably of a late date (cf. Bousset, art. 'Sibyllen' in PRE 3), in the conception of which the figure of Simon Magus has been influential, 'Beliar' is in the first place a wonder-worker endowed with Satanic powers. In fact, even the author of the Revelation of John has paid his tribute to the new conception! In the second beast, which comes from the land (ch. 13), he has introduced into his prediction the figure of the anti-Christian false prophet (16'13 1920), who performs signs and wonders to seduce the world. Of course he could not give the latter any independent significance; so he made it the servant and assistant of the first beast, the anti-Christian Roman empire (Bousset, Kom. zur Offenbar. Joh., ad loc.).

6. But this anti-Jewish conception, which corre-

6. But this anti-Jewish conception, which corresponded better with the position of Christianity in the Roman State, was prevented from obtaining exclusive predominance in the Christian tradi-tion. This was due to the acceptance in wide circles of a remarkable combination of the Antichrist legend with the popular expectation of the return of Nero, prevalent originally among the heathen classes. Not long after the death of Nero, the rumour arose that he was not dead, but was still alive, or that after his death he would re-appear (Sueton. *Nero*, 57; Tacitus, *Hist.* ii. 8). As Nero had stood in friendly relations to the Parthians in his lifetime (Sueton. 47, 57), the report was now circulated that he had fled to them, and would return with a Parthian army to take vengeance on Rome. Deceivers made use of the rumour to appear under the mask of Nero. Such an one came forward as early as the year A.D. 69, under Otho (Galba) (Tacitus, *Hist.* ii. 8-9; Dio Cassius, lxiv. 9; Zonaras, xi. 15), and a second appeared under Titus aras, xi. 15), and a second appeared under litus (Zonaras, xi. 12; probably also Sueton. 57). Even in 100 A.D. the belief that Nero was still alive was held by many (cf. Bousset, Com. 26), 411 ff.; Charles, Ascension of Isaiah, lvii ff.). This popular heathen belief was now adopted first of all by the Jewish Apocalyptic writers. While the author of the 4th (Jewish) Sibylline (79 A.D.) takes it over simply without any special tendency (iv. 137-139), the author of the (Jewish?) original basis of Rev 17 (Bousset, 414-415) expects the return of Nero with Bousset, 414-415) expects the return of Nero with the Parthians to take vengeance on Rome, because she had shed the blood of the saints (17<sup>6</sup>, destrucfor the most part (with the exception of vv. 1-51) was written by a Jewish writer at the end of the 1st cent. (J. Geffcken, 'Komp. u. Entstehungszeit der Orac. Sibyll.,' TU, new ser. viii. 1, p. 22 ff.), the subject of the return of Nero is mentioned by the author no fewer than three times (137-154, 214-227, 361-385). Here the figure of Nero is already distorted into a ghostly demon; his return and the terrible war, which will then convulse the world, will be the beginning of the last end. The Christian as well as the Jewish Apocalyptic thought took possession of the Nero legend, and on this soil the figure of the returning Nero was quite identified with that of Antichrist. Then we have to take into account the additional circumstance that the longer the period from the death of Nero became, the less could a simple return of the *living* Nero be expected, and the more did the expectation of his return from the under world grow. In this way, too, his figure became more and more hellish and ghostly: the relation to the Parthians is lost sight of, and instead of an adversary of Rome he becomes an opponent of God and Christ.

an opponent of God and Christ.

In particular, this is the form taken by the legend of Nero in the mind of the final redactor of the Book of Revelation, who composed ch. 13 in comparative independence, and in ch. 17 (see above) worked over a more ancient document. Here Nero is the beast that rises out of the abyss (178), which was, is not, and again shall be, in order that it may go into perdition (171); he is 'the head as it had been slain' (183-14), the cruel adversary of the Lamb; and so both are indicated by the same phrase as dropeypero(n); he is the tyrant who receives worship over the whole earth (184-8, etc.), and the terrible opponent of the Lamb in the last great decisive battle (1714 1919x). Without doubt the 'number of the beast' (1318) refers to him (according to the great majority of manuscripts, 666-ndp | 101; the other reading, however, leads to the Latin form: 616-ndp | 101.

In the small apocalypse in the Ascens. Is. 318b-

In the small apocalypse in the Ascens. Is. 318b-418, which dates from the second, or perhaps only from the third, decade of the 2nd cent. (Harnack, Chronol. der altchristl. Lit. i. 573), we clearly see the final combination of two figures originally quite foreign to each other, when we read that Beliar, the king of this world, will descend from the firmament in the form of a man, descend from the firmament in the form of a man, who is depicted as the matricidal tyrant Nero. The beginning of the 5th Sibylline (vv. 1-51), too, probably a Jewish composition inserted by the redactor in the time of Marcus Aurelius, identifies Nero with the figure of Antichrist (vv. 28-34; εἶτ' ἀνακάμψει ἰσάζον θεῷ αὐτόν). In the 8th Sibylline (viii. 68 ff., 140 ff., 151 ff.), which dates from the period immediately preceding the death of Marcus Aurelius, only faint reminiscences are to be found. But Victorinus of Pettan, who wrote his Com. But Victorinus of Pettau, who wrote his Com. on the Revelation in the age of Diocletian, still knows the relation of the writing to the legend of Nero (Bousset, 53 ff.). The apologist Commodian, who probably did not write his Carmen apologeticum till the beginning of the 4th cent. (A. Harnack, Chronol. ii. 433-442), is acquainted with two figures of Antichrist, one of which he still identifies with Nero rediments.

identifies with Nero redivivus.

7. But even in the 2nd cent. the legend of Nero lost its influence on the minds of men, and in the same degree the anti-Jewish conception, borrowed from 2 Thess. 2, which was free from historical and political limitations, gained the upper hand. On the ground of exegetical combinations, in partithe ground or exegencial combinations, in particular, under the influence of a renewed use of the predictions of Daniel, and by the help of other traditions—here the combination with the idea of a world-conflagration, which also in all probability arose from the Persian apocalyptic, is specially to be mentioned—the conception was filled out in detail and continued to arbibit in all its particular. detail, and continued to exhibit in all its particulars

Antichrist is to come from the tribe of Dan (cf. Rev 75; also Bousset, p. 282). He shall appear in Jerusalem as a mighty ruler, subdue three rulers, assemble the armies of the world around him, perform signs and wonders, and demand Divine worship. Elijah and Enoch, who both appear as witnesses

against him, shall be subdued and slain. The Jews shall believe on him, and he shall rebuild the Temple. He shall persecute those among the Jews who refuse him their faith. These, however, shall be saved by a miraculous interference of God (the angel). He will put his seal upon his faithful, so that only he who bears this seal shall be free to buy and sell (cf. Rev 13<sup>18</sup>C). Finally, the famine of the last times shall overtake him, from which he will not be able to save his followers; then at the last he shall be subdued and destroyed by Christ, and the general configuration follows. These are the ever recurring features of this picture of the future, which continues to persist throughout the centuries (cf. for the proofs in detail, Bousset, Antichrist).

The same ideas are already to be found in broad outline in the eschatological portions of Ireneus (adv. Horsess, v.), and in Hippolytus (de Antichristo and Com. on Daniel). In times of political excitement during the course of the following centuries, men always turned afresh to the prophecy change, and special historical prophecies come to the front, but in the background the prediction of Antichrist, connected with no definite ime, remains pretty much unchanged. Thus we find in the beginning of the Testamentum Domini, lately edited by Rahmani, an apocalypse of the time of Decius, although it has undergone a later redaction (Harnack, Ohronol. ii. 514 fl.). In this work the description of the external appearance of Antichrists is of interest (cf. also the Copitic and the Jewish Apocalypse of Etijah, which is preserved to us in Hebrew, and in which, if Buttenwisser's conjectures (Eine heb Ethasapokallypse, Leipzig, 1897) are correct, Odhænat of Palmyra appears as Antichrist. In the same period arose undoubtedly the prophecy of the 18th Sibylline, which ends in a glorification of Odhænat, but does not belong to the Antichrist passages in the 3rd Sibylline, which has period arose undoubtedly the prophecy of the 18th Sibylline, which ends in a glorification of Odh

Sibylline, which appears in various editions and revisions of the Middle Ages, goes back to an original document which was composed in the original document which was composed in the 4th century. Since Basset published a 'Wisdom of the Sibyl' (Les Apocryphes éthiopiennes, x.) from Ethiopic and Arabic sources, which in itself is closely connected with the Tiburtina, but is enlarged by predictions which go down to the date of the sons of Harun al-Rashid, it has become still more easy to re-construct the original of the old Tiburtina. This Sibylline, dating from the 4th cent., and celebrating the Emperor Constans as the last ruler, is of importance, because in it occurs for the first time the prophecy regarding the last emperor, who, before the advent regarding the last emperor, who, before the advent of Antichrist, shall obtain dominion over the whole world, and at the end of his reign shall march to Jerusalem and lay down his crown on Golgotha. From this time onwards the last ruler of the world before Antichrist becomes a standing requisite of the legend. In the treatise on Antichrist preserved in Latin under the name of Ephraim (Isidore), which probably dates from the 4th cent., and which has been published by Caspari (*Briefe und Abhandlungen*, 1890, pp. 208 ff., 429 ff.), this change in the legend is also already indicated: 'Christian-

orum imperium traditur Deo et patri' (ch. 5).

There are, besides, quite a number of writings on Antichrist which have been handed down to us under Ephraim's name, as, e.g., a λόγος εἰς τὴν παρουσίαν τοῦ κυρίου καὶ περὶ συνταλείας τοῦ κόμου καὶ εἰς τὴν παρουσίαν τοῦ λόγτιχρίστου (Assemani, ii. 222-230, iii. 134-143; related treatises are to be found among

Ephraim's works in Bousset, Antichrist, 23f.); further, a Syrian homily (Th. J. Lamy, iii. 18f ff.), which—it is true—in its present redaction predicts the rising of Islām. Closely related to the Greek Ephraim are the mepi rijs overekeias rov koapov of pseudo-Hippolytus and a pseudo-Johannine Apocalypse (Tischendorf, Apocalypse apoortypks). The fifteenth Catechesis of Cyril of Jerusalem should also be mentioned here.

9. Antichrist Apocalypses flourished again in the age of Islām. In the very beginning of it we meet with the most curious and notable of these prophetic books, viz. the *pseudo-Methodius*, which is extant in no fewer than three Greek recensions, a Latin translation, and various Greek and Latin redactions (the original Greek text is found in Istrin [see below], the Latin text in Sackur, op. cit.). Here the emperor of the future, who shall miraculously wake out of sleep, overcome Islām, and obtain the dominion of the world, has already become the most striking figure in the picture of the future. Then a number of Byzantine

already become the most striking figure in the picture of the future. Then a number of Byzantine prophecies, which accompany the reigns of the Byzantine emperors and their fates, are influenced by pseudo-Methodius.

One prophetic composition, written in verse and adorned with pictures, which is ascribed to Leo vi. the philosopher (Migne, Patrol. Graza, cvii. 1121 ff.), predicts, e.g., the fall of the house of the Comnent, and celebrates the emperor of the future, who, waking miraculously from the sleep of death, shall rise out of his grave. The legend of the sleeping emperor of the future is everywhere closely interwoven with the tradition of Antichrist. We possess, further, a Greek prophecy associated with the name of Daniel (alongside of a probably more ancient Armenian Daniel-apocalypse, Bousset, Antichrist, 41 ff.), which, in the period of the Latin empire, predicts the restoration of the Greek rule (Bousset, Ztschr. f. Kirchengesch. xx. 239 f.).

In the regions of the East which were ruled over by Islām, the age of Islām and the Crusades was exceedingly productive of prophecies of Antichrist. To this period belong the Apocalypses which are contained in the so-called Liber Clementis disciputi St. Petri (Petri apostoli apocalypsis per Clementis disciputi St. Petri Qetri apostoli apocalypsis per Clementis disciputi St. Petri Optici (14th) Vision of Daniel (in the appendix to Woide's edition of the Codex Alexandrinus, Oxford, 1799), also the above-mentioned Ethiopic-Arabic Wisdom of the Stbyl, and finally the later Syriac Apocalyps of Ezra (Bousset, Antichrist, 45 ff.). In the age of Islām we have also a revival of Jewish Apocalyptic literature, probably to a large extent caused by the Christian prophetic writings. One of the most interesting of the writings here to

early translated into Latin. The Tiburtina, too, with its numerous recensions, accompanying the history of the German emperors, plays a special rôle. Finally, great influence was exerted by the letter which the monk Adso (954) wrote to the queen Gerberga: de Ortu et Tempore Antichristi (cf. Sackur, Sibyll. Texte und Forschungen, ii.). Then the legend of Antichrist passed through its classical period in the West, in which it even made history. Since the heginning of the 2nd Christien history. Since the beginning of the 2nd Christian millennium a strong increase in the eschatological direction can be observed. This was intensified by the excitement which was produced in the lands of the West by the Crusades. All these fantastic eschatological tendencies found their intellectual focus in the person and activity of the abbot Joachim of Floris (end of 12th cent.); in particular, the intellectual movements which he originated found ready acceptance in the Franciscan order, and especially among those Franciscans who were and especially among those franciscans who were inclined to form an opposition. Thus the time came when people saw Antichrist, or the fore-runner of Antichrist, in every ecclesiastical, political, national, or social opponent, and the catchword 'Antichrist' sounded on all sides: in the struggle between the Emperor and the Pope, the Guelfs and Ghibellines, opposing Franciscans and the Papacy, between heretics and the Church, reformative social movements and the ruling powers opposed to them (Reformatio Sigismundi,

Onus Ecclesiæ of Berthold of Chiemsee); in sculpture and painting (e.g. cf. Signorelli's picture in the cathedral of Orvieto), in lyric, epic, and dramatic poetry (cf. esp. the Ludus de Antichristo, ed. W. Meyer), the motives were supplied by the prophecy of Antichrist. In particular, the belief that the Pope of Rome was Antichrist, or at least his forerunner (antichristus minor, mysticus), became of world-wide historical importance. This view was assiduously cultivated by the Franciscans of the opposition, who had remained true to the original ideal of poverty. From them the conviction passed over to the pre-Reformation sects; the Bohemians Milič of Kremsier (*Libellus de Antichristo*) and Matthias of Janow are connected with them in a way which can quite easily be traced. Wyclif and his follower Michael Purvey (the probable author of the work edited by Luther [1528], Com. in Apocalypsin ante centum annos editus), as well as Huss on the other side, are firmly convinced

of the anti-Christian nature of the Papacy.

In a particularly instructive monograph, H. Preuss has shown how important a role the idea of Antichrist played in the age of Luther among the widest classes of the people—how the idea gradually dawned on Luther's mind, and became fixed, that the Pope of Rome was the incarnate Antichrist, and how this conviction led him to more keen and daring opposition to the Papacy, and filled his soul with all the passion and remorse-lessness of battle. Thus in the Articles of Schmalkald, which were composed by Luther himself, the proposition that the Pope is Antichrist has been raised to an article of faith (Part ii. art. iv. 'de Papatu,' § 10.1'), while in the drawing up of the Augustana, political reasons prevented this conviction from being expressed.

In the centuries that followed the Papacy.

In the centuries that followed the Reformation, the doctrine that the Pope was Antichrist gradually receded into the background. It was, of course, still resolutely held by Protestant scholars, particularly by commentators on the Apocalypse even in our own times. But it came to be more and more only learned pedantry, and the belief no longer possessed the power of forming history. With this last phase the interest in the legend entirely disappeared, and it is now to be found only among the lower classes of the Christian community, among sects, eccentric individuals, and fanatics.

munity, among sects, eccentric individuals, and fanatics.

ANTINOMIANISM. — Antinomianism Antinomianism (a)71 'against,' and  $v_0$ /00 'law'), as a distinct theological phenomenon, originated with Johannes Agricola (1492–1566), who was an early coadjutor of Luther in the Reformation. It is the counterpart of modern political anarchism, being directed towards the destruction of the Moral Law of the OT in the interest of the new freedom of Christians and the Wesley defined it, is the doctrine that 'makes void the Law through faith.' Christians are free from the Law. The Law primarily referred to was the Law of Moses. Agricola denied that Christians owed subjection to any part of this law, even to

In its widest sense the term is used to designate the doctrines of extreme fanatics who deny subjection to any law other than the subjective caprices of the empirical individual, though this individual is generally credited as the witness and interpreter of the Holy Spirit. It is uncertain just how far Agricola went towards this wider capriciousness of the individual. For we get from history the usual exaggerations of theological controversies, when we read the debates between Luther and Agricola on the subject. Agricola began, and intended to remain, true to the great Reformation principle of justification through faith alone, without works. It was the fear of work-righteousness that led him to argue against the Moral Law—at least that of the Decalogue. He wished to establish Luther's condemnation of the Roman Catholic doctrine of good works, or work-righteousness, on some dis-tinctively gospel principle. After making a secret propaganda for some ten years, he maintained, in a public disputation at Wittenberg in 1537, that works are indifferent, and that a man is saved by faith alone without any regard to his moral char-acter. He said: 'Art thou steeped in sin, an adulterer or a thief? If thou believest, thou art in salvation. All who follow Moses must go to the

devil. To the gallows with Moses.'

It was then that Luther characterized the teaching as being antinomian, and identified it, in principle, with the anarchism of the Anabaptists. Agricola retracted and was reconciled with Luther, Agricola retracted and was reconciled with Luther, but the controversy was carried on by others. One of the followers of Agricola, a certain Ammsdorf, said that good works imperilled salvation. Agricola claimed that he was only expounding the teachings of Luther and Melanchthon. Indeed we find Luther (Werke, xx. 203) saying: 'We do not wish to see or hear Moses. For Moses was given to the Jews, not to us Gentiles and Christians. We have our Gospel and New Testament. They wish to make Jews of us through Moses, but they shall not.' And Melanchthon says (Loci communes, 1st ed. by And Melanchthon says (Loci communes, 1st ed. by Augusti, p. 127): 'It must be admitted that the Decalogue is abrogated.' But the controversy with Agricola was only the occasion for Luther to give Agricola was only the occasion for Luther to give the definite term 'antinomianism' to a view far older than the German Reformation. This view showed itself even in NT times. Luther himself characterized the Epistle of St. James as 'an epistle of straw,' because of its emphasis upon good works. Then we find the Apostles (Ro 38. 81 67, Eph 56, 2 P 218. 19) warning Christians against perversions of their doctrines as an excuse for licenversions of their doctrines as an excuse for licentiousness, or antinomianism. The Gnostic sects, hyper-spiritual in doctrine, were sensualistic in their morals. They held that the spirit (πνεῦμα), as part of the eternal Divine energy, existed absorber of the eternal Divine energy. the material body. Hence, all acts of the soul  $(\psi i \chi \eta)$  and the material body. Hence, all acts of the soul and body were things indifferent to the spirit. Hence, soul and body might wallow in licentiousness without detracting from the salvation of the spirit (πνεθμα). Here we find with the Valentinian Gnostics the most frank and definite statement of Antinomianism in its widest and most immoral form.

A tract of Augustine (contra adversarium legis et prophetarum) seems to indicate the existence of Antinomianism in the 4th century. There are traces of it to be found during the Middle Ages. It comes out strongly among the Anabaptists of

Germany and Holland. During the Commonwealth, it existed in England among the high Calvinists. These argued that, if a man was elected and predestined to salvation, no power in heaven or on earth could prevent it; and hence, no matter what the moral conduct of a man might be, his salvation was sure if he was one of the elect; the wicked actions of such a man were not sinful, and he had no occasion to confess his sins or to break them off by repentance. Saltmarsh, Cromwell's chaplain, was among these 'sectaries.' But they never became an independent sect. Antinomianism existed in the 18th cent. in England both in the Church of England and among the Dissenters. Again, it appeared in England among the followers of John Wesley, who made earnest protest against it. This Wesley, who made earnest protest against it. This gave occasion for John Fletcher to write a strong book, entitled *Checks to Antinomianism*.

It is not in place to carry the discussion of this term beyond its proper theological rôle. We may only add that the principle of the thing—opposition to law—is found in every sphere of the organized or institutional activities of humanity. All who advocate doctrines subversive of the Family, the State, or the Church, are antinomians. All moral sophists are antinomians. All who pervert the principle that 'the end justifies the means,' into a disregard for established moral laws, so that some personal or finite end be attained, are antinomians. And every individual who pleads special exemption from obedience to the common law of morality is

an antinomian.

an antinomian.

We may cite Epiphanes, the sensual son of the Gnostic Carpocrates, as one of the lowest types of antinomians. He died at the age of seventeen from the effects of debauchery, after having written a work on Righteousness, in which he advocated the generous principle—'Follow your own nature, against all established laws.'

Jacobi may be taken as the highest type of an antinomian in his fervent protest against moral rigorism: 'Nay, I am that atheist, that profane person, who, in despite of the will that wills nothing, will lie, like the dying Desdemona; prevaricate and deceive, like Pylades representing himself to be Orestes; will murder, like Timoleon; break law and oath, like Epaminondas and Johann de Witt; resolve on suicide, like Otho; commit sacrilege, like David; nay, pluck ears of corn on the Sabbath, only because I am hungry, and the law was made for man, and not man for the law.' not man for the law.'

not man for the law.'

For a modern representative of moral antinomianism we may mention Nietzsche in his doctrine of 'Die Unwertung aller Werte'—the unvaluing of all values, the illegalizing of all laws.

J. MACBRIDE STERRETT.

ANTINOMIES.—Kant first introduced this

term into philosophy, although the conception for which it stands had been used by the Eleatic Zeno, by Plato (Pheedo, 102; Rep. 523; Parmenides, 135) and by Aristotle. With Kant an antinomy is the unavoidable contradiction into which reason falls when it seeks to satisfy its necessary demand for the unity of the world as a whole. This is the subject-matter of Rational Cosmology. We can never perceive or conceive the world as a whole. But we are compelled to think it. The conflict then is—the world as we know it under the cate-gories of the understanding, and the idea under which we think it by the Reason. Reason goes beyond the limits of a possible experience, and is met with a flat contradiction the moment it attempts to construe the unconditioned totality in terms of the conditioned, or the world of possible experience. In this knowable world, every phenomenon is determined in relation to other phenomena menon is determined in relation to other phenomena ad indefinitum, not ad infinitum. Hence no determination can be complete and final. But the idea of reason demands this very completeness and finality. This is the conflict between the understanding (Verstand) which knows and Reason (Vernumft) which thinks. Reason says, 'If the conditioned is given, then the whole sum of conditions, and therefore the absolutely unconditioned must be given likewise.' But as Kant tioned, must be given likewise.' But, as Kant limits knowledge to the syntheses of the understanding, he turns to it to prove the idea of reason. But it is limited to the conditioned, and therefore can never reach to knowledge of the unconditioned. An unconditioned condition is absurd. And vet

this is what reason demands.

The idea of reason is too large for the capacity of the knowing understanding, and the definite knowledge of the understanding is too small for the idea of the reason. Hence the hopeless back and forth swing between the dicta on laws of the two faculties.

Kant gives four antinomies or pairs of theses and antitheses.

The first is the antinomy of quantity. Two mutually exclusive propositions can be proved with equal force in regard to the quantity of the world:

THESIS.

The world had a beginning in time, and is limited also with regard to space.

ANTITHESIS.

The world had no beginning, and has no limits in space, but is infinite in respect to both time and space

He then shows that the denial of either member of both the thesis and the antithesis involves an absurdity.

The second is the antinomy of quality, and relates to the divisibility of matter.

THESIS.
Every composite substance in the world consists of simple parts, and nothing exists anywhere but the simple or what is composed of it.

Antithesis.

No composite thing in the world consists of simple parts, and there exists nowhere in the world anything simple.

Here the same reductio ad absurdum is applied to both the thesis and the antithesis. These first two antinomies are styled the mathematical, as considering the world quantitatively and qualitatively. The next two he styles dynamical, as considering the world quantitatively. The next two he styles dynamical, as considering the world, not as a total of dead things, but as consisting of things dynamically and organically related to each other.

The first of these is the antinomy of relation, dealing chiefly with the relation of causality.

TIT

Causality, according to the laws of nature, is not the only causality from which all the phenomena of the world can be deduced. In order to account for these phenomena, it is also necessary to admit another causality, that of freedom.

ANTITHESIS.

There is no freedom, but everything in the world takes place entirely according to the laws of nature.

Here, again, Kant's reasoning is to the absurdity of the opposite of both thesis and antithesis. For the thesis it is argued that without free causality there is no vera causa, but everything is merely an effect, and not even that, unless it presupposes a vera causa which can never be found in any member of the causal series. For the antithesis it is argued that if free causality be allowed, then it must it-self be held to be uncaused, and thus contradict the law of causality-that everything must have

The next is the antinomy of modality, and relates to 'the unity in the existence of phenomena,' or the ultimate nature of the universe. IV.

THESIS.

There exists an absolutely Antituesis.
There nowhere exists an the world, either as a part or as the cause of it.

Kant claims that no dogmatic solution of these antinomies can be given. His own critical solu-tion follows from this theory of Knowledge. Knowledge is only of phenomena. We must think noumena. But we cannot know them as phenomena. It is the attempt to do this that gives rise to these antinomies. His critical solution is that these antinomies arise (necessarily too) only from

a confusion between knowable phenomena and unknowable (but real) noumena. It is this that constantly leads one's reasoning on either side to involve a μετάβασις els άλλο γένος. Besides these four antinomies of the Pure Beason, we find Kant that is, an ethical antinomy of the Practical Reason, that is, an ethical antinomy. It is that between perfect virtue and perfect happiness. Du sollst also du kannst is Kant's bed-rock of morality. Unconditional obedience to the categorical imperative is the summum bonum. But the bonum consumis the summum bonum. But the bonum consummatum includes perfect happiness. What bridge can there be found between perfect virtue and perfect happiness? Here comes the antinomy. Virtue denies happiness as a motive. Virtue demands happiness as the bonum consummatum. But virtue cannot be connected with happiness as its cause or its effect.

THESIS.

The endeavour after happiness produces a virtuous mind. produces happiness.

Here we find Kant saying that the thesis 'is absolutely false.' He really goes on to make a thesis and an antithesis out of the antithesis. His real antinomy, therefore, is this:
Thesis: Virtue is causal of happiness.

Antithesis: Virtue is not causal of happiness. To take the antithesis first, it is easily shown that virtue is not causal in the world of experi-ence. Fire burns and poison kills the virtuous as

well as the vicious.

Then as to the thesis, it is false so far as virtue is considered as a cause in the sensible world. But it is true so far as I am a denizen of a supersensuous world. But even there it is true only because I must have an indefinitely prolonged life in which to approximate to a virtuous mind, and because, finally, there must be a God as the cause adequate to equalizing or proportioning happiness to virtue, that is, a cause adequate to

effecting this union of virtue with happiness.
In Kant's Third Critique, The Critique of Judgment, we find two other antinomies—the

æsthetic and the teleological antinomies. First, the antinomy of taste (§ 56):

THESIS.

The judgment of taste is not based on conceptions; for otherwise de gustibus non disputandum.

ANTITIESIS.

ANTITIESIS.

The judgment of taste is based on conceptions; for otherwise we could not argue about it, and there would be no norm of taste.

Second, the teleological antinomy (§ 70):

Thesis.

All production of material their forms must be judged to be possible according to merely mechanical laws.

The sis and their forms must be possible according to merely mechanical laws.

Hegel (Encyclopädie, § 48) blames Kant for his small list of antinomies. He holds that anti-nomies appear in all objects of every kind, in all representations, conceptions, and ideas.' It is this view that is the vital element of the dialectic, forcing thought onward to ever higher and more concrete forms till it reaches the Absolute Idea in which all contradictions are forms of self-relation. which all contradictions are forms of self-relation. 'The true and positive meaning of the antinomies is this: that every actual thing involves a co-existence of contrary elements. Consequently, to know, or in other words to comprehend, an object is equivalent to being conscious of it as a unified group of contrary determinations' (§ 48, Zusatz). Hegel's whole Logic is an exhibition of the antinomial dialectic of all finite thought, in its indwelling tendency to absolute and final thought. dwelling tendency to absolute and final thought, as 'the life and soul of scientific progress, the dynamic which alone gives an immanent connexion (§ 81). Of every thing and every conception we say it is and it is not, because it is more than what it is in its unmediated form. With mere identity, A=A, there can be no progress. But nothing in the world is mere identity:

nothing in the world is mere identity:

'Nothing in the world is single;
All things by a law divine
In one another's being mingle.'

The truth of any thing or thought is always a
unity of identity and difference, of thesis and antithesis. Synthesis is the truth of both. But all finite syntheses develop antinomies on the way to the ultimate synthesis of thought and reality, where antinomies are no more.

J. MACBRIDE STERRETT.

## ANTIOCHENE THEOLOGY.

[J. H. SRAWLEY].

THE title 'Antiochene Fathers' is generally applied to a school of Church teachers, all connected with Antioch, whose activity covers the latter half of the 4th and the first half of the latter half of the 4th and the first half of the 5th century. Its most famous representatives were Diodorus, bishop of Tarsus († 394); John Chrysostom, bishop of Constantinople († 407); Theodore, bishop of Mopsuestia († 429); and Theodoret, bishop of Cyrrhus († 457). But the theology of these Fathers has its roots in an earlier period, and reproduces the traditions of a school of Christian learning at Antioch, the history and characteristics of which form a necessary introduction to a study of the later writers.

history and characteristics of which form a necessary introduction to a study of the later writers.

I. THE SCHOOL OF ANTIOCH: HISTORY AND CHARACTERISTICS.—The city of Antioch, founded by the Seleucid kings and made by them the capital of their dominions, was the metropolis of the East and the third city of the Roman Empire. It was a centre of Greek life and culture, and was noted for its pursuit of art and literature. The Church of Antioch had played an important part in the early spread of Christianity, and from early times had been the centre of important movements in the region of thought. It was the home of the early Gnostics, thought. It was the home of the early Gnostics, Menander and Saturnilus, while the writings of Theophilus, bishop of Antioch, in the latter years of Marcus Aurelius and under Commodus, attracted of Marcus Aurents and under Commodus, attracted the notice of the West, and show that the attention of the Church had been directed to the statement and defence of Christian truth. The earliest refer-ence to anything like an organized Christian school of instruction occurs in connexion with the con-demnation of the heresy of Paul of Samosata in the year 269. At the council of bishops, which met at Antioch in that year and condemned Paul, met at Antioch in that year and condemned raul, the latter's teaching was exposed by Malchion, a presbyter, who was the head of a school of Greek learning at Antioch. From Eusebius' description (HE vii. 29) it has been argued that the Church of Antioch already possessed some institution resembling the Catechetical School of Alexandria, in which eared learning was carbinal with the cared. which sacred learning was combined with secular studies, and the pursuit of rhetoric and dialectic studies, and the pursuit of rhetoric and dialectic found a place (σοφωτοῦ τῶν ἐπ' ᾿Αντιοχείας ἐλληνικῶν παιδευτηρίων διατριβῆς προεστώς). How far the teaching of Paul himself is representative of a distinct school of thought at Antioch it is difficult to say, but there are features in it which are reproduced by the later Antiochene theologians. (e.g. his appeal to the historical Christ and his rejection of metaphysics. See below, II. 6).

It is, however, in the time of Lucian († 311-312), the presbyter and martyr, that the school of Antioch first comes clearly to light. He is said to have studied in the schools of Edessa and at Cæsarea. From the latter he probably acquired that interest in Biblical studies which was due to the influence of Origen, and for which the school of Lucian was also celebrated. In conjunction with

also been attributed the early Syrian revision of the text of the NT (on these see Swete, Introd. to OT in Greek, p. 81 f.; Westcott and Hort, Introd. to NT in Greek, p. 138). There is also extant a fragment of his Commentary on the Book of Job (Routh, Rel. Sacr. iv. p. 7f.). But equally important with the Biblical labours of Lucian was the influence exerted by him on the theology of the Eastern Church. In what way he was connected with Paul of Samosata is uncertain (see, however, Harnack, PRE<sup>3</sup> xi., art. 'Lucian der however, Harnack, PRE<sup>3</sup> xi., art. 'Lucian der Märtyrer'); but the influence of Paul's teaching upon him is unmistakable, and between the years 270 and 299 he appears to have been outside the communion of the Church (Theodoret, HE i. 3). His teaching represented a compromise between the Adoptianism of Paul and the Logos Christology of Origen (see below, II. 6). At the same time he taught the idea of a created Logos, and in this respect he handed on to his disciples a tradition which found its most logical expression in Arianism. The school of Lucian was 'the nursery of the Arian doctrine' (Harnack). The Arian leaders, Arius and Eusebius of Nicomedia, were pupils of Lucian, and the title Συλλουκιανισταί was at once a recognition of their reverence for their master, and a common bond of union. Our sources of informa-tion as to the teaching of the more prominent Arians exhibit two characteristics which re-appear Arians exhibit two characteristics which re-appear in the later history of the school of Antioch: (1) the use of the dialectical philosophy of Aristotle; (2) the grammatical and literal exegesis of Scripture. On the former of these see Harnack, *Hist. of Dogma* (Eng. tr. 1899), vol. iv. p. 6. The latter characteristic is illustrated in the commentaries of Eusebius of Emesa, a disciple of Lucian, and a moderate Arian in doctrine who had studied in a moderate Arian in doctrine, who had studied in the schools of Edessa, Cæsarea, and Alexandria, as well as at Antioch, and who, according to Jerome, exercised an influence upon the exegesis

Jerome, exercised an influence upon the exegesis of Diodorus (Jerome, de Vir. Illustr. c. 119). Harnack has pointed out the close parallel which exists between the principles of the school of Lucian and those of the earlier Roman Adoptianists, whose chief representative was Theodotus. In both allke we find the same use of Aristotle, and the same literal and critical exegesis of the Bible. Both schools opposed the dominant mystical and allegorizing tendencies of their time by a full use of empirical and critical methods (Harnack, Hist. of Dogma, vol. iii. p. 23 f., vol. iv. p. 6).

But it was not the Arians alone who handed on the traditions of the school of Antioch. Eustathius, bishop of Antioch (exiled in 341), in his de Engastrimytho attacks the allegorical interpretation of Origen, and exhibits the true Antiochene exegesis. Flavian, the colleague and friend of Diodorus at Antioch (Theodoret, HE iv. 22), and Meletius, the patron of Chrysostom, constitute links between the earlier and the later school of Antioch.

The history of the later school of Antioch really begins with Diodorus (bishop of Tarsus, 378-394). A fellow-student of Basil at Athens, and later on the colleague of Flavian, he had upheld the Nicene cause at Antioch in the days of Meletius' exile. His friendship with Basil (Basil, Ep. 135) is important as marking the union between Cappadocian and Antiochene orthodoxy (Harnack, PRE<sup>3</sup> iv., art. 'Diodorus'). Only fragments of his voluminous writings are extant, but they appear to have included treatises on philosophy and theology. philosophy and theology, and commentaries on the Old and New Testaments. In his opposition to Apollinarism he was led to conceptions of the Person of Christ which in later times caused him to be regarded as a precursor of Nestorianism. In his exegesis of the Scriptures, the principles of Lucian was also celebrated. In conjunction with Dorotheus, who combined knowledge of Hebrew with Greek learning (Euseb. HE vii. 32), he completed a revision of the LXX, and to him has

meaning of Scripture, he asserted the importance of grammatical and historical methods of exegesis. Lastly, Diodorus' importance consists in the fact that he was the inspirer and teacher of the two most famous representatives of the school of

Antioch-Theodore and Chrysostom.

Theodore, bishop of Mopsuestia († 429), developed on bold and original lines the teaching of his master on bold and original lines the teaching of his master Diodorus. As an independent thinker and systematic theologian he was the greatest of the Antiochenes. His theology contains a fully thought out system, embracing the nature and destiny of man and the Person and work of Christ. He has points of contact with the Pelagians in his teaching on sin and the Fall, free-will and grace; and in his Christology he was the immediate precursor of Nestorius. No less important were his contributions to the study of Scripture. In his subjective criticism of the less important were his contributions to the study of Scripture. In his subjective criticism of the Canon of Scripture, his insistence on the primary meaning of OT prophecy, and his endeavour to bring out the full historical meaning of Scripture, he represents the climax of Antiochene teaching.

Three other representatives of the school of Antioch during the period of its greatest fame call for notice, though none of them carried out so fully as Theodore its essential principles.

Polychronius, bishop of Apamea († c. 430), and brother of Theodore, exhibits in his commentaries on the OT the traditions of Antiochene exegesis.

John Chrysostom, bishop of Constantinople († 407), was the disciple of Diodorus and Flavian, and shows the influence of his Antiochene training alike in his doctrinal teaching and in his exposi-

and shows the influence of his Antiochene training alike in his doctrinal teaching and in his exposi-tion of Scripture, though in both respects he was in closer accord than Diodorus or Theodore with the Church tradition of his time. Chrysostom was, however, the popular teacher and preacher rather than the exact theologian, and his commentaries on Scripture, which are marked by profound insight into human nature, are the work

of a homilist rather than a critical student.

Theodoret, bishop of Cyrrhus († 457), was a disciple of Theodore, and played an important part in the Christological controversies of his time, in which he exercised a mediating influence between the conflicting principles of Antiochene and Alexandrian theology. He exhibits, alike in his theological and Biblical works, the Antiochene tradition. But he modified in several respects the teaching of his master. As a commentator he exhibits learning, judgment, and terseness of expression, though he is inferior in originality to Theodore and Chrysostom.

On the later history and influence of the school of Antioch, see below, III.

of Antioch, see below, III.

II. THE TEACHING OF THE SCHOOL OF ANTIOCH.—I. Holy Scripture and Revelation.

With the Antiochenes the Scriptures of the Old and New Testaments held a foremost place as the source of Christian doctrine. In their Canon of Scripture they followed the tradition of the Antiochene and Syrian Churches (which is also represented in the Peshitta or Vulgate Syriac Version), and did not include in the NT Canon the Apocalypse, 2 Peter, 2 and 3 John, or Jude. Theodore, on subjective grounds, also rejected the Epistle of St. James. In dealing with the OT books, Theodore recognized degrees of inspiration, and submitted them to a rigorous subjective criticism. The Book of Job he regarded as the production of a pagan Edomite and a work of dramatic fiction, which was lacking in higher inspiration. Similarly, he denied inspiration in the higher sense to Proverbs and Ecclesiastes. The Song of Songs was merely the marriage-song of Pharach's depuritive and lacked the authority.

assigned little value to Chronicles, Ezra, Nehemiah. assigned little value to Chronicles, Ezra, Nehemiah, and Esther, partly owing to doubts as to their acceptance in the Jewish Canon, and partly because they seemed to lack the prophetic insight which marked the other historical books. (Loofs, however, thinks that the only books which Theodore rejected from the OT Canon were Esther and the Apocryphal books. See PRE<sup>3</sup> xix. p. 604). He also rejected the inscriptions of the Psalms, and assigned a late date to the composition of many of the Psalms, placing some in the period of Hezekiah, others in that of Zerubbabel, and others again in Maccabæan times. These views. others again in Maccabæan times. These views, however, were rejected by Chrysostom and Theodoret, who adhered to the general sentiment of the Church.

The Antiochenes held the LXX in the highest reverence, and appear to have used Lucian's recension of its text. But Theodore and Chrysostom were unacquainted with Hebrew, and none of the teachers of the later school took up Lucian's textual labours or interested themselves in such studies (see, however, Chase, Chrysostom, p. 82f.).

In their treatment of the inspiration of the

In their treatment of the inspiration of the Scriptures, while recognizing a real influence of the Holy Spirit upon the writers, the Antiochenes maintained that the individual character of the authors was imprinted on the style of the books. They recognized, too, the principle of accommodation to the time and circumstances of those who were addressed (Chase, op. cit. p. 42). Revelation is progressive. The OT has a preparatory character, and is the unfolding of one Divine purpose, which reaches its culmination in the Incarnation and the Christian dispensation. In their exegesis of Scripture the Antiochenes exhibit a pronounced and the Christian dispensation. In their exegesis of Scripture the Antiochenes exhibit a pronounced opposition to the allegorical interpretation of the Alexandrian school. Eustathius, Diodorus, and Theodore all wrote works against the allegorists (see also Theodore on Gal 4<sup>24</sup> and procem. in Osc.). Against Origen they maintained that the historical books contain true history, and are to be interpreted historically. But the history contains spiritual lessons, which, however, are to be deduced from it, and not arbitrarily imposed upon it. The moral difficulties of the OT histories and of the imprecatory Psalms presented upon it. The moral difficulties of the OT histories and of the imprecatory Psalms presented obstacles to them, which they do not always satisfactorily overcome. Chrysostom often minimizes them, or occasionally resorts to allegory (Chase, op. cit. p. 53 f.). The typical character of the OT narratives is fully recognized. The incidents, persons, and objects mentioned are types of realities found in the NT (Theodore, procem. in Jon.). This harmony between type and antitype was foreseen and foreordained by the Divine purpose in order to assist men in the Divine purpose in order to assist men in recognizing the truth (Theodore in Osc. 1<sup>1</sup>; procem. in Am., Migne, lxvi. 125, 141). Hence the obscurity of the QT is due to the fact that it the obscurity of the OT is due to the fact that it contains shadows and imperfect images of the truth, but is not the truth itself (Chrys. Hom. 61 in Genes.). The language of the OT is often hyperbolical and figurative, if referred to its original object, and finds its full content only in the higher realities of the gospel (Theodore, in Joel 2<sup>28</sup>). The principles of the interpretation of prophecy were set forth in the most thoroughgoing manner by Theodore. He starts from the historical standpoint of the school and maintains historical standpoint of the school, and maintains that, with the exception of a few passages which as the production of a pagan Edomite and a work of dramatic fiction, which was lacking in higher inspiration. Similarly, he denied inspiration in the higher sense to Proverbs and Ecclesiastes. The Song of Songs was merely the marriage-song of Pharaoh's daughter, and lacked the authority both of the synagogue and of the Church. He

and the second s

e.g. Theodore recognized only four Psalms (2. 8. 45. 110) as directly Messianic. (2) Prophecies which have a primary reference to OT events, and refer only typically to the NT, i.e. such prophecies as are quoted in the NT. (3) Prophecies which have no Messianic reference, but refer only to the OT (e.g. Mic 4<sup>1-3</sup>, Zec 11<sup>41</sup>, Hag 2<sup>1-9</sup>, Mal 11<sup>1-11</sup> 33<sup>2-5</sup>). See Kihn, Theodor v. Mops. p. 143 f.

Theodore has a profound realization of the significance of the idea of the Kingdom of God as set forth in the OT. The whole course of OT history was intended to prepare the way for the coming of Christ. Theodore's application of critical methods to the OT, though often arbitrary and vitiated by his ignorance of Hebrew, exhibits at times an acumen and insight which were far in at times an acumen and insight which were far in advance of his age. In his subjective criticism of the OT books he found no successors, but through the later Antiochenes-Chrysostom and Theodoret, who followed in the main his methods, while modi fying his conclusions—the science of exact and

fying his conclusions—the science of exact and literal exegesis gained a foothold in the Church, and exercised a far-reaching influence both in the East and in the West. See below, III.

2. Doctrine of God and of the Trinity.—The Antiochenes exhibit little interest in metaphysical speculation upon the Being of God or the proofs of His existence. Photius, however (Bibl. Cod. 223, see esp. p. 209b; Migne, PG ciii. p. 833), gives an account of Diodorus work Against Fate, in which the latter propounds the cosmological argument for the existence of God. The world, Diodorus maintains, is subject to change. But change itself is a condition which implies a beginning, and requires us to assume something constant behind it. Moreover, the variety of existing things and the wisdom displayed in the very process of change point to displayed in the very process of change point to an underlying unity of origin, and suggest a Creator and a Providence. Both Chrysostom and Theodore wrote works upon the providence

and Theodore wrote works upon the providence of God, in which they endeavoured to show that this providence extends to particulars.

Diodorus and Theodore were staunch supporters of the Nicene theology. Accepting its conclusions, Theodore set forth the doctrine of the Trinity by the help of careful exeges of Scripture, rather than by speculative exegurants. the help of careful exegesis of Scripture, rather than by speculative arguments. From the baptismal formula in Mt 2819 we may learn that Father, Son, and Holy Ghost are three self-subsistent Persons, and equally belong to the Divine and eternal Being. In the OT the distinction of Persons was not yet revealed (in Hag. 21-5). But when the OT speaks of the Divine nature, its language may be applied not only to the Father, but to the Son also, by reason of their community of nature (in Hab. 112). The Holy Spirit is a Person (ὑπόστασιs) of the Trinity, and has His subsistence (ὑπαρξιs) from the 'being' of the Father (in Matt. 118). Chrysostom's treatment is similar to that of Theodore. Careful exposition of the language of Scripture takes the place of metaphysical speculation upon the Trinity. Theodoret expounds in his Eranistes (Dial. i. p. 33 f., Migne) Basil's distinction between the terms 'being' (obola) and 'person' (ὑπόστασιs), but, like Theodore and Chrysostom, he contributes little to the subject.

In one respect, however, Theodore and Theodoret In one respect, however, Theodore and Theodoret occupy an important place in the history of the doctrine of the Trinity. Theodore's teaching upon the Holy Spirit exhibits a clear conception of the essential Procession of the Holy Spirit from the Father. In his comment on Jn 15<sup>26</sup> he affirms that the Holy Spirit's 'going forth' (ἐκπορεύσσθαι) was no mere external mission, but 'a natural procession' (φυτική πρόοδος). But in the Creed put forth by him (Hahn, Bibliothek der Symbole<sup>3</sup>, p. 302) he denies that the Holy Spirit received His subsistence through the Son (οὐτε διὰ τοῦ νίοῦ τὴν ὕπαρξιν εἰληφός).

This position was attacked by Cyril of Alexandria in the ninth of his anathemas against Nestorius, and the Spirit was declared to be the 'very own' (tōw) Spirit of Christ. Theodoret, in his reply to Cyril (Reprehens. Anathemat. 9), re-affirmed the contention of Theodore, and pronounced the opposite opinion to be blasphemy. Possibly the motive underlying the denial of the Procession through

underlying the denial of the Procession through the Son may have been the fear of introducing the heresy of the Pneumatomachi (so Swete, DCB, art. 'Holy Ghost').

3. The Creation of Man.—The chief representative of Antiochene teaching, Theodore of Mopsuestia, exhibits a fully thought out conception of human nature in its constitution and development. human nature in its constitution and development. In this respect he is superior to the Alexandrian theologians, and shows a deeper interest than they in questions affecting the origin and history of man. Theodore's treatment, as in the case of his exegesis of Scripture, is empirical, and rests upon the observed facts of human nature. He starts from the conception of the universe as a living whole ( $\ell \nu$   $\sigma \tilde{\omega} \mu a$ , in Rom.  $8^{19}$ ; so the Platonist Fathers, e.g. Gregory of Nyssa), which exhibits the combination of visible and invisible, or material and spiritual elements (see CAPPA-DOCIAN THEOLOGY, vii. (2)). Man was designed DOCIAN THEOLOGY, vii. (2)). Man was designed to be the bond (σύνδεσμος, συνάφεια, φιλίας ἐνέχυρον) between these two parts of creation (iδ.; cf. the similar treatment of Gregory of Nyssa, Or. Cat. 6). Just as a king's statue is set up in a town which he has built and adorned, in order to remind the citizens of the builder, so man is set in creation as the image of God, in which all created beings may find their meeting-point, and be led to give God the glory which is His due (John Philop., de Mundi Creat. vi. 9, in Galland, Bibl. vet. Patr. xii. 581). Hence man was endowed with all the xii. 581). Hence man was endowed with all the powers necessary to enable him to fulfil the destiny assigned to him. He possesses a body taken from the visible and material creation, while on his higher side he is akin to the spiritual creation (in Rom. 8<sup>19</sup>; cf. Greg. Nyss. op. cit.). Creation was meant to serve man, and the angels appointed by God to superintend the processes of nature minister to his good (ib.). Through man creation has access to the Creator (Sachau, Theodori Mops. fragm. Syr. p. 18). In order to fulfil the purpose of his being, man was endowed with all necessary powers, including the gift of free-will. Theodore has a more profound conception of man's freedom than any of his contemporaries. Freedom is with him no mere indifference to good or evil. Nor is it, as with some other Eastern Fathers (e.g. Origen and the Cappadocians), the mere possibility of change or development. True freedom is rather the power of self-determination, which is exercised to be a supplementation of the Divine of the Divin in harmony with the guidance of the Divine Spirit. It is the higher unity of liberty of choice and necessity' (Dorner). Especially important is Theodore's conception of love as the means by which man's freedom in relation to the influence of the Divine Spirit is realized (de Incarn., Migne, lxvi. p. 977; see below, § 6). Hence freedom implies moral growth and development. It cannot be complete from the first In this cannot be complete from the first. In this respect Theodore is superior to Pelagius and the Alexandrians. (See, further, below, §6; and cf. Dorner, Person of Christ, II. i. 36, 38). (2) From the first, God made man's nature liable

to mortality. As a result of this mortality, man is subject to passions and liable to change. Theodore distinguishes between two stages (καταστάσειs) in the history of created beings, a present stage, in which the creature is subject to change and death, and a future stage, in which all will be brought to and a ruture stage, in which can the accordance of immutability and immortality (in Genes. Migne, lxvi. 634). God exhibited the Genes., Migne, lxvi. 634).

beginning of this second stage in the Incarnation of His Son (in Jon., Migne, lxvi. 317), but it was His purpose that man should first pass through the earlier stage, in which he is subject to conflict, temptation, and mortality. In thus creating man mortal, however, there was a beneficent purpose. (a) This mutable and mortal condition was intended to train man's will by exercising his power of choice between good and evil (in Gal. 2<sup>15</sup>. 16). (b) In view of man's fall, which He foresaw, God attached the penalty of actual death (as distinguished from the liability to death) to disobedience, in order to deter men from sin. obedience, in order to deter men from sin. (2) Man's mortal condition rendered it possible for 'the body of sin' to be destroyed along with the dissolution of his body. Had man sinned, being immortal, his fall would have been irremediable (in Genes. 3<sup>17</sup>; there is a somewhat similar treatment in Methodius and Gregory of Nyssa). Hence the purpose of the command to Adam, and later on of the Law, was to call forth the knowledge of good and evil, to provoke sin, and to show man his inability to attain perfect righteousness. It was only through the struggle and the conflict of this mutable life that man could learn his need of the Divine principle of life revealed in Christ, in order

Divine principle of life revealed in Christ, in order that he might attain his true end (in Rom. 78, in Genes. 317, in Gal. 215-18).

4. The Fall.—Theodore taught that by man's disobedience the liability to mortality became an actual fact, for God had not said, when He threatened man with death as the penalty of disobedience, 'Ye shall be mortal,' but 'Ye shall die' (Marius Mercator, ed. Baluze, p. 340). Death came by sin, and the result of death was the separation of soul and body in man. Thus, too, the bond of the Universe, which had held together the visible and invisible parts of creation, was broken. Sin gained invisible parts of creation, was broken. Sin gained an entrance into the world, and in Adam's descendants the same experience was repeated. As each of them sinned in turn, he became subject, like Adam, to death (so Theodore interpreted Ro 514). A further result of the actual mortality which resulted from sin was that it increased the tendency to sin, by fixing man's thoughts upon the present

order of things and by ministering to his passions (in Rom. 7<sup>14, 17, 18</sup>, in Gal. 2<sup>15, 16</sup>).

5. Original Sin.—The summary which has been given above of Theodore's teaching shows that he allowed no place for the idea of inherited sin. Even the 'death which passed unto all men' is regarded as the result of man's own transgressions, not as the result of Adam's sin. In the fragments of Theodore's work, Against the Defenders of Original Sin, preserved by Marius Mercator (ed. Baluze, p. 340 f.), his attitude towards the standpoint of Jerome and Augustine is clearly shown. He affirms that Adam was created mortal, and he repudiates the idea that Noah, Abraham, David, Moses, and other righteous men should be subject to punishment for Adam's sin. Such a view he regards as inconsistent with the Apostle's words regarded as the result of man's own transgressions, regards as inconsistent with the Apostle's words (Ro 2<sup>5</sup>), that God will render to every man according to his deeds. Thus, too, in speaking of baptism, he distinguishes between the forgiveness of the sins of the individual, and the sinless state which will be fully revealed only at the general restitution of all things, and he maintains that in the case of infants the former cannot be taken into account.

Such teaching made Theodore a valuable ally to the Pelagian leaders, and in 418 Julian of Eclanum and his companions sought refuge with him after their banishment from the West. The points in which Theodore's teaching resembles that of Pelagius are: his insistence that man was created mortal, his emphasis on free-will, his denial of inherited sin, and his treatment of man's growth in knowledge and obedience through the discipline

of the commandments and the law of God. On the other hand, his idea of redemption is different from that of Pelagius. For, according to Theodore's teaching, the original constitution of man as mortal and mutable rendered it impossible for him to attain the goal of his existence apart from the deliverance which came through Christ. Again, as we have seen, Theodore's conception of free-will is more profound than that of Pelagius, with whom freedom is simply the indifference of the will to good or evil (see above, § 3).

with whom freedom is simply the indifference of the will to good or evil (see above, § 3).

Chrysostom in his teaching on human nature exhibits the same practical bent and absence of speculative interest which appears in other directions in his writings. Scarcely any of Theodore's distinctive ideas occur in Chrysostom's treatment of man's history. His conception of the Divine image in man, which he regards as consisting in his dominion over creation, recalls Diodorus and Theodore. He regards the Fall as resulting in a privation of gifts which were not a part of man's natural constitution. He does not teach a complete loss of the Divine image. He agrees with Theodore in insisting on free-will and denying original sin. But in both cases this was probably due to his practical bent of mind, and to his association with that side of Eastern thought which, while emphasizing free-will, had not yet embraced the ideas found in Origen and Gregory of Nyssa, which approximated to Western teaching on Original Sin. As a preacher, Chrysostom saw the danger of any form of teaching which seemed to lessen the sense of responsibility or encourage the indifference and sluggishness of men's wills. To deny free-will was to take the virtue out of goodness (1 Cor. hom. 17). He denies that mortality is the cause of sin (2b.). Chrysostom, in fact, realizes far less than Theodore the weakness of man and his inability to attain to righteousness. In other respects Chrysostom's teaching exhibits points of contact with the later Pelagians. In a passage appealed to by Julian of Eclanum, he refuses to connect infant baptism with infant sin, though Augustine (c. Julian. i. 6) explained the passage as referring to actual sin.

Theodoret also presents few points of contact with the characteristic teaching of Theodore. Like Diodorus and Chrysostom, he maintains that the Divine image consisted in the dominion over creation, and, like all the Antiochenes, he emphasizes man's free-will. Thus he interprets the 'vessels of wrath' in Ro 920 of those who

The Antiochene conception of human nature, as exhibited in its most fully developed form in Theodore, tends to a purely teleological view of man's development. Its philosophical basis, like the rest of the Antiochene theology, is Aristotelian. the rest of the Antiochene theology, is Aristotelian. Mortality, rather than sin, is the great enemy of man, and it involves him in weakness and subjection to the passions. The history of man is the story of the struggle of his will towards a perfection which can come only from a new creation, and from the introduction of a higher stage (κατάστασις) of existence, when this mortal and mutable condition will be transformed into one which is immortal and immutable. In this presentation the disorder introduced by sin occupies presentation the disorder introduced by sin occupies only a secondary place. The extent of the consequences of sin is minimized, and the religious view of sin tends to disappear. Redemption comes to have a different meaning from that which it has in the teaching of St. Paul, St. Athanasius, and St. Augustine (see below, § 7). In logical consistency, Theodore's conception of human nature surpasses that of other Greek Fathers. But it fails to take account of those elements in the fails to take account of those elements in the religious consciousness of man to which St. Augustine gave full expression (cf. Harnack, Hist. of Dogma, vol. iii. p. 279 f.).

6. Christology. — The Christology of the Antiochenes, which was closely connected with their doctrine of human nature, constitutes their chief importance for the history of doctrine. Their P

## PACIFISM. -See WAR.

PADMAPĀNI.—Padmapāni (Tibetan, Phyag na pad ma), the bodhisattva or the god 'with a red lotus in the left hand,' is a name of Avalokitesvara, who, as has been said, is more than an ordinary bodhisattva, who is in fact one of the chiefs of the Buddhist mediaval pantheon (see art. AVALOKITESVARA). Many forms of Avalokitesvara are known from Indian and Tibetan sculptures, from Indian miniatures and Tibetan designs. It is always the same Avalokitesvara, and the differences are abidly incorrection. and the differences are chiefly iconographic, although different legends and speculations may be embodied in the different representations of the same god. From the iconographic point of view it is possible to distinguish the non-human forms, with four, six, twelve, or a thousand arms, from the human forms. Among the latter the figure with a lotus in the left hand is prominent; such a figure was likely to be called Padmapāṇi,¹ Abjapāṇi, Kamalahasta, Padmakara, or any name meaning 'lotus-handed.' Padmapāṇi is the most common. In the same way the figure with a thousand arms is a thousand armed (sahasrabhuja). The right hand sometimes holds a kalaśa, the consecration phial—an attribute of many bodhisattvas, possibly a symbol of their consecration as kumāras, royal princes in the spiritual kingdom of a tathāgata—sometimes a rosary (akṣamālā); sometimes it is in the attitude of giving (varamudrā). Moreover, Padmapāṇi is sometimes characterized by a fawnskin on the left shoulder, and by an image of Amitābha—the reigning tathāgata of Sukhāvatī in his head-dress. Amitābha is the tathāgata, Avalokitesvara the bodhisattva, par excellence, Šākyamuni the nirmitabuddha (see Philosophy [Buddhist]) of the present age.

In Tibet, since 1439 (?) Avalokiteśvara-Padmapāni has been incarnated in the Dalai Lama-a nirmita-

kāya of secondary rank.

The name Padmapāņi does not occur in the Kārandavyūha, the summary of Avalokitesvara's aporela. But lotuses are conspicuous in this άριστεία. But lotuses are conspicuous in this book. When Avalokiteśvara returned from his pilgrimage to Sukhāvatī, the western Buddha's field, he brought back and offered to Sākyamuni lotuses sent as a gift of homage by Amitābha (imāni Amitābhana prahitāni [pp. 18, 89]), and the representation of Avalokitesvara 'with a lotus in hand' possibly originated from this story, or vice versa. However it may be, in the description of the diagram (mandala) of the 'six-syllabled charm' (ōṃ maṇipadme hūṃ) we learn that Avalokiteśvara is to be represented with the lotus and the rosary (p. 74). If the name Padmapāni is wanting, synonyms are near at hand : in the stotra (hynn) uttered by the Devaputra Maheśvara (p. 89) Avalokitesvara is styled Padmadhara, 'who bears a lotus'; Subhapadmahasta, 'who has in hand a pure lotus'; Padmapriya, 'friend of lotuses'; also Padmasana, 'who sits upon a lotus,' and Padmasri, 'lotus glory' (cf. p. 11)—not to be confused with the Padmasri of the Saddharmanundarīka. It is interesting to remark that Avaloki-teśvara is Maheśvara (p. 90), and the fiend of Vajrapāṇi, who never entirely loses his demon character (p. 11).

<sup>1</sup> The same name is given to Brahmā, to the sun, and to Viṣṇn in the Lexicons (see O. Böhtlingk and R. Roth, Sanskrit-Wörterbuch, Petrograd, 1855-75), possibly owing to the Buddhist identification of these gods with Avalokitesvara. 'Pad ma' can equal Viṣṇu, Avalokitesvara.

There is some evidence that, in Tibet, the name Padmapāni vied with the name Avalokiteśvara. It seems that the Mani bka bum prefers the former (W. W. Rockhill, The Land of the Lamas, suppl. notes, ii., London, 1891; E. Schlagintweit, Buddhism in Tibet, Leipzig, 1863, tr. L. de Milloué, AMG iii. [1881] 54; L. A. Waddell, The Buddhism of Tibet, or Lamaism, London, 1895, p. 356).

of Tibet, or Lamaism, London, 1895, p. 356).

PADMASAMBHAVA, or PADMĀKARA.—
This Indian Buddhist missionary, priest, teacher,

This Indian Buddhist missionary, priest, teacher, and saint of the 8th cent. A.D. is of the first importance in Tibetan Buddhism. For, although he is only incidentally referred to by previous writers, merely as the leader of a retrograde movement among the Lamas, he is shown by the present writer to have been the founder of the order of the first Tibetan Buddhist monks, or Lamas, as they are generally called. His nationality and training and the circumstances under which he was sent for by the pro-Buddhist king of Tibet, Khri-Srong De-btsan, the son of an ardent Buddhist Chinese princess, to establish an order of Buddhist monks in Tibet, have been indicated in art. Lamaism.

Previous to his arrival in Tibet (c. A.D. 747-748) there appear to have been no indigenous Buddhist monks in that country, though Tibet had been visited by occasional Indian and Chinese Buddhist monks since the epoch of King Srong bisan (†A.D. 650), who had introduced from N. India or Khotan the so-called Tibetan script, and had procured the translation into its characters of some elementary treatises on Buddhism.<sup>1</sup> This universal tradition crediting Padmasambhava with the founding of Lāmaism is also supported by the epigraphic evidence discovered by the writer in the two edictpillars at Lhasa of the saint's patron, King Khri-Srong De-btsan, dated A.D. 783, or three years before the death of that sovereign. In these two perore the death of that sovereign. In these two edicts, as well as in a third, of the same date, although referring to religious matters, the word 'Lama' does not occur; but the king states that 'by a blessing the orthodox religion was procured's—this term, 'orthodox or inside religion,' is still the ordinary term applied to Buddhism, as opposed to the Bon or other faiths.

The first monastery in Tibet was built under his

The first monastery in Tibet was built under his directions at Sam-yas (c. A.D. 749), after the model, it is said, of the chief monastery of Mid-India, Nalanda, or, according to another account,

1 In the great Scripture commentary, the Bstan-'gyur Mdo, vol. 124, are two grammatical works ascribed to his minister, Thommi, whom he had sent to 'India' (but probably Khotan, which was then Indian in its civilization) to learn the language; also in vol. 123 a doctrinal treatise (Sku-gzuge-kyi mts'an-nyid) by 'The son of Anu,' an eponym of the same minister (W. Rockhill, The Life of the Buddha, London, 1892, p. 212), who is generally credited in the vernacular histories with having also translated the Dhārani on the Oth mani formula, universal now throughout Tibet.

2 L. A. Waddell, JRAS, 1909, p. 931 (nangi-ch'os=' inside religion').

religion').

teaching has links of connexion with the teaching current in earlier periods at Antioch (cf. above, I.), and, as Harnack has observed (*Hist. of Dogma*, vol. iv. p. 166, n. 1), there is an essential unity in scientific method between Paul of Samosata, in scientific method between Paul of Samosata, Lucian, Eusebius of Emesa, Eustathius, Diodorus, Theodore, Chrysostom, and Theodoret. The features common to this treatment are (1) the rejection of metaphysical speculation (cf. above, I.); (2) the attention paid to the historical portrait of Christ in the Gospels; (3) the ethical interest, which leads them to assert a true moral develop-ment in the humanity of Christ; (4) the Aristotelian basis of their conception of ovola, which was taken by them to denote a particular individual being (Harnack, Hist. of Dogma, iii. p. 46; Bethune-Baker, Introd. to Early Hist. of Christian Doctr. pp. 112, 235). This rendered it difficult for them to conceive of a complete nature which was not personal.

But, while there is a general resemblance in the method of treatment exhibited by all these writers, there are considerable divergences in their theological standpoint. Lucian of Antioch, starting from the teaching of Paul of Samosata, departed from the teaching of Paul of Samosata, departed from him in affirming (with Origen) the personal and pre-existent character of the Logos, who was united with the man Jesus. The later Antiochene school, which began with Diodorus, was further marked off from Lucian by its acceptance of the full Nicene teaching upon the consubstantiality of the Son with the Father (in place of the subordinate created Logos of Lucian; cf. above, I.). In other respects, however, this later school, represented by Diodorus, Theodore of Mopsuestia, Chrysostom, and Theodoret, still retained the essential characteristics of the earlier Antiochenes. Diodorus and Theodore represent the more fully Diodorus and Theodore represent the more fully developed form of this teaching. Chrysostom is more practical and less scientific, though in his more practical and less scientific, though in his case, too, the underlying conceptions show the influence of his Antiochene training. Theodoret, in his criticism of Cyril's anathemas, exhibits the Antiochene standpoint, though later on he expressed himself more nearly in accord with the position of Cyril of Alexandria.

pressed himself more nearly in accord with the position of Cyril of Alexandria.

The Christological language of the Antiochenes was influenced partly by their desire to avoid the suggestion of a confusion of natures, and partly by traditional usage derived from the undeveloped theology of an earlier period. It has, however, been thought to show an 'Adoptianist' bias. Thus (1) they commonly speak of God as 'dwelling in Christ' (Eustath., Diod., Theod., Theodoret, Nestorius) rather than of God becoming man. (2) They apply to the humanity the terms ναός, οἰκος, σκηνή. These terms were, however, derived from Scripture (Jn 2<sup>19</sup>, Pr 9<sup>1</sup>, Jn 1<sup>14</sup>), and are occasionally found in Athanasius. (3) They use language which seems to imply a personal human subject distinct from the Divine subject in Christ (δ ἄνθρωπος, ἄνθρωπος, ἀνθρωπος, ἀνθρωπος, ἀνθρωπος, ἀνθρωπος, ἀνθρωπος, ἀνθρωπος, ἀνθρωπος, ἀνθρωπος, ἀνθρωπος, ανθρωπος, ἐναληφθείς, ὁ λαβώη, ὁ ληθθείς, ὁ λαρθωίς, ὁ λαρθωίς, ὁ καιδιακός, ὁ ληθθείς, ὁ λαρθωίς, ὁ καιδιακός, ὁ ληθθείς, ὁ λαρθωίς, ὁ λαβώς οἰκονος, ὁ για (4)). (4) Side by side with these phrases, however, they use impersonal expressions to denote the human nature (τὸ ἀνθρώπινον ὄργωνον, forma servi, σάρξ, quod assumptum est, natura assumptus). (5) They approach more nearly to the language of Athanasius and Cyril when they speak of the Divine personal subject as 'assuming' (λαμβώνεν, assumere, ἀναλαμβώνεν, Eustath., Diod., Theodor). Theodoret) man (or human nature), as 'bearing' (φορείν, Eustath.). Set yelasius (Migne, PG xviii. 694), are probably due to a misreading of the original θεόφορος (for θεοφόρος). If θεόφορος were the criginal, the phrases would be parallel to the language quoted above (ἀνθρωπον φορείν). See Bethune-Baker, Christian Doctrine, p. 276 t.). On the state of Christological speculation before the rise of Apollinarism, see Athanasius, Ep. ad Εριετεντιπ.

Apart from the influences of their training, the Antiochenes were largely affected by the controversy with Apollinarism, which led them to affirm the reality and completeness of the human active accounted by Christ, to emphasize especially His pessession of free-will, and to guard against any idea of the confusion of the two natures or

of a transformation of the human nature into the Divine nature.

Divine nature.

Our chief sources of information about the Christology of Diodorus are the fragments of his work against Apollinaris (1908 robe overviewer48), found in Marius Mercator (ed. Baluze) and in Leontius of Byzantium, c. Nest. et Eutych. (ii. 43). For Theodore we have the fragments of his works, de Incarnatione and contra Apollinarium, collected from various sources; the Acts of the Fitth General Council, the works of Facundus and Leontius, and the Syriac MSS translated into Latin by Sachau. See Migne, PG Lvvi.; Swete, Theodore of Mops. on the Epp. of St. Paul, vol. ii., Appendix; Sachau, Theodori Mops. fragmenta Syriaca. Of special value is Theodore's confession of faith contained in the Acts of the Council of Ephesus, and in a Latin form in Marius Mercator (see Hahn, Bibliothek der Symbole 3, p. 302 f.).

The teaching of Diodorus and Theodore may be

The teaching of Diodorus and Theodore may be

summarized as follows :-

(1) Against Apollinaris, Theodore asserted the completeness of the manhood of Christ and His completeness of the manhood of Christ and His possession of a reasonable soul as well as human flesh (see 'Creed' in Hahn, p. 302 f., and Sachau, p. 38). Especially important is his insistence on the freedom of the human will in Christ (on his conception of freedom, cf. above, § 3). As freedom cannot, according to his view, be ready-made, it involves a process of development in the humanity (cf. the  $\pi\rho\kappa\kappa\kappa\pi\eta$ , or 'moral advance' of Paul of Samosata). Further, in accordance with Theodore's conception of two stages in the history of created intelligent beings (of. above, § 3), it was necessary that Christ should assume humanity in its mutable state, subject to bodily weakness and the passions of the soul. Christ submitted to the assaults of of the soul. Christ submitted to the assaults of the Tempter, and underwent the moral struggle between the higher and lower impulses (Migne, PG, lxvi. 720, 992, 995). By this struggle He mortified sin in the flesh and tamed its lusts (ib. 720). Theodore further admitted a real ignorance in Christ, and an advance in human knowledge (ib. 977, 981). Similarly, Diodorus asserts that the Godhead did not impart to the manhood of Christ all wisdom at the moment of birth, but bestowed it gradually (Marius Mercator, ed. Baluze, p. 349). Cf. Cappadocian Theology, vi. (2).

(2) But it is in their conception of the relations of the human and Divine natures that the teaching of Diodorus and Theodore exhibited a tendency

of Diodorus and Theodore exhibited a tendency which finds its extreme expression in Nestorianism. It is here, too, that the traditional 'Adoptianism' of Antiochene teaching appears. Both Diodorus and Theodore drew a sharp distinction between the human and Divine elements in Christ, and the human and Divine elements in Christ, and thus exposed themselves to the charge of teaching the existence of two persons in Christ. Thus Diodorus distinguished (Leontius, c. Nest. et Eutych. iii. 43) in Christ two sons: one by nature, God the Word; the other by grace, the man who was born of Mary. God the Word is not to be supposed the son of Mary. He may, however, be called καταχρηστικῶς, 'Son of David,' because of the shrine of God the Word which came from David, inst as He who was of the seed of David may be shrine of God the word which came from David, just as He who was of the seed of David may be called 'Son of God' by grace, not by nature. Similarly, Theodore denies that God was born of Mary (Migne, p. 997); though elsewhere he asserts that Mary may be called both  $\theta eor \delta \kappa \sigma s$  and  $d \nu \theta \rho \omega \sigma \sigma \tau \delta \kappa \sigma s$  (God-bearing' and 'man-bearing'), and 'man-bearing', the latter in a natural sense, the former because God was in Him who was born (Migne, p. 992; cf. Nestorius in Loofs' Nestoriana, pp. 167, 301). When it is said that 'the Word became flesh,' this must be understood of appearance only, for the Word was not changed into flesh (Migne, 981). The which is the said that the word was not changed into flesh (Migne, 981). The object of both writers in these statements is jealously to guard against any idea of a confusion of the two natures. But, apart from this negative aim, both Diodorus and Theodore exhibit a positive tendency to regard the human nature as possessed of an independent personality. This led them to conceive of the union of the two natures as a moral

union of grace (whereas Cyril started from the conception of One Divine Person, who has become incarnate, and maintained a hypostatic  $[\kappa \alpha \theta]^{\prime}$   $\delta \pi \phi - \sigma \tau \alpha \sigma \nu ]$  union).

The nature of the union is discussed most fully by Theodore in the de Incarnatione (Migne, p. 972f.). He distinguishes three possible modes of the Divine indwelling. The first is by 'essence' or 'being' (ovola). But in Scripture the Divine indwelling is spoken of as a special privilege of the saints (Lv 2612, 2 Co 615). This excludes therefore an 'essential' indwelling, since the ovola (or 'being') of God is not circumscribed by place. A second mode of indwelling is by the operation or energy (everyela) of God. But this is common to all created things. Accordingly the only remaining mode in which the Divine indwelling is possible is by the Divine approval or complacency (evonla), the moral union by which God dwells in those who are pleasing to Him. How then did the union of God with the man Christ differ from His union with the saints? The answer is that He dwelt in Christ as in a Son (Migne, p. 976). Christ received The nature of the union is discussed most fully with the saints? The answer is that He dwelt in Christ as in a Son (Migne, p. 976). Christ received the whole grace of the Spirit, whereas in other men the participation in the Spirit was partial (ib. p. 980; cf. Diodorus ap. Marius Mercator, ed. Baluze, p. 351; Nestorius, Loofs, p. 206). This indwelling of Christ began with His formation in the word of the Virgin and was a result of the the womb of the Virgin, and was a result of the Divine foreknowledge of what Christ would be (Migne, pp. 974, 980, 994). At His baptism Christ further received the grace of adoption. As a result of His supernatural birth, His inseparable union with the Word, and His unction by the Holy Spirit, Christ exhibited a hatred of evil and an irrepressible love of good (see below (3)). He was preserved by His union with the Word from the inconstancy of mutable human nature, and passed from stage to stage of virtue with the greatest ease (ib. 977). He thus proved Himself worthy of the union, and became our example and way, until after the Resurrection and Ascension He exhibited the union with the Word in its final completeness

(3) In its treatment of the unity of Christ's Person, the teaching of Diodorus and Theodore exhibits a lack of precision and logical completeness. As we have seen, they tended to view the two natures apart, and to conceive of their union as a moral union of grace. Moreover, their idea of a complete human nature involved the notion of a distinct human personality (cf. above). 'When we distinguish the natures,' says Theodore, 'we maintain that the nature of God the Word is maintain that the nature of God the Word is perfect, perfect too the person (πρόσωπον)—for it is not possible to speak of a distinct existence (ὑπόστασιν) which is impersonal (ἀπρόσωπον)—perfect too the nature of the man, and the person (πρόσωπον) likewise. But when we look to the conjunction of the two, then we say that there is one person (πρόσωπον) (Migne, p. 981). The nature of the unity thus attained is in one passage compared by Theodore to that of marriage. As the Lord said of the man and the woman, 'They are no longer twain, but one flesh' (Mt 19<sup>6</sup>), so it may be said of the union that there are no longer two persons (πρόσωπα) but one, the natures, of may be said of the union that there are no longer two persons (πρόσωπα) but one, the natures, of course, being kept distinct (Migne, p. 981). Elsewhere he compares the unity to that of the rational soul and flesh in man (αdv. Apoll. ap. Facund. ix. 4). Theodore employs the terms ἔνωσις ('union') and συνάφεια ('conjunction') to denote the union of the natures. In his interpretation of this union he uses phrases which imply that it consisted in the uses phrases which imply that it consisted in the harmonious relation of the human and Divine wills in Christ (cf. the phrase ἐνώσας αὐτὸν ἐαυτῷ τῆ σχέσει τῆς γνώμης; Migne, p. 989). Theodore, however, was conscious that the charge of teaching two sons

might be brought against him, and he repudiated it. 'The Son,' he says, 'is rightly confessed to be one, since the distinction ought of necessity to remain, and the unity of person (πρόσωπων) ought to be guarded without interruption' (Migne, p. 985; see the 'Creed' in Hahn, op. cit. p. 303; cf. Nestorius, Loofs, p. 330 f.). Similarly Diodorus refutes the charge of teaching two sons by saying that he neither affirms that there are two sons of David, nor that there are two sons of God according to nor that there are two sons of God according to substance, but that the Word of God dwelt in Him who came from the seed of David (Marius Mercator,

who came from the seed of David (Marius Mercator, ed. Baluze, p. 350).

For a fuller discussion of the question, see Dorner, Person of Christ, n. i. 47f. Theodore has points of contact with the mystical theology when he emphasizes love as the principle which brings the humanity of Christ into harmony with the Word. The thought and volition of the man Jesus were, in point of contents, the thought and volition of the Logos. 'The form in which the mind of Jesus actually expressed itself was determined by the Logos; though, in consonance with his theory of freedom, he represented this determination as a mere influence of the Logos' (Dorner, l.c.).

(4) Both Diodorus and Theodore assert the unique character and privileges of the sonship acquired by the man Christ. They both apply the words spoken at the baptism, 'This is my beloved Son, in whom I am well pleased,' to Christ and not to the Word (Marius Mercator, p. 350; Theodore, in Mt 317; de Incarn., Migne, p. 980). The title Son is applied both to God the Word and to the nature assumed by Him, by reason of its union with Him (Theodore, de Incarn. ap. of its union with Him (Theodore, de Incarn. ap. Facund. ix. 3; cf. Nestorius, Loofs, p. 336). As a result of the union with the Word and His adopresult of the union with the Word and His adoption as Son, the man Christ shares in the worship which is offered to the Word. 'We worship,' says Diodorus, 'the purple for the sake of Him who is clothed in it, and the temple because of Him who dwells in it; the form of the servant because of the form of God; the lamb because of the high priest; Him who was assumed, because of the might priest; Him who was assumed, because of the Wirgin, because of the Maker of all. Confessing this, offer one worship' (Marius Mercator, ed. Baluze, p. 351; cf. Theodore, in Col. 125-16; de Incarn., Migne, pp. 2016. 991 f., 996; Nestorius, Loofs, p. 262).

This teaching of Diodorus and Theodore, which

apparently escaped censure during their lifetime, attained public notoriety through Nestorius, the patriarch of Constantinople. Nestorius merely popularized the teaching of his master, Theodore, without exhibiting the same fundamental depth of treatment. The real parent of Nestorianism as a system of Christology is Theodore. See, further,

art. NESTORIANISM.

system of Christology is Theodore. See, further, art. NESTORIANISM.

The Christology of three other representatives of the school of Antioch calls for notice here.

Eustathius of Antioch is an important link between the earlier and later stages of the school. His works exhibit some of the characteristic Antiochene features. He ascribes to Christ a true human development, and speaks of the human nature as the temple of the Deity. The Divine nature is dissociated from the experiences of the human nature. It was the latter alone which was anointed and glorified. He further implies that Christ acquired the Divine gifts and graces gradually. Hence Dorner (Person of Christ, I. il. 250) says that with him, as with the later Antiochenes, 'the deity and humanity remain separate and distinct, and do not constitute a living unity.' Yet Eustathius affirms the closeness of the union between the humanity of Christ and the Logos (Migne, xviii. p. 689, συνδιατομέτη κυρίως ή ψυχή τοῦ Χριστοῦ τῷ Αόγος καὶ δεῷ. 'He is God by nature, yet He has become man of a woman, even He who was formed in the womb of the Virgin' (Migne, kxxiii) p. 90). See fragments collected in Galland, Bibl. vet. Patr. iv. 577 f.; Mai, Script. vet. Nova Coll. (1832) vii. 185, 205; Cavallera, S. Eustathii in Lazarum Hom., App. I. de fragmentis Eustathii (1905).

Chrysostom approaches Christological questions from the practical rather than from the speculative side. Like all the Antiochenes, he emphasizes the completeness of the humanity of Christ. Christ shared our mortal nature, but without sin, and was subject to the physical needs, the human emotions, and the sufferings of our humanity. He exhibits the characteristic Antiochene spirit when he asserts that Christ did all that He did in a human manner, not only to teach the reality of His incarnation, but as a pattern or ideal of human virue. But the idea of Theodore, that the human nature was gradually moulded by the

influence of the Word finds no place in his teaching. Chrysostom further shows signs of Antiochene influence in dealing with the union of the two natures. He repudiates the idea that the Incarnation involved any change of place in the Deity, or that the Logos descended into the flesh of Christ. He interprets the humiliation of Christ (Ph 28) as a humiliation of mind. Again, he distinguishes, after the manner of the Antiochenes, the experiences of the humanity from those of the Godhead, and, like Godhead, which was ancinted and exalted. Lastify, he speaked of the humanity and the Godhead, which was ancinted and exalted. Lastify, he speaked of the humanity and the Head of the H

The Christology of the Antiochenes was the outcome partly of their training, and partly of their opposition to Apollinarism. The historical study of Scripture, and the high conception entertiand by them (see Theodom) of the discripture. tained by them (esp. Theodore) of the dignity and destiny of human nature, led them to emphasize to the fullest extent the humanity of the Lord. Their ideas of free-will and the moral development

aspect of Christ's Person. It was the truth that God Himself was revealed in Christ which from the days of Athanasius had been emphasized in Alexandrian teaching. Hence Cyril of Alexandria was led to lay stress upon the unity of the Word Incarnate. The humanity of Christ does not belong to Himself. It is not the humanity of an individual and independent man, but of God the Word. The human element was subordinated to the Divine. The Word has taken human nature into the unity of His Divine Person, which remains one and the same after as well as before the Incarnation. The Antiochenes had not clearly faced the problem as it presented itself to Cyril. They had affirmed the integrity of the two natures, and they had asserted their ineffable union. But the nature of this union and the exact relations of the two natures had not been considered by them. Hence arise the apparently inconsistent statements of Theodore that the humanity is personal  $(\pi \rho \delta \sigma \omega \pi \sigma \nu)$ , yet Christ is one Person

(πρόσωπον).

Much of the misunderstanding between Cyril and the Antiochenes arose out of the undeveloped stage of doctrine at the time, and the absence of any clear definitions of the words πρόσωπον ('person), ύπόστασις ('hypostasis'), and φύσις ('nature'). had the union of the natures been clearly defined. The terms 'mixture,' 'blending,' 'union,' 'connexion' (μέξις, κρᾶσις, ἔνωσις, συνάφεια) had been used indifferently by earlier writers to denote this union (see art. CAPPADOCIAN THEOLOGY, § vi. (3)). The Antiochenes, from traditional habit, attributed to each of the natures that which beon the other hand, referred everything to the personal subject, who is the Word. When brought face to face, both schools of thought admitted the unity of Person, and both asserted the integrity and distinction of the two natures. The difference between them was exaggerated by misunderstanding and controversy. The unguarded language of Diodorus, Theodore, and Nestorius was, doubtless, largely responsible for this, but the Formula of Concord agreed upon by Cyril and the Antiochenes exhibits the fundamental agreement of the two Christologies. The Antiochenes accepted and explained the word  $\theta \epsilon o \tau \delta \kappa o s$ , the unity of the two natures was affirmed, and Cyril's misunderstood natures was animmed, and Cyrii's misunderstood expressions, φυσική ἔνωσις, ἔνωσις καθ΄ ὑπόστασιν, μία φύσις τοῦ θεοῦ λόγου σεσαρκωμένη ('natural union,' 'personal union,' 'one incarnate nature of God the Word'), were dropped. See, further, Mahé in Revue d'histoire ecclésiastique, referred to above; for Nestorius see Loofs, Nestoriana (1905), and Bethune-Baker, JThSt viii. p. 119 f.
While Cyril affirmed a truth of vital import-

While Cyril affirmed a truth of vital importance to Catholic theology,—the truth that He who assumed human nature was personally God, and took human nature into vital union with Himself, we are justified in maintaining the importance of the stand made by the Antiochenes in defence of the reality and completeness of Christ's human experiences. It was a valuable protest against an almost docetic tendency which had already appeared in Apollinarism, which was latent in Alexandrian theology (even in Athanasius), and which re-appeared in Monophysitism. If the Church was finally enabled to overcome the latter,

it was largely due to what it had learnt from the teaching of the Antiochenes.
7. The Work of Christ.—Theodore alone among the Antiochene Fathers developed a distinctive conception of the work of Christ. His views upon of man impelled them to oppose any teaching which impaired the reality of our Lord's human experiences, or tended (like Apollinarism) towards a docetic view of His humanity. The Alexandrian school, on the other hand, started from the Divine

than the restitution of humanity. Christ is the new creation, who exhibits God's plan in its final completeness. In Him there is set forth that image of God which man was meant to attain, but which he failed to attain. The work of Christ was not only to restore the broken order of the universe and exhibit man in his true place at the head of creation, but to inaugurate that new stage (κατάoraous; cf. above, § 3) in the life of man, in which he should be free from the mutability and mortality of his present state. As a result of His struggle and victory, accomplished by the exercise of His free-will and through the union with the Word, Christ overcame the mutability of human nature, which was crucified with Him and rose with Him (in Rom. 65). The deliverance which He has won for men is already potentially theirs, though it is only in the future that it fully takes

The omissions in this presentation are signifi-cant. The conceptions of guilt and responsibility, and the idea of Christ's death as an atonement, are absent. Death is but a necessary stage, through which Christ passes to the Resurrection and inaugurates the higher and final stage of man's development. The necessity of the Incarnation is not based upon the Fall, but upon the general is not based upon the ran, but upon the general conception of the Divine purpose for man, which required that he should be delivered from his present state of mortality. There are points of contact in this teaching with the teaching of Irenæus, Athanasius, and the Cappadocians, especially in the emphasis laid upon death and mortality. But we miss in Theodore the strong interest in the redemptive side of Christ's work which character-izes Athanasius, and the deeper teaching upon death which he and other Fathers exhibit. Again, Theodore's emphasis on man's free-will led him to assert, as Dorner says (Person of Christ, II. i. 51), not so much 'the thorough reality of the incarnation of God, as 'the reality of the freedom of the human aspect of Christ's Person.' The purpose of Christ's work was to exhibit the development of human nature in its completeness. And in this development the thought of the forgiveness of sins and the work of grace is subordinate to that of the need of moral effort. See, further, Dorner, *l.c.*; cf. above, § 5, and below, § 8.

cf. above, § 5, and below, § 8.

Chrysostom and Theodoret are much nearer to the general tradition of the Church in their teaching upon Christ's work. The conception of Christ as the 'first-fruits' (àmag-xŷ) of human nature, which is consecrated in Him, was suggested to them, as to Theodore, by their exegesis of Scripture. But it was not peculiar to the Antiochenes. More characteristic of Antiochene teaching is Chrysostom's picture of Christ as the original pattern or ideal of human virtue, to exhibit which was the purpose of His human life and experiences (în Joh. hom. 48). In their conception of the Atonement, Chrysostom and Theodoret echo much of the current teaching of their time (e.g. the deception of Satan, Christ's contest with him and overthrow of his dominion over mankind), but they exhibit nothing characteristic of the Antiochene standpoint. The same is true of the idea found in Theodoret (de Providentia, Or. x., Migne, Ixxxiii. pp. 753, 756), that Christ paid the debt and endured the chastisement and penalty due to us for our sins. Chrysostom, though he emphasizes the importance of the Resurrection, does not, like Theodore, make it the central point of Christ's work.

8. The work of Salvation.—(1) The task of re-

8. The work of Salvation.—(1) The task of reconciling man's free-will with God's predestination was attempted by both Theodore and Chrysostom. Both reject the idea of an absolute predestination in favour of a conditional predestination. God's purpose, says Theodore, is dependent on man's free-will (in Rom. 8<sup>28</sup>; cf. Chrys. in Joh. hom. 46). Both, too, regard God's eternal election of men as determined by His foreknowledge of what they would be (Chrys. in Matt. hom. 79; Theodore, in Rom. 910.14; so, too, Theodoret, in Rom. 880 911). On their interpretation of Ro 9, see Chase, Chrysostom, p. 165f.; Sanday-Headlam, Romans, p.

(2) In dealing with man's appropriation of salva-

tion, the Antiochenes, owing to their views upon human nature, fail to do justice to St. Paul's conception of justification by faith. Though Theodore denies that man can be justified by works, yet the initiative of the individual occupies so prominent a place in his conception that faith enters into it only as a secondary idea (in Cor. 1134). Moreover, the faith of which he speaks is different in character from that of St. Paul, being directed rather to the future resurrection life, which man shares at present, through his incorporation in Christ, only in anticipation (in Gal. 2<sup>16. 20</sup>). Chrysostom's treatment is practical. In some passages he emphasizes the act of will by which man turns from evil and inclines to good, and in others he maintains the importance of faith, and attributes all to grace. But the two ideas are not clearly brought into relation with one another (see Förster, Chrysostomus, p. 152 f.).
(3) From what has been said above, it will appear

that the Antiochene attitude towards the question of the relations of grace and free-will resembled that of the Semi-Pelagians (on the relations of Theodore and Julian of Eclanum, cf. above, § 5). In the teaching of both Theodore and Chrysostom the initiative lies with the individual will, though both affirm the necessity of grace (Chrys. in Joh. hom. 17, in Rom. hom. 16. 19; Theodore, in Marc. 4<sup>26-29</sup>, in 1 Cor. 11<sup>24</sup>, in Heb. 4<sup>1-2</sup>).

9. The Sacraments.—There is no formal treatment of the Sacraments in the Antiochene Fathers. They accept the traditional Church teaching and practice, and assign a real value to the Sacraments in the furtherance of the spiritual life (Theodore, in Cor. 11<sup>24</sup>, in 1 Tim. 3<sup>6</sup>). In Baptism, according to Theodore, man receives the gift of union with Christ through the Spirit and the pledge of the

immortality which he is destined to share hereafter with Christ (in Eph. 1<sup>22</sup> <sup>23</sup>).

In speaking of the Eucharist, Theodore and Chrysostom use the current language of their time. Thus Theodore, in commenting on Mt 26<sup>26</sup>, speaks of the words of institution in terms which recall the language of Cyril of Jerusalem, and says that Christ teaches us that we are not to regard the nature of that which lies before us, but to consider that, by the thanksgiving pronounced over it, it is changed into flesh and blood. In his comment on 1 Co 105, however, he speaks of the change as spiritual. Chrysostom uses the emotional and rhetorical language of popular devotion, and goes much further in asserting a conversion of the elements (see Batiffol, Etudes d'histoire et de théologic positive, 2ième série, p. 268 f.). But the two most characteristic contributions to the doctrine of the Eucharist from the Antiochene standpoint are to be found in the writings of Nestorius and Theodoret. Both writers approach the subject in con-nexion with the Christological disputes. In reply to Cyril of Alexandria, who had affirmed that the flesh of Christ given in the Eucharist is 'life-giving' (ζωοποιόν) by virtue of its union with the Word, Nestorius maintains that this view tends to an Apollinarian confusion of the two natures. He appeals to the language of St. John (6°5) and St. Paul (1 Co 11°3t), and urges that it is the 'flesh,' and not the Godhead, which is spoken of as 'eaten.' Christ said, 'This is my body,' not 'This is my Godhead.' St. Paul speaks of that which is eaten as 'bread,' and, adds Nestorius, it is bread 'of which the body is the antitype.' The Eucharist is the 'memorial' of the death of the Lord, i.e. of the Son of Man (not the Word). See passages in Loofs, Nestoriana, pp. 227-30, 355-7, and in Cyril, c. Nest. iv. 3-6. These statements led Cyril to accuse Nestorius of denying the virtue of the Sacrament, and of confining it merely to the commemoration of the death of a man (c. Nest. iv. 6). But probably the real difference between Cyril and Nestorius as to the nature and efficacy of the Sacrament was less than Cyril allows, and was due rather to the difference in their Christological statements. There is a fine recognition of the religious value of the Eucharist in Nestorius' sermon on Heb. 31 (Loofs, Nestoriana, p. 241 f.).

More important is the contribution of Theodoret. In the Eranistes (Dial. i. p. 56, Migne; Dial. ii. p. 165 f., ib.), where he is arguing with a Monophysite opponent, he introduces an analogy from the Eucharist to show that the two natures in Christ are not to be confused. From the current appellation of the elements as 'types' or 'symbols' of the body of Christ, the orthodox disputant maintains that Christ still possesses a real body. The Monophysite opponent rejoins by a counter-assertion that just as the elements after the invocation undergo a change, so the Lord's body after the union with the Divinity is changed into the Divine substance. This the orthodox speaker denies. 'Even after the consecration the mystic symbols are not deprived of their own nature; they remain in their former substance, figure, and form; they are visible and tangible as they were before. But they are regarded as what they have become, and believed so to be, and are worshipped as what they are believed to be.' And again he says (Dial. i. p. 56) that Christ 'honoured the visible symbols by the appellation of body and blood, not because He had changed their nature, but because He had added grace to their nature. In this presentation (which resembles that of Pope Gelasius in the de Duabus Naturis) Theodoret exhibits a view of the Eucharist which has been called 'Dyophysite' (Batiffol), and which, while preserving the reality of the outward and inward parts of the Sacrament, guards against those theories of a conversion of the elements which, from the 4th cent. onwards, gained ground in the Eastern Church. The change, according to Theodoret, is in the region of grace (κατὰ χάριν), not in the natural sphere. See, further, art. EUCHARIST.

10. Eschatology.—The Antiochene conception of man's history and of the work of Christ culminates, as we have seen, in the hope of immortality. Hence the Antiochenes were profoundly interested in eschatology. From Eph 1<sup>10</sup> Theodore drew the conclusion that all men and all rational creatures will finally look to Christ and attain perfect harmony. The eschatological teaching of Diodorus and Theodore is one of the few points of agreement between them and Origen (see also CAPPADOCIAN THEOLOGY, § x. (3)). Both Diodorus and Theodore express, like Origen, the hope that, though the wicked will suffer just punishment for their sins, this punishment will not be everlasting. Diodorus protests against the idea that the punishment of the wicked will be unending, on the ground that it would render useless the immortality prepared for them. God rewards the good beyond their deserts. So, too, the extent of His mercy exceeds the debt of punishment which the wicked have to pay (Assemani, Bibl. Orient. III. i. p. 323f.). Similarly, Theodore asks what would be the benefit of the resurrection to the wicked, if their punishment were unending (Marius Mercator, ed. Baluze, p. 346). When the wicked have been led through punishment to see the evil of sin and to fear God, they will at length enjoy His bounty. Such texts as Mt 5<sup>26</sup> and Lk 12<sup>47,48</sup> inspire him with the hope that the full debt of punishment may be paid, and the wicked finally delivered (Assemani, I.c.).

III. LATER HISTORY OF THE SCHOOL OF ANTI-OCH.—The condemnation of Nestorianism by the Church in A.D. 431 was fatal to the development of

great representatives. Marius Mercator about 431 maintained that Theodore was the real author of Pelagianism, and later on called attention to the Nestorian tendency of his teaching. The use made by the Nestorians of Theodore's writings further increased this animosity. Rabbulas, bishop of Edessa, and later on Cyril of Alexandria, condemned the teaching of the great Antiochene and of his predecessor Diodorus. In the 6th cent., amid the Monophysite controversy, the Emperor Justinian issued the edict of the Three Chapters (544), in which the writings of Theodore, the treatises of Theodoret against Cyril, and the letter of Ibas to Maris were condemned; and this condemnation was repeated by the Fifth General Council in 553, which by an irony of fate also condemned the works of Origen, the representative of the rival school of Alexandria. The same Council likewise condemned Theodore's methods of Biblical interpretation. But, while the proscription of Nestorianism was fatal to the school of Antioch and led to its decline, its teaching was carried on under Nestorian influence in the schools of Edessa and Nisibis. Ibas, the head of the school of Edessa (†457), translated the works of Diodorus and Theodore into Syriac, and when finally the school at Edessa was broken up in 489 through the proscription of Nestorianism by the Emperor Zeno, the refugees found a home in the school of Nisibis, which was founded by Barsumas. Here the Biblical studies to which the Antiochenes had given so great an impetus were renewed, Theo-dore's memory was held in the highest reverence, and he came to be regarded as 'the Interpreter' par excellence among East Syrian Christians. In these schools the study of Aristotle, also inherited from the school of Antioch, was carried on and transmitted by the East Syrian Church in later times to the Muhammadans, by whom it was brought back to Europe in the days of Muslim civilization. Lastly, these East Syrian Christians became a centre for a wide field of missionary activity in the far East, extending as far as India and China.

In the Greek Empire, though the fame of Dio-dorus and Theodore became obscured through the controversies which gathered around their me-mories, the exegesis of the Antiochenes continued to exercise a wide influence through the works of Chrysostom, whose orthodoxy was not exposed to the attacks which had been levelled against other members of the school. Isidore, Nilus, and Victor of Antioch took Chrysostom as their guide in the commentaries which they wrote, while a long line of Greek catenists and commentators from the 6th to the 11th cent. show the greatness of their debt to the Antiochene expositors. Even in the West their influence was not unrecognized. Jerome had points of contact with the school and was influenced by its exegesis (Kihn, Die Bedeutung der antioch. Schule, pp. 59, 194; Hergenröther, Die antioch. Schule, p. 66). Cassian, a disciple of John Chrysostom, carried on the teaching of his master in the Church of Southern Gaul. The controversies about the Three Chapters aroused interest in the writings of Theodore, and it is probably to this period that we owe the Latin translation of some at least of Theodore's commentaries on St. Paul, at least of Theodore's commentaries on St. Paul, which, passing into currency under the name of St. Ambrose, secured a place in the works of the later Western compilers (Swete, Theodore of Mops. on the Minor Epp. of St. Paul, i. pp. xlv., lviii.). Two other famous works produced in the West show the influence of Theodore's teaching. The fact is the Institute regularity of Junilius Africanus. first is the Instituta regularia of Junilius Africanus (c. 550), an introduction to the study of the Scrip-Church in A.D. 431 was fatal to the development of | tures, which, as the author tells us, was derived the school of Antioch and to the reputation of its | from Paul of Nisibis, and which reproduces all the

essential features of Theodore's principles of Biblical interpretation as well as of his doctrinal teaching. This work of Junilius, whom later ages transformed into a bishop, was widely popular in the West. The de Institutione divinarum literarum of Cassiodorus a few years later shows a similar connexion with the East Syrian schools, and exhibits the influence of methods and principles which had been derived from the Antiochenes (Kihn, Theodor v. Mops. und Junilius Afri-

canus, pp. 210f., 215f.).

Nor was the West wholly uninfluenced by the doctrinal teaching of the Antiochenes. As has been already indicated (see II. 5), Theodore was brought into contact in his later years with several of the Pelagian leaders. Julian of Eclanum, one of the most prominent of these, was an admirer of Theodore's writings, while another, the deacon Anianus, has been claimed as the translator of some of Chrysostom's homilies, his object being to uphold, by appealing to Chrysostom, the cause of man's free-will (Swete, op. cit. vol. i. p. liif.). The Christological teaching of Leporius, a monk in the monastery of Marseilles, who is spoken of by Cassian as a Pelagian, shows clear points of contact with that of Theodore. In North Africa, during the 6th cent. the 6th cent., amid the controversy upon the Three Chapters, the works of Theodore found many defenders, and the language of Facundus of Hermiane fenders, and the language of Facundus of Hermiane has been thought to suggest that they had already been translated into Latin. Finally, the Spanish Adoptianists exhibit a close resemblance in their Christology to Theodore, and Neander has suggested that Felix of Urgel was indebted to the writings of Theodore, possibly through a Latin translation made in Africa (Swete, op. cit. vol. i. p. lvf.; Neander, Ch. Hist. v. 219; Harnack, Hist. of Dogma, v. 284f.).

IV. GENERAL SUMMARY.—The permanent service of the Antiochene school lies in its effort to correct a one-sided view of the factors and methods

correct a one-sided view of the factors and methods of revelation. To the emotional, mystical religion, which tended to lose the human element in the Divine, whether in inspiration, or the Person of Christ, or the relations of grace and free-will, it opposed conceptions which endeavoured to do justice to the dignity and worth of human nature. While the Alexandrian theology started from the Divine side, and deduced all its conclusions from that as its source, the Antiochenes followed the inductive and rationalistic method, which consisted in a careful examination of the facts of human nature and experience. The philosophical basis of the one was Platonist, while that of the other was Aristotelian. In Christology the school of Antioch centred attention upon the historical Christ; in its doctrine of inspiration it affirmed the immediate and historical reference of Scripture; in anthropology it insisted upon the reality of human freedom. It regarded the purpose of the Incarnation as the accomplishment of man's destiny rather than as the deliverance of him from the consequences of sin. The struggle and conflict provoked by the commandment became a means of educating man to realize his freedom of choice and his weakness, and so of raising him out of the stage of subjection to the passions and mortality into the higher life of immortality and sinlessness which has been won for him by Christ. The two standpoints, the Alexandrian and the Antiochene, represent complementary aspects of Christian theology. If the Alexandrian and mystical standpoint has found fuller expression in the later thought and teaching of Christendom, the problems of modern thought, and the evolutionary view of the Uni-verse, have once more called attention to the point of view which underlies the teaching of the Antiochenes.

J. H. SRAWLEY.

ANTIPATHY.—Antipathy is a state of mind or feeling expressing some sort of dislike or hatred of an object or person. Its proper reference is to persons, and it is often a milder or more polite term for hostility. Its analogue is found in the repulsion existing between elements of matter under certain conditions, as sympathy has its analogue in attraction or affinity between them. Thus an æsthetic man may have an antipathy or aversion towards an unæsthetic or vulgar person ; an unbeliever may have an antipathy towards a religious believer. Anything that excites our dislike creates antipathy. It is a state of mind quite consistent with morality, and may actually be essential to it in certain stages of development; but it does not imply anything either moral or immoral, though it may be a state of mind making certain moralities effective. Anger and hatred are closely associated with ethical implications, but antipathy has no such associations, but rather connotes the fact of mental or emotional antagonism without regard to ethical considera-tions. JAMES H. HYSLOP.

ANTI-SEMITISM.—I. Historical.—The expression 'Anti-Semitism,' which was coined about thirty years ago, signifies not opposition to Semites in general, but a hostile or at least an unfriendly disposition on the part of Aryans towards Jews,

both socially and commercially.

The expression 'Semitic languages' was used for the first time in the year 1781 (contemporaneously by the two Göttingen professors, August Ludwig

The transfer of the

von Schlözer and Johann Gottfried Eichhorn) as a comprehensive designation for those related languages which were spoken by peoples brought into connexion with Shem, in the table of peoples in Gn 10. The Bonn professor, Christian Lassen, was the first to give expression to the view that these peoples, the 'Semites,' were in many respects distinct from the Aryans and other races (cf. Indische Alterthumskunde, vol. i. pp. 414-417, Bonn, 1847).

Lassen ascribes to the Indo-Germanic race a 'higher and a more complete mental endowment.'

'higher and a more complete mental endowment.'
'The point of view of the Semite is subjective and egoistic.
His poetry is lyrical, and therefore subjective. In his religion he is self-seeking and exclusive. The characteristic features of the Semitic spirit, the passionate disposition, the obstinate will, the firm belief in their exclusive rights, in fact the whole egoistic trend of mind, must have in the highest degree fitted their possessors for great and daring deeds. A bold spirit of enterprise, an energetic and persevering courage, great skill, and a fine discernment how to take advantage of favourable circumstances and means of help among strangers, characterize first the Phoenicians, and later the Arabs. As soldiers, sailors, and enterprising traders, not only can they place themselves on a par with Indo-Germanic peoples, but they have to some extent excelled their contemporaries of this race and been their predecessors.'

Ernest Renan has expressed himself in similar terms in *Hist. gén. des lang. sémit.*, Paris, 1855, and in *Études d'hist. relig.*, 1857. The Anti-Semites extracted from Renan many catch-words and lines of attack, although Renan's intentions did not lie in this direction. What he had said about Semites in general, they applied specially to the Jews. The influence of Renan's judgment of the Semites comes clearly to the front, e.g., in an article which received much notice in its time, published anonymously, but written by the well-known ethnologist Friedrich von Hellwald, 'Zur Charakteristik des jüdischen Volkes' in Das Ausland, 1872 (Stuttgart), Nos. 38 and 40. We shall quote a few sentences here.

Ausland, 1872 (Stuttgart), Nos. 38 and 40. We shall quote a few sentences here.

'In the case of the Jews, we have to do with an entirely different ethinic group. . . . This people, scattered and settled in Aryan Europe, is purely Semitic. From an anthropological point of view, the Jew who lives in our midst stands quite as far apart from us as the Arab; and the emphatic contrast between the two, usually indicated by the opposites, Christian and Jew, is for the most part exactly the same as the existing opposition between Aryanism and Semitism. The European feels, so to speak, instinctively in the Jew who stands over against him the foreigner who has immigrated from Asia. . From the time of their entrance into Canaan the Jews can boast of an almost exclusive national type, which has persisted with remarkable purity to the present day. . . A further specific feature of Judaism is its extraordinary geographical extent and its remarkable power of adaptation. . All over the world, in all climates, Jews live in content and prosperity, in spite of having in some places to suffer very hard civil and social pressure. . . In the east of Europe the Jew is sharply distinguished from the other elements of the population; he is an object of hate, but still an almost indispensable constituent of social life. Quite as rough and ignorant as the non-Jewish peasant, but in character ignoble and mean, while possessed of that cunning which as a natural endowment of the Semitic race, the Jew has understood how to make himself in economic relations master of the Christian population, which stands far below him in keenness of intellect, and whose hate he repays by plundering them in every conceivable direction. The Jews, like most of the Semites, possessed from the very beginning a cunning which naturally tended to develop still further [owing to the oppression to which they were subjected]. . . . We cannot do otherwise than designate the Jews the very canker from which the lands of Eastern Europe suffer. No means (provided they are

F. v. Hellwald speaks of the frugality of the Fews, of their love to their parents and children, of their system of mutual assistance, and of their system of mutual assistance, and of their straordinary fertility.

The great influence which the Jews, especially amid the fautonic nations, have acquired in political, literary, and

economic conditions, comes, too, from their excessive zeal for learning. Dark spots in the Jewish racial character are a consciousness of their own merits, often ridiculously exaggerated, and a boundless egoism... Self-sacrifice, devotion, and love of country are conceptions foreign to the Jewish mind. The Jew everywhere feels himself a cosmopolitan... The entire tendency of Jewish effort can be summed up in one word, "exploitation." Thanks to this method, instinctively and systematically employed, the Jews have actually reached a stage which enables them to control the rest of the population... They have succeeded in concentrating in their hands enormous wealth... Recognizing the power of the printed page on the masses, they have especially exerted themselves to obtain control over the daily press... In many places journalist and Jew are identical conceptions. Equipped with a superficial and imperfect knowledge, they come forward as teachers of the people, accessible to every influence which suggests possibilities of gain. They form a focus of corruption more devastating than can well be imagined."

These extracts from F. v. Hellwald, although they contain many false along with some correct opinions, are given here because many 'Anti-Semites' of the present day express themselves in exactly similar He was one of the first to bring to clear expression what many at that time felt only in a vague way, and consequently his writing made so deep an impression and exerted so great an influ-

ence.

The expression 'Anti-Semite,' as will be clear from what has been said, is, so far as the present writer is aware, scarcely three decades old. In the year 1880, W. Marr published, at Chemnitz, under the general title Antisemitische Hefte, three short essays, 'Der Judenkrieg,' 'Oeffnet die Augen, ihr deutschen Zeitungsleser,' and 'Goldene Ratten und rothe Mäuse.

Anti-Semitism, however, is more than two thousand years old. Cf. Est 38 And Haman said unto king Ahasuerus, There is a certain people scattered abroad and dispersed among the people in all the provinces of thy kingdom; and their laws are diverse from all people; neither keep they the king's laws: therefore it is not for the king's profit to suffer them.'
But, leaving this passage out of account, we may

regard Egypt, and especially Alexandria, as the seat of Anti-Semitism.

C. Feitz Silhein, Der Antisemitismus des Altertums in seiner Entstehung und Entuncklung, Basel, 1905; E. Schürer, GJV3 ill. pp. 1-2-107, 397-420 (1888); Th. Reinach, Textes d'auteurs grecs et romains relatifs au Judaisme, Paris, 1895.

As early as the times of the first Ptolemys many Jews resided in Alexandria. Their number increased especially during the time of the per-secution of the Jewish religion by Antiochus Epi-phanes. This persecution resulted in the Jews becoming more exclusive than ever in relation to adherents of other religions. Hateful accusations and bitter taunts, both to a large extent resting on ignorance, formed the answer of the heathen. Unfortunately the work of Flavius Josephus, Against Apion, is almost the only source of information we have. The earliest 'Anti-Semitic' author was the Egyptian priest Manetho (B.C. 270-250). Apion the grammarian (a contemporary of Christ) is best known to us from the still extant work of Josephus just referred to. Among the Romans we may mention Tacitus (*Hist.* v. 2 ff.) and the poets Horace, Juvenal, and Martial. The mockery of these writers was directed against circumcision, against abstinence from swine's flesh, and against the celebration of the Sabbath. The chief accusations brought against the Jews (apart from the assertion that the Jewish race was of late origin and had done nothing for culture) were: firstly, άθεότης, i.e. that the Jews rejected all Divine worship but their own, and consequently every image; secondly, autia, i.e. the social exclusiveness connected with the laws of food and the Levitical laws of purity, which was interpreted for the Jews as 'adversus omnes alios hostile odium' (Tacitus, Hist. v. 5).

After Christianity obtained the supremacy over

heathenism in the Roman Empire, the Emperors (at a later date the Churches) of the separate lands, and many rulers regarded it as their duty to oppose Jewish influence, in order that the heathen, who had been newly won to Christianity, should remain Christians, and that the number should remain Christians, and that the number of adherents might be more easily increased (cf. e.g. Fried. Wiegand, Agobard von Lyon und die Judenfrage, Erlangen and Leipzig, 1901). At a later date the wealth of many of the Jews, acquired for the most part by money-lending, attracted the cupidity of Christians. This was the case, e.g., at the first Crusade (1096), and at the expulsion of the Jews from France by Philip IV. the Fair (1306). Religious motives were operative. the Fair (1306). Religious motives were operative in the Jewish persecutions in the beginning of the second Crusade (1146; Abbot Peter of Clugny in France, the monk Rudolph of Mainz in Germany), France, the monk Rudolph of Mainz in Germany), as well as in the exclusion of the Jews from Spain in 1492 and from Portugal in 1497. In England, as early as the 12th cent. the maxim 'ipsi Judæi et omnia sua regis sunt' held as law (Hovedon, Annales, ed. Stubbs, ii. 231). The Jews were regarded as the milk cow of kings; and as enormous sums of money were repeatedly demanded from them, they were almost compelled to procure these by means of resure. In this way the Laws these by means of usury. In this way the Jews called down the hate of the people upon themselves. Stories, some true, many fabricated, of acts of vengeance on the part of the Jews (murder or creating view of Christian children at the time of or crucifixion of Christian children at the time of the Easter festival) were fitted, and were actually used, to rouse this hatred to uncontrolled passion. It was in the 13th cent. that the 'blood accusation' first came to the front in its latest and most objectionable form, viz. that the Jews restrack, Das Blut , pp. 126, 194). In the same century attacks on the Talmud became very violent (cf. H. Strack, Einleit. in den Talmud , p. 68). The charge that Jews poisoned wells occurs probably for the first time in the 12th cent., in Bohemia; often in the 14th cent., in Switzerland and France, but especially in Germany. In the whole history of the Jews we find all too frequent proofs of hostile disposition and outbreaks of hatred, oppression, persecution, expulsion, and tyranny.

The French Revolution forms an important epoch in the history of the Jews. On the 27th of September 1791, the National Assembly declared the repeal of all exclusive measures directed against the Jews; the constitution of the year iii. (1795) recognized the Jews as possessing equal rights. The following legislation, as well as the Restoration, brought the Jews some restrictions, but these were set aside by the Revolution of July 1830. The Jews of Alsace, however, obtained this emancipation later, by means of the exertions of

Adolphe Crémieux.

The course of events in France was not without influence in Germany. From 1799 onwards a great number of publications, some in favour of the Jews, and some against them, made their appearance.

and some against them, made their appearance.
Cf. J. de le Roi, Gesch. der evang. Judenmission<sup>2</sup>, Leipzig, 1899, i. pp. 109-118. Several works against the granting of equal rights to the Jews may be mentioned here: C. W. F. Grattenauer, Wider die Juden, Berlin, 1803; O. G. Tychsen, Qutachten über die Erweiterung der staatsbürgerl. Rechte der Juden in Mecklenburg-Schwerin 1812 (see A. Th. Hartmann, Oluf Gerhard Tychsen, i., Bremen, 1818, pp. 227-259, cf. pp. 202-208); Fried. Rühs, Über die Ansprüche der Juden an das deutsche Bürgerrecht, Berlin, 1816, and Das Recht des Christenthums und des deutschen Reiches vertheidigt gegen die Ansprüche der Juden und ihre Verfechter, Berlin, 1816.
In the weer 1830 H. E. G. Paulus, the well-

In the year 1830, H. E. G. Paulus, the well-known representative of rationalism, demanded that the Jews should give up their ritual law as the condition of obtaining equal political rights (Jüdische Nationalabsonderung); a similar view was maintained by Carl Streckfuss in his Über

das Verhältniss der Juden zu den christlichen Staaten, Halle, 1833 (a second pamphlet with the same title appeared in Berlin, 1843). The Rostock Orientalist, Anton Theodor Hartmann, who was well read in the Jewish literature, demanded that the Jews should expressly renounce the principles of injustice to be found in the Talmud and the Shulhān 'Arūkh (i.e. those principles which, in the view of Hartmann and many others, allowed injustice against non-Jews or were otherwise opposed to morality). He demanded, further, that they should restrain themselves from all disparaging statements with regard to Jesus and those who were not Jews.

those who were not Jews.

His writings on this subject are the following: Joh. Andr. Eisenmenger, Parchim, 1834; 'Darf eine völlige Gleichstellung in staatsbürgerlichen Rechten sämmtlichen Juden schon jetzt bewilligt werden?' in the Archiv für die neueste Gesetzgebung aller deutschen Staaten, ed. Alex. Müller, vols. v., vi. 1834-35; Grundsätze des orthodozen Judenthums, Rostock, 1835 [a reply to Salomon's first letter]. Hartmann's views were keenly and in many respects cleverly attacked in two pamphlets by the Jewish preacher of Hamburg, Gotthold Salomon: Briefe an Herrn Anton Theodor Hartmann, Altona, 1835, and Anton Theodor Hartmann, Altona, 1835, and Anton Theodor Hartmann's neueste Schrift' Grundsätze des orthodozen Judenthums' in threm wahren Lichte dargestellt, Altona, 1835.

The commencement of the reign of the Prussian king Frederick William IV., who cherished the ideal of a 'Christian State,' gave a fresh stimulus to writings on the Jewish question. Among those who opposed the granting of equal civil rights to the Jews we have the following writers: H. E. Marcard, Uber die Möglichkeit der Juden-Emancipation im christlich-germanischen Staat, Minden, 1843; and the well-known radical theologian, Bruno Bauer (died 1882). Die Judenfrage. Brunswick. 1843.

1882), Die Judenfrage, Brunswick, 1843.

By the law of 3rd July 1869, absolute religious equality was granted within the North German Confederation, and soon after the same law was extended to the whole of the German Empire.

Modern Anti-Semitism arose in Germany in the eighth decade of last century (cf. J. de le Roi, Geschichte, i. pp. 258-272; A. Leroy-Beaulieu, Israël Chez les nations<sup>2</sup>, Paris, 1893). An important external cause was the daring attack made by many newspapers, possessed or edited by Jews, and appearing for the most part in Berlin, on many Christian topics (faith, constitution, recent events, ecclesiastical parties, and prominent persons connected with these); cf., e.g., Franz Delitzsch, Christentum und jüdische Presse, Erlangen, 1882. As reasons for the rise and speedy spread of the Anti-Semitic movement, we may further mention, secondly, the great influence which the Jews had obtained in public affairs—to a large extent, of course, owing to the carelessness of the Christians. Thirdly, in newspaper writings, in the theatre, in some branches of art (music, e.g., cf. Rich. Wagner, Das Judenthum in der Musik, Leipzig, 1869), in trade, and in several branches of industry (e.g. manufacture of ready-made articles of dress), the influence of the Jews appeared to many unreasonably great. Fourthly, the proud and ostentatious demeanour of many nouveaux riches Jews, who had acquired sudden wealth by speculation on the Stock Exchange, excited hatred. The same effect was produced, fifthly, by the economic dependence on the Jews into which many districts and occupations had fallen: e.g. a portion of the peasant population of Hesse had become dependent on cattle- and grain-merchants, while dressmakers and needlewomen were in the power of Jewish merchants; sixthly, by the support given to the Social Democratic party by Jewish leaders and Jewish money; seventhly, by the union among Jews of the whole world, e.g. Alliance Israëlite Universelle; and eighthly, by the exaggerated sensibility to every criticism and exposure of weaknesses on the part of Jews. Ninthly, there was a wide-spread feeling that the Jews were foreigners

among the Germans: the stricter Jews not only rejected intermarriage with Christians, but they also kept themselves socially separate from them, e.g. on account of the laws of food. Many Jews, particularly the Zionists, openly avow Palestine as their real fatherland, although for the time

being it is beyond their reach.
We cannot here inquire more exactly how far these reasons, taken individually, justify opposition to the Jews, seeing that the conditions are widely different in the many lands where the Jews are numerous. An unprejudiced mind, examining the matter carefully, will, in our opinion, be compelled to recognize on the one hand that there are reasons for opposition, and on the other hand that jealousy of the wealth amassed by some Jews has enormous influence with great numbers.

influence with great numbers.

We may mention here the following works from among the important pamphlets designed to spread and deepen the Anti-Semitic movement: C. Wilmans, Die goldene Internationale und die Nothwendigkeit einer socialen Reformpartet, Berlin, 1876 [3rd ed. 1876]; W. Marr, Der Sieg des Judenthums über das Gernanenthum vom nichtonfessionellen Standpunkt aus betrachtet, Bern, 1879 [11th ed. 1879], Wähelt keinen Juden! Der Weg zum Siege des Germanenthums über das Judenthum, Berlin, 1880 [4th ed. 1880]; Adolf Stöcker, Das moderne Judentum in Deutschland, besonders in Berlin, 1879 [5th ed. 1880]; Christlich-Social. Reden und Aufsätze, Bieleid, 1835 [2nd ed. 1890]; Heinrich von Treitschke, Ein Wort über unser Judenthum, Berlin, 1880 [4th ed. 1881]. Further papers and pamphlets are mentioned by Joseph Jacobs: The Jewish Question, 1876–1834, Biographical Handlist, London, 1885; Joh. de le Roi, Nathanael (ed. by H. Strack), 1887, pp. 65–89, Geschichte, i. pp. 258–271; and Deutsch, art. 'Anti-Semitism' in JE i. 641.

A verv great influence was exerted by two

A very great influence was exerted by two speeches delivered before the Christian Social Labour party by Adolf Stöcker in Berlin in Sept. 1879: 'What do we demand from modern Judaism?' and 'Defence against modern Judaism' (both are printed together in the above-mentioned pamphlet on modern Judaism). In them Stöcker demands three things: 'a little more modesty, a little more tolerance, and a little more equality.' Hein. von Treitschke is the author of the phrases, frequently used since then, 'trousers-peddling young Poles' (hosenverkaufende polnische Jünglinge), and 'the Jews are our misfortune,' as well as the sentences: 'We do not wish that on the thousands of years of Teutonic civilization there should follow an age of a mixed German-Jewish culture,' and: 'We Germans are a Christian people, and the Jewish question in Germany will not be settled till our fellow-citizens of the Jewish race are persuaded that we are and will remain a Christian people.' An equally decided attitude has been taken, as is well-known, by Catholics in Germany, Austria, France, and Italy (cf. Deutsch in *JE* i. 643).

The irritation increased, and the conditions were

made worse owing to the enormous emigration of Jews from the lands of Eastern Europe to the West, especially, since 1881, from Russia and Roumania, at first to Germany and then to America and England. The preventives used on the part of the German Government were: firstly, restriction, and later almost entire refusal, of nationalization to Jews coming from the East; secondly, regulations by means of which a rapid passage of the migrating Jews through Germany was assured, e.g. the appointment of special localities for the temporary sojourn of emigrants at the great centres of commerce on the route (Ruhleben near Berlin, Hamburg, Bremen, etc.); thirdly, turning out by the police authorities of persons without means or occupation, especially where there was any suspicion that those in question belonged to the Nihilists or Anarchists. The first measure of the Nihilists or Anarchists. The first measure of prevention adopted in England was the Aliens Bill. In the United States every immigrant is now required to show a small sum of money, in order to prevent the immigration of persons entirely destitute of means of support.

Only a few years later than in Germany, the flame of Anti-Semitism was kindled in Austria and in Hungary, by Istóczi in the Hungarian Parlia-ment, and by Georg von Schönerer in the Austrian Imperial Assembly in Vienna (1882). In France a loud and successful agitator was found in the person of Ed. Drumont, whose book, La France juive (1st ed., Paris, 1886), has seen more than 100 editions. Since 1892 he has edited the Anti-Semitic journal La libre Parole. The case of Albert Dreyfus was long used, from 1894 onwards, as a means of rousing the passion of the Anti-Semites, especially in France. The matter ended in the year 1906 with the rehabilitation of Dreyfus and with his reappointment as Major in the French army. At the Berlin Congress of 1878 a resolution was passed that in Roumania all citizens, without distinction of religious belief, should enjoy equal rights. The Roumanian Government, however, supported by the Anti-Semitic majority in Parliament, devised a means of rendering this provision worthless. The Constitution declared that no one should be prevented by his religion from possessing civil and political rights, but it was immediately declared that the Jews were foreigners, and not Roumanians—a breach of trust unworthy of a government and a people professing to be Christian. Besides, good school education and admission to public hospitals were made almost impossible for Jews, and the authorities have sought, by means of a series of new laws, regula-tions, and police restrictions, to make it unbearable for Jews to remain in Roumania.

For the Jews of the Russian Empire, the death of Alexander II. in 1881 was fraught with grave significance. Soon after the accession of Alexander III., fearful persecutions of the Jews (pogrom, pl. pogromy) were begun, and by the laws passed in May, 1882, the freedom of movement of the Jews in the 15 provinces of the territory for settlement, already small enough, was still further limited. The chief attacks on the Jews took place in the years 1903 (at Easter in Kishenev; see H. Strack's years 1903 (at Easter in Kishenev; see H. Strack's remarks in his periodical Nathanael, 1903, pp. 78-93, and 1904, pp. 62-64; L. Errera, Les Massacres de Kishinev, Brussels, 1903; I. Singer, Russia at the Bar of the American People, New York, 1904; C. Adler, The Voice of America on Kishineff, Philadelphia, 1904), 1905 (in October at Odessa and many other towns), and 1906 (at Bialystok and other places). In view of the events of the year 1905, the Seventh International Jewish Missionary Conference, held at Amsterdam, April Missionary Conference, held at Amsterdam, April 25th, 1906, carried unanimously the following motion, brought forward by the present writer and the Rev. Louis Meyer of Chicago (now of

Cincinnati):

Cincinnati):

'The Seventh International Jewish Missionary Conference hereby records its deepest sympathy with the poor sufferers from the latest persecutions of the Jews in Russia. One hundred and fifty villages, towns, and cities of Russia where Jews dwelt have been devastated, many hundreds of Hebrews have been slaughtered, and many thousand Jewish families have been devastated, many hundreds of Hebrews have been slaughtered, and many thousand Jewish families have been faults upon the Jewish side, no human or Divine right permitted Russian officials of Government and Police to incite the lower classes against the Jewish people, which as such are innocent, that in the persecution of the Jews these lower classes should forget their own sufferings, caused by bureaucratic maladministration and by refusal of liberty of thought and religion. Such action we condemn, because it necessarily must close the hearts of the Jews to the gospel call still more than heretofore.'

Those chiefly responsible for the anti-Lewish

Those chiefly responsible for the anti-Jewish attacks in Kishenev were the Minister of the Interior, von Plehwe, and the vice-governor, Ustrugow. The latter had refused to grant protection from plundering and murderous bands to defenceless Jews who implored his help, because he himself was an Anti-Semite, and because he was certain that his inactivity would not be cen-

sured by the Minister. The former used the Jews as a lightning-conductor, by means of which the dissatisfaction of the population with regard to the arbitrariness of the police and the organs of Government might be directed into another channel. He could do this all the more easily that the Jews were in any case largely regarded with unfriendly even by the lower classes of the with unfriendly eyes by the lower classes of the people, who had grown up in ignorance and super-Jews, as proprietors of dram-shops, have contributed much to the impoverishment of the Russian peasants, and have thereby aroused hatted. It is true that in Jewish persecutions, and, in capacit in every distributed are all in capacities and are all the statements of the statement of the Russian peasants, and have thereby aroused hatted. It is true that in Jewish persecutions, and, in capacities are all the statements are all the statements of the statement of the statement of the statement is often made that the Jewish are constituted in the statement is often made that the Jewish are constituted in the statement is often made that the Jewish are constituted in the statement is often made that the Jewish are constituted in the statement is often made that the Jewish are constituted in the statement is often made that the Jewish are constituted in the statement of the statement in general, in every disturbance, the Jewish drink-shops are often the first to be plundered. That, however, is easily understood without ascribing any special guilt to the possessors of these shops.

Unfortunately, it is by no means improbable that the extension of Anti-Semitism will still con-tinue. The repetition of such outbreaks as have taken place in Russia in recent years will, indeed, be more difficult if a Government binding itself, or bound to, a constitution actually comes into existence. It is, however, quite possible that at no distant date serious Jewish persecutions will arise in the United States, in Hungary, or in France. And in Prussia there has at least been no lack of sinister attempts to incite the population to acts of violence, since for years Count Pückler (of Klein-Tschirne, Silesia) has dared in public assemblies in Berlin and elsewhere to summon the masses to a 'fresh joyous war' against the 'cursed

2. Arguments of the Anti-Semites, and attempts to refute them.—The means made use of by almost all Anti-Semitic agitators have very materially contributed to the fact that Anti-Semitism has not only extended to the widest circles, but has also been turned into a slanderous malignity and a wild passion for persecution (cf. M. C. Peters, Justice to the Jew, New York, 1899).

(a) The most dangerous of these means since the 13th cent. has been the 'blood accusation' mentioned above (p. 595a). The most influential propagator of this accusation was the canon August Rohling in Prague in the years 1883-1892 (see Strack, Das Blut<sup>8</sup>, pp. 109-120). Only the most important instances of modern times can be mentioned here.

important instances of modern times can be mentioned here.

On April 1st, 1882, a maid-servant, Esther Solymosi, fourteen years of age, in Tisza-Eszlár, disappeared. The evidence of the Crown witness Moritz Schart, who had asserted that he saw the murder of the girl through the keyhole, was shown by the judicial investigation to be impossible; the suspected Jews obtained a verdict of not guilty (see P. Nathan, Der Prozess von Tisza-Eszlár, Berlin, 1892; S. Mannheimer in JE xii. 148-150). The eight-year-old girl murdered in Korfu in the night between 12th and 13th April 1891 was not a Christian, Maria Desylla (there was no such person there at the time), but a Jewess, Rubina Sarda. The Jewish butcher Adolf Buschhoff, in Xanten, in the Rhine province, was accused of murdering, on June 29th, 1891, the 5½-year-old boy Johann Hegmann. The public prosecutor, however, stated: 'In my long experience of criminal cases I have never seen a clearer case, where so convincing and connected a proof was brought forward, that the accused did not commit the crime in question.' Every suspicion that the murder was committed with a view to obtaining the blood of the victim was removed by the post-mortem examination (cf. Der Xantener Knabenmord vor dem Schwurgericht zu Cleve, 1-14 Juli 1932, 'Ollstündiger stenographischer Bericht, Berlin, 1893; Deutsch in JE xii. 574). The Jewish shoemaker Leopold Hilsner was pronounced guilty of murdering Agnes Hruza on March 29th, 1899, in Polna, Bohemia. However, Arthur Nussbaum (Der Polnaer Ritualmordprozess: Eine kriminalpsychologische Untersuchung auf aktenmässiger Grundlage, mit einem Vorwort von Franz von Liszt, Berlin, 1893; Deutsch in JE cach other or incredible in themselves; and (4) that there was no motive adduced why Hilsner should murder Agnes which had even a shade of proba-

bility. Very great interest was aroused by the murder of the 18½-year-old High School boy Ernst Winter in Konitz, West Prussia, in March 1900. The highest medical authorities in Prussia came unanimously to the conclusion that the out on the neck of Winter's dismembered body was not made till after his death, nor was his death caused by loss of blood (cf. Dis Gutachten der Sachverstündigen über den Konitzer Mord, Berlin, 1903; Deutsch in JE vii. 552-555).

More detailed information on the history of the Blood-accusation is given by the present writer in Das Blut im Glauben und Aberglauben der Menschheit, mit besonderer Berücksichtigung der 'Volksmedizin' und des 'fildischen Blutritus's, Munich, 1900; see also the work of the Roman Catholic priest Fr. Frank, Der Rütualmord vor den Gerichtshöfen der Wahrheit und der Gerechtigkeit, Regensburg, 1901; Chwolson, Die Blutanklage und sonstige mittelalteriche Beschuldigungen der Juden (aus dem Russischen übersetzt), Frankfurt-a'-M., 1901; JE iii. 260-267.

(b) Another important means of attack used by the Anti-Semites is the agitation against the killing of animals according to the Jewish rites. If the Jews are refused the exercise of the form of slaughter appointed by their religious laws in any town, permanent residence in that place is made very difficult for them. If the prohibition is ex-tended over a whole country, life there is made almost impossible for Jews. Accordingly, the Anti-Semites of Germany have entered Societies for the Proportion of Carolty to Animals and for the Prevention of Cruelty to Animals, and since 1883 have addressed petition after petition to the authorities and to Parliament against Jewish slaughter of animals. On 18th May 1887, the German Imperial Parliament rejected a prothe German Imperial Parliament rejected a pro-posal petitioning for legislation against the prac-tice throughout the Empire. In 1892, however, Jewish slaughter was declared illegal in the Kingdom of Saxony by the Home Minister, and in the same year the prohibition of this form of slaughter was declared in Switzerland to be an essential element of the constitution of the union. In recent times, Anti-Semitic town councils in Prussian towns have attempted to make the custom impossible by means of slaughter-house regulations; and a new and very energetic agitation has begun in the Societies for the Prevention of Cruelty to Animals. tion of Cruelty to Animals.

Of. the works of the physician and Russian Jew, J. A. Dembo, Das Schächten im Vergleich mit anderen Schlachtmethoden, Leipzig, 1894; Gutachten über das jüdischrituetle Schlachter verfahren, Berlin, 1894; F. Weichmann, Das Schächten (Das rituetle Schlachten bei den Juden), mit einem Vorwort von H. L. Strack, Leipzig, 1899. In these writtings conclusive proof is given that the Jewish method of slaughter does not constitute creative to a vinete. cruelty to animals.

Among other objects of attack on the part of the Anti-Semites we may mention here (cf. above,

(c) The Talmud. There is no truth whatever in the assertions that the Jews seek by every conceivable means to keep the Talmud secret, that they fear lest its contents may become known, and that they declare it a crime worthy of death for a Jew to reveal its contents. The writings on the Talmud (explanations, monographs, translations of whole treatises, etc.) by Jews themselves are very numerous in all European languages. As a practical proof that Christians are not dependent for a scientific judgment regarding the Talmud on what a Jew may think fit to communicate, it may be mentioned that the present writer in 1887 wrote an introduction to the Talmud without having asked or received the slightest detail of informa-tion from Jews or Jewish Christians. The Talmud contains no report or statement which the expert

Christian scholar cannot discover.

(d) The Shulhām 'Arūkh (Ezk 23<sup>th</sup> 'table prepared'), the ritual code of Joseph Karo († 1575 in Safed, Palestine), was printed for the first time in Venice in 1564-5. A fanatical and slanderous attack was made by the proselyte, 'Dr. Justus' (pseudonym = Aaron Brimann), in Judenspiegel oder 100 neuenthüllte, heutzutage noch geltende, den 100 neuenthüllte, heutzutage noch geltende, den Verkehr der Juden mit den Christen betreffende

A learned Gesetze der Juden, Paderborn, 1883. and suggestive treatise, but coloured somewhat in favour of the Jews, was published by D. Hoffmann, Der Schulchan-Aruch und die Rabbinen über das Verhältniss der Juden zu Andersgläubigen, Berlin, 1884 [2nd ed. 1894]. For a thorough examination of both sides of the question we are indebted to G. Marx (=G. Dalman), Jüdisches Fremdenrecht, antisemitische Polemik und jüdische Apologetik,

Leipzig, 1886.
(e) The alleged existence of Jewish secret writings and secret sects. As early as 1900 the present ings and secret sects. As early as 1900 the present writer publicly and solemnly declared that there are no secret Jewish writings. Of course, to those who do not understand Latin, Cæsar's Gallic War is a secret writing, especially if they are not acquainted with any of the numerous translations in English, German, etc. Judaism has always been tolerant of the faith and practice of the individual, but it has always persecuted sects. recognizing but it has always persecuted sects, recognizing quite correctly that sects would be very dangerous to the existence of Judaism itself. The most imto the existence of Judaism itself. The most important sect in Judaism is that of the Karaites, which arose in the 8th cent. A.D., and of which small remnants, even at the present day, are to be found living in the Crimea, in Poland, and in Cairo, with a few in Jerusalem. Karaites and Talmudists have been always most bitterly opposed, and even at the present day hate each other. If the Talmudist Jews, either as a whole or in second the Talmudist Jews, either as a whole or in sections, had a 'blood-rite' or other ordinance, which Christians would regard as abominable or de-structive of the common good, the Karaites would not have failed to point expressly to it; and it is just as little likely that the Talmudist Jews would have kept silent if it had been possible for them to accuse the Karaites of observing a 'blood-rite' or other repulsive laws.

(f) The formula kol nidre, 'all vows,' by means of which the Jews on the eve of the Great Day of Atonement in the synagogue declare all vows which they may make in the next year to be non-binding, does not refer to oaths which are made to others, but only to obligations which one lays upon oneself. It is not admissible to use this custom to cast doubt on the good faith of the Jews in taking oaths in general (cf. the present writer's art. 'Kol Nidre' in  $PRE^3$  x. 649-653; M. Schloessinger in JE vii. 539-542).

(g) A very foolish but, in Western Germany and Bavaria, widely credited accusation is that the Jews, before selling meat to non-Jews, must defile it (Lat. mingere) in the most loathsome manner (see the present writer's Sind die Juden Verbrecher

(h) The assertion is often made that a comparatively large percentage of Jews are punished as criminals (see, e.g., W. Giese, Die Juden und die deutsche Krimmalstatistik, Leipzig, 1893). On the deutsche Krimmalstatsstik, Leipzig, 1893). On the other hand, the Berlin Committee for answering Anti-Semitic attacks has published Die Kriminalität der Juden in Deutschland, Berlin, 1896. For a criticism of both writings by F. Nonnemann of. Nathanael, 1896, pp. 44-78 (cf. also H. Lux, Die Juden als Verbrecher, Munich, 1894; Deutsch in ITF: 2005) JE iv. 362 f.).

(i) A publication by the same Committee, Die Juden als Soldaten, Berlin, 1896, with copious statistical tables, has in a thoroughgoing manner sought to meet the assertion which is frequently

sought to meet the assertion which is frequently made, that the Jews are cowards (cf. also S. Wolf, The American Jew as Patriot, Soldier, and Citizen, Washington, 1894; M. C. Peters, The Jew as a Patriot, New York, 1901).

3. Conclusion.—The Jews have undoubtedly suffered great and bitter wrongs. On the other hand, justice must recognize that Jewish apologists have frequently failed to observe due moderation.

Evil motives have often without proof been ascribed to opponents, who have been covered with hateful calumny. They have been scoffed at in an exaggerated way on account of single mistakes, as if thereby all other accusations and reasons were demonstrated to be false. Jewish apologists have often sought to put a favourable construction on something done by a Jew simply because a Jew did it, although the act could not be seriously defended. The non-Jewish majority has more than once been irritated by stupid aspersions (cf., to name only a single instance, P. P. G[rünfeld]'s Ben Sirah Militans, Abgebrochene Sätze für A-B-C-Kinder, Stuttgart, 1880).

B-C-Kinder, Stuttgart, 1880).

The most important literature from the Jewish side has been mentioned above at various points. A very useful collection of materials is supplied by Josef Bloch, Acten und Gutachten in dem Prozesse Rohling contra Bloch, Vienna, 1890; cf. also Antisemiten-Spiegel: Die Antisemiten im Lichte des Christenthums, des Rechtes und der Wissenschaft<sup>2</sup>, Dantzig, 1900. The most largely circulated book on the side of the Anti-Semites is the Anti-Semiten-Katechismus, Leipzig, which, from 1887 to 1893, went through 25 editions, and is now published under the title: Theodor Fritsch, Handbuch der Judenfrage: eine Zusammenstellung des wichtigsten Materials zur Beurteilung des jüdischen Volkes, Hamburg, 1907.

In conclusion a word may be said on the duty

In conclusion a word may be said on the duty of Christians with regard to Anti-Semitism. have in the first place to maintain in all circumstances veracity and justice. We must thus not only refrain from slander and false accusations, but contradict these in cases where Jews have but contradict these in cases where Jews nave difficulty in defending themselves. The question, e.g., as to the criminality of Jews can, with the help of statistics available to every inquirer, be discussed quite as well by the Jew as by the Christian. If, however, Jews were to write on the 'blood accusation' or the Talmud, even the most upright Jew might easily fall under the suspicion of concealing or colouring the facts in favour of his nation and his religion. On this account, Franz Delitzsch (born Feb. 23rd, 1813, died Mar. 4th, 1890), the present writer, and others have regarded it as their duty again and again to show that many attacks directed by the Anti-Semites against the Jewish religion, and thus against the Jews generally, are based on falsehood, and are in fact slanderous.

and are in fact slanderous.

Franz Delitzech, Rohlings Talmudjude, Leipzig, 1831, 7th ed. 1831; Was Dr. Aug. Rohlings training the time of the schwören will, Leipzig, 1833; Schachmatt den Blutlügnern Rohling und Justus, Erlangen, 1833; Neueste Traumgesichte des antisemtischen Propheten, Erlangen, 1833. Hermann L. Strack wrote first against the 'blood-accusation' on the occasion of the case of Tisza-Eszlár in Zöckler's Evangelische Kirchen-Zeitung, 12th August 1832, No. 32. The murder in Korfu occasioned the publication Der Blutaberglaube bei Christen und Juden, Munich, 1891, 4th ed. Der Blutaberglaube in der Menschheit, Blutmorde und Blutritus, 1892, 5th to 8th ed. Das Blut im Glauben und Aberglauben der Menschheit, 1900; Einleitung in den Talmud, Leipzig, 1887 [4th ed. 1903]. See also the papers mentioned above, 2 (f) and (g).

It is, secondly, our duty to show in word and

It is, secondly, our duty to show in word and deed neighbourly love to the Jews. We dare not allow our love to be confined to those who share our religious beliefs (cf. Gal 6<sup>10</sup>), but we must always remember the lesson taught in the parable of the Good Samaritan (Lk 10). Thirdly, we are bound to furnish proof that the Christian religion rightly claims to be the universal religion. For this end we have to show the influence which Christianity has exercised and still exercises (a) on humanity as a whole; (b) on the individual; and (c) specially on Judaism (preaching in the language of the country, the work of the so-called Home Mission, e.g. spiritual care for prisoners, etc.).

Great complaints are made about the relatively excessive and still increasing influence exerted by the Jews in public life, not only in trade, but also in the press, in municipal councils, etc. We cannot here inquire where and how far such complaints are justified. One thing is certain:

violence and exclusive legislation will not lead to the removal of such evil conditions, but will simply replace them by still greater evils. But every non-Jew who is convinced that the Jews in any place exert too great an influence on their non-Jewish surroundings, must with double faithfulness perform his duties as a subject of his State (e.g. as Briton or as German) and as citizen (e.g. in London or in Berlin), and stimulate other non-Jews to a like faithful fulfilment of their duty. Here also the maxim holds: if we are dissatisfied with our environment, we must first ask what our fault is. Let us become better ourselves, and the state of affairs will improve. HERMANN L. STRACK.

ANURĀDHAPURA.—Anurādhapura was the capital of Ceylon for nearly 1500 years. It was founded, according to the tradition handed down in the earliest sources,\* by a chieftain named Anurādha (so called after the constellation Anurādhā) in the 6th cent. B.C. on the bank of the radia) in the 6th cent. B.C. on the bank of the Kadamba River. Nearly a century afterwards king Paṇḍukābhaya removed the capital, which had been at Upatissa, to Anurādhapura; and there it remained down to the reign of Aggabodhi IV. in the 8th cent. A.D. It was again the capital in the 11th cent., and was then finally deserted.

in the 11th cent., and was then finally deserted.

The name Anurādha as the name of a man fell out of use; and we find in a work of the 10th cent. (Mahābahhvanna, p. 112) the name of the place explained as 'the city of the happy people' from Anurādha, 'satisfaction.' The Sinhalese peasantry of the present day habitually pronounce the name Anurāja-pura, and explain it as 'the city of the ninety kings,' anu meaning 'ninety,' and rāja meaning 'king.' The ancient interpretation of the name—Anurādha's city—is the only correct one. The second is little more than a play upon words, and the third is a Volksetymologie founded on a mistake. English writers on Ceylon often spell the name Anarajapoora, or Anoorajapura.

writers on Ceylon often spell the name Anarajapoora, or Ancorajapura.

The exact site of Anurādha's original settlement has not been re-discovered. Pandukābhaya constructed the beautiful artificial lake, the Victoria Lake, Jaya Vāpi, more usually called, after the king's own name (Abhaya, 'sans peur'), the Abhaya Vāpi. It still exists, but in a half-ruined state shout two miles in circuit. Its southern state, about two miles in circuit. Its southern shore is rather less than a mile north of the Bodhi Tree. It was on the shores of this lake that the king laid out his city, with its four suburbs, its cemetery, its special villages for huntsmen and scavengers, its temples to various pagan deities then worshipped, and residences for Jotiya (the engineer) and the other officials. There were also abodes for devotees of various sects—Jains, Ajīvikas, and others. North of all lay another artificial lake, the Gāmini Lake, also still existing, and now called the Vilān Lake. Apart from the two lakes, nothing has been discovered of the remains of what must have been even then, to judge from the description in the 10th chapter of the Great Chronicle, a considerable city. Tree. It was on the shores of this lake that the

pudge from the description in the 10th chapter of the Great Chronicle, a considerable city. But the foundations of the fame and beauty of the place were laid by king Tissa (so called after the constellation Tissā), who flourished in the middle of the 3rd cent. B.C., and was therefore contemporary with the Buddhist emperor of India, Asoka the Great. The friendship of these two monarchs, who never met, had momentous consemonarchs, who never met, had momentous consequences. Tissa, with his nobles and people, embraced the Buddhist faith; and, no doubt in embraced the Buddhist faith; and, no doubt in imitation of Aśoka, erected many beautiful buildings in support of his new religion. Those at Anurādhapura numbered ten,† the most famous of them being the Thūpārāma, still, even in ruins, a beautiful and striking object. It is a solid dome, 70 feet high, rising from a decorated plinth in the centre of a square terrace, and surrounded by a number of beautiful granite pillars in two rows. It is not known what these pillars were intended \* Dipavamaa, ix. 35; and Mahāvamsa, pp. 50, 56, 65. † Enumerated in the Mahāvamsa, ch. xx. p. 123 (ed. Turnour).

to support. It would seem to appear from Mahā-vamsa, ch. xxxvi. (p. 232, ed. Turnour), that they vamea, ch. xxxvi. (p. 232, ed. Turnour), that they supported a canopy over the tope; but it is difficult to see how that can have been done. Perhaps each of them had, as its capital, some symbol of the faith. Such pillars, surmounted by symbols, put up by Aśoka in various parts of India, still survive. But in that case they are always solitary pillars. Bold flights of steps led up to the terrace from the park-like enclosure in which it stood; and the dome was supposed to contain relics of the Buddha. It was, in fact, a magnificent, highly decorated, and finely placed burial mound.

Mound.

Another still existing building of this time is the Issara Muni Vihāra, a hermitage constructed by king Tissa on the side of a granite hill, for those of his nobles (issara) who entered the Buddhist Order. Naturally only the stonework has survived; but this includes caves cut in the solid rock, bas-reliefs on the face of the granite, two terraces (one half-way up, one on the top of the rock), a small but beautiful artificial tank, and a small  $d\bar{a}gaba$ . It is a beautiful spot, and must have been a charming residence in the days

of its glory.
Of the rest of the ten buildings no remains have been found; and it is very doubtful whether any of Tissa's enclosure round the Bodhi Tree has surof Tissa's enclosure round the Bodhi Tree has survived. The tree itself, now nearly 2200 years old, still survives. The soil has been heaped up round its base whenever it showed any signs of decay. Planted originally on a terrace raised but little above the level of the ground, it now springs up in three detached branches from the summit of a mound that has reached to the dimensions of a small hill. The tree planted by Tissa, a branch of the original Bodhi Tree at Gayā in India, was sent as a present by the Emperor Aśoka. The auspicious event was celebrated in two bas-reliefs on the eastern gateway of the Sānchi Tope,\* probably put up by Aśoka himself.†

The capital was taken by the Tamils not long after Tissa's death, and was re-captured, about a century afterwards, by Dushta Gāmini Abhaya, the hero of the Great Chronicle. He occupies in Ceylon tradition very much the place occupied in

Ceylon tradition very much the place occupied in English history and legend by king Arthur. We have information about the buildings he erected in his capital. Undoubtedly the most splendid was the so-called Bronze Palace. This was built on a square platform supported by a thousand granite pillars, which still remain in situ. Each side of the square was 150 feet long. On the platform were erected nine storeys, each square in form and less than the one beneath it, and the total height from the platform was 150 feet. The general effect was therefore pyramidal, the greatest possible contrast to the dome-shaped dāgabas in the vicinity, just as the bronze tiles which covered it contrasted with the dazzling white of the polished chunan-which formed the covering of the domes. The building was almost certainly made of wood throughout, and its cost is given in the Chronicle; as 30 kotis, equivalent in our money to about £300,000.

The other great work of this king was the Dagaba of the Golden Sand; but this he did not Dāgaba of the Golden Sand; but this he did not live to complete. According to the Chronicle (ed. Turnour, p. 195), it cost one thousand kotis, equivalent to a million sterling. It is still one of the monuments most revered by all Buddhists; and even in ruin it stood, in 1830, 189 feet above the platform on which it rests. Its Pāli name is \*Reproduced in Rhys Davids's Buddhist India, pp. 301-303. † For fuller details see Borer, where the question of the evolution and meaning of the Wisdom-Tree conception will be more appropriately treated.

† Mahāvamsa, ch. xxvii.

usually simply Mahā Thūpa, 'Great Tope,' the name given above being a rendering of its distinctive title Hemavali in Pāli, Ruwan Wæli Dāgaba in Sinhalese. Five chapters in the Great Chronicle (ch. xxviii.-xxxii.) are devoted to a detailed account of the construction and dedication of this stipa, and of the artistic embellishment of its central chamber, the relic chamber. This has never, it is believed, been disturbed; and as the exterior has, quite recently, been restored, there is now little chance of the historical secrets there buried being revealed.

For some generations after these great events the city enjoyed peace. But in B.C. 109 the Tamils, with their vastly superior numbers, again broke in, and took Anuradhapura. It was not till B.C. 89 that the Sinhalese were able to issue from their fastnesses in the mountains, and drive the Tamils out. Their victorious leader, Watta Gāmini, celebrated the recovery of the capital by the erection of a still greater tope than all the former ones—the Abhaya Giri Dāgaba. This immense dome-shaped pile was 405 feet high from ground to summit, and built, except the relic chamber, of solid brick. Its ruin is still one of the landmarks solid brick. Its ruin is still one of the landmarks of all the country round. The Vihāra attached to this tope, and built on the site of the garden residences given by Pandukābhaya to the Jains, obtained notoriety from a curious circumstance. The principal of the college, though appointed by, and a great favourite of, the king, incurred censure at an ecclesiastical court composed mainly of residents at the older Vihēre, the Great Minster at an ecclesiastical court composed mainly of residents at the older Vihāra, the Great Minster, close to the Bodhi Tree. There ensued a long-continued rivalry between the two establishments, usually confined to personal questions, but occa-sionally branching off into matters of doctrine. For five centuries and more this rivalry had an important influence on the civil and religious history of the island.

With the completion of these buildings, the city assumed very much the appearance which it preserved throughout its long history. The Chronicle records how subsequent kings repaired, added to, and beautified the existing monuments. It tells us also how they and their nobles built palaces These have all completely vanished. The only new building of importance that still survives is the Jetavan Ārāma, another huge dome-shaped pile, built about two miles due north of the Bodhi Tree

at the beginning of the 4th cent. A.D.

It is at the beginning of the next century that we have the earliest mention of Anuradhapura from outside sources. Fa Hian, the Buddhist pilgrim from China, stayed there for the two years A.D. 411-412. He gives a glowing account of its beauty, the grandeur of the public buildings and private residences, the magnificence of the processions, the culture of the Bhikshus, and the piety of the king and people. The reason for Fa Hian's long stay in the city was his desire to study and to obtain copies, on palm leaf, of the books studied. For Anuradhapura was at that time the seat of a For Anurādhapura was at that time the seat of a great university rivalling in the South the fame, in the North of India, of the University of Nālandā on the banks of the Ganges. Among the laity, law, medicine, astrology, irrigation, poetry, and literature were the main subjects. The Bhikshus handed down from teacher to pupil the words of the sacred books preserved in Pāli, to them a dead language, and the substance of the commentaries upon them, averatical historical and philalogical preserved. exegetical, historical, and philological, preserved in their own tongue. They had handbooks and elasses for the study of the grammar and lexicography of Pali; of the ethics, psychology, and philosophy of their sacred books; and of the problems in canon law arising out of the interpreta-

tion of the Rules of the Order. And they found time to take a considerable interest in folklore and time to take a considerable interest in folklore and popular and ballad literature, much of which has been preserved to us by their indefatigable and self-denying industry. All this involved not only method, but much intellectual effort. Students flocked to the great centre of learning, not only from all parts of the island, but from South India, and occasionally from the far North. Of the latter the most famous was the great commentator, Buddhaghosa (q.v.), who came from Gayā, in Behar, to get the information he could not obtain in the North.

in the North.

'For there, in that beautiful land, the most fruitful of any in India or its confines in continuous and successful literary work and effort, there have never been wanting, from Asoka's time to our own, the requisite number of earnest and devoted teachers and students to keep alive, and to hand down to their successors and to us, that invaluable literature which has taught us so much of the history of religion, not only in Ceylon, but also in India itself.'\*

The Chancilland

The Chroniclers were not, therefore, very far wrong in emphasizing this side of the life of Anuradhapura. To it the city owed the most magnificent and the most abiding of its monuments, surpassed in historical value only by its

intellectual achievements.

intellectual achievements.

When Buddhaghosa was in Ceylon, the water supply of the city was being re-organized. The artificial lakes in the vicinity, which added so much to its beauty, were found insufficient; and king Dhātu Sena, in A.D. 450, constructed, 50 miles away, the great reservoir called the Black Lake (Kāla Vāṇi). The giant arms of its embankment still stretch for 14 miles through the forest. It was 50 miles in circumference; and the canals for irrigation on the route, and for conducting the water to the capital are still in fair ducting the water to the capital, are still in fair preservation. A breach in the bank has lately been restored at great expense. This reservoir was, no doubt, at the time of its construction, the most stupendous irrigation scheme in the world.

This was the last great work undertaken at Anurādhapura. There ensued a series of dynastic intrigues and civil wars of a character similar to the Wars of the Roses in England. Each party Tamils on the mainland, whither the defeated were wont to flee for refuge. The northern part of the island, in which Anuradhapura lay, became more and more overrun with Tamil freebooters and free lances, more and more difficult to defend. Finally, in A.D. 750, it was abandoned as the seat of government, which was established at Pulastipura, under the shelter of the Southern hills. Anurādhapura fell into the hands now of one party, now of another. For a brief interval in the 11th cent. it claimed, under a Sinhalese pretender, supported by Tamil forces, to be again the capital. But the pretender was driven out, and the city reverted to the Pulastipura government. Finally, at what date is not exactly known, but probably about A.D. 1300, the whole district, stretching across the island, from 50 miles north to 50 miles south of Anuradhupura, became a kind of no man's land, Antradhupura, became a kind of no man's land, and relapsed rapidly into jungle. Neither the Tamil kings of Jaffna in the north, nor the Sinhalese kings in the south, were able to exercise any real sovereignty over it. The once beautiful and populous city dwindled away to a few huts round the Bodhi Tree, now left in the charge of two or three solitary monks. The earliest notice of the ruins received in Europe was in Knox's *Historical Relation of the Island of Ceylon* (1681), iv. 10. Held a captive for twenty years in the mountains, Knox escaped in 1679 through the jungle round Anurādhapura, and his naïve words vividly portray the utter desolation of the place.
\* Buddhist India, pp. 308, 304.

'Here is a world of hewn stone pillars, standing upright, and other hewn stones, which I suppose formerly were buildings. In three or four places are ruins of bridges built of stone, some remains of them yet standing on stone pillars. In many places are points built out into the water, like wharfs, which I suppose have been built for kings to sit upon for pleasure.'

The English Government has now made good roads, and a railway has been opened through to Jaffna. Several officials are resident at the station, and a settlement is growing up. For some distance round this settlement the undergrowth has been cut away, and there is now grass growing under spreading trees. The ruins are being cleared, and some of them preserved from further injury; and some excavation has been carried out.

T. W. RHYS DAVIDS.

APACHES—The Anches are the southern.

APACHES.—The Apaches are the southern-most group of the Athapascan stock of American Indians, who originally covered the territory from the Arctic Coast to New Mexico, and from the the Arcue Coast to New Mexico, and from the Pacific to Hudson Bay, their kinship being plainly traceable through their language. However, the name 'Apache' is a misnomer, apparently from the Zuñi ápachu, 'enemy,' and not found in their vocabulary, as they are known among themselves, not as 'Apaches,' but as 'Inde' (N'de, Dinë, Tinde), not as Apacies, but as finde (N de, bile, intel), or 'People.' Mentioned by Juan de Oñate as early as 1598 (Doc. inéditos de Indias, xvi. 114) in the 'Snowy Mountains' of New Mexico, they were not found as far west as Arizona, their present home, until the middle of the 16th cent., when they were a large and warlike tribe, whose numbers were increased by captives from their more peaceful neighbours, and whose customs, habits, and beliefs they assimilated to a certain extent.

Prior to their reservation life, the Apaches were a nomadic people, practising agriculture only to a limited extent, living mainly by foraging and by the hunt. They were and are now divided into tribal groups, designated by the locality to which they belong (see the list in Hodge, Handbook of American Indians, i. 66), but have always lacked the organization for which so many of the other tribes are noted, and to-day they are found living in bands and villages along the cañons and waterways, or in the rich valleys, tilling small farms and caring for their stock during the summer, and in the winter moving their camps to the heavily timbered sections, both for protection and more accessible fuel. Naturally their homes are of the most temporary character—usually willow poles thrust into the ground, fastened together at the top, oval in form, and of sufficient height to allow most temporary character—usually willow poles thrust into the ground, fastened together at the top, oval in form, and of sufficient height to allow a person to stand erect, with an opening at the centre through which the smoke passes from the fire-place directly underneath. The sides are interwoven and thatched with bear grass, over which canvas is sometimes drawn, with a single opening for a door. Among the San Carlos Apaches these khúvas are excavated between one and two feet. The Jicarilla Apaches live in brush wikings or in tents, the latter habitation being preferred also by the Lipan and many Mescarillo Apaches. There seems to be no ceremony or symbolism attached to the house, though Hrdlička observed one San Carlos family pray on entering a new khúva, while another house had two eagle-feathers tied as fetishes to one of the poles. The Apaches use smoke signals, columns of smoke being passed from camp to camp. One smoke

column denotes attention; two, establishment of a comm, quiet, safety; and three, alarm; a greater number urging a correspondingly greater need of haste (Mallery, I RBEW p. 538 f.). The Apaches have always been known as the cultivators of grain, particularly corn, from which tis win, their favourite drink, is made. Their additional foodstuffs consist of seeds, berries, nuts, melons, and small game, while fish and every species of fisheating birds are tabued.

eating birds are tabued.

In appearance there is no uniform Apache type, this being due to their nomadic habits, and to their assimilation with neighbouring peoples. As a rule, they are sinewy and strongly built, with good lung power, and well-developed lower limbs. In early times the men's dress consisted of a breech cloth and moccasins, with long uppers extending to the knee, and often to the thigh, with rawhide soles, turned upward at the toe and decorated with rawhide soles, turned upward at the toe and decorated with painted designs. In winter a yoncho, or buckskin shirt, made of two skins with an opening for the head, and fastened with thongs beneath the arm, was worn. A band round the head kept the hair back from the face; the hair was generally worn long or trimmed square on a level with the chin. The women wore a buckskin over one shoulder, which was tastened beneath the opposite arm, a short skirt of buckskin, coming just below the knee, with fringes of the same, and pendants of metal or shell. Girls and unmarried women wore their hair drawn back on the nape of the neck, and rolled in a club shape; while attached to the figure eight, studded with brass-headed tacks; they also wore wristlets of brass and copper, and ear-rings and necklets of shell or seeds. Only of late years have they tatued, but now it is quite common to see various geometric designs on their foreheads and chins, and sometimes on the cheeks. On reaching puberty, girls have their eyebrows and eyelashes pulled out.

Polygamy is practised by the Apaches, a man generally marrying his wife's sisters as they mature, since they believe less friction will exist in the family. A widow cannot marry within a year of her husband's death, but his brother can take her to wife any time within the period of mourning; if he does not, however, she is free to marry any one she pleases. Marriage is generally arranged by the parents or near relatives, and is generally by purchase. If a man has more than one wife, they usually live in separate camps, the children belonging to the mother. The morality of the girls is always good before marriage. When a man marries, he avoids meeting or speaking to his mother-in-law. If they should meet by accident, the first to see the other hides or looks in the opposite direction. A girl is of marriageable age when she reaches the age of puberty, her parents making the announcement by a feast and dance, at which she is forbidden to be present, and which lasts through the night; afterwards she is open to

proposal.
Women do all the household work, the planting and tending of the crops, and the carrying of the burdens. To-day their principal income is derived from the sale of hay, grain, and wood to the agency, military posts, ranches, and towns adjacent to the reservations. At home the Apache is fond of talking and entertaining his friends. Both men and women are inveterate gamblers.

woven in geometric or figured designs of black, and made from the pod of a species of Martynia.

A close study and intimate knowledge of the various Apache tribes reveal no religious organization, but there are many forms of worship, not as the white man recognizes worship, but in the form of sacrifice, prayers, fasts, and physical pen-ance to appease the wrath of the evil spirits. Perhaps the nearest approach to one of the classified forms of worship of the Apaches is the elemental, forms of worsnip of the Apaches as the elementous, or nature-worship, though there are traces of animism as well as of animal-worship in their reverence for the bear, jack rabbit, snake, etc., to which they offer the sacrifice of hoddentin (see below). The number four is sacred, as among the American Indians generally; and so is eight, though to a minor degree. As far back as the 16th and 17th cents, the Jesuits and Franciscans formed missions, and worked with their accustomed zeal, but with little success. After years of toil and sacrifice, the field was wholly abandoned, and, apart from the various signs of the cross and sacred cords that might be traced to the rosary, no influence seems to have remained of these early teachings. And as these symbols were so common among the aborigines, it is doubtful whether even these are relics of former Christian influence. belief in spirits both good and bad, and in the necessity of sacrifice, is prominent in their worship, as will be seen by their offering of hoddentin to appease every known spirit on every occasion.

To be properly understood, however, the beliefs and superstitions of the Apaches must be studied through their medicine-men and women, who wield a marvellous influence in fastening on them their belief in the occult, an influence little understood or appreciated by the civil authorities. Through this lack of understanding, the Apache Indians have been much maligned, and a great deal of the trouble with Government representatives in the past has arisen through not taking into consideration their superstitions and methods of reasoning. Great freedom exists as to the selection of the shaman or medicine-man. Any man, woman, or child who seems to be endowed with spiritual or occult powers and able to interpret omens, is free to follow his own inclinations and invent his own symbols. It is customary, however, for them to place themselves as assistants to some medicine-man who has gained power and influence, paying him liberally for his tuition, a year or more being the usual length of time given to study.

The Apache believes that all ills of the body are caused by evil spirits, which must be expelled or subdued. When any one is sick, he sends for his favourite medicine-man. If the patient is wealthy, the medicine-man will have the assistance of several others, often bringing his family along with him, and camping near the patient. The family and friends of the sick supply the medicine-man and his family with food and help. Before the medicine-man's arrival, the sick one's family generally prepares as many cans of tis win as they can afford; and when he arrives, a corner of the camp is reserved for his use, the best blankets are given for him to rest on, and the choicest food is placed before him. When he has finished his repast, large cans of tis win are placed before him, and he drinks and calls from among his friends those whom he wishes to drink with him. whom he wishes to drink with him.

While the feast is going on, the medicine-man begins to bargain his service; and if everything is seems to pargain his service; and it everything is sensificatory, he proceeds to arrange a programme for his patient's care. If there is but one person that in the camp, the exercises consist of singing, and drumming; but if there are more see, it an epidemic is raging in the settlement, the settlement, the settlement is the settlement of the settlement.

and children joining in the weird and monotonous cadence. Hoddentin is sprinkled round the couch of the sick, and applied to his forehead, tongue, and, in the form of a cross, to his breast, the medicine-men placing this same powder on their own tongues to give strength and divination. The singing and dancing are often continued until the leaders are completely exhausted. All the while they mumble a sort of gibberish that they claim to be understood only by themselves, and to possess the magic that is a part of their individual power. The Apache materia medica consists mainly of a few roots, leaves, and vegetable matter, always with the application of hoddentin. Hoddentin is the pollen of the tule, a species of cat-tail rush, the pollen of the tule, a species of cat-tail rush, and is gathered without any special ceremony. A small bag of it is carried by every man, woman, and child, even the infant in its cradle having a small bag attached to it. No undertaking, compact, or agreement is entered into without the sacrifice of some of this powder; a small portion of it is blown into the air at dawn and darkness; or it is blown into the air at dawn and darkness; it is blown toward the sun to appease its heat and bring rain for the crops. Every phase of the life of the Apaches is surrounded by superstition and subject to necromancy, over which the medicinemen have control. Like the fraternity of physicians of more scientific learning, they specialize, one being consulted for rain, another to recover stelen property another for sickness etc. stolen property, another for sickness, etc.

In addition to this sacrificial powder, there are many other sacred emblems that are much relied on by the Apaches. The izze-kloth, or sacred cord, which is worn by leaders as well as by medicine-men, the bull-roarer, the medicine-hat, and the medicine-shirt are all firmly believed to possess certain special properties. The bull-roarer is an oblong piece of wood, about 1½ in. wide and 7 or 8 in. long, made with a round head through which a cord is passed, while on the main body are irregular furrows. It is usually of pine or fir, and if obtained from the mountain heights, and premany other sacred emblems that are much relied if obtained from the mountain heights, and previously struck by lightning, it possesses special qualities in controlling the elements. This bullroarer the medicine-men twirl rapidly. It then gives the sound of a sudden rush of wind, and exerts a compelling influence on the bringing of rain to the crops. The *izze-kloth*, used by leaders and laity alike, is the most sacred emblem the Apache possesses, so much so that it must be hidden from sight and protected from profane touch, both the izze-kloth and the medicine-hat losing their efficacy when in any way handled by an unbeliever.

The Apaches worship and sacrifice to the sun, moon, and other planets, as well as to the lightning, wind, etc.; and hold various dances, such as spirit-, ghost-, sun-, and snake-dances, though the snakedances are not so common or so regular as among the Hopis and other neighbouring tribes.

Regarding the success of the medicine-men, it is well with them in cases of sickness if they do not lose too many patients; but when unsuccessful, they generally claim that there is some other influence at work overcoming or counteracting their own. The present writer has seen several incidents where the medicine-man managed to shift the responsibility to another, knowing that the relatives of the deceased were dissatisfied with his work. While the body was still warm, the medicine-man drew from his medicine-bag a flake of flint, with which he made an incision in the side of the deceased where he had suffered most, put his lips to the incision and began to moan, and in a short time turned around and spat on the ground a mouthful of blood, and with it a small stone, which he claimed had been fired into the deceased by an old woman living forty miles away. That night a party went to the old woman's camp and killed her

The individual interpretation given to each one's beliefs and imaginations precludes any set form of worship; but in a general way they all centre round those symbolic influences and superstitions that debar progress and hold them effectually to the faith of their fathers.

The characteristic Apache burial is in natural rock shelters in cliffs and crevices, either on the rocky sides of mountains or in the earth and talus at the base of the hills. Nooks in small unfrequented canons are also utilized. After the removal of the earth and talus, the body is laid on the resulting platform and covered with a frame of poles and brush, over which rocks are heaped, the mound being from 4 to 10 ft. broad, 6 to 15 ft. long, and 2½ to 4 ft. high. No coffin is used, but the corpse is clothed and well wrapped up. A shovel (and sometimes an axe, or, in the case of a woman, a carrying basket), is frequently left on the grave, of which no subsequent care is taken. Among the

of which no subsequent care is taken. Among the White Mountain Apaches tree-burial occurs.

ANTONIO APACHE.

APADANA.—The name of one of the books in the Pali Canon. It contains 550 biographies of male members and 40 biographies of female mem-bers of the Buddhist Order in the time of the Buddha. The book is therefore a Buddhist Vitae Sanctorum. It has not yet been edited, but copious extractsfrom the 40 biographies are given in Eduard Müller's edition of the commentary on the Theri Gāthā (PTS, 1893). One of those extracts (p. 135) mentions the Kathā Vatthu, and apparently refers to the book so named, which was composed by Tissa about the middle of the 3rd century B.C. If Tissa about the middle of the 3rd century B.C. If this be so, the Apadāna must be one of the very latest books in the Canon. Other considerations point to a similar conclusion. Thus the number of Buddhas previous to the historical Buddha is given in the Digha Nikāya as six; in later books, such as the Buddha Vainsa, it has increased to 24. But the Apadāna (see Ed. Müller's article, 'Les Apadānas du Sud' in The Proceedings of the Oriental Congress at Geneva, 1894, p. 167) mentions eleven more, bringing the number up to thirty-five. eleven more, bringing the number up to thirty-five. It is very probable that the different legends contained in this collection are of different dates; but the above facts tend to show that they were brought together as we now have them after the date of the composition of most of the other books in the Canon.

There exists a commentary on the Apadana called the Visuddha-jana-vilāsinī. In two passages of the Gandha Vamsa (JPTS, 1886), pp. 59, 69, the authorship of this commentary is ascribed to

Buddhaghosa.

According to the Sumangala Viläsinī, p. 15 (cf. p. 23), the repeaters of the Dīgha maintained that the Apadāna had been included in the Abhidhamma Pitaka, while the repeaters of the Majjhima said it was included in the Suttanta Pitaka. This doubt as to its position in the Canon is another reason for placing the work at a comparatively late date.

The word Apadana means 'pure action,' heroic action'; and each of the Apadanas gives us first the life of its hero or heroine in one or more previous births, with especial reference to the good actions

that were the cause of his or her distinguished position among the early Buddhists. There then follows the account of his or her life now. An Apadana therefore, like a Jataka, has both a 'story of the past' and a 'story of the present'; but it differs from a Jataka in that the latter refers always to the past life of a Buddha, whereas an Apadana deals usually, not always, with that of

an Arhat (q,v).

When the Buddhists, in the first century of our era, began to write in Sanskrit, these stories lost era, began to write in Sanskrit, these stories lost none of their popularity. The name was Sanskritized into Avadāna; and several collections of Avadānas are extant in Sanskrit, or in Tibetan or Chinese translations. Of these the best known are the Avadāna-Sataka, or 'The Century of Avadānas,' edited (in part only as yet) by J. S. Speyer, and translated by Léon Feer; and the Divyāvadāna, edited by Cowell and Neil, not yet translated. As a general rule, these later books do not reproduce the stories in the older Apadāna. They write new ones, more in accordance, in spirit and implication, with the later doctrines then prevalent. Most of these Avadānas are on the lives of Arhats. But the main subject of the longest of all the Avadāna books, the Mahā-vastu-avadāna, is a series of the previous lives of the Buddha, though it also includes a few of the old Apadanas in new versions.

a few of the old Apadanas in new versions.

Senart (8 vols., Paris, 1882–1897).

T. W. RHYS DAVIDS.

APATHY.—The Greek doctrine of apathy (ἐπάθεια) is usually regarded as a leading charac-

 $(\delta\pi d\theta \epsilon ia)$  is usually regarded as a leading characteristic of the Stoic School, but it undoubtedly belongs to an earlier date. This is the view of the anonymous commentator on Aristotle's Ethics (Comment. in Aristot. gr. xx. p. 128, 5: lorέον δὲ δτί και πρό τῶν στοικῶν ἢν ἢ δὸξα αῦτη). There are certainly marked tendencies towards it in the Cynic School, with its complete renunciation of all pleasure and its glorification of work. If it is the case that Aristotle's Nic. Eth. ii. 2, 1104b, 24 (διδ καὶ ὁρίζονται τὰς ἀρετὰς ἀπαθείας τινὰς καὶ ἡρεμίας) alludes to the Cynics, the latter must already have made use of the expression  $d\pi d\theta e a$ . In any case, it had influenced Stilpo the Megarian, who found happiness in the animus impatiens (Seneca, Epist. I. ix.), and seems to have used the word ἀσχλησία (Alex. de Anim. 150, 34, Bruns). Zeno, the founder of the Stoa, however, was influenced by the Megarian as well as by the Cynic philosophy.

On the other hand, Democritus described εὐθυμίη,

the human happiness consisting in μετριότητι τέρψιος και βίου ξυμμετρίη (Frag. 191, Diels), in the same way as apathy is described later. For apathy he is said to have used the term dταραξία, which appears again among later Sceptics. His doctrine, through the medium of Anaxarchus of Abdera (Diog. Laert. ix. 60), surnamed εὐδαιμονικός and celebrated especially on account of his ἀπάθεια, had an influence on Pyrrho, the founder of Scepticism, who taught δπάθεια probably even under this name (Cic. Acad. ii. 130; Plut. de Prof. in Virt. ii. p. 82 f.). His disciple Timon praises his constant cheerfulness (γαλήνη, Frag. 63, Diels) and his freedom from πάθη (Frag. 9); other passages mention his αδιαφορία and ἀταραξία (Diog. Laert. ix. 66, 68), which result from the withholding of judgment (ἐποχή) on all the events incident to human life: he who ventures no opinion about the worth of a thing may regard it as either good or evil, and so his tranquillity of mind cannot

Commence of the Commence of th

be disturbed thereby. It is true that Epicurus did not advocate the extermination of the emotions  $(\pi d\theta \eta)$ , yet he occasionally depicts the imperturbable tranquillity of mind of the wise man in such colours that he approaches the Stoic standpoint.

Of the statement from the third epistle (Epicurea, ed. Usener, p. 62): τούτου γάρ χάριν πάντα πράπτομεν, όπως μήτε αλγώμεν μήτε ταρβώμεν. όταν δὲ ἀπαξ τοῦτο περὶ ήμᾶς γένηται, λύεται πας ὁ τῆς ψυχής χειμών; also Frag. 457: ἐρωτι φιλοσφάας ἀληθινής πᾶσα παραχώθης καὶ ἐπίπονος ἐπιθυμιά ἐκλυέται; and the well-known statement (Cic. Tusc. ii. 17): 'In Phalaridis tauro si erit, diect, "Quam suave est, quam hoc non curo."

Such ideas are in accordance with the general feeling of the Hellenistic period, which was quite willing to recognize the happiness of the individual

in a kind of quietism.

Entire freedom from the emotions was now demanded of the Stoic sage (Frag. 207, Arnim) by Zeno, who, however, made to the healthy human intellect the concession that even the sage, although unaware of the emotions themselves, is nevertheless conscious of a shadow of them (Frag. 215). This doctrine was more clearly expounded by his pupil Dionysius in his separate treatise περὶ ἀπαθείας (Diog. Laert. vii. 166), but more especially by Chrysippus (e.g. in περὶ δικαιοσύνης and περὶ ὁρμῆς), whose fragments on this subject are collected in Arnim, Stoic. vet. Fragm. iii. 443-455. The emotions belong to the irrational and immoderate (πλεονάζονσαι) class of impulses (δρμαὶ), which bring unrest into the mind of man. They arise from false judgments on the worth of things, or rather from the thoughtless assent (συγκατάθεσιε) to such judgments (Dyroff, Ethik der alten Stoa, p. 152 ff.; Epict. iii. 19. 3: οὐδὸν Δλλο ταραχῆς ἢ ἀκαταστασίας αξτιών ἐστιν ἢ τὸ δόγμα). The philosopher, as the physician of the soul, has to combat the passions, the chief of which are: desire, fear, pleasure, and grief,—pity is also included in them,—by demonstrating the falseness of the judgment and cultivating the virtues of moderation and courage. As virtue is perfected reason (λόγος), the irrational impulses are incompatible with it, and thus in the soul of the wise man there is left no trace of passion (Frag. 447); the όρμαί are completely blended with the λόγος; the wise man is ἀπαθής, and therein consists his happiness (Diog. Laert. vii. 117; Cic. Tusc. iv. 37).

It was inevitable that against this extreme

It was inevitable that against this extreme doctrine lively opposition should arise. Plato had already deliberately opposed apathy (cf. Philebus, pp. 21 D, 60 E, 63 E: ἀλλ' ἄς γε ἡδονὰς ἀληθεῖς καὶ καθαρὰς εἶπες, σχεδὸν οἰκεἰας ἡμῶν νόμιζε, καὶ πρὸς τανταις τὰς μεθ' ὑγιεἰας καὶ τοῦ σωφρονεῖν), and his disciples had, therefore, taken up their position almost on the standpoint of Aristotle and the Peripatetics, who strove after μεσότητες ἐν τοῖς πάθεσι (Nicom. Eth. ii. 1108°, 30; the later writers call it μετριοπάθεια), and could not approve of apathy. No more could Epicurus, whose ἡδονή was actually regarded by the Stoics as one of the chief passions (Stobæus, ii. 90. 16). Carneades summed up this contradiction in his successful attack upon the Stoic exaggerations. He started from the fact that man is not only soul, but also body; that, consequently, certain bodily impulses are inevitable, among which pleasure assumes the first place; since it cannot be an evil, apathy is impossible (Gell. xii. 5, 7). This opposition resulted in the yielding of the Middle Stoa (Schmekel, Philos. d. mittl. Stoa, p. 364); Panætius after the fashion of the Peripatetics perceives virtue in the avoidance of extremes, and allows the ὁρμαί as legitimate in themselves. For him bodily pleasure is something natural, and therefore not to be exterminated; grief, on the other hand, is contrary to human nature, and therefore human nature is justified in avoiding it. Posidonius laid stress on the contrast between body and soul, and held that only the

soul, so far as it remains pure, can be ἀπαθήs, but not the body; he admitted, besides, a παθητικὸν μέρος τῆς ψυχῆς (Plut. de Virt. Mor. 3, p. 411d; Galen. de Hipp. et Plat. plac. p. 408 M). He thus abandoned the old Stoic attitude on principle, although in some single statements he approached very near it (e.g. Cic. Tusc. ii. 61). The later philosophers are strongly influenced by this more moderate attitude. Epictetus is the only one who returns to the old rigorism; his wise man must again be ἀπαθής and ἀπάραχος, δίχα ὀρέξως καὶ ἐκκλίσεως, and he fought expressly against μετρισπάθεια (iv. 1, 175; cf. Bonhöffer, Ethik des Epiktet, p. 46). Seneca also opposes it in one of his writings (Epist. 85), but otherwise he assumes Posidonius' point of view. This view occasionally persists in the later philosophy, and Neo-Platonism, with its withdrawal from this world and its mortification of the flesh, is decidedly in its favour. Thus Philo resolutely demands apathy (Zeller, v. 4, p. 449), and so also with Porphyry it appears as the highest stage of virtue, while metriopathy receives a lower place (op. cit. p. 717).

W. KROLL.

APHRODISIA ('Appolloua).—The general name of festivals in honour of Aphrodite. The cult of Aphrodite may be regarded as having been universal in one form or another in the Mediterranean lands. In all the great centres of Hellenic life it occupied an important place, prevailing from Naucratis in Egypt to Phanagoria in the Black Sea, and from the Troad to Italy and Sicily (see the long list, with the evidence, in Pauly-Wissowa, art. 'Aphrodite'). The Ægean islands were among its most famous centres, notably Cythera, Crete, and Cyprus. There is, however, no real ground for regarding the cult, in its later specialized form as the cult of a goddess of physical beauty,\* as having been aboriginal in Greek lands. Probably Aphrodite was originally an Oriental nature-divinity, and she retained many Oriental traits in her local cult as a specialized divinity in Greece.† The more refined cult of the goddess as the patroness of married life is probably a genuinely Hellenic development, for this aspect of her is either altogether lacking or at least is not prominent in its Eastern forms. Contrary to a very general but erroneous conception, originating in Plato's well-known distinction between Ourania Aphrodite who personifies the intellectual love of the soul, and Aphrodite Pandemos who personifies the sensual love of the body (Plat. Sympos. 180 D), it is precisely this title of Otparia, 'Heavenly,' that is the clearest sign of her Eastern origin; the Platonic distinction was not recognized in the State religion, and the moral and spiritual meaning of the title is of late growth (Farnell, op. cit. 629 ff., 659 ff.). In the same way, that aspect of Aphrodite under which she was worshipped at Athens and elsewhere as Pandemos, 'Guardian of the body politic,' was not an independent Hellenic development, but a survival and development of an Oriental conception (Farnell, p. 663).

With regard to the nature of the cult, ethically

With regard to the nature of the cult, ethically considered, it is to be observed that much of the modern conception is based upon a radically false notion, and the unguarded application to Hellenic practice of ill-understood Oriental phenomena.

\*As a 'departmental goddess, having for her sphere one human passion' (J. E. Harrison, Prolegomena to the Study of Greek Religion, p. 309) she is depicted in the Homeric Hymn. † For an examination of this question of origin, consult Farnell's Cults of the Greek States, Oxford, 1896, ii. 619 ff.

Until the decline of Greek civilization, the cult of Aphrodite, so far as we know it from our literary or monumental sources, was indistinguishable in point of purity and austerity from that of Zeus or Athene, and was in this respect, in fact, on a higher plane than that of Artemis. Rules of chastity, for example, were in some cases imposed upon her priestesses (Paus. ii. 10. 4). It was at Corinth alone in Greece, and there in connexion with the worship of the 'Heavenly' Aphrodite, that impure practices were found established as part and parcel of the ritual of worship. The fact is that a careful distinction must be drawn between Greek religion and ritual, which is upon the whole pure, and the mythological stories, which are often the reverse, and are, moreover, conveyed to us largely through the impure medium of degenerate poetry. Degeneracy did indeed exhibit itself in the cultus, as in other domains of Greek life and practice—a symptom of the loosening of the moral bonds in the Hellenistic period,—and later in the erection of altars and temples, and the establishment of festivals under the name of Aphrodite to the mistresses of the successors of Alexander and others (Athenæus, 253, 595).

Probably the festival of Paphos was the most celebrated of those held in honour of the goddess; and there also in all probability many features that had no parallel in Greece, save perhaps at Corinth, were to be seen. Great crowds assembled at the temple from all parts (Strabo, 683: καὶ πανηγυρίζουσι διὰ τῆς ὁδοῦ ταὐτης κατ΄ ἔτος ἐπὶ τὴν Παλαίπαφον ἄνδρες ὁμοῦ γυναιξιν συνιόντες καὶ ἐκ τῶν ἀλλων πόλεων). The title ᾿λγήτωρ borne by the high priest at Paphos would probably indicate his conduct of the vast procession. Sacrifices of blood were not offered, though victims seem to have been slain for purposes of divination: or there may have been two altars, one for incense, the other for sacrifice (cf. Tac. Hist. ii. 3: 'Hostiæ, ut quisque vovit, sed mares deliguntur: certissima fides hædorum fibris. Sanguinem aræ obfundere vetitum: precibus et igne puro altaria adolentur'). A ritual bath and mimic dance probably formed part of certain mysteries which were celebrated (Harrison, op. cit. pp. 283, 312; cf. Farnell, op. cit. p. 651: 'in Cyprus, in some religious ceremony, some scenic representation of the Adonia perhaps, the image of the dead goddess was exposed, and then after due performance of certain rites she was supposed to be restored to life'). Those who desired to be initiated ἐν τῆ τέχνη μοιχικῆ τεceived on entering the temple a! phallus and a lump of salt, and gave a piece of money to the temple treasury.\*

Most Oriental in character of all the Greek cities was Corinth. Euripides celebrates Acrocorinthos as the holy hill of Aphrodite (Frg. in Strabo, 379: ἡκω περίκλυστον προλιποῖο Ἰκκροκόρινθον, leρὸν δχθον, πόλιν Ἰκροροδίτας; cf. Alciphr. iii. 60). The most un-Hellenic of the elements of the Anbrodite cult was

Most Oriental in character of all the Greek cities was Corinth. Euripides celebrates Acrocorinthos as the holy hill of Aphrodite (Frg. in Strabo, 379: ήκω περίκλυστου προλιποῦσ' ᾿Ακροκδρινθου, ἰερὸν δχθου, πόλιν ᾿Αφροδίτας; cf. Alciphr. iii. 60). The most un-Hellenic of the elements of the Aphrodite cult was the practice of religious prostitution (Strabo, 378), alluded to by Pindar when he celebrates the 'hospitable young women, the ministrants of Persuasion in rich Corinth, whose thoughts often fit towards Ourania Aphrodite' (Pind. Frg. 87, ed. Boeckh). At Corinth, apparently alone in Greece, these hetæræ took part in the State ritual; for when-

these hetæræ took part in the State ritual; for when\* Clem. Alex. Protr. 14: ἐν ταῖς τελεταῖς ταῖτης τῆς πελαγίας
ἐδονῆς τεκμήριον τῆς γονῆς ἀλῶν χύνδρος καὶ φαλλὸς τοῖς μνουμένοις τὴν τέχνην τὴν μοιχικὴν ἐπιδίδοται νόμισμα δὲ εἰσφέρουστν
αὐτῆ οἱ μυούμενοι, ὡς ἐταἰρς ἐρασταῖ; Απιοδι αδν. Gent. δ. 169;
Justin, xviii. 5. 4: 'mos erat Cypriis virgines ante nuptias
statutis diebus dotalem pecuniam quasituras in quastum ad
litus maris mittere, pro reliqua pudicitia libamenta Veneri
soluturas.' For this sacred prostitution, an Oriental practice,
see Herod. i. 199, speaking of the cult of the Babylonian Mylitta
(Ξίδτατ, Astarte), cf. Strabo, 552; Ramsay, Cities and Bishoprics
of Phrygia, Oxford, 1895, i. 94; J. G. Frazer, Adonis, Attis,
Oxieris, Lond. 1906, p. 21. For similar institution in connexion
with the Cappadocian goddess Ma, cf. Strabo, 585. See also
Nilsson, Griech. Feste, p. 366 ff.

ever public prayers were addressed to Aphrodite on matters of moment, as large a number as possible of the heteræ were taken to aid in the ceremony; and individuals privately often vowed to consecrate a certain number of these women to the goddess (such would be in general bought slaves of Greek or foreign origin). We hear of them as putting up public petitions on behalf of the Greek cause in the Persian Wars (Athen. 573 C). Naturally, therefore, the heteræ took a conspicuous part in the festivals of Aphrodite, one day being given up to them, and another to the respectable women. Doubtless much of Eastern licence was seen on these festival days at Corinth; the city was notoriously dangerous in this respect to visitors (cf. Strabo, 378: οὐ παντὸς ἀνδοὸς ἐς Κρουθόν ἐσθ' ὁ πλοῦς).

378: οὐ παντοὲ ἀνδρὸὲ ἐς Κόρινθὸν ἐσθ' ὁ πλοῦς).

At Argos the chief festival of Aphrodite was called Hysteria (ὑστήρια), because swine were sacrificed to her—probably an indication of the cult of Aphrodite in conjunction with Adonis, for ordinarily the Greeks, as we learn from Aristophanes (Ach. 793), did not sacrifice swine to Aphrodite. Probably, wherever the pig was sacrificed to Aphrodite, it was a mystery, the pig representing Adonis himself (see Frazer's note in Paus. ii. 10. 5; Farnell, op. cit. p. 756). Connected with the same form of the cultus was the strange hermaphroditic festival of the goddess at Argos, which bore the special name of the Feast of Wantonness (ὑβριστικά), at which women dressed as men, and men as women, the men even wearing veils (Plut. de Virt. Mul. 245 E). The festival was popularly explained as commemorative of the brave defence of Argos by the poetess Telesilla in 510 B.C.; but such interchange of garments as a religious rite is not uncommon elsewhere (cf. Macrob. Sat. iii. 8; and references in Farnell, p. 755), so that probably the story of Telesilla is merely ætiological (see Frazer on Paus. ii. 20. 8: Nilsson. Griechische Feste. p. 371).

memorative of the brave defence of Argos by the poetess Telesilla in 510 B.C.; but such interchange of garments as a religious rite is not uncommon elsewhere (cf. Macrob. Sat. iii. 8; and references in Farnell, p. 755), so that probably the story of Telesilla is merely ætiological (see Frazer on Paus. ii. 20. 8; Nilsson, Griechische Feste, p. 371). In Ægina the festival of Aphrodite seems to have been combined with one to Poseidon (Plut. Quæst. Gr. 44), the details suggesting that the cult was one of Aphrodite as a divinity of death (about which see Farnell, op. cit. p. 652). In Thessaly, women alone appear to have taken part in the festival; it was at one such celebration that the courtezan Lais was murdered (schol. in Aristoph. Plut. 179: al Θετταλαl γυναίκει ἐφόνευσαν αὐτὴν ξυλίναις χελώναις τυπτοῦσαι ἐν τῷ leρῷ τῆς 'Αφροδίντης, πανηγύρεως οὐσης, ἐν ἢ ἀνδρες οὐ παρεγίνοντο). In Zacynthos, athletic contests, especially racing, were part of the festival (Dion. Hal. Ant. Rom. i. 50). Some details connected with the festival of Aphrodite as Pandemos are furnished by an inscription found at Athens, in which the Senate recommends to the Assembly that the police officials (ἀστυνόμοι) on the occasion of the public procession (πομπή) in honour of the goddess, prepare for the cleansing of the temple a dove, cleanse and whitewash the altars, wash the images, etc. (Dittenberger, Sylloge², 556=BCH, 1889, p. 162; Nilsson, p. 374).

the temple a dove, cleanse and whitewash the altars, wash the images, etc. (Dittenberger, Sylloge<sup>2</sup>, 556=BCH, 1889, p. 162; Nilsson, p. 374).

Finally should be noticed a usage of the word 'Aφροδίσια in a more general sense of 'festival gathering,' without religious significance. It is so found in Xen. Hell. v. 4. 4: ως 'Αφροδίσια ἄγουστυ ἐπ' ἐξόδωτῆς ἀγρίστης (of the Polemarchs of Thebes. Cf. Plut. Cim. and Luc. comp. 1: ἢδη λοιπὸν 'Αφροδίσια τῶν πολέμων καὶ στρατηγιῶν ἀγοντα παίζειν; Athen. 4, p. 128 Β, 'Αντιγόνου τοῦ βασιλέως δεῖπνον 'Αφροδίσια ἐπιτελοῦντος. Such celebrations might naturally be annual; cf. Alciph. Ep. 2. 1, τὰ 'Αφροδίσια ποιῶ ταῦτα καπ' ἔτος).

APOLLINARISM.—Apollinaris, the younger, of Laodicea († c. 390), was the founder of a heresy which forms the connecting link between Arianism in the 4th and Nestorianism and Monophysitism

of Laodicea († c. 390), was the founder of a heresy which forms the connecting link between Arianism in the 4th and Nestorianism and Monophysitism in the 5th century.

1. Life of Apollinaris.—Of the events of his life not very much is known. His father, who was also named Apollinaris, was a grammarian from Alexandria who came to Berytus (Betrut) and then went on to Laodicea (Laddicty) in Syria. (Betrut) and then went on to Laodicea (Laddicty) in Syria there he married and had a son, Apollinaris the younger, the future heretic (Socrates, HE ii. 46). Socrates says that the future heretic (Socrates, HE ii. 46). Socrates says that the future heretic (Socrates, HE ii. 46). Socrates says that the future heretic (Socrates, HE ii. 46). Socrates says that the future heretic (Forther Merica) and that Theodotus, the Bishop of Laodicea, forbade him this acquaintance, as being dangerous to his faith. Eventually Theodotus, or perhaps his successor efects, communicated Apollinaris, together with his son, either because they would not give up their intimacy with Epiphanius, or because they kept the faith of Nicea and Athanasius, whereas the bishop was a semi-Arian (th).

Apollinaris the father, who had been ordained prespyter at Laodicea, tried to supply his fellow-Christians with a substitute for the Greek classics which Julian had forbidden them to teach. He appears to have arranged nearly the whole Bible in the form of poems of various metres. 'He expounded the books of Moses in heroic verse, and edited the other historical books of the Old Testament, partly as elegiac poems, partly as tragedies with different metres (Socr. iii. 16). The son, having learnt this art from his father, wrote out the Gospels as Platonic dialogues (th). But there is some confusion between the father and son about these paraphrases of the Bible. Sozomen attributes them all to the son (Sozomen, HE v. 18).

Apollinaris the younger must have been born not very long after the year 300. Epiphanius speaks of him in 876 as a 'venerable old man' (Her. 'II

new doctrine (HE vi. 25). It seems true that he first conceived his theory as a defence of Homoousianism.

We hear of him next as bishop, apparently of Laodicea. It is true that neither St. Basil, Gregory of Nazianzus, Epiphanius, Socrates, nor Sozomen mentions him as a bishop, and that Leontius of Byzantium speaks of him only as 'Apollinaris the presbyter' (the Sectis, Act. iv., PG Ixxxvi. 1217). And Photius doubted whether he had been bishop (in ep. Philost. viii. 15). On the other hand, St. Athanasius speaks of certain monks who had been sent to Alexandria by 'Apollinaris the bishop' (Tom. ad Antioch. ix.), Philostorgius relates the fact as having been 'told by some people' (HE viii. 14), Theodoret says that he generally lived at Laodicea (HE v. 4), and St. Jerome, who had known him well, calls him 'Bishop of Laodicea in Syria' (de Vir. 12. 104). But Pelagius had succeeded George as bishop of the same city about the year 383 (Lequien, Or. Christ. ii. 794), so it seems that Apollinaris had been set up as Homoousian bishop in opposition to the semi-Arian line. It must have been about 360 that he began to be commonly known as the teacher of a new doctrine. The Synod of Alexandria in 362 seems to know and reject his ideas. It 'confessed that the Saviour did not assume an inanimate or insensible body. . . Not only the body but also the soul receives salvation from the Word' (Athan. Tom. ad Ant. 7). But it does not mention his name. By the year 370 all the Orthodox Fathers speak of him as a heretic. St. Basil says, 'We have no communion with Apollinaria' (Ep. cxxxi. 2, etc.). He denounces him to 'the Westerney' (Ep. cxixi. 2), and rejoices later that they have condemned him (Ep. cclxx. 2). This condemnation is that of

the Roman Synod in 374 (Mansi, iii. 479). Apollinaris is not mentioned in any of its ten canons, but they are plainly drawn up as condemnations of his theory. The Synod of Antioch, held in 378 under Meletius, anathematizes those who 'say that the Word of God dwelled in human fiesh in the place of a reasonable and intelligent soul' (Mansi, iii. 486). The first canon of the Synod of Constantinople in 331 condemns a number of heretics, of whom the last are the 'Apollinarists'; its seventh canon ordains that the Apollinarists shall be received back into communion if they retract their heresy and present a written declaration (AigeAlos) of the true faith (Mansi, iii. 558-563). As soon as he had formulated his particular doctrine and had begun to be opposed by other bishops, Apollinaris gathered his following into a definitely organized sect. At Antioch he set up a certain Vitalis as anti-bishop, 'a man distinguished by his honourable life and educated in the teaching of the Apostles, but corrupted by this poison' (Theodoret, HE v. 4). Sozomen says that this Vitalis had joined Apollinaris because of a quarrel with Flavian of Antioch (HE vi. 25). And there were other Apollinarist bishops throughout Syria. St. Basil writes ironically of this heretical hierarchy: 'a great mystery of godliness, hishops bearing empty titles without either clergy or people' (Ep. cclxv. 2).

bishops bearing empty muse where the control of the two (Ep. c.lxv. 2).

Meanwhile St. Athanasius (or the other author of the two books against Apollinaris that bear his name) and St. Gregory of Nyssa had written their treatises against the heresy (see below). Apollinaris died, leaving behind him an organized Apollinarist Church, about the year 390 (Jerome, de Vir. 14. 104).

2. The Apollinarist heresy.—Apollinaris began as a zealous defender of Homoousianism against the Arians. Sooner or later the question was bound to arise: How could the Logos be joined to a human nature? It was around this question that the later Nestorian and Monophysite disputes turned. Apollinaris' solution, in which his heresy consisted, was an attempt to save the unity of Christ's Person at the expense of His human nature. In this way he was a sort of forerunner of Eutyches. He is certain that God Himself became man in Christ. He is also certain that the whole Divine nature cannot be joined to the whole nature of a man. He maintains this by the same arguments as were afterwards used by the Monophysites. as were afterwards used by the Monophysites. Two perfect natures always remain two separate persons; 'two perfect beings cannot become one.' This axiom, quoted by Athanasius as one of his 'sophisms' (contra Apoll. i. 2), was the starting-point of his system. He illustrates it by various examples. We may not adore a man, we must adore God. So it would follow that Christ must be both adored and not adored. Moreover a be both adored and not adored. Moreover, a perfect man is necessarily sinful, 'where there is a perfect man, there is  $\sin$  '(ii.); but Christ could not become sinful. And He would be neither really God nor really man, but a man-god  $(d\nu\theta\rho\omega$ really God nor really man, but a man-god (ανρω-πόθεος), a monstrous and impossible hybrid of two incompatible species, like the Minotaur, the cen-taurs, dragons, and other mythological absurdities (Greg. Nyss. Antir. 49). He goes on to argue that he would certainly not be a man, for all men consist essentially of three parts, body, soul, and spirit, whereas He would have four parts, adding to these His Divinity. In short, 'a person being spirit, whereas He would have four parts, adding to these His Divinity. In short, 'a person, being one, cannot be combined of two' (ib.). He finds the solution of the difficulty in the application of a general principle of philosophy. The Neo-Platonic school taught that human nature is the composition of these three elements—a body, a soul that actuates and informs the body (to use the later mediæval term), thus making us living beings, and the mind, or spirit, that makes us reasonable beings, which spirit is the special characteristic of man.

characteristic of man.

Apollinaris thinks that the doctrine of the three elements of man, body, soul, and spirit (σῶμα, ψυχή, πνεῦμα οτ νοῦs), is confirmed by Scripture. He quotes the text: 'Bless the Lord, O ye spirits and souls of the just' (Dn 386 [= Three 64]; cf. Greg. Nyss. Antir. 46). We are told to serve God in spirit and to adore Him in spirit and truth (Ro 19; Antir. 49); St. Paul prays that the Thessalonians may be sanctified in spirit, soul, and body (1 Th 523); and he distinguishes the carnal (ψυχικόs) from the spiritual (πνευματικόs) man (1 Co 2<sup>13. 14</sup>, cf. 3<sup>1</sup> 15<sup>465</sup>;

Antir. 49). Of these three elements the body and the soul make up the 'natural' (φυσικός) being (the machine, Plato would have said), which is ruled

machine, Plato would have said), which is ruled and guided by the mind.

But the guiding principle in man is changeable, fallible, sinful. It cannot be so in Christ. Therefore in Christ the Divinity, the Logos, takes the place of a human mind. He is a natural man (i.e. body and soul) guided and ruled by the Logos. body and soul) guided and ruled by the Logos. He too, like us, consists of three parts only, and He is therefore really a man and not an impossible being of four parts. Only one part, the most important, is not human but Divine. That is at any rate the eventual and fully developed form of Apollinarism. It has been suggested (Lietzmann), and some answers of his opponents seem to suppose, that its author did not at first trouble about a subtle distinction between soul and spirit, but simply said that the Logos instead of a human soul was joined to Christ's body. However, the stress of controversy soon made him adopt the Neo-Platonic theory versy soon made him adopt the Neo-Platonic theory as the basis of his theology, and he and his school then made so much of it that all through the Middle Ages the psychology of the three elements was associated with one name only, that of Apollinaris. He thinks that he has found texts to prove his explanation of the hypostatic union by the absence of a human soul, or, later, of a spirit in Christ. St. Paul, for instance, says that the first Adam was made a living soul, the second a lifegiving (therefore Divine, not human) spirit; the first was carnal (ψυχικόs), the second spiritual (πνευματικόs, 1 Co 15<sup>46-49</sup>; Antir. 11-12). The Incarnation is described as the assumption by the carnation is described as the assumption by the Logos, not of a whole man but of a physical body only. It is the 'mystery that appeared in the flesh' (1 Ti 316; Antir. 2), the Word was made, not man, but flesh (Jn 114; Antir. 16, etc.), Christ assumed the form of a servant (i.e. the body), and was found in the (outward) habit of a man (Ph 27t.: Antir. 20, 21).

So in this way the Logos and the man Jesus are really one being. Christ was not two separate persons, but Divinity and manhood joined inseparably in one person. And we adore this person without making distinctions, because in Him even the human nature is actuated, and so made Divine,

by the Logos that guides it.

The contemporary orthodox Fathers who reject this theory are not much concerned about the truth or falsehood of the statement that human nature consists of three elements. That question was raised again much later by the mediæval schoolmen when 'Apollinarist' became a favourite name of abuse given by Thomists to the Scotists who denied that the reasonable soul is the form (forma substantialis) of the body. But the first opponents of Apollinarism are offended chiefly by the asserof Apollinarism are offended chiefly by the assertion that Christ lacked an element of complete human nature. They quote against it the texts in which He is said to be like us in everything except only sin (He 4<sup>15</sup>), to be really and completely man (Jn 8<sup>40</sup>; Antir. 45), and to have not only a soul but also a spirit (Ik 23<sup>46</sup>; Antir. 17, Jn 11<sup>33</sup>; Athan. contra Apoll. i. 15, Jn 19<sup>30</sup>, ii. 16). They also undertake to refute Apollinaris' arguments. If the quotation 1 Co 15<sup>46</sup> proved anything in this question, it would follow that Adam had no spirit at all (Antir. 12), and that the word 'flesh' in Jn 11<sup>14</sup>, as elsewhere, stands for the whole human nature (Antir. 27); and they insist on the conclusion which Apollinaris himself would not admit, namely, that Apollinaris himself would not admit, namely, that if the Logos had become one of the elements of

outlived its author for many years. He had set outlived its author for many years. He had set up a hierarchy all over Syria, and his sect existed and carried on his teaching till it seems to have been gradually absorbed by the far more important Monophysite movement. Vitalis was Apollinarist Bishop of Antioch. We hear of one Timothy of Beirut, who wrote a history of the Church, and who 'had no other object in so great a work but to commend Apollinaris, inasmuch as from him and to him an endless number of letters were and to him an endless number of letters were written and written back' (Leontius Byz. c. Nestor. et Eutych. iii. 40, PG lxxxvi., who proceeds to point out that a man's greatness is not to be measured by the size of his correspondence). A certain Valentinus wrote a defence of Apollinarism, called 'Against those who accuse us of saying that the body is of the same substance as God (adv. Fraudes Apollimaristarum, among the works of Leontius Byz. PG LXXXVI. ii. 1947-1976; some passages from both Timothy and Valentinus are quoted in this treatise). It seems that the unknown interpolator of St. Ignatius' letters (a Syrian in the beginning of the 5th cent.) was an Apollinarist. He twice (*Philipp*. v. 2 and *Philad*. vi. 6) expressly denies that Christ had a human

Although the movement gradually disappears as its place is taken by Syrian Monophysitism, one still occasionally hears of Apollinarism in the evergrowing list of heresies; and as late as 691 the Quiniscutum Synod in its first canon does not forget to condemn 'Apollinaris, leader of wickednot assume a body endowed with both soul and mind' (Mansi, Collectio, 1759-1798, xi. 936).

4. Writings of Apollinaris.—There is the most complete agreement among his contemporaries

4. Writings of Apollinaris.—There is the most complete agreement among his contemporaries that Apollinaris was a learned as well as a very prolific writer. St. Jerome says that he had written 'countless volumes about Holy Scripture,' and that his thirty books against Porphyrius were greatly esteemed (de Vir. IU. 104). Philostorgius tells us that his arguments against Porphyrius were superior to those of Eusebius (HE viii. 14). St. Basil says that 'as he had great facility in writing on any subject, he filled the world with his books' (Ep. celxiii. 4). Sozomen gives a long list of his poems, and mentions a work 'Concerning Truth' (Υπèρ ἀληθείαs), an apology against Julian and the Greek philosophers, in which 'he shewed their errors concerning God without using texts from Scripture' (HE v. 18). We hear also of a refutation of Eunomius (de Vir. IU. 120; Philost. HE viii. 12) and of a book against Marcellus of Ancyra (de Vir. IU. 86). Epiphanius, too, writes with great appreciation of his learning and talents (Hær. III. ii. 24).

Of all these works scarcely anything is left. Of the poetic versions of the Bible written either by him or by his father, one volume remains, the Paraphrase of the Psalms (PG xxxiii. 1313–1538; it includes the 151st Psalm). It cannot be described as a success. A version of the OT in hexameters, into which the author has crowded every possible reminiscence, allusion, and idiom from the pagan classics, must obviously lose all the feeling and quality of the Bible without becoming more than a very feeble imitation of the real classics. So it is not wonderful that after

coming more than a very feeble imitation of the real classics. So it is not wonderful that after Julian's death, as soon as Christians were allowed to return to the real thing, Apollinaris' substitutes were soon forgotten. Socrates says that in his time these Biblical poems had 'disappeared as completely as if they had never been written' (HE iii. 16).

Christ's human nature, the Logos too would have suffered and died (Antir. 30, etc.).

3. The Apollinarist sect.—In spite of the opposition of a long list of Fathers (Athanasius, Basil, the two Gregorys, and many others), Apollinarism

orthodox Fathers. Leontius of Byzantium (or whoever the real author of the treatise 'Against the Frauds of the Apollinarists' was) begins his work by saying: 'Some of the followers of Apolwork by saying: 'Some of the followers of Apollinaris, or Eutyches, or Dioscor, in order to confirm their heresy, have ascribed (\*#\(\epsilon\) perfain works of Apollinaris to Gregory Thaumaturgus, or Athanasius, or Julius, in order to deceive the simple'; and the whole of this little work is a compilation of texts which the author thinks to be cases in point. Its full title is, 'Against those who offer us certain works of Apollinaris, having falsely inscribed them with the names of holy Fathers.' inscribed them with the names of holy Fathers.

So one of the chief problems concerning Apollinaris has always been the discovery of any of his writings which may be hidden under other names. In the case of some such works the matter may be said to be now definitely settled. Leontius (l.c.)had already declared that the little treatise called The Partial Faith (ἡ κατὰ μέρος πίστις) among the works of Gregory Thaumaturgus (the text is published by Dräseke and Lietzmann; see below) was written by Apollinaris; this is now admitted by every one. Other works also commonly acknowledged to be by him are: pseudo-Athanasius, Of the Incarnation of the Word of God (Hepl The σαρκώσεως τοῦ θεοῦ λόγου, Dräseke, pp. 341-343); pseudo-Julius of Rome's Letters to Dionysius of Alexandria (ib. 348-351), and, very probably at least, the tract, Of the union in Christ of the body to the Divinity (Περί τῆς ἐν Χριστῷ ἐνότητος τοῦ σώματος πρὸς τὴν θεότητα, ib. 343-347), also under the name of Julius. Lastly, there are fragments of Apollinaris' writings in various Greek Catenas (cf. Krumbacher, Byzant. Litteratur, Munich, 1897, pp. 206, 211) and in the quotations from him made by his adversaries (Athanasius, Gregory Naz. and Gregory Nyss.). Dräseke (Apoll. v. Laod.) proposes to attribute to him a large number of other writings, all pseudo-Justin, including the Cohortatio ad gentes, which he thinks to be Apollinaris' book 'Concerning Truth'; the third and fourth books of St. Basil against Euromius (which would then be his work against Eunomius menwork against Eminditus mentioned by Jerome and Philostorgius); the first three dialogues of Theodoret of Cyrrhus on the Trinity; some sermons of Gregory Thaumaturgus; pseudo-Athanasius' Dialogues on the Holy Trinity; as well as almost any more or less contemporary anonymous works, including even the poem Christ Suffering (Xριστὸs πάσχων, cf. JPTh, 1884, pp. 657-704), which is really a mystery play of the 11th or 12th cent. (Krumbacher, Byzant. Litt. pp. 746-749). These identifications are now generally considered to have been premature and mistaken (Bardenhewer, Patrologie, 1894, pp. 224-225; Krüger in PRE<sup>3</sup>, art. 'Apoll. v. Laod.'; Harnack, Lehrb. der Dogmengesch., 1895, pp. 309-321). Lietzmann (Apoll. Laod.) suggests a more reasonable list.

Laod.) suggests a more reasonable list.

Literature.—The first sources for a knowledge of Apollinaris' life and ideas are, after the fragments of his own works, those of his earliest opponents. These are: Athanasius (but there is some doubt about the authorship), Two books concerning the Incarnation of our Lord Jeaus Christ against Apollinaris (Hepi capacress τοῦ κυρίου ἡμῶν Ἰπροῦ Χριστοῦ κατὰ Ἰπολλυναρίου, PG xxvi. 1091—1165); Gregory of Nyssa, A Denier of the things said by Apollinaris (Αντιδρητικός πρὸς τὰ τοῦ Ἰπολλυναρίου, PG xiv. 1123—1269) and his Letter to Theophilus of Alexandria (to. 1269—1277). Theodore of Mopsuestia wrote a work against Apollinaris, of which fragments remain (PG lx. 993–1004). All these contain quotations from his own works. Gregory of Nazianzus speaks of him and of his heresy in several letters (ci. and cii., to Cledonius, PG xxxvii. 176–201, and ccii., to Nectarius of Constantinople, tō. 329–333). St. Basil's letters (PG xxxii.) also contain many references, and Leontius of Byzantium in the beginning of the 7th cent. (or another writer of that time; the authorship is doubtful) wrote the treatise, Against the Frauds of the Apollinaris (PG lxxxvi. 1947–1976).

MODERN LITERATURE: C. P. Caspari, Alte und neue Quellen, etc. (Christiania, 1879, pp. 65–146); A. Ludwich, Apollinaris metaphrasis pealmorum, 1–111 (Königsberg, 1880); J. Dräseke, Apollinarios von Laodicea, sein Leben und seine Schriften,

APOLLO.—See next art. and GREEK RELIGION.

APOLLONIA ('Απολλώνια). — In the case of Aphrodite it was only by rare exception that her festivals bore a special name (see art. APHRODISIA), but festivals in honour of Apollo were, as a rule, known by special appellations. 'Apollonia,' as the actual title of such festivals, seems, in fact, to be confined to the following instances:-(1) At Delos, where the inscriptions speak of τὰ Δήλια καὶ ᾿Απολλώνια, and often ᾿Απολλώνια alone.\* This was probably a double name for a complex festival, the famous Delian festival spoken of by Thucydides, iii. 104 (see Farnell, Cults, iv. 290). (2) At Myndus ini. 104 (see Farnell, Cults, 1v. 290). (2) At Myndus (Dittenberger, Sylloge Inscriptionum græcarum², 677). (3) At Miletus (ib. 627). (4) At Epidaurus (ib. 690). (5) At Hierapolis in Asia Minor (Gr. Inscr. in Brit. Mus. 615; see Nilsson, Griechische Feste, p. 179 n.). The use of the word ἀπολλώνια by Dio Cass. of the festival of Apollo in Rome

does not fall to be considered here. †

Apart from the above examples, festivals in honour of Apollo bore special names, all of which seem to have had originally no connexion with him, but to have reference to primitive, and perhaps to some extent pre-Hellenic, usages which only later were brought into relation with Apollo, who came into Hellas with the Hellenic tribes from the North (cf. J. E. Harrison, Proleg, to Gr. Religion, p. 30; Farnell, op. cit. 99 ff.). The cult and ritual of Apollo is throughout a blend of primitive and advanced ideas and practice; 'being certainly the brightest creation of polytheism, he is also the most complex; so many aspects of the people's life and progress being reflected in his cult . . . and in reviewing his cults one is surveying the career of a people in its transition from the lower barbarism into the highest social and intellectual life' (Farnell, op. cit. 98). It is not intended here to go into the details of the various festivals of Apollo, but to point out the features of significance.

Festivals in honour of Apollo belonged to the spring, summer, or autumn season; none is known to have fallen actually in the winter season. Certain days of the month were sacred to him—the first, seventh, fourteenth, and twentieth; especially sacred was the seventh, which was regarded as his birthday, and on that date most of his great festivals began. The Epiphany, or the day of Apollo's coming, was celebrated by certain States, usually in the spring, or early summer, e.g. in the Daphnephoria, a spring-festival in Beetia (Paus. ix. 10. 4, with Frazer's note) celebrated every eighth year, or, as the Greeks expressed it,

Herod. vi. 57 (at Sparta). At Delphi, the 7th of Busios, his birthday. At Delos and Athens, the 7th of Thargelion. At Mykonos, a sacrifice on the 7th of Hekatombaion. Attic Pyanopsia on the 7th of Pyanepsion. Seven a sacred number in connexion with a festival of Apollo at Sioyon (Paus. ii. 7. 7). 'No satisfactory explanation, astronomical or other, has been suggested for these facts' (Farnell, ορ. cit. 259).

every ninth year. At Delphi there was a feast on his birthday on the 7th of Busios, the first spring-

month, and this seems to have been identical with the *Theophonia* (Herod. i. 51; Plut. Quast. Grac. 9, p. 292 F; BCH, 1895, p. 11).

The more purely agrarian festivals may be distinguished from those in which the artistic character is more prominent. The former are festivals of first fruits or harvast festivals presenting of first-fruits, or harvest-festivals, presenting many analogies to the peasant festivals of other lands. Examples of this type are the Karneia of Laconia, falling on the 7th of the month Karneios Attic Metageitnion (Aug.), and the Hyakinthia celebrated in May-June at Sparta (Paus. iii. 19. 3; Wide, Lakonische Kulte [Leipzig, 1893], 289 ff.; Xen. Hell. iv. 5. 11).\* Above all, the Thargelia of Athens, falling in the latter end of May, is a harvest-festival, for at that date in Greece the first cereals and fruits are ripe. † The Thargelia is a combination of a primitive harvest-festival with a rite of purification (the curious ceremony of the Pharmakos) which may have belonged originally to the Earth-goddesses and was afterwards appropriated to Apollo. The Attic Pyanopsia or Pyanepsia, the only recorded Apolline festival that fell in late autumn, was also an agrarian festival -a thanksgiving service for the later cereals and

ruits (Farnell, op. cit. 286).

The festivals held at Delos belong to a higher order, being closely connected with art and poetry, although here also the agrarian or primitive ele-ment enters (Paus. i. 31. 2). So also the great Pythian festival held at Delphi on the 7th of the month Bukatios, the second summer month of the month outsatios, the second summer month of the Delphian calendar (CIA ii. 545), may have been originally a harvest-festival; but if so, in historical times it is entirely identified with the higher aspects of Greek culture, and, moreover, the athletic side of that culture did not predominate at the Pythia, as it did at the Olympian festival, over the

Pythia, as it did at the Olympian festival, over the artistic and intellectual.

'The earliest competitions were musical and poetical, tragic recitations being subsequently added... Prizes were awarded not only to the poets and musicians, but even to painters; and, in fact, the Pythia may be regarded as the prototype of the artiexhibitions of modern Europe, for in this festival alone we hear of the famous artists exhibiting their works and competing. The great Delphic celebration then was pre-eminently the consecration of the highest life of Hellas to Apollo; a detailed account of it would form a special chapter in the history of Greek music' (Farnell, op. cit. 292).

Other festivals of Apollo held at Delphi, though less brilliant, are of great importance to the student

less brilliant, are of great importance to the student of Apolline ritual. The festival of the god's Epiphany in early spring has already been mentioned. To this should be added the *Theoxenia*, in which the newly-arrived god extended his hospitality to the other deities, especially to Dionysos, as appears from one of the lately discovered Delphic hymns, in which Dionysos is invoked 'in these holy hours of spring,' and entreated to show this hymn to the brother god in the yearly Theoxenia.‡ This festivity, therefore, included poetic competitions; it included also a sort of vegetable show, for a prize was given to him who exhibited the finest leek (Athen. 372 A: δε αν κομίση γηθυλλίδα μεγίστην τη Λητοί, λαμβάνειν μοίραν ἀπὸ τῆς τραπέζης). Finally, we must notice the festival called the Stepteria, a feast of purification which is described by Plutarch (293 C, 418 A, 1136 B; cf. Ælian, Var. Hist. iii. 1), as in part a holy drama enacting the death of Python and the subsequent flight of Apollo to

\* For details of these festivals, consult Farnell, op. cit. 259 ff., or the handbooks of Antiquities. In the Hyakinthia we have a combination of an older and a more recent religious rite (Farn.

combination of an older and a more conop. cit. 127).

VOL. I.—39

service is so characteristically Hellenic, and perhaps none so fascinating,' Farnell, op. cit. 293):—On a certain day in spring, a noble Delphian boy went with a band of boys of the best family, under the escort of sacred women with torches, in complete silence to a cabin built near the Pythian temple in the form of a royal palace, in which the Python was supposed to be lurking. They set fire to the cabin, overturned the table, and fled without looking backwards through the temple-doors. Then the boy feigned to go into exile; afterwards they all went together to Tempe, where they were purified at an altar, and, having plucked the sacred laurel and crowned themselves with its leaves, returned home along the sacred Pythian way, and in a village near Larissa, called Deipnias, the boyleader partook of a solemn meal of a sacramental nature. They then returned in triumph to Delphi, to the music of flutes, and the sacred laurel they brought served to fashion the crowns for the Pythian victors (see Farnell, op. cit. 293 ff.). This festival is closely connected with the cathartic or purificatory function of Apollo, a function which nowhere received fuller public recognition than at Athens, especially in connexion with homicide. Such cathartic ceremonies were, however, probably a late development of Apolline ritual.

W. J. WOODHOUSE.

APOLLONIUS OF TYANA in Cappadocia is

Tempe, where he is purified, and whence he returns in triumph with the sacred laurel. The following

is the outline of the ritual ('no recorded religious

in several respects a notable figure in the history of religion. Apart from the fact that he was a religious reformer of no little fame, he gave rise, as early as the time of Eusebius of Cæsarea, to a controversy which has continued almost down to the present day. The details of his life are to be found in a work by Philostratus the elder (3rd cent.), which was written at the request of Julia Domna († 217), 'the patroness of every art, and the friend of every man of genius' (Gibbon). Septimius Severus was a passionate student of magic and divination, and had chosen Julia Domna as his second wife on account of her 'royal nativity.'\* Philostratus' patroness, who was also a collector of books, had been made acquainted with some memoirs by Apollonius' disciple, Damis the Assyrian. † These were not well written, and Philostratus was requested to copy them, improve the style, and in fact to compile as complete a biog-raphy as possible. He tells us himself that several 'Lives' of Apollonius were in existence, and that to some of them-those of Maximus of Ægæ and Mæragenes—he had access. He also used letters of Apollonius.; Moreover, he himself travelled into most parts of the known world, and everywhere heard the 'inspired sayings' of Apollonius. The biography, however, which Philostratus composed is of a romantic character. § It is clear that the story of Apollonius, though much of it may be regarded as more or less true, has been greatly embellished. Many of the embellishments are of

\*\* Gibbon, Decline and Fall of the Roman Empire, Bury's ed. vol. 1. p. 126.
† Philostr. 1. 3. 'Damis the Assyrian' has been regarded as purely a literary device; so F. C. Baur and Ed. Zeller. But although his character seems to have been intentionally drawn in such a way as to illustrate the moral and intellectual superiority of his master, there is no reason to doubt his existence. Boswell, with whom he has been compared, has made his own

Boswell, with whom he has been compared, has made his own character appear somewhat unnatural. Apollonius and Damis have also been compared with Don Quixote and Sancho Panza. See A. Réville, p. 52; G. R. S. Mead, p. 112.

The so-called 'Letters of Apollonius' which have come down to us are generally regarded as spurious. See Hercher, in Epistolographi Grace, Paris, 1878.

§ It has been described as a 'Tendenzroman' or 'Märchenbuch.' F. Ueberweg (Hist. of Philos., London, 1875, vol. i. p. 233) speaks of it as a 'philosophico-religious romance.' Julius Jessen thinks the work was composed with the help of a Greek romance. See also Rohde, pp. 438-442.

such a nature as to suggest that they were made to suit the taste of Julia Domna, which was, of course, well known to Philostratus. Besides this, the compiler of the biography, in the manner of ancient writers, has added in the text many notes or glosses of his own without distinguishing them from the information derived from his original sources. Like Thucydides, too, he has composed a number of speeches and put them in the mouth of his hero; and it has been noted by F. C. Baur and others that the Babylon of Apollonius is identical with that of Herodotus.\*

and others that the Dabyton of Aponomics is identical with that of Herodotus.\*

Apollonius, whose parents seem to have been wealthy, was born about B.C. 4. The country people said he was a son of Zeus,† but he called himself; the son of Apollonius. At an early age he displayed a wonderful memory and great power of application. He was also very beautiful. When he was 14, his father took him to Tarsus to study rhetoric with Euthydemus. But the boy thought the people of Tarsus frivolous, and soon afterwards retired to Ægæ, where he conversed with the disciples of the great philosophers in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and determined to follow his strictest teaching (1. 7). He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.§ At this period he spent much of his time in the temple of Asklepios, and was allowed to see the cures which were wrought there (i. 8). We are told that through him the temple became a Lyceum and Academy. When of age, he returned to Tyana. Here, his father having died, he gave his brother, who was a spendthrift, half his own inheritance, and set to work to reform him. He then distributed the rest of his inheritance among those of his relatives who needed money, || and for his own part determined never to marry (1. 18). As a disciple of Pythagoras, he then observed the five years' silence, spending the time partly in Pamphylia and partly in Cilicia, and making himself understood by signs or, when necessary, by writing. These years were devoted to study and observation (1. 18; 1). Atterwards he went to Antioch, where he visited various temples and suggested reforms in religious practices (1. 16).

Apollonius now decided to go to the East, particularly to

observation (i. 14 f.) Atterwards he went to Antioch, where he visited various temples and suggested reforms in religious practices (i. 16).

Apollonius now decided to go to the East, particularly to India. When he reached Nineveh, he met Damis, who thenceforward became his devoted disciple and companion. Damis told him that he knew the languages of the countries in which they proposed to travel, but Apollonius replied that he knew all tongues, because he could read men's thoughts (i. 18). In Babylon he seems to have met the Magi. He also met, and was entertained by, the king, Bardanes, but refused to take part with him in a sacrifice involving the shedding of blood, or to go to the chase with him, regarding the sport as cruel to animals (i. 25-38). After visiting the surrounding cities (i. 39), they made for the Indian frontier, and seem to have entered India by the Khyber Pass (ii. 6). A guide having conducted them to Taxila (Attock, ii. 20), Apollonius was entertained by king Phraotes, who atterwards gave him a letter to Iarchas, the eldest of the wise men (ii. 40). Crossing the tributaries of the Indius (ii. 43) to the valley of the Ganges (iii. 5), they at length reached the goal of their journey, the castle or monastery of the wise men (iii. 10). Apollonius was conducted alone by a messenger to the castle (iii. 10). Here he was allowed to ask any questions he pleased.\*\* A messenger was then sent to invite Damis to attend as well (iii. 34), Apollonius, during his stay, besides learning many secrets from these Brāhmans or Buddhists, †

was allowed to witness certain cures. Iarchas touched a cripple and healed him; he also restored sight to a blind man, and the use of his hand to a paralytic (iii. 39). They made the homeward journey partly by ship, going from the Indus to the mouth of the Euphrates (iii. 52-58). Then, by way of Babylon, Nineveh, Antioch, Seleucia, and Cyprus, they came to Ionia (iii. 58). Visiting Ephesus, Apollonius warned the inhabitants of an approaching plague. They disregarded his warning, and he retired to Smyrna (iv. 1-5). When the plague came, ambassadors were sent to him to implore his help. He returned to Ephesus and calmed the inhabitants. They next visited Pergamus, where Apollonius cured diseases (iv. 11), Troy, Lesbos (iv. 13), and eventually sailed for Athens. We next find them in Corinth (iv. 25). When at length they came to Rome, all Apollonius companions but eight fied. In Rome the reformer was very outspoken. Moreover, a distemper broke out to which Nero became a victim. The people prayed for his recovery, and Apollonius is reported to have said that 'the gods were to be forgiven if they took pleasure in the company of buffoons and jesters (iv. 44). Tigellinus had him arrested on a charge of high treason. But he was impressed by his conversation, and, taking him for a god, released him. While Apollonius was at Rome, a girl of consular family, who had 'seemingly died,' was carried out to burial. Apollonius touched her, and 'wakened her from that death with which she seemed to be overcome' (iv. 45). He left the city when Nero published an edict excluding philosophers from Rome (iv. 47). He now went to Spain, landing at Gades (Cadiz). After staying here a short time (iv. 47), he went to Africa, and thence by sea to Sicily, where he visited the principal cities and temples (v. 11-14). Returning to Greece (v. 18), he sailed from Piraus for Chios (v. 21), and then went by way of Rhodes to Alexandria, where the people looked upon him as a god (v. 24). He now went to Spain, landing at Gades (Cadiz). After staying he

(cii. 42). The Cupron, after hearing Apollonius' replies to his chesilens, accusted him, but lands dim remain to converse with all the privately. I have not farewall to Greece (vil. 15), where

\* In a letter of farewell to Iarchas, Apollonius says: 'I will continue to enjoy your conversation as it still with you, if I have not drunk of the cup of Tantalus in vain.' A. P. Sinnett (p. 18) thinks of telepathy; G. R. S. Mead (p. 88) says it is evident that the 'cup of Tantalus' is identical with the 'wisdom' which has been imparted to Apollonius,'and is once more to be brought back by him to the memory of the Greeks.

† Philostr. iv. 10. We are told that Apollonius transported himself thither at once, and that he told the people to stone an old man with a bad squint who was begging. When they had done this, they found in place of the old beggar a large dog.

‡ Here, we are told, Apollonius cast a demon out of a young man, and as it went forth it overthrew a statue (iv. 20).

§ Here, we are told, Apollonius exorcized a demon, an empusa or a lamia, who in the form of a fair maiden had captivated one of his pupils, Menippus. Cf. Keats, 'Lamia'; and Burton, Anatomy of Melanchoty.

† Philostratus evidently thinks that she was not dead. Apollonius seems to have awakened her out of a catalepsy or hypnotic sleep. On this see Joseph Lapponi, Hypnotism and Spiritism, London, 1907. J. M. Robertson (Christianity and Mythology, London, 1900) derives the story of the awakening of the daughter of Jairus in Mt 9181 from this episode in Philostratus. But, in spite of the resemblance, there is no reason to see any direct connexion between the two events (so Erwin Rohde, p. 388, n. 5). F. C. Baur and Albert Reville think that the story in Philostratus was modelled on that of the raising of the young man at Nain or of the daughter of Jairus. If, however, the story was borrowed, the model, as Julius Jessen suggests (p. 181.), is no doubt to be found in Asclepiades (Pliny, HN xxxi 3, 8).

¶ Here he met Vespasian (v. 27), and is said to

<sup>\*</sup>Again, several gaps have been detected in his story (the first after Bk. i. ch. 15; another of about twenty years from A.D. 72).
† We are also told that before his birth, Proteus, the Egyptian god, announced to his mother that the child she would bear would be an incarnation of himself. It is said that he was born in a meadow, and that a chorus of swans sang in unison to celebrate the event (i. 41).
‡ We are told later (viii. 24) that in Greece Apollonius' disciples called themselves Apollonians.
§ He refused, that is to say, to wear clothes made from living creatures.

<sup>§</sup> He refused, that is to say, to wear clothes made from living creatures.

§ So Philostratus tells us here. Whenever Apollonius visited a temple, he was no doubt treated as a guest. But he must have required money for his travels, and there are indications elsewhere in Philostratus story that Apollonius must have kept back part of his inheritance; so Tredwell, p. 49.

§ This is clearly what Apollonius means. When we are told (i. 20) that he knew the language of animals, the idea is the same. We are told elsewhere that he sometimes made use of an interpreter. See Max Wundt, p. 320f.; G. R. S. Mead, p. 112.

\*\* In reply to the question, what the wise men thought of themselves, Iarchas said 'gods,' and explained, 'because we are good men' (iii. 18).

†† When Apollonius said that they were 'on the earth, and yet not on it,' it is clear that the words are to be interpreted spiritually (so Max Wundt, p. 313; G. R. S. Mead, p. 86). But, on the strength of this, Damis explains that they were able to float at a height of two cubits above the ground; and A. P. Simpett thinks they were able to 'elevate' themselves in a modern spiritualistic sense. For parallels of such levitation see Rohde, p. 180, n. 1; Gray, in AJTh, vii. 309.

he stayed two years (viii. 24). Here he insisted on visiting the cave of Trophonius\* at Lebadea in Bootia, forcing his way in (viii. 19). Having returned to Ephesus, while he was in the middle of a discourse there, he saw and announced the death of Domitian.† He disappeared altogether at the end of the reign of Nerva, having purposely sent Damis away to Rome (viii. 28).† At what age he died is uncertain. It has been put at 80, 90, or 100.

There is no valid reason for questioning the historical existence of Apollonius. His character on

torical existence of Apollonius. His character on the whole is quite intelligible; his teaching is clear and consistent. He was a Neo-Pythagorean religious reformer, a vegetarian, an ascetic, and a student of medicine; and in his creed, a worshipper of Helios, a universalist and humanitarian.§ We need not doubt that he was able to cure certain diseases; and it is possible that, consciously or unconsciously, he made use of telepathy; || but whether he travelled quite as much as Philostratus represents him to have done is open to question. Nor is there any reason to doubt that he was an author. The works attributed to him, besides Letters, are *Initiations and Sacrifices*, a *Testament*,

Oracles, a Life of Pythagoras, a Hymn to Memory, and Divination by the Stars.

The pupil of a disciple of Apollonius is satirized by Lucian; and Apollonius himself is ranked by Apuleius with Moses and Zoroaster. Dio Cassius, who was also patronized by Julia Domna, tells us in his *History* (lxxvii. 18) that Caracalla (211-216) the list having (1xxvii. 16) that Calacata (211-210) erected a chapel or monument to his memory; and Lampridius (Life of Alexander Severus, xxix.) says that Alexander Severus included Apollonius, with Christ, Abraham, and Orpheus, amongst his house-Christ, Abraham, and Orpheus, amongst his household gods. We learn from Vopiscus (Life of Aurelian, xxiv.) that, when Aurelian (270-275) was besieging Tyana, Apollonius appeared to him, whereupon the Emperor vowed him a temple. Porphyry and Iamblichus mention him as one of their authorities for the 'Life' of Pythagoras. A more famous reference to him is that of Hierocles (Philipsing Philipsing) 205). Obscursus Philalethes, c. 305), proconsul of Bi-thynia under Diocletian; in criticizing the claims of the Christians, he cited the wonders of Apol-lonius in order to show that 'miracles' were not the peculiar property of Christianity. Eusebius of Cæsarea replied to him in a treatise, contra Hieroclem. Lactantius also (c. 315) attacked Hierocles. Later, however, Jerome and Augustine speak highly of Apollonius' character at least, and Sidonius Apollinaris says that 'perchance no historian will find in ancient times a philosopher whose life is equal to that of Apollonius.' Ammianus Marcellinus and Eunapius also eulogize him.

Hierocles contrasted the miracles of Apollonius with those of Jesus. Later writers have contended that Apollonius was invented as a pagan rival of Christ. This is the view of F. C. Baur and Albert

Joseph Lapponi, Hypnotism and Spiritism, p. 131 f. A. P. Sinnett thinks it not impossible for Apollonius to have made himself invisible. He would then have been able 'immediately atterwards to levitate himself and pass out, over the heads of the people assembled, from such a building as a Roman court, open to the air, no doubt, in many directions' (p. 26, cf. p. 18). The truth is, no doubt, that this is one of the touches introduced to suit the taste of Julia Domna.

\*F. C. Baur compares this with the descent of Christ to Hell.

Hell.
† The story is also told by Dio Cassius (lxvii. 18). Joseph Lapponi (Hypnotism and Spiritism, p. 133) refers to this as one of the early instances of clairvoyance or telepathy.
† We are told that subsequently he appeared in a vision to a young man, and convinced him of the truth of immortality.
§ He protested against gladiatorial shows, and against every form of cruelty to animals. The slaves of his companions he regarded as part of his philosophic community (iv. 34). Cf. Jean Réville, p. 212 f.

|| There seems to be sufficient evidence for cures of a like nature in modern times (see Albert B. Olston, Mind Power, London, 1906, p. 108).

London, 1908, p. 108).

¶ In the 15th cent. Apollonius was denounced as a detestable magician. In 1680, Charles Blount published, with a polemical purpose, a translation of part of Philostratus' work, with notes which have been attributed to Lord Herbert of Cherbury. Voltaire and others made a similar use of Apollonius.

Réville, who find a number of more or less fanciful parallels between the story of the Gospels \* and that of Philostratus; only they think that the latter was written not, as earlier critics supposed, in a hostile sense, but in the spirit of the religious syncretism of the age. More recent critics, howsyncretism of the age. More recent critics, however, have rightly maintained that there is no trace of any direct connexion between the two stories. In Philostratus the whole narrative bears a Greek stamp;† and his model for the life of Apollonius, if he had one, was Pythagoras.‡ As Julius Jessen further points out (p. 12), if Philostratus' work had had a polemical purpose, certain important miracles of healing would have been ascribed to Apollonius rather than to the Indians. ascribed to Apollonius rather than to the Indians. Nor is it remarkable that two religious reformers should have lived about the same time and have had somewhat similar experiences (cf. Ed. Baltzer, p. 388). It should be mentioned, in conclusion, that the newest view about Apollonius is that he was a kind of spiritualist. It is held by A. P. Sinnett, and to some extent by G. R. S. Mead. Mr. Sinnett, writing in 1898, says that 'until the occult revival of the last twenty years, no modern students of philosophy were in possession of any clue by which it would have been possible for them to have understood Apollonius' (p. 4; cf. G. R. S. Mead, p. 116).

Mead, p. 116).

## APOLOGETICS.-

APOLOGETICS.—
A. HISTORICAL INTRODUCTION.
B. APOLOGETICS OF TO DAY.
I. Outline of a progressive Apology.
II. Methods of Apology and modern needs.
III. Arguments arranged according to the sphere in which they lie.
(i) The PHYSICAL REALM.
1. The evidence of nature.
(a) The argument from matter, life, and mind.
(b) The argument from design in nature.
2. The problems of nature.
(a) Miracles.
(b) Evolution.
(c) Monism, true and false.
(d) Sufering.

\* Baur and Réville (p. 64) also contend that Apollonius 'combines in his own person many of the characteristics of the

Apostles.'
† So Pettersch, p. 22; Max Wundt, p. 321. Baur's most important point is that the Greek and Roman literatures of the time are not familiar with the idea of the casting out of demons as found in the story of Apollonius. But, as J. M. Robertson says (p. 285), this is 'to make the arbitrary assumption that the superstitions of Syria could enter the West only by Judaic or Christian channels.

n Isosan Guanness.

‡ So Julius Jessen, p. 80 f.; and J. M. Robertson, p. 285.

§ Baltzer, writing in 1883, wondered that modern spiritualists ad not claimed him.

(ii.) THE PSYCHICAL REALM.

1. Historical arguments.
(a) The Jews and OT prophecy.
(b) The historical Christ.
(c) The Resurrection of Christ.
(d) The history of Christianity and of the Church.
2. Psychological arguments.
(a) The changed life of the disciples, and the conversion of St. Paul.
(b) The witness of Christian oustoms and institutions.
(c) The success of Christianity.
(d) The abiding unity of faith.
(e) The argument from the psychological nature of religion.

EXCURSUS:—The general superiority of Christianity to other religions.

8. Metaphysical arguments.
(a) The argument from intelligence, will, and conscience.

science.

science.
(b) The argument from consciousness.
(c) The argument from the idea of God.
(d) The Cosmological or Abtological argument.
EXCURSUS: —The amthropological attack.
(iii.) The MORAL REALM.

Arguments for theistic belief from the moral realm of thought.
 (a) The universal idea of God and cultivation of re-

ligion.
(b) The moral sense in man, the conscience and the

sense of sin.

(c) The moral course of the world's history.

2. Arguments for Christianity from the moral realm 2. Arguments for Christianity from the moral reason of fact.
(a) The Christian Scriptures.
(b) The morality of Christianity.
(c) The Person of Christ, the moral ideal.
(iv.) THE SPERTUAL REALM.
(a) The testimony of the spiritual faculty.
(b) The testimony to Christianity of the spiritual yearnings of men.
(c) The testinony of holy lives.
(d) The personal experience of the Christian.

A. HISTORICAL INTRODUCTION. - We define the term 'Apologetics' as the Christian defence against attack by non-Christians. Facing outwards as it does, it therefore need not include reference to the does, it therefore need not include reference to the doctrine and theology which lie behind it. We may further limit this wide subject, in order to reduce it to the compass of an article, by omitting its history altogether. As different ages have had to face different attacks, this would be altogether impossible, were it not that the results of centuries of assault and defence have in our own age been collected in an academic form, so as to be the basis of a scientific system of Apologetics, as a regular branch of Christian literature and activity

The need and use of Christian apologetics have The need and use of Christian apologetics have existed from the beginning. All early Christian literature is in a sense an apologia, as is shown even in the NT from the first words of the first sermon onwards (Ac 2<sup>14-16</sup>). With regard to the recognized 'Apologists' of the succeeding age, we shall note only two features. On the one hand, they found themselves called on the defend not as they found themselves called on to defend not so much the beliefs of Christianity as the behaviour of Christians; and, on the other hand, they developed the offensive as well as the defensive method of answer. Among the chief names are those of Justin Martyr, Aristides, Melito of Sardis, Minucius Felix, Tatian, and Tertullian.

From the 3rd cent. attacks became less personal and more doctrinal, and in the hands of such enemies as Celsus, the more hostile Neo-Platonists, and Julian, the Scriptures had become an object of ridicule. The later apologists are therefore of a somewhat different stamp, and we can only refer to such varied writers as Origen (against Celsus), Arnobius, Lactantius, Cyril of Alexandria (against Julian), Macarius Magnes, and Augustine (de Civitate Dei). Gradually the need for such works ceased, and, as we pass to the later centuries, we find that apologists deal no longer with the faith generally, but with special problems in connexion with it. It is the philosophic aspect that the Middle Ages give us, and the works of chief importance are the Monologion and Proslogion of Anselm, the Dialogus inter Philosophum Judæum

et Christianum of Abelard, and the Summa Theologiæ contra Gentiles of Thomas Aquinas. The work of Anselm is of the most abiding interest, for it was he who first formulated the famous a priori proof of the being of God known as the Onto-logical argument. A new era began with the rise of Deism in the 18th cent., when the effort was made to set up a 'religion of nature' in place of Christianity. In England the chief answer came from Bishop Butler, who saw that the deistical admissions as to the existence and supremacy of God, the sins of men, and the reality of judgment, were valuable premises on which to base an argument for the acceptance of the whole of the faith. Starting with natural religion, he showed in his Analogy, by an argument which will always remain a famous Christian apologetic, that revealed religion follows from it, as neither more difficult nor more incredible.

The next attack, as represented by David Hume, was upon the credibility of miracles, and Paley's Evidences of Christianity, in answer, remains a classic in the history of English apologetics. The 19th cent. saw a more determined assault on the supernatural, and the growth of Positivism, Agnosticism, and Scepticism has been such that it must still be reckoned with in discussing the apologetics of the present day, and count has still to be taken of Huxley and Herbert Spencer, as well as of Haeckel, in setting forth, as we now proceed to

do, the present state of the problem.

See J. Donaldson, 'The Apologists' (vols. ii. and iii. of Hist. of Chr. Lit.), 1864; J. Patrick, The Apology of Origen in reply to Celsus, 1892, pp. 121-282; J. M. Rigg, St. Anseim of Canterbury, 1896; J. Cairns, Unbelief in the 18th Century, 1880; W. A. Spooner, Bishop Butler, 1901.

B. APOLOGETICS OF TO-DAY.—Instead of giving the outline of any one present-day apologetic work, an attempt is made below to state in general terms the chief arguments that are being used to-day to defend the Christian faith. Naturally they will be given by way of statement and not by way of argument, and will be placed in an order which is meant to be scientific, rather than such as will make the most forcible appeal to readers.

make the most forcible appeal to readers.

For the subject generally, see A. B. Bruce, Apologetics: or, Christianity defensively stated, 1892; C. A. Row, Christian Evidences in relation to Modern Thought (Bampton Lectures, 1877); W. L. Robins, A Christian Apologetic, 1992; Lonsdale Ring, Exidences of Christianity (Oxford Ch. Text Birs., 1905); F. Ballard, Miracles of Unbelief, pop. ed. 1904; Christian Apologetics, ed. W. W. Seton, 1905; G. P. Fisher, Manual of Christian Evidences, 1892; W. H. Turton, The Truth of Christianity, 1900; A. J. Harrison, Problems of Christianity and Scepticism, 1891; J. R. Illingworth, Reason and Revetation: an Essay in Christian Apology, 1906.

Einrit it will be well to indicate the limitations

First, it will be well to indicate the limitations in his arguments which the wise apologist is ready In his arguments which the wise apologist is ready to concede. He does not claim that they afford irrefragable proof of his beliefs. To assert that Christianity can be conclusively demonstrated by merely intellectual proof is to stultify the nature of a true revelation. If an essential of true religion be the exercise of faith, and if God has revealed the exercise of the exercise Himself by appealing to a faculty in men which is not their reason, it will be impossible to make a man a Christian by mere argument. The final appeal is to the heart; the appeal to the mind must content itself with proving without a shadow of doubt that Christianity is rational, credible, and probable. This is specially true of the arguments for the being of God. for the being of God. None of them amounts to positive proof, and yet it must not be forgotten that there are many of them, and that their

cumulative force adds enormously to their weight.

I. Outline of a progressive Apology.—We now proceed to give an outline of the successive stages by which the argument leads up from simple Theism to the Christian creed.

(a) NATURAL RELIGION.—God exists, and may be known apart from revelation. This is proved

by — (1) The argument from General Consent. That which is merely subjective when applied to the spiritual experience of the individual, and is therefore viewed with suspicion by opponents, becomes objective when it shows a 'consensus' becomes objective when it shows a 'consensus gentium' to belief in a God. (2) The Cosmological or Etiological argument, which suggests the universe as an effect which must have a cause. (3) The Teleological or Design argument, which suggests that the order of nature implies a First Cause gests that the order of nature implies a First Cause who is intelligent and free. (4) The Ontological argument, which points to God as the highest imaginable object of thought, and the ground of thought itself. (5) The Moral argument, which takes man's conscience as implying a lawgiver who inspires him without being identified with him. (6) The Historical argument, which points to the sense of purpose and design running through human history.

human history.

(b) REVEALED RELIGION.—(1) Natural religion leads us to expect something further, and suggests.

Hyperell Hyperell Property of the property of (b) REVEALED RELIGION.—(1) Natural religion leads us to expect something further, and suggests a Deity who would be sure to make Himself known. (2) This further step necessarily involves the supernatural. The objections to a supernatural revelation must be faced, viz. (a) such inadequate theistic theories as Pantheism, Deism, and Modern Theism; (β) such anti-theistic theories as Atheism, Agnosticism, and Materialism. Miracle must be discussed in its relation to natural law and to the purpose of revelation. (3) The Christian revelation must be shown to be intrinsically superior to other religions—Polytheism, Buddhism, and Muhammadanism—and to be the successor and higher fulfilment of Judaism. (4) The argument is led to that around which all centres—the Person of Christ. The Christ of the Gospels and Epistles is shown to be historic, the Resurrection makes all other miracles possible, and Christ remains the moral miracle of the world. (5) This is naturally followed by the history and influence of Christianity, as educating and regenerating the world, and showing a superhuman power of recuperation and continued existence. (6) This leads to the dispensation of the Holy Spirit and the work of the Church. Christian institutions, such as the ministry, the Sacraments, and the Christian year, are seen to be witnesses both to Christ and Christianity.

II. Methods of Apology and modern needs.—

tianity.

II. Methods of Apology and modern needs.—
The bitter attack upon miracles in the 19th cent. has caused recent apologists to seek some line of proof that should be independent of this confident assault. It is on the moral aspects of Christianity that the chief stress is now laid. And the subject that the chief stress is now laid. And the subject is no longer divided according to the old divisions of Natural and Revealed Religion. In the attempt to use every line of defence, it is preferable to marshal the evidences in accordance with the successive spheres in which they lie.

(1) Lowest stands the *physical* realm, but it is the arguments of science with which it is filled.

the arguments of science with which it is filled. The development of physical science during last century, as shown in new theories of which we connect the beginnings with the name of Darwin, and the attacks of Huxley and of Herbert Spencer, and yet more recently of Haeckel, make this an important part of modern Apologetics. The question of miracles lies only partly within it, for the Christian still adopts the attitude of Paley towards. Hume, and refuses to admit that any towards Hume, and refuses to admit that any Christian miracle is a merely physical occurrence. But the arguments in favour of a theistic religion, which, in the face of modern Materialism and Agnosticism, must still form the basis of a defence Agnosticism, must still form the basis of a defence of Christianity, are many of them physical and physiological in form. Besides actual arguments found in the physical sphere, there are many pro-blems connected with nature which need discus-

sion. These are best placed under the same head, and include not only such questions as that of suffering, and the theory of Evolution in the forms which the last fifty years have made familiar, but that latest battleground of faith and unbelief which is represented by the word 'Monism.' At the present moment it seems likely that the honest and well-equipped apologist will have to re-consider each of his theistic positions in the light of the monistic tendency of the latest results of science, and indeed this has already been done in recent works to which reference will be made. But it will be impossible in this article to do more than will be impossible in this article to do more than show that, if a naturalistic Monism is invoked on one side, an even stronger weapon may be found in spiritual Monism on the other. The main features of this latter and its bearing on the faith can only be mentioned, and its authorities referred to.

(2) The next sphere of evidences is the psychical, when we have passed from nature generally to human nature from physics and matter to meta-

when we have passed from nature generally to human nature, from physics and matter to metaphysics and mind. Properly speaking, the realm of psychology belongs only to the present, but it need not exclude those other spheres of mental activity which we speak of in the past and the future. The consideration of the past must necessarily embrace a large part of Apologetics, for Christianity is essentially a historical religion, and takes its stand upon the facts of long ago. Under this head we prefer to place the Christian defence of miracles, focussing attention on the supreme miracle of the Resurrection, which is supreme not only in the sense that, if its difficulty is overcome, the other miracles follow naturally, but also in the sense that with its truth as a fact of history come, the other miracles follow naturally, but also in the sense that with its truth as a fact of history Christianity stands or falls. And every century the lengthening history of the faith affords a further means of building argument upon the past. In the sphere of more direct psychology which concerns the individual mind, we are led to such questions as the conversion of Paul, and the position of the writers of the NT.

Some would postulate a separate sphere as the metaphysical—the sphere in which mental phenomena are in a special sense marshalled by reason. Others are content to give a metaphysical tinge to the stages which reach higher than the physical

(3) The next sphere is the *moral*, raised as far above the mental as the mental is above the physical. Under this head come such theistic arguments as the universal idea of God, the conarguments as the universal idea or God, the conscience of man, the individual consciousness, and the sense of sin. But the supreme moral argument centres in the Person of Christ. He Himself and His earthly life and moral teaching are now made the chief argument for the truth of the religion that He founded. He is at the same time the that He founded. He is at the same time the moral miracle which cannot be explained by 'natural' causes, and the answer to the moral instincts of humanity, the key to unlock not only the unique monotheistic morality of Judaism, but such problems as those of sin and suffering, and of the purpose and the goal of human existence. Our the purpose and the goal of numan existence. Our generation is coming to realize more than those gone by that 'Christianity is Christ.' And the result, for the apologist, has been stated thus (W. L. Robbins, A Christian Apologetic, 1902, p. 25 f.): 'The fundamental ground of Apologetics must be shifted from miracles to the moral character of Jesus Christ, and verifiable facts of present clicious experience. religious experience. . . This would seem to be the most wide-reaching modification required in modern Apologetics—a shifting of the accent from the past to the present, from the miraculous to the

(4) Highest and last is the spiritual realm. Here we reach without doubt the final argument, and

yet it is of but little use in Apologetics. For a spiritual religion must be spiritually understood, and it is only to the spiritual that it can make its

It may therefore be said that the moral argument from the Person of Christ forms the chief line of defence, and the separation of these higher realms of evidence from the physical is in itself a reply to those opponents who try to confine the entire issue

to the latter.

III. Arguments arranged according to the sphere in which they lie.—(i.) THE PHYSICAL REALM.—I. The evidence of nature.—(a) The argument from matter, life, and mind.—We begin with the mystery of 'Being,' and a study of the objects of sense reveals that matter is the basis of them. But mysterial substances are of different kinds and material substances are of different kinds, and some of them are marked off from the rest as self-acting, or *living*. These are compound substances, capable of reduction to the same elementary substances as the rest, but possessed of the faculties of feeding, growing, and reproducing. But the *life* which they possess is far more than the sum-total of the material substances of which they are composed; it is a mystery, with no explanation of its origin. And there is a further mystery, for connected with some of these living material beings is mind, which is not demonstrably derivable from life, any more than life is from matter; for thought, which is the expression of mind, appears to be far more than simply a movement of matter. But there is an attribute of all being, known as force, which is an important factor throughout. As mental force, and as vital force, it must necessarily be conceived of as inherent in mind and life. But as physical force, in the lowest of the three stages, it has to be regarded, as Newton insisted, as exterior to matter, and acting upon it. Thus far, physical science can speak plainly. But what answer is to be given when the question is pushed a stage further back? How did these things come to be thus? How did matter originate? How is the gulf to be bridged that separates life from matter and mind from life? And whence comes the force that acts upon them all?

Materialism and Agnosticism have their answer; but are they as reasonable as is the following Christian explanation? Force is derived from an eternal force. Matter has not always existed, but was created at the fiat of His will. This implies a personal Creator, a First Cause who is both single, as shown by the unity of nature, and supernatural, because all the laws and forces of nature do not contain Him, but show His work. This by no means denies the Atomic Theory, but explains how the 'favourable circumstances' for the new formations of atoms came about; and the theory of Evolution is seen to be the method of His working, while there is no need of lame attempts to bridge the chasm between matter, life, and thought. Such an answer is no mere a priori argument to make certain preconceived ideas argument to make certain preconceived ideas about religion fit in with science; rather is it the most reasonable induction from the facts of the physical realm. It lays no blame on science for getting no further back than matter and force; for it holds a true agnosticism which denies that it is the province of science to go further. Merely weighed by probabilities, it can claim to be the most rational and the least difficult explanation of the problem of being

the problem of being.

See Aubrey Moore, Science and the Faith, 1889; G. Sexton, Baseless Fabric of Scientific Scepticism, 1879; W. F. Wilkinson, Modern Materialism (Pres. Day Tracts); A. B. Bruce, Apologetics, 1892, ch. iv.; F. R. Tennant, The Being of God in the Light of Physical Science (Camb. Theol. Essays), 1905; J. Ward, Naturalism and Agnosticism, 1903; P. N. Waggett, Religion, and Science, 1904; J. Fiske, Through Nature to God, 1899; H. Wace, Christianity and Agnosticism, 1895; W. R.

Inge, Christian Mysticism, 1899; J. R. Illingworth, Divine Immanence, 1898; H. M. Gwatkin, The Knowledge of God, 1907; J. Watson, The Philosophical Basis of Religion, 1907.

(b) The argument from design in nature.—This evidence, so keen a weapon in the days of Paley's Natural Theology, is said by opponents to have become blunted by the theories of modern science. Romanes claimed that the place of supernatural design has been taken by natural selection, basing his claim upon the fact that all species of plants and animals were slowly evolved, and not separately and suddenly created. But creation by God need not be sudden, and we welcome all the processes of evolution as so many examples of His method of working. Perhaps it is sufficient to insist that evolution is a process, not a cause. It serves only to push the evidence of design further back, and therefore to increase our admiration for the Designer. And it is to be noted that if the evidence of nature suggests the existence of a personal Creator, the evidence of design does more, for it suggests His foreknowledge.

To imagine that such exquisite mechanism as that of the human eye, or such wonderfully suitable material in all its properties as a man's bones, was due to the inanimate and fortuitous working of matter and force, makes a far greater demand

than any Christian miracle.

The popular objection to the evidence of design lies in pointing to 'nature red in tooth and claw.' This opens the question of the problem of pain, which, as far as it relates to man, requires separate treatment. With regard to the sufferings of the to be made in these days, by attributing to lower creatures our own standard of sensibility. This is a department in which the apologist must be careful not to ignore the discoveries of modern Biology.

ful not to ignore the discoveries of modern Biology. See BIOLOGY, SUFFERING.

See F. Ballard, The Miracles of Unbelief, pop. ed. (1904), p. 65, etc.; G. P. Fisher, The Grounds of Theistic and Christian Belief (rev. ed. 1908), pp. 42-67; J. T. Tigert, Theism, a Survey of the Paths that lead to God, 1900. See also, for the kindred argument from the sublime and the beautiful in nature, R. St. J. Tyrwhitt, Natural Theology of Natural Beauty, 1832; J. B. Mozley, University Sermons, Sermon on 'Nature,' 1876; G. Rawlinson, The religious Teachings of the Sublime and Beautiful in Nature (Pres. Day Tracts).

2. The problems of nature.—(a) Miracles.—The apologist refuses to limit the discussion of miracles to the physical realm, claiming their explanation

to the physical realm, claiming their explanation through the historical and the moral aspect of them. But it is on the material side that the attack has come. The modern instinct revolts from miracles, and echoes Hume's assertion that no amount of testimony can render them credible. In our defence of them we must be careful where to begin. To one who does not believe in a God they are indeed incredible. He exalts certain so-called 'natural laws' into the supreme place, and rules out all that does not seem to agree with them. But if it be assumed that the world had a Creator (according to the foregoing arguments from nature, (according to the foregoing arguments from nature, and those suggested by other lines of thought), miracles at once become possible. For a miracle may be defined as 'an act of God which visibly deviates from the ordinary working of His power, designed, while capable of serving other uses, to authenticate a Divine message.' If we begin with this assumption, we may still argue, as Paley did, that miracles have the same degree of probability as God's revelation of Himself to men.

Therefore, if we begin with the objection 'Miracles are impossible,' we must take the objector a stage further back, and discuss with him the belief in a God. But miracles are not always discredited by such reference to the main issue. The following are some of the objections levelled

against them:

(a) Miracles are inconsistent with the order of

nature. This argument not only ignores the working of a God who still has control over His creation, but also gives a rigid uniformity to certain so-called 'natural laws,' which after all are based only on the imperfect induction and limited experience of the human mind. If modern science has arrived at these laws by induction from a study of the universe, and not by the arbitrary assumption that these laws are uniform, all evidence must be taken into account. And as miracles lav claim to evidence, science must needs take them into consideration, or it will be stultifying its own methods. Such evidence, however, lifts the question out of the physical realm.

(\$\beta\$) It is further objected that the admission

of miracles implies a lax or unscientific conception of the course of nature. And it is, indeed, true that Christians sometimes speak as if only miracles were the signs of God's working, and as if they interfered with the course of nature by subverting its laws. But we must insist that in speaking of miracles as 'supernatural,' we do not refer them to any other agency than that of so-called 'natural' events. We claim only that, if both historical and moral reasons demand it, it is both credible and reasonable that God should occasionally do what is outside man's ordinary experience of the working of created things. If man himself can interrupt the ordinary course of nature, he must certainly expect that God will do the same.

(γ) Perhaps the favourite attack on miracles today is the rationalizing of Biblical miracles one by one. It is claimed that such miracles may after all be brought into harmony with nature, for they are really to be referred to 'natural' causes. To have exalted them into more is the result of mistake or fraud. We reply that the only answer is in the weighing of the evidence. We are taken at once out of the physical realm into that of psycho-

logy and history.

logy and history.

(8) Attempts are continually made to discredit all miracles by pointing to those that Christians themselves do not accept. But we may confine the issue to those Biblical miracles which have their climax in the Resurrection. We are not called on to explain the work of Pharach's magicians, the many marvels of the Middle Ages, or the achievements of occultism to-day. It is enough to prove that certain miracles actually happened, as an attestation of a Divine revelation.

See Mozley, Miracles (Bampton Lectures for 1865); Lord Grimthorpe, Review of Hume and Huzley on Miracles, 1888; A. T. Lyttleton, The Place of Miracles in Religion, 1890; A. B. Bruce, The Miraculous Element in the Gospels, 1886.

(b) Evolution.—The modern theory of Evolution touches the faith at many points. The sceptic uses it to discredit the design argument (see above), and to show that there is no room for the existence or working of a God; to explain the life of the one Perfect Man as due simply to natural causes in the evolutionary progress of the race; and to point to the origin and development of Christianity as an evolution from natural causes and previous sources. The apologist refuses to hand over Evolution to be a mere weapon in the enemy's hand. He claims that it is also his own. He sees in it the visible processes (or rather, the theories about them which the human mind has tried to express) whereby God works. The evolution of Christ and Christian the Armen and Christian the Armen and Christian the Christian tion of Christ and Christianity he refuses to discuss merely in the physical realm, but applies the his-

widely to embrace the moral world in the present widely to embrace the moral world in the present as well as the physical world in the past, to strengthen the conviction and hope of the Christian with regard to the future. The following words will illustrate such a position (J. M. Wilson, Evolution and the Holy Scriptures [1903], p. 18): 'Evolution is showing us in very plain ways some of those truths that we have grasped only in words, the Unity of Nature, the Divine Plan, the Omnipotence and Omnipresence of God. . . . It is, moreover, a marvellous help to faith and patient work to believe that as there has been an evoluwork to believe that as there has been an evolution in nature in the past, so there is such a process in man and in the moral world now going on.

cess in man and in the moral world now going on.'
See J. Iverach, Evolution and Christianity, 1894; E.
Griffith-Jones, The Ascent through Christ, 1899; J. Cairns,
Is the Evolution of Christianity from mere natural Causes
credible? (Pres. Day Tracts); J. M. Wilson, Problems of Religion and Science, 1900; F. E. Jevons, Evolution, 1900, and
Religion in Evolution, 1906; J. Ward, Naturalism and
Agnosticism?, 1903; H. Calderwood, Evolution and Man's Place
in Nature?, 1896; J. M. Baldwin, Development and Evolution, 1902; G. H. Howison, The Limits of Evolution?, 1905.

(c) Monism, true and false.—The tendency of
modern science has been to discover a closer unity
in all things than had been invegined. Upon this

in all things than had been imagined. Upon this the opponents of Christianity have not been slow to seize. They have never been able satisfactorily to bridge the gulf between matter and spirit. Now they have the word of science that such dualism has been discredited by recent research, and that all phenomena, whether material or spiritual, must be explained as essentially one, and that therefore the only rational theory of the universe is some form of *Monism*. The wise apologist does not meet this with a denial. He is ready to listen to science as long as science retains its proper sphere; and if monistic belief seems the most rational, he does not reject it because it has been said to controvert Theism, but first examines the matter, and then re-considers his theistic position in the light of his conclusion. Therefore, the first question to be asked is what is meant by Monism, and the second is what is its bearing on Christian belief.

(a) Monism is a word which is growing in popularity, but it certainly does not always mean the same thing. There is a naturalistic, or scientific, and there is a spiritual Monism. The case is like that of Evolution: one aspect of the theory is said to overthrow Christianity, but another side is claimed as supporting it. There is no doubt that the Monism which makes itself most heard is that of the naturalistic kind, such as is identified with the name of Haeckel. It does, indeed, claim not to be materialistic, and recognizes Spirit as well as Matter; but it refuses to allow a dualistic distinction between God and the world, and regards Force and Matter as only two sides of one reality or Substance, which does everything and is everything. There is an invariable 'Law of Substance' whereby this Substance is in a process of evolution which causes eternal motion throughout the Universe. Such evolution is succeeded in turn by dissolution, and thus new worlds are continually being born and re-born. There is no place left for God, freedom, or immortality. The one single Substance operates of necessity and without ceasing, through all things, so that everything is determined by what has gone before; and when each individual has served his turn, he gives way to another, and disappears. But there are modifications of such Monism which are not necessarily torical method to both, and finds that they can be shown to be evolved from natural causes only by arguments which ignore the first principles of Evolution itself. But the Christian apologist is not content merely to apply the theory of Evolution in the same sphere as his opponent. He claims that the principle may be extended more

But there is quite a different kind of Monism which the Christian may fearlessly accept and assert, and that is Spiritual Monism. The term has been explained (W. L. Walker, Christian Theism and a Spiritual Monism, 1906, p. 202) as 'adopted in order to set forth both agreement with Science in acceptance of its facts, and difference from the interpretation which some in the pame of Science in acceptance of its facts, and anyerence from the interpretation which some in the name of Science give to these facts. It acknowledges the two-sidedness that is everywhere manifested, and sees everything and every being in the world to be the result of the working or unfolding, or development in its conditioned form, of a single Power manifested as both material and spiritual. But instead of as both material and spiritual. But, instead of giving the predominance to the material side, or equal value merely to the two sides, or leaving them both unexplained, it regards the spiritual side as that which is logically first and deepest— that which the material side only expresses and serves—that which manifests its supremacy in our own consciousness.' And the claim that this form of Monism makes is this: 'So far as we are able at all to understand ourselves, and to look out upon the immeasurable vastness beyond, no monistic scheme can be tolerated which does not both do us justice and transcend us. And certainly a monism which treats the world of phenomena as real, whilst regarding as illusory, or as ultimately mechanical, the world of noumena, sufficiently discredits itself. Spiritualistic monism is not guilty of the latter, nor can it be denied that it fairly fulfils the former' (F. Ballard, Theomonism True, 1906,

p. 378).

Before passing to our other question, we note the impossibility of trying to confine the issue to the merely physical realm.

(β) The bearing of Monism upon Christian belief can only be briefly indicated, and may perhaps be best expressed in the outline of the argument as given in the last-named work (pp. 380-400). (i.) There is no contradiction, or even collision, between Spiritual Monism and Theism. (ii.) It causes no weakening of preceding reasons for Theism.

(iii.) It leads up to Divine Personality. (iv.) It refuses, with Theism, to treat man as an automaton. (v.) It demands, however, the purification and enlargement of theistic phraseology. (vi.) A twofold development is involved, namely, a fuller recognition of Divine Immanence, and a blending of this with Divine Transcendence. It is in such of this with Divine Transcendence. It is in such directions as this that the greatest change is coming over Apologetics at the present moment. See W. L. Walker, Christian Theism and a Spiritual Monism, 1906; F. Ballard, Haeckel's Monism False, 1905, and Theomonism True, 1906; J. Morris, A New Natural Theology<sup>2</sup>, 1905; F. R. Tennant, Cambridge Theological Essays, 1905; J. F. Tristram, Haeckel and his Riddles, 1907.

(d) Suffering.—This is a problem which has perplexed mankind in every age. It has to be faced in relation to every system, and it has often been used in the attempt to disoredit Christianity. The unmerited sufferings of men are adduced as showing that there is not a God who looks after the world as a Father, and the sufferings of the rest of creation are said to point to a 'nature red in tooth and claw' such as no beneficent Creator would allow. We have to admit that the problem still remains for us a perplexing one, but at the same time we claim that Christianity is the only system under which it may be viewed in a satisfactory and hopeful light. Taking physical pain as the simplest ful light. Taking physical pain as the simplest form of suffering, we may see in it a useful and beneficent purpose, as forming a 'danger signal,' without which far more harm would follow. And then we may apply this to suffering of a more complex kind. In arguing with any but the mere hedonist, we may assume that the purpose of life is something other than enjoyment. If it be 'the growing development of our faculties through the

discipline of life,' then it is easy to see how it is discipline of life, then it is easy to see how it is helped by suffering. And we may recognize in it a twofold use, partly for the education of the individual, and partly for the well-being of the race even at the cost of the suffering of the individual.

But what is the bearing of Christianity on the problem? (a) The belief in a re-adjustment here-

after explains the inequalities of suffering in the present world. (3) The Fatherhood of God teaches present world. (8) The Fatherhood of God teaches that He is in sympathy with the sufferings of His creation, and the realization of such a sympathy has already proved 'the secret of endurance in the sufferings of the world.' (7) The Cross of Christ, as not merely an isolated act of vicarious suffering, but the manifestation of the abiding union of the Divine in suffering, proves that the Divine sympathy is real. The deeds of Christ are inseparably linked with His words, His example with His precept, and the sufferer sees the problem wrapt in a new glory in the light of such echoes as 'Not my will but thine be done,' and 'He that loseth his life shall find it.' (8) Not only does Christianity throw light on the problem in the case of the Founder, but the Christian is bidden to take up his cross and follow Christ; the facing of it in His Master's spirit and strength is a necessary and a his cross and follow Christ; the facing of it in His Master's spirit and strength is a necessary and a joyful part of his creed. The belief in his own redemption through suffering makes him ready to 'fill up that which is behind of the afflictions of Christ,' and voluntarily seek suffering in the service of his brethren, as well as patiently accept that involuntary suffering which he realizes will be for his eternal good, and make him more like the Master who was 'made perfect through suffering.' No other religion explains and glorifies suffering thus, and therefore we claim that it attracts men to the Christian faith, instead of repelling them and discrediting it in their eyes.

See Masterman, 'The Problem of Suffering' in Topics of the

See Masterman, 'The Problem of Suffering' in Topics of the Times (S.P.C.K.), 1906; Illingworth in Lux Mundi, 1889; J. Martineau, A Study of Religion<sup>2</sup>, ii., 1889; and art. SUFFERING.

(ii.) THE PSYCHICAL REALM.—I. Historical arguments.—(a) The Jews and OT prophecy.—While Christianity is not bound to answer the objections Christianity is not bound to answer the objections that are levelled against Judaism, it accepts Judaism as its parent. And the Jews and their sacred literature form a strong apologetic argument for our faith. Their external history is in itself a marvel from first to last, while their spiritual theology and worship amid the debased beliefs of the ancient world, as embodied in their ideas of God and man and in the Messianic hope, and God and man and in the Messianic hope, and above all their prophetic instinct, which has its only explanation in the facts of the founding of Christianity, offer an argument the value of which is coming to be once more appreciated in our own

day.
See E. A. Edghill, The Evidential Value of Prophecy, 1906;
W. Sanday, Bampton Lectures, 1908, ch. viii.; H. A. Redpath,
Christ the Fulfilment of Prophecy, 1907.
(b) The historical Christ.—The Person of Christ

makes a higher appeal than that of mere history. But, viewed from the historical side, we claim (a) that the birth, work, death, and resurrection of Christ are among the best attested facts of human Chilst are among the best attested facts of human history. ( $\beta$ ) That their historicity would never have been called in question were it not for the miraculous element inseparably bound up with them. ( $\gamma$ ) That we have already shown that the only scientific treatment of miracles is to regard them as capable of verification, and to weigh the evidence for them accordingly. (5) That when all the evidence for the miraculous element in Christianity, both psychical and moral, has been sifted, the whole history of its founding remains as true as any other fact of ancient history.

But the sifting of historical evidence implied under the last head involves a study of topics which will be dealt with under their own titles. We

must, therefore, be content to mention them, and

to refer to books where they are discussed.
(1) The authenticity of the four Gospels; claim that either they record facts, or else nothing whatever can be said about Jesus of Nazareth; the arbitrary and unscientific nature of the attempt to offer any other history than that of the Gospels; the mutual relation of the Synoptic Gospels; the strengthening of the evidence through their various lines of testimony; the witness of the Fourth Gospel in relation to them.

Gospel in Felation to them.

The Incarnation (Bampton Lectures, 1891); Westcott, St.
John's Gospel (Introd.), 1892; Burkitt, The Gospel History and
its Transmission, 1906; Sanday, The Life of Christ in recent
Research, 1907; J. Orr, The Incarnation and recent Criticism,

(2) The historical accuracy of Acts; the impossibility that it is a sequel to anything but the history of the Gospels; its witness to the historical Person of Christ.

of Christ.

See Ramsay, St. Paul the Traveller (1895); Harnack, Luke the Physician (tr. Wilkinson, 1907), etc.

(3) The Epistles; the earliest witness to the life of Christ; the value of their incidental allusions; the basis afforded by the four uncontroverted Existles of St. Paul Epistles of St. Paul.

Episues 01 St. Faul.
See R. J. Knowling, The Witness of the Epistles, 1892,
Literary Criticism and the NT, 1907; Howson, Evidential
Conclusions from the Four greater Epistles of St. Paul (Pres.
Day Tracts).

(4) The arguments for a historical Christ deducible from Jewish and heathen literature; Josephus, and the Talmudic account of Jeschu; Suetonius, Pliny, Tacitus, and, indirectly, the True Account of Celsus.

See E. Crawley, The Tree of Life, 1905, ch. v.; Paley, Evidences of Christianity, 1794.

(c) The Resurrection of Christ.—This, of course, is included in the proof of His historical Person on the lines indicated above. But from the beginning it formed the central evidence of Christianity, and, at the same time, as the supreme miracle of revelation, it has been the centre of attack. It must, therefore, receive separate treatment, owing to its profound importance; for it is the very centre of the Christian position. With it there stand or fall both the claim of Christ to be Divine and the Christian's hope in his own resurrection. At the same time, as the supreme miracle of the Christian revelation, it will bear the weight of all the other Gospel miracles. To have proved it to be historic is to have routed the attack on miracles, while isolated assaults on minor won-ders must be brought to face this main issue. The evidence for the Resurrection has been summed up

under the following heads:—

(a) The evidence of St. Paul. Not only is the risen Christ the mainspring of his changed life, but he asserts that he, as well as certain others whom he specifies, has seen Him with his own

eyes. This is the earliest written testimony we have.
(β) The evidence of the other Apostles and NT writers. Not only is this found all through their writings, but it forms the text and centre of the

sermons recorded in Acts.

(γ) The indirect evidence contained in the records, which establishes the fact that the appearances were under varied circumstances, to those in different frames of mind, in the same country and generation as they are said to have happened, and the cause of a changed life to believers and of bitter opposition from their enemies. The sudden change from sorrow to joy in the first disciples is incapable of any other explanation.\*

(a) The evidence of the empty grave. Had Christ's enemies possessed the corpes, they would have mydraed it had His followers possessed it.

have produced it; had His followers possessed it, Christianity would have been consciously founded

\* See below, under Psychological arguments, (a) concerning their changed life.

on a gigantic fraud. This view is now held by no

(e) The evidence of Christ's life before the Crucifixion. The records show that He fully expected this sequel, though His disciples were quite unable to grasp it or to realize it when it had actually

happened.
(3) The evidence of the Church. Not only has the Resurrection been the central belief of the

Church from those days until these, but such institutions as Sunday and the Eucharist, and the joy that is contained in them, cannot be explained

by any other means.
Such evidence is far stronger than that which supports most of the accepted history of the ancient world. Such objections as the absence of eyewitnesses and the inconsistency of the accounts would never have been raised, but for the stupendous issue depending on the historic truth of the Resur-

Opponents are powerless to deny that the evidence was sufficient from the earliest days to enable every Christian absolutely to accept the fact, and make it the centre of his belief and conduct. All that they can do is to try to account for

nact, and make it the centre of his belief and conduct. All that they can do is to try to account for this belief in such a way as to deny the actual fact. Bruce reduces such non-Christian hypotheses to five.

1. The thief theory.—The disciples stole Christ's body, as perhaps He had told them to, in order to make men believe in a resurrection. Such a itheory as this of Reimarus is now universally discredited.

2. The sucoon theory.—Christ did not really die, but revived, escaped, and pretended to have risen. This view of Paulus and Schleiermacher has been refuted even by Strauss as inconsistent with the character of such a moral reformer, while its practical difficulties are insuperable.

3. The vision theory.—Renan and Strauss assert that the belief arose from the hallucination of several disciples, the first to suggest it being Mary Magdalene, an excitable woman who had once been possessed. But this directly contradicts every word of the only existing records, which show that excited expectancy was entirely absent. Nor is it possible to think, if the Resurrection was only subjective, that these visions suddenly gave place after six weeks to the calm strength of the early Church.

4. The theory of objective visions, or theyrum hypothesis.—This is Keimi's attempted compromise. The appearances were not purely subjective, but the objective cause was not a risen body of Christ, but His glorified Spirit comforting them by 'sending telegrams from heaven.' But such a theory, without avoiding the supernatural, does not free the disciples from hallucination, for they certainly thought their Master was there in the fiesh, and not in heaven.\*

5. The mythical theory.—There were no appearances at all, but the strong way the disciples spoke of the continued life of their crucified Master was misunderstood by the Apostolic Church. Hence arose the myth of the Resurrection, which was later embodied in the legendary accounts contained in the Gospels. Thus Weizsäcker and Martineau would say that all is accounted for as an evolu

'Resurrection' in DCG.

(d) The history of Christianity and of the Church.—Here, again, is involved, in the first place, a study of Acts and the Epistles. Their early date must be proved. Christianity is not the creation of St. Paul. The early Church did not develop as Baur suggested, but as indicated by the early Fathers. The primitive existence of Church order witnesses to the same effect.

\* However, the theory must not be entirely discounted which accepts the evidence of a,  $\beta$ , and  $\gamma$  above, while it rejects that of  $\delta$ . See K. Lake, The Historical Evidence for the Resurrection, 1907.

See L. Pullan, The Books of the NT, 1901; Gore, The Church and the Ministry's, 1900; Neander, History of the Planting and Training of the Christian Church (tr. Byland, 1851); A. B. Bruce, Ferdimand Christian Baur (Pres. Day Tracts); Salmon, Introd. to the NT, 1885.

2. Psychological arguments.—We must explain that this term is used for convenience to denote that class of argument which is not strictly historical, but which deals either with the feelings of individuals, or with the inferences which may be drawn from Christian practices, or the relation of Christianity to other systems. The following are

Christianity to other systems. The oldowing are given as examples of such arguments:—
(a) The changed life of the disciples, and the conversion of St. Paul.—Up to the death of Christ the disciples had shown themselves timid in their behaviour and earthly in their expectations. They behaviour and earthly in their expectations. They suddenly became full of boldness and joy and a new spiritual force which nothing could resist. The psychological difficulty of such a change is enormous. It is overcome only by the explanation that their Master rose again, spiritualized their ideas, and gave them an abiding gift of the Holy Spirit. And even if these unlettered Galilæans had been deceived, it is impossible that they could have in their turn deceived a cultured and expert have in their turn deceived a cultured and expert Jewish Rabbi. The conversion and apostleship of St. Paul alone, duly considered, was of itself a demonstration sufficient to prove Christianity to be a Divine revelation.

See G. Lyttleton, Conversion and Apostleship of St. Paul, 1869; R. J. Knowling, Testimony of St. Paul to Christ, 1905.

(b) The witness of Christian customs and insti-tutions.—Allusion has already been made to these in their special relation to the Resurrection. But in their special relation to the Resurrection. But there are other evidential uses to which may be put such recognized parts of Christianity as the Ministry, the Sacraments, and the Christian Year. They satisfy the cravings of human nature, its needs, tendencies, and aspirations, in a way that no other religion does. The ministry is founded on the theory that man is social, and needs organization, continuity, and authority in the guidance of life. The sacramental system takes into account the composite nature of man, using and welding into one both the material and the spiritual elements, and at the same time conveying in a definite form that communication of Divine grace which we should naturally expect to be the climax of any revelation which God makes of Himself to the individual. The Christian Year links us with the first ready observed in NT times, the observance of Friday as the day of the Crucifixion is of early origin; and so the list might be continued. Not only do these things witness to the historicity of only do these things witness to the instoricity of the facts which they commemorate, but, viewed from the sphere which is psychical rather than historical, they bring the whole question of Apologetics out of the past into the present, and enable us to postulate the real life of those roots of Christianity which are hidden in the past, when we examine carefully those living and growing branches which are visible in the present.

See Lonsdale Race: Evidences of Christianity, 1905, 192-121.

See Lonsdale Ragg, Evidences of Christianity, 1905, 102-121. (c) The success of Christianity.—Apart from the moral aspect of the question, an estimate of facts and their relation to mere human possibilities of explanation, suggests an evidence of the Divine origin of Christianity, and of the work of the Holy Spirit in the history of the Church. At the same time it has to be remembered that other religions may make a counter-claim, so that the claim of Christianity must be shown to be unique. The following are the chief points in the argu-

(a) The early, wide, and, within certain limits, irresistible diffusion of Christianity. It required an enormous power to kill polytheism for ever, i

and to leave not a shrine of a heathen god behind:

but this was what Christianity did.
(β) Its power of revival and restoration after every declension and decay. This may be traced throughout history, through the Middle Ages, the Reformation, and more modern revivals, and Christianity may be shown to possess elements which Muhammadanism cannot claim.

(γ) The resistance which it has been able to offer to successive assaults. From the days of the earliest martyrs persecution has been powerless to crush it. All the forces of the ancient world were arrayed against it, but the only result was the decay and fall of Rome itself. And it has faced all objections of later days, and can point to a confusion among its opponents which makes one school of anti-Christian thought contradict another.

 $(\delta)$  It is specially armed with means and motives for self-propagation. Its work of proselytizing, founded on the pure motives of the missionary spirit, is on a different plane from Buddhism and Muhammadanism. The rule of faith expressed in its creeds, the universal application of its sacred writings, the organization of the Church, her ministry, her sacraments, her worship, and her government, are fitted in a unique way for passing on the faith whole and unimpaired from age to

age and from land to land.

(e) Its success is in harmony with its own predictions and anticipations. It is here that the argument from prophecy has its fullest force. For it begins with the earliest literature, in the promise that the seed of the woman should bruise the serpent's head, and continues through centuries. And when it reaches the NT, it shows such unlikely features as the anticipation of the corruptions of Christianity, from the parable of the Tares at the beginning to the expectation of Antichrist at the end.

Various natural causes have been adduced to account for such a success, but one by one they may be proved insufficient, and we fall back on the conclusion that the origin and growth of the faith must be attributed to a Divine agency.

See J. Cairns, The Success of Christianity and modern Explanations of it (Pres. Day Tr.).

(d) The abiding unity of faith.—In the face of the divisions of Christendom, and the misunderchurch, it may seem bold to found an argument on the unity of Christendom in its belief. But when a broader view is taken, and Christianity is compared with other religions, a strong argument for the Divine origin and preservation of the Faith is found to lie in its continued acceptance. The is found to he in his communa wast-Creeds themselves, handed on intact from age to age, Their silence present a remarkable phenomenon. Their silence on non-essentials combines with their insistence on fundamentals to prevent their ever being out of date. No other religion can point to so broad a unity. The unity of Muhammadanism or Bud-dhism is either local or at least Oriental, and can make no such appeal to the whole world. And the fundamentals upon which Christian belief has been based, quod semper, ubique, et ab omnibus, are just those truths which are not shared by any people outside Christendom. Such are the spirituality and Fatherhood of God, the moral condition of man and the blackness of his sin, the possibilities of universal salvation by redemption through One Person, in whom a human and a Divine nature are combined, the Personality and Divinity of the Holy Spirit, and His work in and among men, with the visible Body of Christ as His sphere of working, the approach through the sacraments, the authority of the Scriptures and of the Church, the necessity of faith, and the importance of an eschatology such that the thought of the future resurrection of the body influences men in the

And this unity of faith is also manifested in a unity of aspiration. The biographies of different Christians in all ages reveal a kinship in spiritual life and belief, and the same is shown by a study of

hymnology throughout the centuries.

It is a profound marvel that the Churches in different localities in the first days did not soon begin to show some cleavage of faith and the practices that result from it. It is a still greater marvel that in recent generations the multiplication of sects, the revolt against authority, and the rise of free speculation within the Church, have not made more impression on the fundamental unity of the Faith. The least difficult explanation of such phenomena lies in the Divine origin and preservation of Christianity.

See J. Stoughton, Unity of Faith (Pres. Day Tracts).

(e) The argument from the psychological nature of religion.—This is the result of a study of religion which is of comparatively recent growth. Kant began the investigation of religion not merely by reflexion on what was positive and objective, but by taking it as an internal and mental fact. Consciousness proves the existence of religion as a subjective or mental state; but consciousness itself must be analyzed, in order to analyze religion. In this way a threefold division of mental phenomena has been established—into cognitions, emotions, and volitions. Religion must be a state of intellect, sensibility, or will, or some combination of two or all of these factors. Hegel identified act constitutes religion, though the exercise of reason is an essential part of religion. If religion has no rational foundation, it has no real foundation. Others resolve religion into feeling or sentiment. But every feeling requires an explanation, which can be found only in an exercise of intellect. Hume traces religion to fear, Feuerbach to desire, Schleiermacher to a feeling of dependence, to which Mansel adds the conviction of moral obligation. Strauss combines all these. Kant identifies religion with morality. But it is not simply these things, though it includes them. Rather is the religious process at once rational, emotional, and volitional, and is to be connected with all threeknowing, feeling, and doing-in its threefold aspect of knowledge, affection, and self-surrender. If one general notion can be made to embrace the universal instinct of men as regards a definition of religion, it is this, that it belongs to the whole man, in accordance with the psychology sketched above. The question remains, which religion answers best to this description? It is only the istic religions that can claim to do it; polytheism, pantheism, deism, and rationalism are ruled out. 'Of theism, deism, and rationalism are ruled out. the three great theistic religions, Judaism, Christianity, and Muhammadanism, the last is far inferior to the other two, and the first is a transition to and preparation for the second' (Flint, Theism's, p. 44). Christianity is left, as alone giving a perfect representation of God.

EXCURSUS:—The general superiority of Chris-

tianity to other religions.—

(1) Polytheism.—Polytheistic beliefs are the characteristic of the whole ancient world, with the single exception of the Jews. Such beliefs continually broke down with the advance of culture, and it is perhaps sufficient to say of them that they have abundantly been proved to be ethically de-grading, as not linked with morality, and philo-sophically unsatisfying, as offering no final revela-tion. Some of the religious of India are pantheistic as much as polytheistic, and admit of the fatal objection that they ignore the transcendence of the Deity. See artt. POLYTHEISM, PANTHEISM.

(2) Buddhism.—This deserves a word of separate treatment, as its moral code is profoundly attractive, and it counts almost as many adherents as Christianity. But really it is not so much a religion as a philosophy, an inherently atheistic system which does not offer a real Deity for worship, and suggests no hope for a future life. very fact that its followers have instinctively demanded an object for worship, has caused it to become corrupted and obscured by the introduction of pure polytheism.

See C. F. Aiken, The Dhamma of Gotama the Buddha and the Gospel of Jesus the Christ, 1900.

(3) Muhammadanism. — Here it is its success which forms the chief recommendation of the religion; but this has been largely discounted by the forcible means of propagation which have been required. Its pure monotheism brings it into relation with Judaism and Christianity, but its God is as distant as He is sublime, and 'its theological outcome is simply awe and submission, not loving intercourse.' The lowness of its moral standard prevents it from having a civilizing influence, and the moral state of society under it may be judged by the painfully degraded position of woman. The fact that it is founded, not on a life but on a book, checks its power of expansion and adaptation, and has reduced it to a code which is the enemy of all real progress.

(4) Judaism.—This is the one pure religion of the ancient world, and might be a formidable rival of Christianity if the latter were obliged to treat it all that is best and purest and most permanent in Judaism. Historically, the one religion grew out of the other; theologically, the germ of Christian doctrine is to be found in the OT doctrines of God and man, its progressive revelation, and its Messianic hope. There is no desire to belittle the one pure religion of the ancient world, but there is much in it that is incomplete. Christianity simply claims to fulfil it, to answer its problems, and to carry it forward to finality. The question of the position of the OT is here involved.

See R. L. Ottley, Aspects of the OT, 1897; J. Orr, The Problem of the OT, 1906.

It must be noted that the general superiority of

Christianity to these religions includes the fact that it sums up all that is best in them. We do not stigmatize them as utterly false, but we recognize them as a feeling after that truth of which Christianity claims to be the final expression (see Excur-

anity claims to be the final expression (see Excursus at the end of the 'Psychical Realm,' p. 620b). For the whole subject, see Flint, Theism, Lect. ii. (Baird Lectures, 1876); A. B. Bruce, Apologetics, 1901, chs. iii.-vii.; Jevons, Introd. to Hist. of Religion, 1896; Lefroy, Mahomedanism: its Strength and Weakness; Liddon, Essays and Addresses, 1892, pp. 1-60; Eliot Howard, Non-Christian Religious Systems, 1906; Westcott, The Gospel of Life, 1892, esp. ch. v.; Marcus Dods, Mohammed, Buddha, and Christ, 1877; Pan-Anglican Papers, i. 1908; JE, passim; G. Matheson, The Distinctive Messages of the Old Religions, 1892.

3. Metaphysical arguments.—(a) The argument from intelligence, will, and conscience, commonly called the Ontological argument. - In nature, because we are thinkers ourselves, we realize that what is before us is the result of thought. We grasp by our intelligence that intelligence is exhibited in all work in which there are parts which bear an ordered relation to each other, and in which the whole is something more than the mere sum of the individual parts. Therefore we infer that what the mind detects, mind has produced, and that a creative intelligence underlies order. In morality, the sense of a moral law, and the demand for ethical perfection, in the voluntary fulfilment of such non-natural requirements as the dictates of duty, imply a standard, a superhuman will, a Holy One, such as has been revealed to the world in Christ. In the realm of conscience, there lies in the human mind an instinct which expresses itself in the conviction of a survival after death and of future retribution and reward. In the face of all ills and miseries, man desires to continue to exist, and anticipates a re-adjusting of the balance which will not terminate until the full demands of that moral law, of which conscience is the representative and ambassador, have been met in full. The intelligence, the will, and the conscience thus combine in a threefold suggestion of an Intelligence which creates, of a Lawgiver who imposes a superhuman will, and a Judge who re-adjusts the balance. But in view of the unity of nature, and the unity with it of our human nature, that which lies behind all nature, and which the various parts of our human nature suggest, will in itself be One. We therefore arrive at a Personal God, as He has been revealed in Christ.

that which lies behind all nature, and which the various parts of our human nature suggest, will in itself be One. We therefore arrive at a Personal God, as He has been revealed in Christ.

See J. A. Fleming, The Evidence of Things not Seen, 1904.

(b) The argument from consciousness.—We cannot stay to discuss that part of Herbert Spencer's philosophy which deals with the consciousness (see J. Iverach, The Philosophy of Mr. Herbert Spencer examined [Rel. Tract Soc.]). But human consciousness or personality affords an argument which is indeed kindred to the foregoing, but has been put in a form of which the following is an outline.

indeed kindred to the foregoing, but has been put in a form of which the following is an outline.

1. 'Through direct consciousness of himself man discovers that he is possessed of a Permanent Personality, endowed with will, intelligence, moral and spiritual affections. 2. Through consciousness further developed by reflexion on himself and the universe, he attains the conviction that over all is a Supreme Personality, endowed with omnipotent Will, infinite Intelligence, perfect Righteousness, and Love. It is contended that these results of consciousness rest on the same basis, and stand or fall together. If the primary consciousness of a human self is denied, all the rest vanish with it. On the other hand, if it is accepted, it carries all the rest in its train. Thus it is from the I nowledge of himself that man rises to the knowledge of cod. Theism is the truit of belief in man's real humanity; see Brownlow Maitland, Theism or Agnosticism, 1878.

(c) The argument from the idea of God.—Whence does the idea of God come to us? It is not originated by any of the arguments we use, whether

(c) The argument from the idea of God.—Whence does the idea of God come to us? It is not originated by any of the arguments we use, whether ontological, cosmological, or teleological. They help to verify it, but they postulate it as already existent in the mind. It cannot be traced to man's conscience, heart, or reason, though these faculties may verify and develop it. There is no place where the idea of God has not existed. Therefore God exists. Kant overthrew the original ontological argument by asserting that any cognition of things is impossible where there is no empirical matter to work upon. But we refuse to allow that God cannot be empirically known. Agnosticism really asserts not only that man cannot know God, but that God cannot make Himself known. And to say this is to deny His existence. But a flat denial of God's existence is possible only for the man who has passed through every sphere in his search for Him. In short, in order to be able to assert authoritatively that no God exists, a man must be omniscient and omnipresent, i.e. he must himself be God, and himself give the lie to himself

assert authoritatively that no God exists, a man must be omniscient and omnipresent, i.e. he must himself be God, and himself give the lie to himself.

(d) The Cosmological or Etiological argument.—

We have the idea of causality inherent in us. We attribute everything to some cause, but even though we feel ourselves on a higher level of causality than ordinary nature, we do not feel self-caused. Our notions fall back to a First Cause, which is the final cause of all, and itself uncaused. The study of the universe suggests that this cause must be, not mechanical, but full of order and intelligence, and the study of our own personality leads us further to think of this Causa causans as a personal God.

See, for the metaphysical and philosophic aspect, Caldecott, The Being of God in the Light of Philosophy (Camb. Theol. Essays, 1905); J. R. Illingworth, Personality Human and Divine, 1904, and Reason and Revelation, 1906; and, for the influence of modern knowledge on the main theistic arguments, Ballard, Theomonism True, 1906, pp. 68-346.

Excursus:—The anthropological attack.—The analogies between Christian beliefs and practices and those of some of the other great religions of the world, have long formed the basis of an attack upon the faith. In recent years the study of more primitive religions, and of anthropology generally, has suggested further analogies, and given rise to a fresh attack. The attempt is being made to explain away Christian history and ideas as merely the survivals of what has now been found to exist in primitive cults all over the world. Various modes of defence have already been employed, but the apologist must not ignore the parallels afforded by recent discoveries. The facts collected in such books as Frazer's Golden Bough or Crawley's Mystic Rose or Robertson's Pagan Christis must rather be claimed and used for the Christian argument. As illustrations of the hostile use of them we may mention the theory that Christ is to be connected with Eastern Sun-worship, the twelve Apostles being the signs of the zodiac, and that the Sacrament of Communion is merely an adaptation of the wide-spread primitive belief, with its degrading accompaniments, that to partake of a life means to inherit its virtues. And strange elaborations have followed, such as Frazer's theory of the Crucifixion, which suggests that the Jews had transferred to the feast of Purim the customs of a strange kind of Saturnalia, wherein a mock king was first pampered and then killed, and that Christ only met 'the fate that annually befull the malefactor who played Haman' (see J. G. Frazer, The Golden Bough<sup>2</sup>, iii. 190 ff.).

The Christian answer to which we would briefly restrict that all religion is one and the that the victor was and the that the victor and the strangeness of the christian answer to which we would briefly religion is one and the that the victor was and the that the victor and the christian answer to which we would briefly religions.

The Christian answer to which we would briefly point is that all religion is one, and that its 'primary function is to affirm and consecrate life (Ernest Crawley, The Tree of Life, 1905, p. 270). If Christianity is God's final answer to human needs, we shall expect to see those needs manifesting themselves elsewhere. 'We can see a deeper meaning in the parallelism which forms so remarkable a bond between Christianity and the lower religions. These analogies from savage culture show that religion, everywhere and always, is a direct outcome of elemental human nature, and that this elemental human nature remains practically unchanged. This it must continue to be so long as we are built up of flesh and blood. For instance, if a savage eats the flesh of a strong man or divine person, and a modern Christian partakes sacramentally of Christ's body and blood under the forms of bread and wine, there is evidently a human need behind both acts which prompts them and is satisfied by them, and is responsible for their similarity of Christianity is no survival from primitive to the control of the c

... Christianity is no survival from primitive religion, but a higher development from the same permanent sources' (E. Crawley, *The Tree of Life*, 1905, p. 261 f. See also J. R. Illingworth, *Divine Immanence* 1898 ch iv

Immanence, 1898, ch. iv.).

(iii.) THE MORAL REALM.—It has been said that the moral element in our nature is as much higher than the mental as the mental is above the physical. The weight of moral arguments is therefore greater, and perhaps for this reason this sphere has been chosen by recent apologists for their main line of defence. It has already been mentioned that Christ Himself in His moral aspect is the supreme apologetic of to-day; but there are other lines of moral argument which are placed first, owing to their priority in the sequence of thought.

I. Arguments for theistic belief from the moral realm of thought.—(a) The universal idea of God and cultivation of religion.—This argument is sometimes called 'the evidence of general consent.' Cicero witnessed long ago: 'There was never any nation so barbarous, or any people in the world so savage, as to be without some notion of

gods.' The belief in some form, and the expression of it in worship, are found in every system, ancient and modern. To ascribe this instinct to accident is to raise a moral difficulty which cannot

easily be surmounted.
(b) The moral sense in man, the conscience and the sense of sin.—Kant, while rejecting other arguments, placed the whole weight of proof on this one. There is in our nature a sense of moral this one. There is in our nature a sense of moral responsibility, a feeling of what we ought to do, regardless of our present wishes and immediate advantage. This sense, commonly called conscience, cannot come either from our own liking or the will of the community, against the opinion of which it sometimes acts. The only explanation of its working is in the existence of a perfect moral Being, independent of ourselves, a perfect Lawgiver and Judge, to whom conscience feels itself responsible. It is here that we are brought closest to the vast problem of evil and of sin. A discussion of it belongs to theology rather than to apologetics. But we may quote the saying of Leibniz, that 'metaphysical evil consists in imperfection, physical in suffering, moral in sin.' As we trace the upward development of the race, we find that just where the sense of individual personality comes to the front, a conflict begins to be realized between the claims of others and those of self. Man is unique as placed in a position from which he may either rise higher or fall lower. He has a consciousness of something higher; if he wilfully chooses that which is lower, it is sin. But since his moral nature does realize the choice, struggling upward to the higher, in spite of the certainty that he will never fully reach it, and filled with humiliation when he has failed in the struggle and acquiesced in the sin, we are pointed to a perfect moral Being who is averse to sin, and to whom the moral sense in man knows itself to be re-

See Liddon, Some Elements of Religion, 1872, pp. 66-71; Inge, 'Sin and Modern Thought' (in Topics of the Times, 1906, pp. 142-167); Coe, The Religion of a Mature Mind, 1902, p. 361.

(c) The moral course of the world's history.—The tangled skein of human history is found, when unravelled, to exhibit a continual progress towards a more and more perfect exhibition of righteousness and goodness. There is a purpose running through history, indicating a moral governance. This may be studied in the development of the various sides of human institutions, as the life of nations, social life, crime, law, and religion. But such a moral government of the world, and such an education of the human race, imply a moral Governor and Educator; for it is impossible that such tendencies should be unconscious and impersonal.

See Fisher, Grounds of Belief<sup>2</sup>, 1902, p. 69; Flint, Theism, 1902, pp. 227-261; Liddon, Some Elements of Religion, 1872, pp. 142-148.

2. Arguments for Christianity from the moral realm of fact.—(a) The Christian Scriptures.—As the study of nature suggests an intelligence behind, and a study of history suggests a moral Governor, so the study of the Bible suggests a power higher than that of the men who contributed to this great literature which contains so many varied elements. Stress must be laid on (1) its organic unity, manifested in an OT and a NT fitting into each other exactly in spite of the changes of time and thought, in the wonderful symmetry that is presented by the two, and in the advancing morality which may be traced in their pages; (2) its authority, the moral force and power of conviction that its writers possess in an absolutely unique degree, its tone of certainty and genuine ring as the authoritative message of God; and (3) its exact correspondence with the deepest instincts of human nature, so that conscience welcomes its words as the highest expression of morality and religion.

See J. A. Fleming, The Evidence of Things not Seen, 1904, p. 40 ff.; J. Orr, The Bible under Trial, 1907.

(b) The morality of Christianity.—The success of Christianity has already been dealt with. But nothing has been said about the inward and radical transformation which it has effected. Its elevation, from the first days until these, of those who embrace it, is a moral miracle absolutely without parallel. The early apologists were already able to point to the effects of Christianity, as seen in a complete moral change in Christians. The argument has been increasing in force ever since. For the inevitable introduction of half-hearted members into a growing community, which soon extended as widely as civilization itself, is more than compensated by the contrast between the civilization which has been leavened by Christianity, and any other civilization in the history of the world. It is true that Christian morality is founded on the morality of Christ, and can be explained as a perpetual endeavour to fulfil His precepts and imitate His example. But this only takes the argument one stage further back, as we shall see shortly. And the very fact that the sustained endeavour And the very fact that the sustained endeavour has been made gives an additional proof that the morality of Christ was not a human and natural product. Two points in Christian morality must be insisted on. (1) It presents an ideal which no one except its Founder has ever fulfilled or expected to fulfil. And yet men have gone on trying. They have none of the satisfaction which belongs to those who fulfil a lower standard, such as that of Muhammadanism. And their reason for trying is not personal advantage, for the ideal has to be sought through self-sacrifice; in Christianity it is the losing of one's own soul that is to save it. it is the losing of one's own soul that is to save it.
(2) And not only is Christian morality different from what the natural man would wish for himself, but it is different from anything that he would invent. Its code is of the most unexpected kind, and has no real parallel or preparation elsewhere, in whatever setting we view it. And perhaps least of all was it likely to arise at such a place and time as Palestine in the 1st cent. of our era. If we reject the explanation of it which lies in the person of the Founder Himself, the alternative conclusions are difficult indeed of acceptance. See F. Ballard, Miracles of Unbelief, esp. pop. ed. 1904,

p. 242.

(c) The Person of Christ the moral ideal.—The morality of Christ's teaching is universally accepted as the highest the world has ever seen. The point need not be laboured here. But it is not merely a matter of His teaching; it is His example that stands highest. And in this too there is agreement among all. Even a writer like Lecky can say (History of European Morals<sup>8</sup>, vol. ii. p. 9): 'The simple record of three short years of active life has done more to regenerate and to soften mankind done more to regenerate and to soften mankind than all the disquisitions of philosophers, and all the exhortations of moralists. This has indeed been the well-spring of whatever is best and purest in the Christian life.

It is upon the moral ideal presented by the Person of Christ that modern apologetic takes its stand. It boldly asks, 'Whence hath this man these things? and demands a rational answer.

(a) Is it replied that this is simply derived from

our records, and need have no place in the history of actual fact? But this is no answer; for we ask, Whence then came the Gospel portrait of Christ? Whatever view be taken of the composition of the Gospels, it involves in some one an exquisite conception of the ideal which has no parallel in the world. It is impossible to believe that various men, whether few or many, whether actual disciples or only compilers working up traditions in later years, succeeded in forming a unity, a harmonious picture, such as is found in

Professional Contraction

the Gospel portrait. The only explanation of their work lies in there having been an original to be

(β) May we, then, retain the moral part of the portrait, and take it out of its miraculous surroundings? It will be found that the two are so interwoven that separation is impossible. Take away the supernatural, and nothing but a shadow is left. For the miracles are not interspersed amid the various indications of the character; they are the outward manifestation of it. They are not wrought, except on rare occasions, with an evidential purpose, but simply as the natural acts of so

exalted a character.

 $(\gamma)$  And what of the Divine claim of Christ? Is it possible to regard it either as interwoven in the tale by His mistaken followers, or as an individual tale by His mistaken followers, or as an individual mistake owing to a wrong estimate of His own Person? Both alternatives seem incredible, in view of the fact that this claim is the only key to His life, His words, and His work. Take such a public declaration as 'I am the light of the world; he that followeth me shall not walk in darkness, but shall have the light of life' (In 8<sup>12</sup>). If anything in the record is true, surely that solemn atterance, in the presence of His enemies and before the multitudes who had thronged to the feast, is not a figment of after years. And if He made the claim Himself, more presumptuous than could have claim Himself, more presumptuous than could have come, not only from a Galilæan carpenter, but from the holiest of men, what must we say if it were not true? That He was either an impostor or a de-luded enthusiast. No one nowadays dare assert the former, and to do so would only make it a greater miracle how the highest moral ideals of humanity have for eighteen centuries been linked with such a man. And if the latter alternative be chosen, it is absolutely impossible to reconcile the self-sacrificing devotion and utter humility of His whole life and work with a distorted moral obliquity whole life and work with a distorted moral obliquity and infattated self-assertion which could make so preposterous a claim. The familiar dilemma, 'Aut Deus aut homo non bonus,' has not yet been avoided by those who would hold such views. If the moral ideal which His Person presents forbids the latter, the former is the only rational explanation which remains.

(5) But is not Evolution to be allowed to enter and explain? Is it not simply that in Christ the upward movement reached its climax, and in Him we see the moral sense of the human race reaching

we see the moral sense of the human race reaching its perfection? But it is the reverse of true that such a character can be explained by its antecedents and environment. The arguments of Paley are still true of 'the originality of Christ's character.' He assumed a part which was in many ways the direct opposite of the Messiah of popular expectation. And the one catholic Men whose tacking is adapted to all nations and all ages, sprang from the narrowest and most bigoted nation of antiquity. And those who deny His Divinity change the virgin birth into an illegitimate one. They rob themselves of the argument that He was only evolved as the purer son of a pure virgin. They assert in effect that the most marked and mighty impulse of the past towards all that is purest, worthiest, loftiest, in the evolution of human nature, emanated spontaneously from the untutored, peasant-bred son of an adulteress' (Ballard, Miracles of Unbelief, p. 275). Such things are a denial of the first principles of evolution, and constitute a moral wire all for moral difficult, a constitute a moral wire all for moral difficults. stitute a moral miracle far more difficult to accept than that a pure virgin 'was found with child of the Holy Ghost.' This line of defence is thus seen to lead to a direct attack on the enemy's position.

See Liddon, The Divinity of our Lord, 1867; Gore, The Incurnation of the Son of God, 1891; Ballard, Miracles of Un-belief, pop. ed. 1904, ch. viii.; Row, Manual of Christian

Evidences, 1886, pp. 27-122; Robbins, A Christian Apologetic,

(iv.) THE SPIRITUAL REALM.—We here reach the highest form of Christian evidences, and the most convincing, for the proofs are brought within the range of personal experience. But, at the same time, they are useless in arguing with an opponent. We can do no more than point out to same time, they are useless in arguing with an opponent. We can do no more than point out to him that it is wholly rational that spiritual things should be spiritually discerned, and that in a spiritual religion like Christianity the final proof must be a spiritual one, while the cumulative arguments that lead up to it do not in themselves amount to absolute proof, but are as high as an outsider is capable of rising. It is true that God leaves not Himself without witness in the physical sphere and that there is abundant testimony in sphere, and that there is abundant testimony in the mental and ethical realms; but man approaches Him most closely in that which is least material, and therefore the spiritual faculty of faith is not to be mocked as contrary to reason, but accepted as transcending it. We must therefore take into

account-

(a) The testimony of the spiritual faculty.—The spiritual faculty mentioned above may be simply spoken of as 'faith,' and we claim that it is distinct from the other organs of knowledge, so that it must be added to the senses and reason in order to must be added to the senses and reason in order to complete our cognitive being. Often the testimony of the senses is contradicted by reason, and in the case of such a word as 'finite' it is positive and real to reason, though wholly imperceptible to the senses. And in the same way faith may sometimes contradict the conclusions which have been arrived at by the reason. To reason the word 'Infinite' is purely negative, but to faith it is entirely real and positive. So we claim that faith is that faculty or organ of knowledge whereby we apprehend the or organ or knowledge whereby we apprehend the Infinite. Other religions may contain the knowledge of the presence of the Infinite, but Christianity is unique in not only telling men that their duty is to know God, but in giving them the successive steps whereby they may do so. Though he has arrived at his conclusion neither by the senses nor by the reason, the Christian has arrived at a real and legitiments form of human knowledge when he

by the reason, the Christian has arrived at a real and legitimate form of human knowledge when he can say, 'I know whom I have believed.'

See Miller, 'The Idea of God,' in Topics of the Times (S.P.C.K., 1906).

(b) The testimony to Christianity of the spiritual yearnings of men.—Perhaps the two plainest of these yearnings are shown in the instinct to worthin and the heave of importality both of which ship, and the hope of immortality, both of which are practically universal. The former opens the whole question of prayer, and the latter the wide subject of eschatology. Neither can be discussed here, but the argument must lead on to the fact that both are satisfied in a unique degree by the

practice and belief of Christianity.

practice and belief of Christianity.

See F. Ballard, Miracles of Unbelief, pp. 280-310.

(c) The testimony of holy lives.—It has always been realized, from the days of the early Apologists, that one of the most telling of evidences lies in the spiritual life of Christians. Few men are argued into a belief in Christianity. They may verify their acceptance of it by its appeal to reason and the senses, but the real motive power consists in a touching of their heart. And this is done not by the words, but by the life of Christians. Apologetics may be exalted into a science, but the work getics may be exalted into a science, but the work of turning men is but little due to the professed apologist. Every Christ-like life is in itself a powerful apology, and often succeeds where all else

(d) The personal experience of the Christian.—
This can be the only final proof. The Christian can test all he has been told, in the sphere of his own spirit, and its relation to God as revealed in Christ. And this experience has been multiplying

in the lives of millions for nearly 2000 years. If we are charged with undue bias, it can be answered that 'initial unbelief is a prepossession as much as faith.' Thus do we pass upwards out of the region of Apologetics. We must be content to add the various arguments together, and claim that their sum-total raises so great a probability in favour of the Christian religion that there are far greater difficulties about any other explanation of the facts of the case. And the nature of our faith is such that the rest must be done in the region of the Spirit, wherein alone the probability can pass upward into certainty.

T. W. CRAFER.

APOSTASY (Jewish and Christian).-The deliberate abandonment of one religion for another, e.g. Judaism for Christianity or vice versa, made voluntarily or under compulsion. The word is usually employed in a bad sense, and consequently from the standpoint of the religion deserted. Heretics, i.e. those who embrace one form of a religion in place of another, are not here reckoned as apostates. In Christian jurisprudence, apostasy is regarded as a far more serious offence than even heresy.

garded as a far more serious offence than even heresy. The word ἀπόστασις is used in classical Greek of a revolt or defection from an alliance. ἀποστασία is a later form, found in the LXX, Putarch, and Dionysius of Halicarnassus. In the LXX these words, with their kindred forms, ἀποστασία, ἀποστασία, ἀποστασία, ἀποστασία, ἀποστασία, ἀποστασία, ἀποστασία, ἀποστασία (2 Greek of the sense of rebellion against Jahweh (Jos 2222) or an earthly monarch. Thus the 'rebellion schildren' of Is 30¹ are called τέκνα ἀπόστασια; the idolatry of Ahaz is his ἀποστασία (2 Ch 2913); and in 1 K 213³ 'men of Bella' is rendered ἀνδρες τῆς ἀποστασία. In 1 Mac. the word ἀποστασία is used in its modern sense (215 ἢλθον οἱ καταναγκόζοντες τὴν ἀποστασίαν). In the NT, St. Paul is accused of teaching 'an apostasy from Moses' (Ac 212¹), and he speaks in 2 Th 28 of the great ἀποστασία at the end of all things, before the revelation o. the 'Man of Sin' (see below). Augustine calls the replactation princi homina (c. Jul. Ibb. Iib.), and he uses th's term because the ebsolute freedom o. our first parents, unhampered by original sin, to choose between obeying and disobeying God, made there a voluntary defection (see Shedol, ii. 148 fi.). St. Thomas Aquinas (Qu. 12, Art. 1) says of disobedience: 'apostasia videtur omnis peccati principium.' I. Although we have many examples of national

1. Although we have many examples of national apostasy in the OT, instances of individual desertion of the religion of Israel are rare; but in the Deuteronomic law the provisions against those who try to persuade the people to 'serve other gods' are naturally severe (Dt 136-11). In Ezekiel we have examples of secret worship of heathen deities practised in the very temple of Jahweh (Ezk 85th.). On the whole, however, it may be said that, with the exception of the great apostasy in the days of Ahab and Elijah, the infidelity of Israel towards Jahweh was, as a rule, shown in attempts either to combine this worship with that of the local divinities, or to serve Him with rites similar to those practised in the worship of the gods of Canaan. We first meet with distinct acts of apostasy

from Judaism during the fierce persecution under Antiochus Epiphanes, when Jews either voluntarily or under compulsion renounced the worship of God for that of the deities of Greece. The degree of apostasy varied between a total abandonment of all pretence of Judaism, and the adoption of certain Greek customs like the practice of athletics and the wearing of the petasos, or broad-brimmed Greek hat, which the more rigid Jews regarded as an act

of disloyalty to Jahweh.

of disloyalty to Jahweh.

Antiochus Epiphanes (s.c. 175-164) did not cause the tendencies of the Jews to Hellenize which manifested themselves early in his reign. The inhabitants of Jerusalem, especially the priests, had already conformed to the Greek dress and frequented the palaestra (2 Mac 413-1). Jason the high priest even sents presents for the sacrifices to Heroules at Tyre, though his messengers refused to employ the money for such an object, and handed it over to the royal navy (2 Mac 413-19). When the persecution began in B.C. 168, and the Jews were compelled to sacrifice and to eat swine's fiesh, many of them apostatized (1 Mac 143); and it was the slaying of one of these by Mattathias, the father of the famous Maccabees, that gave the signal for the revolt (1 Mac 244). The Hellenizing Jews held the citadel of Acra in Jerusalem with the Syrians (1 Mac 134), and were not dispossessed till B.C. 142.

Apostasy of a different kind is mentioned in the Book of Wisdom. The Alexandrian Jews adopted in some cases the philosophy of Greece, especially Epicureanism (Wis 21-11). In the Talmud the term Epiquirūsin is applied to apostates (see below).

2. Examples of apostasy among Christians are to be found in the NT; but in many cases the fall-

ing away of the converts was not strictly apostasy, but a relapse into Judaic Christianity or even heresy. Still Jesus Christ foretold that in the days of trial many would fall away; and in the Epistle to the Hebrews (if we may still believe this Epistle to be addressed to Jewish Christians) there are indications that many Jews who had embraced Christianity were forsaking the Church for the synagogue, when the choice between the one and the other became imperative. We have only hints of newly converted Christians becoming idolaters.

newly converted Christians becoming idolaters.

Mt 2410 (σκανδαλισθήσονται πολλοί . . . καὶ μισήσουσιν αλλήλους) is possibly a prediction of the bitterness of the apostates towards their former iriends; also (x.12) the ἀνομία will cause the love of the many to wax cold. The 'antichrists' spoken of in 1 Jn 2181 may be classed as apostates, but see Westcott, αλ loc. The important passage in He 6411, which speaks of the impossibility of renewing unto repentance those who fall αλτί (ποιαπανώντας) after το 'μίντρι ετί, από στικίτη (νεανταγούντος) to them of all the warnings against apostasy in this Epistle are frequent (cf. esp. ch. 10). Though in the Epistle to the Galatians the abandonment of the Apostle's teaching was not a complete surrender of Christianity, yet he hinself evidently regards it as a practical apostasy (Gal 54). Indications that apostasy was not unknown may be found in the letters to the Churches in the Apocalypse and in the Pastoral Epistles.

In conformity with our Lord's warnings, the

In conformity with our Lord's warnings, the early Christians looked for a great falling away before His Second Coming. In 2 Th 2<sup>3</sup> St. Paul tells his converts not to be perturbed because they know that there can be no Parousia ἐὰν μὴ ἔλθη ἡ ἀποστασία πρῶτον. Whatever the exact nature of άποστασία πρῶτον. Whatever the exact nature of the apostasy in the present connexion is, it must be at least a religious apostasy, and one, moreover, as the use of the definite article proves, regarding which the Apostle's readers were already fully informed. From the Biblical use of the word anoστασία it would appear that there is an allusion to a falling away from God; but it has been maintained that the coming revolt of the Jews against the Imperial power of Rome was in the mind of St. Paul.

See art. 'Man of Sin' in Hastings' DB; Lightfoot, Notes on the Epistles of St. Paul. G. Milligan, Theseadonians (1998), Note J, p. 189 ff., gives a catena of the explanations of this passage.

In the primitive Church there were many cases of

Christians forsaking the communion of the Church and relapsing into idolatry. Some of those accused of Christianity before Pliny admitted that they had left the Church for many years, and had no hesita-tion in complying with the proconsul's requests: 'Hi quoque omnes et imaginem tuam deorumque simulacra venerati sunt et Christo male dixerunt' (Pliny, Ep. x. 96). Ammonius Saccas, the founder of the Neo-Platonic school, is said to have been a Christian originally, and to have apostatized (Euseb. HE vi. 19); and there is a tradition that Aquila, the translator of the Heb. Scriptures, was an apostate to Judaism. Apostasy to heathenism was considered the gravest crime of which a Christian could be guilty, and even if it was due to fear of torture or imprisonment, no pardon or hope of re-conciliation could be extended to the guilty person. It was not till the time of St. Cyprian (A.D. 252) that the idea of restoring an apostate to com-munion was even so much as entertained, and then only owing to the immense popular reverence for those who confessed the faith during the persecution of Decius.

of Lecius. Wilful apostasy was, of course, an inexpiable offence, and ranked with murder and adultery; but it appears that up to the time of Cyprian even involuntary apostasy excluded a person for ever from the visible Church. Hermas has been taught that there is no forgiveness for sin after baptism; and it is only by special revelation that he learns from the Angel of Repentance that one post-baptismal penitence is accepted (Hermas, Mand. iv. 3). Tertullian, in his earliest work, admartyras (ch. 1), says that those who could not find peace with the Church sought it from confessors awaiting martyrdom;

but it does not appear from the context that this means that they could restore an apostate to communion. In his treatise de Pudicitia, written in his Montanist days, the same writer, whilst denouncing Zephyrinus (?), Bishop of Rome, for allowing penitence to those guilty of carnal sins, enforces his argument by showing that these offences are in the same category as idolatry and murder—unpardonable in a Christian. It seems fairly certain that the re-admission of the layer was a novelty in the days of Cyprian. 'Evidently,' says Abp. Benson, 'the question which to some was presenting itself was not when, or upon what terms, the lapsed should be re-admitted, but whether it was possible for the Church to remit such guilt' (Cyprian, 1897, p. 108).

The law of the early Church in record to appear to the context of the context in record to appear to the context of the context in record to appear to the context of the context in record to appear to the context of the context in record to appear to the context of the context in record to appear to the context of the context in the context of but it does not appear from the context that this means that they could restore an apostate to communion. In his treatise

The law of the early Church in regard to apostasy was very severe. The offence consisted not merely in deliberate desertion of the Church, but in any compliance with paganism, i.e. a man was not permitted to continue a member of the Church who was engaged in any trade ministering to idolatry, superstition, or licentiousness; nor was he allowed to conform to custom by offering sacrifice in an

official capacity.

When the days of persecution ceased, the severity of the canons was considerably modified, and apostates were re-admitted to communion after due penitence. The strictness of primitive Christianity is seen in the enactments of the Council of Elvira (Illiberis) in Spain, held during the persecution of Diocletian (A.D. 303). Apostasy to Judaism was much feared, especially in Spain and Gaul, and Christians were forbidden to attend Jewish banquets or to have any intimate dealing with Israelites. After the conversion of Constantine, apostasy became a civil offence punishable by law. Apostates to Judaism were liable to confiscation of property, and lost the right of making wills. Repentance was of no avail as regards the civil penalties incurred by apostasy, which included dismissal from all posts of dignity. 'Perditis, hoc est sacrum Baptismus profanantibus, nullo remedio penitentiæ (quæ solet aliis criminibus prodesse) succurritur' (Codex Theod. xvi. 7. 4-5).

succurritur' (Codex Theod. xvi. 7. 4-5).

In the time of Cyprian (a.D. 252) no hope whatever was extended to apostates. Even if they are slain for the name, they cannot be admitted to the peace of the Church (Cyp. Ep. Iv.). This is confirmed by the legislation of the Council of Elvira, which refuses deathbed communion to adults who have deliberately sacrificed (can. 1), to Christians holding hereditary priesthoods who have performed the duties (ii.), and to informers who have caused the death of a Christian (lxxiii.). At the Council of Anoyra, held a year after, the edict of Milan allows the worst class of apostates to be received back to the Church after a due penitence extending fover ten years (can. 9); and the Chumenical Council of Nicæa (a.D. 325) allows such to be admitted to communion after twelve years in the ranks of the penitents (can. 11). In 397 the Council of Carthage actually forbids apostates to be excluded for ever from the Church: 'Apostaticis conversis vel reversis ad Dominum gratia vel recon-

forbids apostates to be excluded for ever from the Unuron: 'Apostatiois conversis vel reversis ad Dominum gratia vel reconciliatio non negetur.'

See Bingham, Antiq. xvi.; Smith, DCA, art. 'Apostasy'; Dale, Synod of Elvira; Hefele, Conciliengeschichte, vol. i.

The name 'Apostate' has been specially applied

to the Emperor Julian, whose defection from Christianity threatened to undo the work of the conversion of Constantine. There is no absolute proof that Julian was ever baptized, though, as he held the office of a reader in his youth, it is, to say the least, highly probable. The Christianity he professed, moreover, must have been of an Arian type. The religion which he embraced after his 'apostasy' was a description of Neo-Platonism, which endeavoured to give a spiritual interpreta-tion to the myths of antiquity. He depressed the Church by every means in his power short of actual persecution; but nothing caused so much consternation or gave such serious offence as his edict forbidding Christians to teach the classics in the schools and universities of the Empire (Ep. 42).

Schools and universities of the Empire (LP. 42).

The main events of his life are as follows: Born in AD. 331, the son of Julius Constantius, brother of the great Constantine, he was saved in the massacre of the Imperial family in 387, and educated by his cousin Constantius. In 351 he began to show a disposition towards heathenism, but fear of Constantius compelled him to dissemble. He was Cæsar in Gaul from AD. 355 to 360, when the army of the province declared him Augustus. He was sole emperor from the death of Constantius, Nov. 3, 361. He was killed in a battle with the Persians, whose territory

he had invaded on June 26, 363, and a Christian was immediately elected imperator by the army in the person of Jovian. An interesting study of the character of Julian is to be found in Ibsen's Emperor and Galilæan.

3. In the Talmud much is naturally said about apostates from Judaism. Four different kinds are mentioned: Minim, Meshummadin, Masōrōth, and The Meshummadin are those who Epiqūrōsin. wilfully transgress part of the ceremonial law; the Masoroth are delators or political betrayers; the

Epiqūrōsin freethinkers.

The Minim demand more special attention. It is an open question whether they were Jewish Christians or a Gnostic sect in Judaism. At any rate they were heretics desiring to keep their place in the community of Israel, who had to be detected and cast out. Thus the famous R. Eliezer was arrested on a charge of Minuth, but acquitted. his sorrow for having been suspected he was consoled by the great R. Aqiba. The Minim are also spoken of in the Talmud as a separate sect, but at the same time they regarded themselves as being so little different from Jews that they could ask for, and obtain, a Jewish Rabbi of unimpeachable orthodoxy to be their teacher. A Gentile is never called a Min. The most famous of the Minim was Elisha ben-Abuyah, known also as Aher, 'the changed one.

changed one.'

See R. T. Herford, Christianity in Talmud and Midrash, 1903, who devotes the greater part of his valuable work to the discussions between the Rabbis and the Minim. Friedländer in his Der vorchristliche jüdische Gnosticismus maintains that the Minim were Gnostics of the Ophite sect. (The passage mentioned as enumerating the different classes of apostates destined for Gehinnom is Sanh. xiii. 45: 'The Minim and the apostates and the betrayers and Epiquirösin, and those who have lied concerning the Torah, and those who depart from the ways of the congregation, and those who have lied concerning the Resurrection of the dead, and every one who has sinned and caused the multitude to sin,' etc.; see also Deutsch in JE i. 665 f.; Kohler and Gottheil, 4D. ii. 12–18; Broydé, 4b. viii. 594 f.

and Gottheil, ib. ii. 12-18; Broydé, ib. viii. 594 f.

4. In the Middle Ages apostasy and heresy were punished with the utmost severity, but it is scarcely possible to conceive of the open abandonment of Christianity where the jurisdiction of the Church was all-powerful. We have, however, a curious example of a deacon in England embracing Judaism in order to marry a Jewess, and being burned at Oxford on 17th April 1222, of course after degradation from his clerical office. This is one of the few cases of the execution of a heretic in England before A.D. 1401; and it seems that the Sheriff of Oxfordshire was blamed for his undue severity in so speedily executing this criminous clerk. In Spain also, under Alfonso X. (the Wise), A.D. 1250, conversion of a Christian to Judaism was made a capital crime; the influence of the Jewish race in that country being especially feared from the earliest times.

For the execution of the deacon see Maitland, Canon Law in the Church of England, ch. vi., 'The Deacon and the Jewess.' The destruction of the Order of the Knights Templar by Philip the Fair and his accomplice

Pope Clement v. may be mentioned as an example of the charge of apostasy being used by the Inquisition for a political purpose. The Order, which in 1119 consisted of nine knights devoted to the pious task of keeping the roads to Jerusalem clear of robbers, in the 13th cent. became one of the wealthiest monastic bodies in Christendom, and a military force of the most formidable description. With the fall of Acre in A.D. 1291 the Templars had ceased their activity in the Holy Land, and in 1307 Philip the Fair conceived the idea of embroiling them with the Church, in order to procure the abolition of the Order and the confiscation of their immense wealth. The profound secrecy which enveloped the meetings and even the religious services of the Order gave their enemies the requisite handle to bring charges of the foulest immorality and anostasy against them. The foulest immorality and apostasy against them.

Templars were accused of making every candidate for admission to their body apostatize by thrice renouncing Christ and spitting upon the crucifix. Torture was freely employed to extert confessions, but more the whole the prideries obtained to the confessions, but upon the whole the evidence obtained was of the most absurd and contradictory character, and the majority of those examined persisted in the innocency of the Order; and though the processes went on simultaneously throughout Europe and the Levant, no seriously incriminating evidence seems to have been obtained except in France. The cruelties which accompanied the suppression culminated in the burning of the Grand Master Du Molay and his companion on the Ile des Juifs on the Seine, 19th March 1314

on the Seine, 19th March 1314.

Lea, History of the Inquisition, vol. iii. pp. 289-384; Milman, Latin Christianity, bk. xii. ch. 1. Hallam, Middle Ages, vol. i. p. 137, is inclined to credit the charges against the Templars on account of the publication of Count Hammer Purgstell's essay, Mines de l'Orient exploitées (1818), charging the Templars with apostasy to a sort of Ophite Gnosticism. The subject is discussed by Castle in the Transactions of the Quatuor Coronati Lodge, vol. xix. pt. 3.

The Spanish Inquisition originated for the purpose of suppressing not heresy, but apostasy. The

maranos, or Jewish converts, were suspected of practising their ancestral religion in secret, though outwardly conforming to Catholicism. It was to root out this crypto-Judaism that the tremendous machinery of the Holy Office in Spain was devised, and the sufferers under Torquemada were those who had relapsed to Judaism.

5. There have been many examples of Christians among the Turks and Moors abandoning their among the Turks and Moors abandoning their faith in order to enjoy the privileges reserved for Muhammadans; and the renegado often enjoyed high official positions in Turkey. Naturally such persons abandoned their nationality with their religion. Apostasy from Christianity to Judaism is extremely rare, as the Jews themselves do not proceed the recent of procedures. encourage the reception of proselytes. One notable example of such apostasy is that of the fanatical and unfortunate Lord George Gordon, who was the cause of the famous No Popery riots in 1780. In 1788, after he had been found guilty of a libel on Marie Antoinette, he fled to Amsterdam, whence he was expelled, and on his return to England he made a public profession of Judaism. He was imprisoned in Newgate in the following year, and died in 1793, conforming in all respects to the ceremonies of his new religion.

In recent times there have been cases of Europeans and Americans of Christian parentage embracing Muhammadanism and Buddhism, and conforming to the practices of these religions. In France it has been asserted that Diabolisme is practised as a religion, of course involving a distinct apostasy; but the evidence of such persons as Leo Taxil, who declared that a church existed in France for the worship of Satan, seems to have been discredited by his subsequent disavowals, and Satanism (q.v.) seems to be little more than the revival of some of the follies of the Black Art of the Middle F. J. FOAKES-JACKSON.

APOSTASY (Muhammadan).—'He that adopts any other religion shall be put to death.' Such, according to the sacred Muslim tradition, was the command of the Prophet; and on this basis all Muslim jurists are unanimous in deciding that apostasy from Islām (Arab. irtidād) must be punished by death. The Zāhirites, who, as is well known adhere as far as possible to the outward known, adhere as far as possible to the outward meaning (Arab. zāhir) of the sacred texts, are even of opinion that the apostate (Arab. murtadd) must be put to death immediately, that is to say, without initiating any inquiry as to whether he might possibly be converted to Islam again, because the words of the Prophet present no indi-cation of any delay. This was also the view held law permits to him, then such conduct is a clear

by Mu'adh ibn Jabal, Muhammad's governor of Yaman. According to a well-known tradition, this official came to Abu Musa, whom he found engaged in questioning a prisoner. On hearing that this man had apostatized from Islam, Mu'adh refused to take a seat until the apostate had been put to death, saying: 'Such was the decision of Allah and his Apostle.'

But, according to the opinion of the majority of jurists, it is desirable (according to others, even a duty) before proceeding to carry out the punishment by death, to make an effort to bring the apostate to repentance (Arab. tawba). If such a one declares that he turns again to Islam, then the inquisitors are to be satisfied with the response and let him go away in peace. If, on the contrary, he refuses to return to Islam, they are bound, according to many, to allow him a delay of three days (according to others, even longer) as a period for reflexion. He is still retained in prison and may within this interval go back upon his error. In support of this practice, reference is made to the example of the Khalif Omar. When he learned that a man of the troops of Abū Mūsā during the siege of Tustar, in the year 17, had been put to death on account of apostasy from Islām, he was extremely indignant at the deed. 'Why,' he inquired, 'did you not keep him in prison for three days and deal with him in order to bring him to repentance?' And all the companions of the Prophet who were present showed by their silence that they agreed with him. The Hanafites are inclined to think that the

punishment of death on account of apostasy is pullishment of death on account or apostasy is applicable only to men. According to them, women are only to be kept in prison until they repent, because the Prophet has forbidden the putting to death of unbelieving women. According to others, this prohibition has reference only to the killing of the wives of unbelievers in the Holy War. A similar difference of opinion exists with regard to the punishment of apostates while yet in their minority. These, according to some lawyers, may be put to death immediately, accord-

ing to others only after attaining their majority.

The punishment by death is to be carried into execution only by the sword. From the sacred sources of tradition, it is known that the Khalif Alī caused the adherents of Abd Allāh ibn Sabā to be burnt to death because they proclaimed heretical doctrines and held that 'Ali himself was God. 'Alī regarded this conduct as tantamount to apostasy from Islām. But when Ibn 'Abbās learned the occurrence, he said: 'I should indeed have put them to death, but certainly not burned them, for the Prophet has forbidden that any one shall be punished by fire, because this mode of punishment belongs exclusively to Allāh.' On this account, the opinion prevails that the infliction of death by the stake is prohibited in Islām. But other modes of torturing to death are also expressly repudiated by Muhammadan jurists.

Various other legal consequences of apostasy from Islām are mentioned in detail in the Muslim law-books. For example, the marriage of the apostate is thereby legally annulled. So also he loses the reward of all good works which he may previously have performed, and must make everlasting atonement for his sin in hell. His corpse is not to be interred among the graves of other

Muslims, etc.

Apostasy does not necessarily consist only in an express declaration that one is no longer a Muslim, but may also at times be deduced from various other circumstances. If, for example, a Muslim declares to be lawful what the canonical law forbids to him, or, on the contrary, unlawful what the token of unbelief. In like manner this is so, if, at any time, a Muslim worships the sun or the stars or idols, or declares the Prophet to be a liar, or makes the existence of Allah a matter of doubt.

According to the view of the Shāfi ites, it is not only apostasy from Islam that is to be punished with death, but also apostasy from other religions. whenever this is not accompanied by conversion to Islām. A Jew who becomes a Christian will thus have to be put to death, according to the Shafi ites, because the Prophet has commanded in general that every one shall be put to death 'who adopts

any other religion.

any other religion.'

## APOSTLES' CREED.—See Creeds.

APOSTOLIC AGE.—I. Chronological limits. The phrase is commonly used for the period in the history of the Church extending from the death of Christ to the end of the 1st cent., when, according to ancient tradition, John, the last of the twelve

ing to ancient tradition, John, the last of the twelve Apostles, passed away.

If the term 'apostle' were taken in the broader sense in which it was commonly used in the earliest days, the Apostolic age might be regarded as extending well on into the 2nd cent., when there were still many travelling missionaries bearing the name 'apostles' (see Didache, 11). But the term soon came to be applied exclusively to the Twelve and Faul, and has been used in this sense ever since. It is true that no sharp line of demarcation can be drawn between the late 1st and early 2nd centuries; and even assuming that John lived to the time of Trajan, which is by no means certain, his death had no special significance for the history of the Church. As a consequence, some historians have made the Apostolic age end with the destruction of Jerusalem in A.D. 70, or with the death of Paul. But to give such an emphasis to the former event is to overestimate its significance for the history of the Christian Church; and to make Paul's death the close of the Apostolic age is to imply that he was the only Apostle, when as a matter of fact there were others before he came upon the scene, and after he had passed away; for Peter himself, to say nothing of John, very likely outlived him by half a dozen years (see McGiffert, Apostolic Age, p. 592). If the designation is to be retained at all, it is better, then, to use it in the traditional sense for the Apostolic age are meagre, and yet on the whole

Apostolic age are meagre, and yet on the whole more satisfactory than for the generation immediately succeeding. Most important of all are the Epistles of Paul, which are very rich in historical material. The Book of Acts is also indispensable, based as it is in considerable part upon older sources, and containing a great deal of information not to be found elsewhere. But, like any other historical work written by one not himself an eyewitness of the events recorded, it has to be used

with caution.

with caution.

Into the question of the authorship and sources of the Book of Acts it is impossible to enter here (see the special studies by Sorof, Die Entstehung der Apostelgeschichte, 1890; Feine, Bine vorkamonische Ueberlieferung des Lukas in Evangund Apostelgesch. 1891; Spitta, Die Apostelgesch. ihre Quellen und deren gesch. Werth, 1891; Clemen, Die Chron. der Paul. Briefe, 1898, p. 97ff., and in Th. Stud. und Krit. 1895; I. Weiss in Th. Stud. und Krit. 1895; I. Weiss in Th. Stud. und Krit. 1895, 190; Jingst, Die Quellen der Apostelgesch. 1895; Hillgenfeld in Zeitsch. für Wiss. Theol. 1896, 1896; and the summary in Moffatt, The Historical New Testament, 1901, p. 655 ff.). In a recent work entitled Lukas der Arzi (1906), Harnack maintains, in opposition to the prevalent critical opinion, that Luke, 'the beloved physician,' mentioned by Paul in Col 414 (2 Ti 411, Philem 24), was the author of the book, including the famous 'We' passages (1610-17 205-15 211-18 271-2816). Harnack has made out a strong, though, in the present writer's opinion, not a conclusive case for the traditional view; but even if his contention were accepted, it would not particularly affect the historical value of the Book of Acts, for those who deny the identity of the author of the 'We' passages; and, as Harnack himself admits, the author of the book as a whole recognize the general trustworthiness of the 'We' passages; and, as Harnack himself admits, the author was probably an eye-witness only as far as they extend, and was dependent

upon others for his information in other parts of his book, where upon others for his information in other parts of his book, where his acquaintance with Paul by no means guarantees his historic accuracy (see Schürer's review of Harnack's book in *Theol. Lit. Zeitung*, 1906, p. 406 ff., and Harnack's reply, p. 466 ff.). In any case, whoever the author may have been, his book must be controlled, and at many points corrected, by the Epistles of Paul.

In addition, we have the Gospels, which reflect in part the conditions of the age when they were written, the Epistle to the Hebrews, First Peter, the Pastorals, the Apocalypse, Clement's Epistle to the Corinthians, the three Johannine Epistles, and James and Jude. Other writings, such as the Didache, Barnabas, and the Epistles of Ignatius, throw light back upon the late first century; frag-ments of Papias and Hegesippus give us some information; and passing references occur in certain non-Christian writers, e.g. Tacitus and Suetonius.
3. Outline of the history.—The age falls into three periods: pre-Pauline, Pauline, and post-Pauline.
(a) Pre-Pauline period.—Of this period we have

an idealized picture in the early chapters of the Book of Acts; but those chapters contain also some trustworthy information drawn from older documents, and perhaps in part from current tradi-tion; and the Epistles of Paul, though chiefly reflecting later conditions, throw some light back upon earlier days. We are thus enabled to control the account in Acts, and to trace the course of

events, at least in a general way.

The centre of interest during the period was Jerusalem. Here the disciples who had been scattered at the time of Jesus' death gathered again, when convinced of His resurrection and glorification, to carry on the work which they believed He had entrusted to them, and to prepare their countrymen for the establishment of the their countrymen for the establishment of the Kingdom which was to take place upon His return. They continued to live as Jews, and apparently had no thought of breaking with the traditions or customs of their people. Christianity meant simply the belief that Jesus was the promised Messiah, who was soon to return to inaugurate the Messianic Kingdom. The benefits of this Kingdom they believed, as devoutly as any of their contemporaries, were to be enjoyed by Jews alone, native or proselyte. That the Jewish law was to be abrogated, and Christianity to become a new and independent religion, apparently occurred to none of them. They were devout Jews, and their Christian faith did not in any way interfere with the practice of the religion of their fathers. But they were distinguished from their neighbours by their belief that Jesus was the Messiah and would soon return to do Messiah's work; and this conviction dominated their lives. They were Messianic be-lievers in a sense true of none of their fellow-countrymen, and were thus bound very closely together. At the same time, they did not at first form an organized sect, and they had apparently no synagogue of their own. Their Christian life found expression rather in familiar domestic intercourse, and did not interfere with or become a substitute for their accustomed religious life in temple and synagogue. In the strict sense, we cannot speak of a Christian Church at this time in Jerusalem. The Christians all belonged to the one Jewish Church, and knew no other.

The early disciples felt themselves to be citizens of the future Messianic Kingdom, and their interest centred there rather than in the present. As a consequence, they were not in any sense social reformers. The community of goods, of which we have an account in Ac 2445. 4855, represented no new social ideal, but was simply an expression of the feeling of brotherhood which prevailed within the little Messianic circle, and of an indifference to the goods of the present world entirely natural in men who expected its speedy displacement by a new and more glorious order of things. There was nothing

in Christianity as understood by them to necessitate a break with existing Judaism. In their zeal for the new faith, and in their efforts to win others to it, they created disturbances, and so came into conflict with the authorities (Ac 4 and 5). Such conflicts were of little significance; but the attack upon Stephen, and the persecution which followed, were a different matter, being due to the fear that the new faith threatened the stability of Jewish institutions,—a fear which the Christians themselves did not at all share (see McGiffert, p. 84 ff.). The trouble which arose at this time seems to have been only temporary. But it was impossible for non-Christian Judaism to regard the growing Christian sect with friendly eyes. The Christians, in fact, had to endure the steadily increasing hatred of their countrymen; and their flight from Jerusalem shortly before the siege of 70 A.D., and their refusal to take part in the Bar Cochba rebellion in 132 ff., only served to make the break complete and permanent. Though hated and repudiated by their countrymen, they still clung to their ancestral law and custom, and lived for the most part in isolation from the rest of the Christian Church, being known commonly as Ebionites or Nazarenes. Finally, after some centuries, Jewish Christianity entirely disappeared. The future was not with it, but with another form of Christianity altogether, of which the Apostle Paul was the greatest champion.

(b) Pauline period.—For this period our sources are Paul's own Epistles and the Book of Acts. The account in the latter is fuller and more trustworthy than for the earlier period. The author's information, however, was not always accurate and adequate even here, and his account has to be used with caution, and corrected or supplemented at many points by the Epistles, which are a primary source of the first reak.\*

source of the first rank.\*

The second period is distinguished from the first by a change of leaders, of scene, and of principles. In place of personal disciples of Jesus, a new figure came to the front who had never known Him; in place of Palestine, the Roman empire at large was now the scene of activity; and instead of a mere form of Judaism, Christianity became a new and

independent religion.

The conversion of Paul has always been recognized as an epochal event in the history of the Church. To him it was chiefly due that Christianity became a factor of importance in the life of the great Roman empire, and ultimately a world-wide religion. It is true that even before his Christian activity began, the new faith had been carried beyond Palestine and had made converts among the Gentiles,—he was not the first and not the only Apostle to the heathen,—but it was he who gave permanence and stability to the work, and thus became the real founder of the world-Church. Under his leadership Jewish propagandism became Christian propagandism, and the influence of Judaism in the world at large was made to promote the spread of a faith which became its worst foe. No wonder that Paul the Christian was hated by so many of his countrymen both within and without the Christian circle. It was he who made Jewish propagandism ineffective, by substituting for it a propagandism which conserved all its attractive features with none of its limitations. Paul was himself a strict Jew, zealous for the traditions of the fathers; but he was also a citizen of the Roman empire, born and bred in the midst of a Greek civilization to which Judaism meant little or nothing. It was inevitable that he

should be interested in the spread of Judaism in the world at large, and that, when he became a Christian, the relation of the new faith to the life of the Roman empire should occupy his thought. But it was out of his religious experience before and after his conversion that there was born the principle which revolutionized Christianity and made it an independent religion. His conversion to Christianity was not the mere result of the conviction that Jesus was the Messiah, making of him simply another Messianic believer. It was the fruit rather of a moral struggle of peculiar intensity, out of which he emerged victorious only because he discovered in Christ a liberator from the bondage of law, and the creator of a new life of moral liberty. His moral struggle was not the effect of his conversion, but an antecedent of it, and his Christianity was simply the answer to his moral need. In it, therefore, there was a universality quite foreign to the Christianity of the early Jewish disciples. To them it had meaning only as a Jewish thing; it was the realization of their national Messianic hope. But to Paul it was the solution of a universal moral problem and the answer to a universal moral need. Wherever there was the desire for righteousness and the consciousness of failure in its pursuit, Christianity had place, and so it was just as much for Gentiles had place, and so it was just as much for Geneues as for Jews. Messianic hopes and ideals had little to do with it; it was simply a new moral principle needed by all; for all, Paul believed, were under the bondage of sin. Thinking thus, it was impossible for him to limit Christian propagandism in the way the earlier disciples did. To them Christian are cardinally lead if weder the tianity was exclusively Jewish; and if, under the pressure of events, they were constrained to admit that a Gentile might conceivably become a Christian without first becoming a Jew (witness, for instance, the case of Cornelius), they believed that this was provisional only, and would lead ultimately to the full acceptance of Judaism. If Christianity, then, reached the Gentiles at all through them, it could do so only under narrow limitations and burdensome restrictions. But the gospel of Paul, proclaiming, as it did, freedom from sin through the prospection of a new moral power, the spirit of the possession of a new moral power—the spirit of Christ—could be preached on equal terms and with equal effectiveness to men of all races. Paul's attitude towards the Jewish law was but an incident of his general position; but inasmuch as that Law constituted the chief distinction between Jews and Gentiles, and in its observance strict Jews saw the sum and substance of all righteousness, his attitude toward it was of immense significance. The Jewish law, he believed, like all law, was given by God in consequence of sin. Where the spirit of holiness has control no law is needed, any more than God Himself needs law to keep Him holy. Law is for the purpose of controlling a person and preventing him from living out his natural character, and therefore is needed only where the character is bad. When a man is freed from the dominion of sin by the possession of the spirit of Christ, he is freed also from the dominion of law; his character is holy and needs no law. Filled with the spirit of Christ, he cannot do otherwise than live in that spirit, which is the spirit of love, of purity, and of peace. Paul himself might continue to observe the precepts of the fathers, and on occasion he might even urge his converts to do the same; but on his own principles he could not insist on such observance, and the moment it was insisted on by others as essential, he must resist them and stand for his fundamental principle of Christian liberty. This might not have affected practical conduct in the least had Christianity been confined to the Jews, whose holiness expressed itself naturally in the observance of the Law, and

<sup>\*</sup>The contention of van Manen and others of the Dutch school, that the Book of Acts is more trustworthy than the Epistles, is not sound, and has commended itself to few scholars.

to whom its ceremonial precepts were as sacred as its moral. But when Gentiles became Christians, it was another matter. To them much of the Jewish law seemed unnecessary and quite without relation to holy living. The result was a serious crisis, to holy living. The result was a serious crisis, much more serious than had been precipitated by the case of Cornelius. The matter was considered at the conference in Jerusalem described in Ac 15 and Gal 2, and a compromise was reached which provided for the recognition of two forms of Christianity, a Jewish and a Gentile. The latter was free from the obligation to observe the Jewish law, the former was still bound by it. The compromise might have answered as a practical expedient had the two forms remained entirely isolated, but it was not long feasible in communities where there were both Jewish and Gentile Christians. Unless there was to be schism within the Christian brotherhood itself, all must live as Jews, or all the Jews must modify, at least in part, the strictness of Jewish practice which prevented familiar inter-course with the Gentiles. Where Paul's principles course with the Gentiles. Where Paul's principles prevailed, only the latter course could be adopted. The former would have meant the subjection of his Gentile converts to the bondage of a law from which on his own principles they were completely free, while the latter meant only a liberty for Jewish Christians which on the same principles was equally theirs. Ultimately, as the Gentile wing of the Church grew, the principle of liberty thus asserted resulted in complete emancipation from Jewish ceremonial—an emancipation resisted by many stricter spirits in the Church, whom Paul calls Judaizers, but promoted by his powerful influence, and also by the wide-spread existence in the Roman world of alliberalized Judaism already largely indifferent to ceremonial and interested only in the more spiritual and ethical features of the ancient faith (cf. Schürer,  $GJV^3$  iii.). Into the heritage of the older Jewish propagandism the new Pauline Christianity entered, offering the world all that and more than Judaism had offered it, in a form stripped of all its offensive features, and claiming to be not merely a modified Gentile phase of the Jewish faith, but a religion as truly Gentile as Jewish. It is no wonder that it speedily became a formidable rival of Judaism, and ultimately completely outstripped the latter in the race.

outstripped the latter in the race.

It is not necessary to trace here the Christian activity of Paul, which covered a period of nearly 25 years, from the beginning of his work in Antioch until his execution in Rome. He was the greatest Christian missionary of the period, and the only one about whose activity we have any extended knowledge. The fact that some of his Epistles have been preserved to us, and that the second half of the Book of Acts is devoted exclusively to his work, enables us to follow his career with considerable accuracy. But our meagre knowledge about others is no reason to suppose that there were no others doing similar work in different parts of the world, and even in those parts where he himself was active. Considerable districts of western Asia Minor, Cyprus, Macedonia, and Achaia seem to have owed their Christianity chiefly or in the first instance to him, but Rome was evangelized independently. At his death Christianity had already entered every province bordering upon the Mediterranean from Syria to Italy, with the exception of Thrace, and had penetrated into the interior of Asia Minor as far as Galatia.

Galatia.

His death at the close of his two years' imprisonment in Rome was due not so much to the fact that he was a Christian, as to his implication in successive disturbances in the East, leading the authorities to regard him as a dangerous character. It was this that caused his imprisonment in Casarea, and his execution followed his conviction before the Emperor upon the same charge (see McGiffert, p. 419 ff.). His conviction and execution therefore did not mean an attack upon Christianity by the Imperial government, and, so far as we can learn, did not in any way affect the status of Christianity in the Empire. With the death of Paul passed away the greatest of the Apostles, and the one who did most for the spread of Christianity in the Roman world. To him the Christian Church of history is chiefly due.

(c) Post-Pauline period.—For this our information is less abundant than for the previous period. The Book of Acts does not carry us beyond the Roman imprisonment of Paul, though, like the

Gospels, it reflects in some degree the ideas of the age when it was produced. The Epistle to the Hebrews, First Peter, the Johannine Epistles, the Apocalypse, First Clement, and probably the Pastorals and the Epistles of James and Jude, also belong to this time, and throw some light on conditions in Rome, Asia Minor, and Corinth. We get glimpses of persecution here and there, and discover traces of the development of organization, of the diminishing spontaneity of religious life, and of the stereotyping of moral principle and practice. But the picture is vague and the details very few. No great figure dominates the history, as was the case while Paul was on the scene. It as was the case while Faul was on the scene. It is a period of rapid growth and consolidation, and yet the actors in the history and the course of events are almost unknown to us. The persecution of Nero, to which Peter probably fell a victim, was caused apparently by the accident that the Christians were brought to his notice as convenient scapegoats upon whom to throw the blame for the conflagration of Rome (Tac. Ann. xv. 44). While confined to the capital, this persecution brought the Christians into unpleasant notoriety, and gave them the reputation of being dangerous characters, hostile to the public weal. Under the morose hostile to the public weal. Under the morose and suspicious Domitian both Christians and Jews suffered, because of the Emperor's doubts as to their loyalty. The First Epistle of Peter and the Apocalypse testify to conditions during this reign; and the Epistle to the Hebrews, and the Book of Acts with its apologetic interest, are best read in the light of these conditions. The Christians were the evidently coming increasingly into conflict with the authorities, at any rate in certain quarters; and the letter of Pliny to Trajan, dating from 112, shows that already before he became governor of Bithynia the mere profession of Christianity had come to be generally regarded as a crime, though there is no evidence that any law had been passed upon the subject.

The most notable phenomenon of the period is the Johannine literature, and the existence of a Johannine school in Ephesus to which it testifies. That John the son of Zebedee was not its author is regarded by us as certain. We think it even doubtful whether he was ever in Ephesus (see Harnack's Chronologie der altchristlichen Litteratur, personality of the name of John is beyond question, and the school which gathered about him bears a very pronounced type of its own, Pauline in its basal principles but highly developed in an original way. The Epistle to the Hebrews, with its large infusion of Philonism, is also an interesting and instructive document, illustrating, in our ignorance of its author, the paucity of our information touching the leading characters of the day. So far as our evidence goes, Christianity during this period spread no further than it had before the death of Paul, except toward the east and north in Asia Minor, where it reached Cappadocia, Pontus, and Bithynia (1 P 11). The Apocalypse gives us the names of some churches in Asia Minor (Smyrna, Pergamum, Sardis, Philadelphia, and Thyatira) not mentioned in Paul's letters or the Book of Acts, and the Epistle to Titus shows that Christianity had already reached Crete. For Alexandria we have no direct evidence, but Christianity must have gone there early, in all probability long before the end of the 1st century. In general the scene of the history in this, as in the Pauline period, was the lands lying along the eastern and northern shores of the Mediterranean from Palestine to The close of the Apostolic age saw Christianity firmly established at least in Asia Minor, Greece, and Italy, and already well started on the conquest of the Roman world. The Christians

were an object of suspicion to the State, and were widely disliked by the populace, because of their lack of patriotism, their clannishness and exclusiveness, their hostility to prevailing religious beliefs and practices, their fanatical disregard of common worldly interests, and their puritanic denunciation of popular amusements and pastimes. They came chiefly from the lower grades of society, particularly the class of slaves and freedmen (another ground of offence against them in the opinion of many); but there were some among them of wealth and social standing (cf. Ph 4<sup>22</sup>, Ja 2<sup>2</sup> 4<sup>13</sup>; Eusebius, *HE* iii. 18). The movement was not ostensibly a social one, and yet it had social consequences because of its recognition of the moral and religious possibilities of the lowest, and its emphasis upon Christian brotherhood and equality. The Christians were still expecting the speedy return of Christ, involving the downfall of the great Roman empire and the end of the present age; and they had a profound belief in the elect character of the Church and its ultimate enjoyment of the blessings promised to believing Israel. They therefore found their life largely in the future. Their religious services had taken on a more or less stereotyped character, and their local societies or churches were already somewhat definitely organized. They were conscious of belonging to one great Church of Christ, and the feeling of unity between the most widely separated communities found constant expression. Their hopes and ideals were everywhere much the same, and they were in possession of many of the beliefs and principles which still control Christendom. The Church at large was not yet an organized institution, but Christianity

was already well started upon its historic career.

4. Development of theology.—The first disciples were not theologians, and did not concern themselves particularly with theological questions; but their conviction that Jesus was the Messiah led to a considerable modification of traditional beliefs, and became the starting-point in the development of a specifically Christian theology. Believing Jesus to be the Messiah, they were thrown into consternation by His untimely death, coming as it seemed while Messiah's work was still undone and the Kingdom not yet inaugurated. Their belief in His Messiahship could not have survived had it not been for the conviction that He was alive again, which speedily took possession of them. That conviction meant the rehabilitation of their old hopes. Jesus had risen in order to do Messiah's work, and if He did not at once 'restore the kingdom to Israel' (Ac 16),—if He were absent for a time,—it was only that Israel might be prepared by repentance and righteousness for the enjoyment of the blessings of the Kingdom which He would speedily return to establish. The supreme duty of His followers, then, was to proclaim His coming, and to prepare their countrymen for it. But their proclamation must seem absurd to those who did not believe Him to be the Messiah; and so the imperative need of the hour must be to convince their fellows of His Messiahship.

their fellows of His Messiahship.

Proof was tound in His wonderful works, and particularly in His resurrection (Ac 222a. 315 etc.), the disciples testimony to the latter fact being confirmed by an appeal to OT prophecy (22ax). To the seemingly fatal objection that He had, after all, done nothing that the Messiah was expected to do, and that His life and death were entirely unworthy of the Messiah's work when Israel was prepared, and that the Scripture foretold a twofold Messianic coming—the one in humility, involving suffering and death, and the other in glory, for the setting up of the Kingdom (31at). Here lay the nerve of the first disciples' preaching. In this novel assumption of a Second Coming is to be found the distinctive feature of primitive Christian theology. Their apologetic did not consist in showing that Jesus had already done Messiah's work; it did not involve any great modification or spiritualization of traditional ideas as to the character of that work and as to the nature of the Messianic Kingdom. It aimed only at proving that Jesus was really the

Messiah, and that He might therefore be trusted yet to do all that had been expected. In their emphasis upon the second coming they lost the full significance of the first, and failed to understand Jesus' complete transformation of braditional values. Why, contrary to common expectation, should there be a two-fold coming? Why had Jesus, being the Messiah, lived a life of humility and died upon the cross? That they found the situation foretold in the Scriptures seems to have satisfied them, though they very likely believed, as was not unnatural, and as Paul's words in 1 Co 154 perhaps suggest, that the first coming had its place in the promotion of repentance and righteousness, and so in the preparation of the people for the Kingdom, which could not appear until they had repented (Ac 3<sup>196</sup>). But this was a subordinate matter.

The question of Jesus' origin nature and rela-

The question of Jesus' origin, nature, and relation to God, which later became so important, was not raised among these early disciples. The common traditional idea of the Messiah as a man called and supernaturally endowed by God seems to have been accepted without question (Ac 2<sup>22.86</sup> 3<sup>18</sup> etc.). Nothing in Jesus' words or deeds or in the events of His life led them to modify the existing view. The one controlling belief was in the future coming, and the one imperative duty was preparation for the enjoyment of the blessings of the Kingdom then to be established.

With the conversion of Paul a new period opened

With the conversion of Paul a new period opened in the history of Christian theology. The central truth to him was not the second coming of Christ, but the transformation of man's nature here and now by the indwelling of the Divine. His theology was rooted in his religious experience. Out of that experience, interpreted in the light of contemporary Greek thought, was born a theory of redemption entirely unlike anything known to the early disciples. The theory involved the transformation of man's evil fleshly nature by the power of the Divine Spirit, Christ, with whom he is mystically united through faith. Thus united to Christ, a man dies with Him unto the flesh and rises with Him unto a new life in the Spirit, a life of holiness and freedom. Salvation is thus a present, not merely a future, reality; and the true spiritual resurrection of the Christian takes place now and here. The future resurrection will mean only the substitution for the present fleshly body, in which the Christian is compelled to dwell while on earth, of a new spiritual body fitted to the spiritual life which has already begun. Paul's theory involved also the Deity of Christ, through mystical union with whom a man's nature is transformed. It was in his doctrine of redemption that the historic belief in the Deity of Christ found its basis.

Into the details of Paul's thought we cannot enter further here. His system is found in all its essential features in the earliest of his extant writings—the Epistle to the Galatians—as well as in the latest (see McGiffert, ch. iii., also pp. 221 ff. and 378 ff.).

The peculiar type of thought of which Paul is the earliest representative appears also in a fragmentary way in the First Epistle of Peter; and the Fourth Gospel and First Epistle of John are dominated by it (so also the Epistles of Ignatius of the early 2nd century). Though Jesus is represented as speaking so extensively in the Fourth Gospel, it is the thought of the author rather than of Jesus Himself that appears both in Gospel and Epistle. In both we find the conception of the need of the transformation of man's nature by the indwelling of the Divine, and the belief in the Deity of Christ, through union with whom the transformation is effected. In spite of many divergencies between John and Paul, the general type of thought is the same, and the agreements far outweigh the differences.

In the other writings of the NT and in Clement's Epistle to the Corinthians an altogether different type of theology appears, more nearly akin to that of the early Jewish disciples. The influence of

Paul is hardly seen except in the common belief that the Jewish law has been abrogated, and that Christianity is open on equal terms to men of every race. To all these writers the gospel is the promise of salvation for those who keep the law of God. of salvation for those who keep the law of God. Salvation is a future thing, involving, in the thought of some, who retained the conception of the early Jewish disciples, a share in an earthly kingdom to be set up by Christ at His return and to endure for a season (Rev 20<sup>4ff.</sup>), and in the thought of all, the enjoyment of a blessed immortality in heaven. The principal condition of salvation is the keeping of God's commandments as revealed by Jesus Christ. This must be preceded by repentance, and repentance by faith,—which means. by Jesus Christ. This must be preceded by repentance, and repentance by faith,—which means, primarily, the conviction that God will reward those who keep, and punish those who break, His law,—without which faith no one will repent and obey God's commandments. The work of Jesus Christ was to bring to men a knowledge of God's law and its sanctions, and by Him they would be judged. He was thus at once Mediator of salvation and Judge of the world, and the titles 'Saviour' and 'Lord' were both commonly applied to Him. The exalted position which He occupied led Christians to think of Him as standing in a relation of peculiar intimacy with God, and in course of time peculiar intimacy with God, and in course of time to speculate about the origin and nature of that relationship. By some it was thought that His supernatural endowment began at the time of His baptism, when He was called by God and equipped for His work by the gift of the Spirit (cf. the accounts of the baptism in the Gospels, esp. the text given in Justin Martyr's Dialogue with Trypho, 103, and also the testimony of Justin, ib. 48, and Eusebius, HE v. 28. 3). By others He was given a supernatural origin, being represented as the child of the Holy Spirit (as in the Gospels of Matthew and Luke); while still others pushed His origin even further back, and thought of Him as a pre-existent Being who had come down from heaven pre-existent Being who had come down from heaven thus, e.g., the Pastoral Epistles, Hebrews, Apocalypse, and Clement). Where this general type of thought prevailed, an adequate motive for assuming the Deity of Christ, such as actuated Paul and those who felt the influence of his theory of and those who felt the influence of his theory of redemption, was lacking. Endowment with the Spirit at baptism, supernatural birth, pre-existence— —none of them involved Deity in the strict sense. It was not due to these Christians, but to Paul and his school, that the doctrine of the Deity of Christ finally became a part of historic Christian

theology.

The two types of thought that have been described developed for the most part independently of one another for some generations; but even in writings representing controllingly one or the other type, traces of the opposite tendency sometimes appear, and towards the close of the 2nd cent. the two were combined by Irenæus, bishop of Lyons, who made both man's obedience to the Divine law and the transformation of his nature through the infusion of Divine grace necessary to salvation, and so laid the foundations of historic Catholic theology. In the combination much of Paul's thought was lost; but the essential feature of it that human nature is evil and must be transformed by union with the Divine—was permanently con-served, and became the basis of the sacramental system, which we find, as a matter of fact, already

system, which we find, as a matter of tact, already foreshadowed in 1 Co 10 and in Jn 3 and 6.

5. Ethical ideals. — To the primitive Jewish disciples, Christianity was primarily not an ethical but a Messianic movement. It is true that they believed, with John the Baptist and with Jesus, that righteousness was a condition of sharing in the blessings of the coming Kingdom (cf. Ac 228). It was because of the unrighteousness of the It was because of the unrighteousness of the

people that Jesus had not established it during His earthly life, and not until there was general repentance would He return (Ac 3<sup>18t</sup>.). But they interpreted righteousness in the ordinary Jewish way as the keeping of the revealed Law of God in all its parts, and introduced little change in current ethical ideals. They saw in Christianity the promise of the speedy realization of the Messianic Kingdom and their own participation in its blessings, but apparently they did not feel the need of new ethical ideals and new moral power, and they did not think of looking to Christianity for them.

To Paul, as has already been seen, Christianity was an altogether different thing. He had experienced a serious moral crisis, and had passed perienced a serious moral crisis, and had passed through a severe moral struggle such as the earlier disciples had not known, and he found in Christianity, above all else, the satisfaction of his moral needs. Christianity, as he conceived it, was a religion offering to him and to every man a new moral power sufficient to transform him from an arrill the good height from a signature to a saint. His evil to a good being, from a sinner to a saint. His theory of redemption did not find general acceptance,—in fact it was commonly quite misunder-stood,—but his conviction that Christianity has to do fundamentally with release from sin and with the do fundamentally with release from sin and with the promotion of holiness speedily became wide-spread. From him, too, came the sharp contrast between 'fiesh' and 'spirit' which has dominated Christian thought ever since. Those who came after him were not, as a rule, so thoroughgoing as he at this point, but the idea of the Christian life as a moral conflict—the warring of two opposing principles, a fleshly and a spiritual—was common at an early date. Holiness thus came to be regarded as the principal mark of the Christian life, and sins of the flesh were esteemed the worst of all sins. Primitive Christian literature is full of exhortarimitive Unistian interactive is full of exhora-tions to purity, and of denunciations of unchastity and lust. The lenient view taken of sexual im-morality by the contemporary heathen world, and the close connexion between it and some of the religious cults of the day, doubtless had much to do with the frequent references to the subject in early Christian documents; but behind it all, even though seldom coming to expression, lay the Pauline contrast between flesh and spirit, and the conviction that impurity of the flesh drives away the Holy Spirit and makes His continued presence with the individual and with the Church impossible (cf., in addition to the many passages in Paul's own Epistles, He 10<sup>29</sup>, Jude <sup>19</sup>, and esp. the 2nd cent. writings—Hermas, *Mand.* v. and x., and 2 Clement 14). Paul himself was not an ascetic 2 Clement 14). Paul himself was not an ascetic in any strict sense; he even opposed asceticism in matters of food and drink, when it appeared in Rome and Colossæ (Ro 14 and Col 2); but hints of an ascetic tendency appear in his Epistles (Ro 8<sup>13</sup>, 1 Co 5<sup>5</sup> 9<sup>27</sup>), particularly in connexion with the relation of the sexes (cf. 1 Co 7). In fact, the subsequent development of Catholic asceticism was already foreshadowed, though the process was still in its incipiency, in the Apostolic age (see the pro-test against it in 1 Ti 4<sup>1st</sup>). See ASCETICISM (Chr.). Another controlling contrast in primitive Chris-

Another controlling contrast in primitive Christian ethics, due in part to the same cause, in part to the prevailing expectation of the speedy return of Christ, was that between this world and the next—promoting a spirit of unworldliness, or otherworldliness, which has remained a permanent feature of the Christian view of life. The disciples early came to regard themselves as a people called out of the midst of a corrupt generation and set apart as God's own; and to live as citizens of another world, to fix one's affections upon higher than earthly things, to be separate from this world and superior to its interests and concerns—this was and superior to its interests and concerns—this was

regarded as the truly Christian attitude (cf., e.g., 2 Co 6<sup>17</sup>, Gal 6<sup>14</sup>, Ph 3<sup>20</sup>, Col 3<sup>2</sup>, Ja 4<sup>4</sup>, 1 Jn 2<sup>15</sup>; and also the striking passage in the 2nd cent. Epistle to Diognetus, 5 ff.). Not harmony with one's environment, as in classic Greek ethics, but revolt against it, and the carrying on of a life entirely detached from it—this was the Christian ideal already in the Apostolic age. And this spirit worked together with the controlling emphasis upon fleshly purity to promote asceticism, and ultimately, though not yet in the Apostolic age, its natural fruit—monasticism (cf. the prophetic remark of Paul in 1 Co 5<sup>10</sup>).

The sharp contrast between the two worlds, and the recognition of the present world as evil, did not result in a desire to change existing conditions; no social revolution was contemplated. The division of society into rich and poor, master and slave, was treated as normal. The effort was made to introduce Christian principles into all the relations of life, one happened to belong was not

The sharp contrast between the two worlds, and the recognition of the present world as evil, did not result in a desire to change existing conditions; no social revolution was contemplated. The division of society into rich and poor, master and slave, was treated as normal. The effort was made to introduce Christian principles into all the relations of life, but the desire to escape from the class to which one happened to belong was not encouraged (cf. 1 Co 7<sup>2007.</sup>). There is frequent emphasis in the writings of the age upon one's common duties as father, husband, wife, child, servant (Eph 5, Col 3, 1 P 2, 1 Ti 6, Tit 2), and even occasionally as citizen (Ro 13<sup>1.7</sup>, 1 P 2<sup>13.17</sup>, Tit 3<sup>3</sup>, 1 Clement 60. 61). However evil the present world may be, the Christian is to walk in such a way as to give no just ground of offence to outsiders, is to show proper respect to all men, and to live honourably, quietly, peaceably, and blamelessly with every one (Ro 12<sup>1.72</sup>, 13<sup>7</sup>, Ph 2<sup>15</sup>,

The ideal of social service and the desire to promote the spirit of brotherhood in the world at large had little place among the early Christians. Rather to gather out of the world a company of holy men, heirs of the promised Kingdom—this was their great aim (cf. the Eucharistic prayers in the early 2nd cent. Didache, 9. 10). It is true that love is frequently insisted upon in the writings of the Apostolic age, but it commonly takes the form of love for the Christian brethren, which is to be manifested in charity, hospitality, sympathy, concord, for bearance, tender-heartedness, forgiveness, humility, etc. And even when it is not so limited, it usually appears as only one of a number of virtues (cf. 1 Ti 2½, 4½, 6½, 21 12½, 3½, Ja 1²7, 28). The place of supremacy given to it by Christ and after Him by Paul is accorded to it by no other writers of the age. (The striking passage in 1 Clement 49 ff. is hardly sufficient to justify us in making an exception of the author). But the influence of Jesus is seen nevertheless in the general emphasis—common to most of our sources—upon the virtues of gentleness, peaceableness, forbearance, and humility. Nothing is said of the duty of insisting upon one's rights and demanding proper recognition from others. Self-abnegation in one's relations with one's fellows, rather than self-assertion, is the recognized ideal.

in one's relations with one's fellows, rather than self-assertion, is the recognized ideal.

But the contrast with the prevailing ethical sentiment of the Roman world was not confined to a difference in ideals. The Christians recognized the moral law, which it was their duty to obey, as given directly by revelation from God, the revelation involving also an announcement of the future sanctions attending obedience and disobedience. There was thus a definiteness and compulsion about Christian ethics not commonly found elsewhere. Emphasis upon the hope of reward and the fear of punishment, as grounds of moral conduct, is very common in our sources (e.g. 1 Co 6<sup>9</sup> 9<sup>25</sup> 15<sup>29</sup>, 2 Co 9<sup>6</sup>, Gal 5<sup>21</sup> 6<sup>9</sup>, Col 1<sup>5</sup>, 1 P 3<sup>9</sup>, He 2<sup>2</sup> 10<sup>25</sup>, 1 Ti 6<sup>19</sup>). But higher motives are also frequently urged: to walk worthily of one's calling as God's elect, to please and glorify God,

to be like Christ, to be true to one's opportunities and responsibilities, to help, not harm, one's brethren, to promote the good name of Christianity in the world at large (cf. 1 Co 620, Ph 215, Col 33, 1 Th 212 41, 1 P 115 23.12 41, 1 Clement 30). It meant much also that the early Christians believed that Christianity was for all men, low as well as high, and that they recognized the moral possibilities even of the meanest. Christianity, indeed, supplied a new and mighty moral enthusiasm for the masses of the people, and that in spite of the fact that already the ominous distinction between two grades of morality, one for the common man and the other for the spiritual elite, was beginning to appear (cf. 1 Co 7 and Didache, 6).

So far as moral performance was concerned, it evidently left much to be desired. Of this the repeated exhortations and warnings in the Christian literature of the period are sufficient evidence, and we have direct record of some striking examples of immorality (e.g. Ac 5, 1 Co 5.11, Jude 4c). It is worthy of notice, too, that the Christians bore a bad moral reputation among their pagan neighbours, due largely, no doubt, to prejudice, but also in part well founded (cf. 1 Th 4<sup>11</sup>, 2 Th 3<sup>11</sup>, 1 P 2<sup>12</sup>). But in spite of all this, it is clear that Christianity was a controllingly moral movement, and that it involved a real moral improvement on the part of many of its adherents. The very insistence upon the matter in our sources shows that there was a strenuous ethical ideal, and that the Christians themselves recognized its binding character; and we have abundant testimony to the effects of Christianity upon the lives of its converts (see not only the writings of the Christians themselves, but also the tacit witness of Pliny's letter to Trajan). In general, it may be said that the common notion of the Christians was that the aim of Christianity is to make men purer and better here, in order to a blessed immortality hereafter.

6. Development of organization.—In primitive

6. Development of organization.—In primitive Jewish Christianity no organization was needed in the beginning, for the disciples regarded themselves simply as heralds of the coming Kingdom. It might perhaps have been expected that they would form in Jerusalem a separate synagogue, but this they apparently did not do, and the failure to do it shows how little they regarded themselves as a distinct sect. Their desire was to convince their fellow-countrymen of Jesus' Messiahship, and so win Him disciples, rather than to form a religious cult or society of their own. Certain Christians, particularly James the brother of Jesus, and others who had stood in relations of intimacy with Him, such as the Twelve, naturally had large influence in the Jerusalem circle, but there is no sign that this involved any official position or appointment. Some sort of an organization, however, the disciples had at an early date. As a brotherhood they felt it their duty to care for the necessities of the needy among them, and so a committee was appointed for the distribution of aid (Ac 6). Beyond this we do not know that the early Jerusalem Christians went; but ultimately, after the final break with their unbelieving countrymen, the Jewish Churches were organized as independent institutions, though the exact form which the organization took is unknown

In the non-Jewish world conditions were different. Here, too, the expectation of the speedy consummation made any careful organization seem unnecessary, and the conviction of the presence of the Spirit made human officials seem superfluous. But the founding of churches began at an early date; and in them, although for some time leadership devolved naturally upon men specially endowed

THE REPORT OF THE PROPERTY OF

by the Spirit, such as apostles, prophets, and teachers, gradually the necessities of the case led to a more formal organization, substitutes being required for the inspired men who might not always be present. Two classes of officials—bishops and their assistants, the deacons—existed in some churches before the end of the Apostolic age; but the development of the threefold ministry—bishop, presbyter, and deacon—belongs to the 2nd century.

7. Religious services.—The early Jerusalem disciples were devout Jews, and continued to observe the religious practices and to attend the additional practices and the additional practices are also as a superior and the additional practices are also as a superior and the additional practices.

the religious practices and to attend the religious services of their people. Their common religious life as Christians expressed itself not so much in formal services as in informal gatherings from house to house, where their community of feeling as disciples of Jesus and heirs of the approaching Kingdom found natural and familiar expression. Concerning the subsequent development within the Jewish Christian Churches we have no in-

formation.

In the Gentile world all seems at first to have been equally informal; but the attitude of hostility towards the religious practices and principles of the heathen world, taken by Paul and other early missionaries, made it necessary for converts to Christianity to repudiate, as a rule, their old cults, and to find their religious life wholly within the Christian circle. Thus it was inevitable that a Christian cult should early develop to meet the Christian circle. Thus it was inevitable that a Christian cult should early develop, to meet the need of those who were cut off from the religious exercises to which they had been accustomed. Christian worship became ultimately very elaborate and ornate, and took on many of the features of the cults which it displaced, but in the Apostolic age we discover only the beginnings of the development. Our information on the subject is almost wholly confined to the Church of Corinth, and there all was very simple and informal. The Christians met frequently for religious worship and mutual edification, and also at other times to partake of a edification, and also at other times to partake of a common meal. The former occasions are referred to by Paul in 1 Co 14. At these meetings the Christians engaged in various religious exercises,— Christians engaged in various religious exercises,—prayer, praise, prophecy, teaching, speaking with tongues,—the whole service being controlled by the Pauline idea of the presence of the Holy Spirit, by whose influence the disciples were inspired to pray or prophesy or engage in other religious exercises. Perfect freedom of expression was granted to all, but it was assumed that only those who were prompted thereto by the Spirit would take active part in the services. The freedom was not for the individual as an individual, but as a mouthpiece of the Spirit. At the time when Paul wrote, this of the Spirit. At the time when Paul wrote, this liberty had already resulted in serious disorder, and the meetings had degenerated into scenes of confusion and discord. In dealing with the difficulties, he laid down two principles of far-reaching importance. The first was that the services are solely for the edification of those present, and all the exercises must be conducted with that end in view. Only must be conducted with that end in view. Only such gifts must be employed, and only under such conditions, as will promote the good of all. But how can one refuse to utter what the Spirit imparts, even though it be unintelligible or untimely? In reply to this question, Paul stated a second general principle of equal importance with the first: 'The spirits of the prophets are subject to the prophets,' that is, an inspired man has the right and duty to exercise judgment in the use of his spiritual gifts, and to employ them only in such his spiritual gifts, and to employ them only in such a way as to promote edification. The utterance of these two principles foreshadows the passing of the original freedom. If an individual fails to exercise discretion in the use of his gifts, he must be controlled by his brethren, and thus the way is

prepared for a regular order of service, and for the appointment of certain persons to take charge of the meetings, and to see that all is done decently and in order. There is no sign that Paul himself contemplated such a result, but the stereotyping process ensued in course of time. In Rome, before the end of the 1st cent., it was already well under way, and regularly appointed officials were in control of the services (cf. 1 Clement, 40 ff., 44); and before long the early freedom had given way almost everywhere to liturgical rules (cf. Didache, 9 f.; Justin, Apol. 67; Ignatius, Magn. 7, Trall. 7,

Smyrn. 8).

In addition to the meetings already described, the Christians at Corinth were in the habit of gathering from time to time to share in a common meal. At this meal they not only partook of food and drink for the ordinary purpose of satisfying hunger and thirst, but it was their custom, as was apparently the case among the early Jerusalem disciples, to eat bread and drink wine in commemo-ration of Jesus. At the time when Paul wrote, the meals had degenerated into scenes of discord and debauchery. Under these circumstances he informed the Corinthians that the commemoration informed the Corinthians that the commemoration of Christ's death was the chief purpose of the meal, and not eating and drinking for their own sake; and he commanded them to satisfy their hunger at home, that they might be able to commemorate Christ in the right spirit, and make the meal wholly a religious service (1 Co 11<sup>22 24</sup>). The immediate effect of Paul's attitude in this matter we do not know. The common meals continued in some quarters for generations, but ultimately they were everywhere given up, and the religious cerewere everywhere given up, and the religious ceremony known as the Eucharist or Lord's Supper alone remained. In subsequent centuries it became the central feature of the Christian cult. A very elaborate ceremonial grew up in connexion with it, and it was regarded as the most sacred and mysterious of all religious rites (see artt.

AGAPE and EUCHARIST).

In the *Didache*, 9, it is commanded that none except baptized persons be allowed to partake of the Lord's Supper. This is the earliest explicit statement of a general rule which, it may fairly be supposed, was commonly operative from the beginning; for the sacred meals of the early Christians can hardly have been shared by any not belonging to the Christian circle, and admission to it was

commonly, if not invariably, marked by the ceremony of baptism (see art. BAPTISM).

8. Significance of the Apostolic age. — The Apostolic age is the period of Christian origins, and as such has a significance attaching to no other the best of the common in the history of the Church. It was during this period that the Church as an organization came into existence, and the foundations were laid upon which all subsequent ages built. Most of the tendencies that appear in Christian history are to be found at least in germ in the Church of the 1st

it is through the Apostolic age also that we get our knowledge of Jesus Christ. To it we owe not simply the written accounts of His life, but also simply the written accounts of His life, but also the impression of His personality which constitutes an integral part of our picture of Him. It is true that the very change of emphasis from Christ's message about God to His personality as Messiah involved a changed interpretation of His controlling purposes, which has coloured Christian thought ever since. Nevertheless, it is through the Apostolic age that we approach Him, and from it that we get the information which enables us to understand Him in some respects better then His own stand Him in some respects better than His own disciples did. His person dominated the age, and the memory of His presence was a vivid and com-pelling reality. The days in which men who knew

Him face to face were still alive and influential must always stand apart from other days in the regard of His followers.

On other accounts, too, the Apostolic age will always have peculiar religious value. As the period of beginnings, there is an incomparable freshness about it. Its vivid sense of the approaching consummation gives it an inspirational quality not found elsewhere; and in it were produced the classic documents of Christianity from which all Christians since have drawn religious sustenance. This fact alone is enough to mark it off from all

other ages in the history of the Church.

But another significance has been ascribed by Christian tradition to the Apostolic age. During Christian tradition to the Apostolic age. During the 2nd cent. there grew up a conception of Apostolic authority which has prevailed ever since, and has given the 1st cent. a worth and dignity to which the fact that it is the period of Christian origins and nearest in time to Jesus Christ would not of itself entitle it. In the effort to repudiate the errors of the Marcionites and Gnostics, which were spreading rapidly in the 2nd cent, certain leaders of the Church began to insist upon the teaching of the Apostles, that is, the Twelve and Paul, as the sole standard and norm of Christian faith, on the ground that they had been chosen by Christ to be the founders of His Church, and had been endowed with the Spirit in such measure as to render them infallible witnesses to the will and truth of God. In the effort to define the teaching of the Apostles, and to show that they gave no support to the vagaries of Marcion and the Gnostics, it was claimed that they had left certain writings together constituting an authoritative Scripture canon, and had framed a creed containing the fundamental tenets of the Christian faith. Whoever would be a member of the true Church, and so an heir of salvation, must unfeignedly accept all that was taught both by canon and by creed.

A sharp line of demarcation was thus drawn between the age of the Apostles and all subsequent generations. In the Apostolic age was found the standard for all time to come. The Apostles themstandard for all time to come. The Apostles them-selves came to be regarded as figures supernaturally endowed for the unique work of establishing the Church, and raised above the ordinary frailties and limitations of humanity. Their official char-acter was so emphasized that all sense of their individuality was lost. The differences between them were forgotten, in the conviction that as men divinely inspired they must all have been com-pletely one. Apart from Paul, history knows prac-tically nothing of their several careers, of the regions where they laboured, and the work they did; and not until the 3rd cent., long after all authentic sources of information had disappeared, did tradition begin to busy itself with them as individuals—a striking illustration of the indifferindividuals—a striking illustration of the indifference to historic reality to which the 2nd cent. theory of Apostolicity gave rise. As a result of that theory, all that the Apostles were supposed to have taught, whether by precept or example, acquired infallible authority; and nothing in doctrine, in polity, in ritual, or in practice could be regarded as Christian unless directly or indirectly of Apostolic origin. Development on all these lines was made possible by the belief that the Apostles had also instituted a perpetual Apostolic office for the government and guidance of the tolic office for the government and guidance of the Church, the incumbents of which were endowed with the power to interpret infallibly the will and truth of God. Bible and creed were thus supplemented by the living voice of the Catholic episco-pate, and the Church was enabled to conform to new conditions and to meet new needs as they arose, without ostensibly breaking away from its Apostolic foundations or giving up its theory of

19 6 mg

Apostolic authority. The Protestant reformers of the 16th cent. rejected the Catholic doctrine of an infallible episoopate, but the Catholic belief in Apostolic authority was retained, and the Bible was regarded as the complete and final expression of Apostolic teaching on all conceivable subjects. Revelation and inspiration were supposed to have ceased with the age of the Apostles, and the development that had taken place under the ægis of episcopal authority was repudiated. The effort was made to return to the conditions of the Apostles. tolic age, and to bring the Church into complete tolic age, and to bring the University to its principles and practices in all respects, nothing being regarded as truly Christian unless it enjoyed the authority of Apostolic precept or example. Cf. next article.

This belief still prevails widely in connexion with doctrine, but in the matter of ritual and polity it has been generally abandoned. Moreover, the whole concention of Apostolic authority has been given

conception of Apostolic authority has been given up by many in modern times, and it has come to be widely held that the age of the Apostles was essentially like any other in the history of the Church, that it was confronted with its own prob-lems and difficulties, and that the men who met and solved them were of like passions and limita-tions with Christians of all ages.

This change of attitude has been of immense historical and religious value. A reality attaches to the Apostolic age and to the figures of the early leaders of the Church which they never possessed before. For the first time an understanding of the period and a genuinely historical treatment of it have become possible, and from the religious experiences of the Apostles and their companions, now more clearly understood and appreciated, modern Christians are gaining new inspiration and instruction.

modern Christians are gaining new inspiration and instruction.

Literature.—Of older books on the Apostolic are should be mentioned: Neander, Geschichte der F. a. Fr. a. Ind. L. Trag der christikahen Kirche durch die Apostol. 1.522 [Eng. tr. 18-29]; Baur, Paulus der Apostel Jesu Christi, 1845 (Eng. tr. 18-29]; Christian history which was adopted by the Tübingen school in generall, followed in 1855 by Das Christenthum und die christiche Kirche der drei ersten Jahrhunderte (Eng. tr. 1875 ff.); Ritschl, Entstehung der altkatholischen Kirche, 1850 (2nd ed. 1857, entirely worked over) (in its second edition another epoch-making book, which did more than any other to break the dominance of the Tübingen interpretation of early Church history; Renan, Histoire des Origines du Christianisme, 7 vols., 1863 ff.; of more recent works, Weizsäcker, Dus apostol. Zeitalter der christi. Kirche, 1856 (3rd ed. 1902; Eng. tr. 1895) [the most influential of modern histories of the Apostolic age]; Pfleiderer, Das Urchristenthum, 1857 (2nd ed. 1902), also Die Entstehung des Christenthums, 1905 (Eng. tr. 1905); McGiffert, Hist. of Christianity in the Apostolic Age, 1887 (rev. ed. 1899); Bartlet, The Apostolic Age, 189; Wernle, Die Anfünge unserer Religion, 1901 (2nd ed. 1904; Eng. tr. 1903 ff.); Obschitiz, Die urchristl. Generinden, 1902 (Eng. tr. 1904), and his brief sketch, Das apostolische Zeitalter, 1905 fr. Ropes, The Apostolic Age in the Light of Modern Criticism, 1906. The various standard lives of Paul works on NT literature and theology, Church histories, and histories of doctrine, which deal more or less fully with our subject, it is not necessary to specify.

A. C. McGifffert.

APOSTOLIC SUCCESSION.—I. The principle of ministry in the NT.—That from the Apostles' time there has existed in the Christian Church a ministry exercising official functions by regular devolution of authority is a fact which few historians would have disputed, if no claim had been made on its behalf to be a necessary part of the institution of Christ. But as this claim is put forward on behalf of Churches retaining the canonical orders, and also by Presby-terians, Apostolic succession becomes a significant fact, and therefore a doctrine. Consequently it demands a closer and more vigorous scrutiny than would otherwise attend an investigation into the origin of the Christian Ministry. The theory is that Christ, having established a society primarily

visible and historical, gave to that society a recognizable unity and cohesion, not only by instituting in Baptism a sacrament of initiation, and in the Eucharist a sacrament of corporate life, but also by perpetuating its collective witness in a continuous and authoritative ministry

and in the Eucharist a sacrament of corporate life, but also by perpetuating its collective witness in a continuous and authoritative ministry.

This principle has often, and not unnaturally, been expressed in crude and unhistorical forms. It has, for example, been common to confuse the question of a true principle of ministry with that of the manner in which this principle has been realized in history. This has led to discussions on the Divine right of bishops as an exclusive form of Church government; and caused stress to be laid on an all but mechanical system of devolving episcopal authority which the facts of early Church history, so far as known, do not justify, and which is too formal to be consistent with an organically developing society. Hocker was right when, in opposing the Presbyterian theory, he contented himself with affirming that episcopacy 'best agreed with the sacred Scripture' (Eccl. Pol. iii. 16, but cf. vii. 11).

Or, again, the sacerdotalism of the third cent. has been unwarrantably intruded into the first, and the whole matter treated as 'frorth' it were a question whether Christ had set up a pricatic caste. to which the mysteries of religion were entrusted, and without which spiritual life was not only hindered but 'mpossible. These methods of thought have led to narrow and technical inquiries into the sacramental character of holy orders, the form and matter of the rite by which they were conferred, and the precise conception of the various powers which from time to time it has been intended to convey. Such, for example, is the papal Bull Apostolicae Curae, condemning Anglican orders on the ground that the Ordinal of Edward vi. departed from the intention of its mediaval predecessors in denying sacrificial power to presbyters.

But the crudest form of the argument, in spite of Macaulay's ridicule (Essay on Gladstone on Church and State), witnesses to certain facts of the Church's development which may not be ignored. The Nicene canons, A.D. 25c (No. 4), make careful arrangements, on th

The object of the present article is to show what reasons there are, in view of the facts and principles of the NT, for believing that the great institution of the Christian ministry belongs to the substance of Christianity. Whatever variations may stance of Christianity. Whatever variations may have attended its transmission (as, e.g., in the case of the supposed right of the Alexandrian presbyters until the time of Bishop Heraclas, A.D. 233, to consecrate their own chief pastor [Jerome, Ep. 146 ad Evangelum; see Bigg, BL p. 40; Gore, Ch. and Min., Note B; J. Wordsworth, Ministry of Grace, pp. 135, 136], the Ministry preserved an unbroken continuity in all churches till the 16th century. The theory built upon this fact does not stand or fall with a sacerdotal conception of orders, but arises out of the facts ception of orders, but arises out of the facts of the Gospel narrative. 'We find the Church,' says Archbishop Temple, 'from the very beginning flowing out of the ministry' (Sermon at Consecration of Truro Cathedral). Whatever may be the function of the Church, whether it be the the inquiry is not vitally affected. Where, as in the Western Church of the Middle Ages, great stress is laid upon the due celebration of the Eucharist, Apostolic succession will appear mainly as a sacerdotal theory. Where, on the other hand, as in the age of the Gnostics, resistance to doctrinal error is the foremost consideration, the ministry will appear rather as the Divinely appointed guardian of the Apostolic witness to evangelical truth. The two questions that are fundamentally important are: (a) Is the Church of Christ as the object of salvation prior to the individual Christian? (b) Does the Church as established by Christ present any of the features of a historical institution? It

is only as these questions are answered that we can proceed to discover from history how the organic life of the society has been in fact developed.

proceed to discover from history how the organic life of the society has been in fact developed.

Apostolic succession being accepted as a principle of the Church's life, we do not commit ourselves to any one theory of the reasons which led, in the evolution of the Christian society, to the establishment of the various orders of ministers. If the Seven of Ac 6 be, as is frequently supposed, the original deacons, then we know that, whatever functions may from time to time have been engrafted on the office in the course of history, the neglect of the Hellenistic widows was the occasion of their first election and ordination. Whether a similar need for the due administration of the common purse (Hatch, BL 2), or the requirement of a foreign correspondent to represent each community in its relations with the rest (Ramsay, Church in the Roman Empire, xv. 3, xvii.), or the demand for a vicar apostolic to guard the evangelical deposit from the attacks of heresy, be the cause of the establishment of bishops; or whether, as is more probable, a complexity of causes, some more influential in one region than in another, produced the universal episcopate, the Church still remains a differentiated and structural body, not a promiscuous gathering of persons professing Christian discipleship and organizing themselves for the promotion of common ends. On the other hand, unless it be held that the Apostles exercised an absolute authority in the primitive Church, and that the clergy, or any one order amongst them, succeeded to all the functions of the Apostoliate—and neither view agrees with the facts of the NT—it is manifest that a ministry regularly ordered from Apostoliate—and neither view agrees with the facts of the NT—it is manifest that a ministry regularly ordered from Apostoliate—and neither view agrees with the facts of the NT—it is manifest that a ministry regularly ordered from Apostoliate—and neither view agrees with the facts of the NT—it is manifest that of Congregationalism, which, as Dr. Dale has shown, is in the

or whether the body also has Christ for its direct author.

A. IN THE GOSPELS.—The Gospel of Mark registers the stages by which the Christian community, with its characteristic message of forgiveness and endowment of the Holy Spirit, was established through the public work of Jesus Christ (F. C. Burkitt, St. Mark's Account of the Birth of the Church, pp. 3-5, cf. his Gospel History and its Transmission, ch. 3). It is important to observe, as revealed in this Gospel, the principles which appear as impressed upon it from the first. which appear as impressed upon it from the first. The headline of Mark's narrative is, 'The beginning The headline of Mark's narrative is, 'The beginning of the gospel of Jesus Christ, the Son of God' (1<sup>1</sup>). That the gospel is virtually identical with the Kingdom, of which it is the proclamation, is apparent from vv. <sup>14-15</sup> in which Jesus is described as taking up the work of the Baptist and announcing as His message the approach of the Kingdom (cf. Mt 4<sup>23</sup>, Lk 4<sup>15-21</sup>). The identification of the forerunner with the voice, which, according to the evangelical prophet (Is 40<sup>3</sup>), was to herald the return of God's people to the sacred city (Mk 1<sup>2</sup>), and the recognition of Jesus in His baptism as and the recognition of Jesus in His baptism as uniting the attributes of the expected Messiah with those of the Servant who is to be Jahweh's agent in the process of restoration (1<sup>11</sup>; cf. Ps 2', Is 42<sup>1</sup>), mark out the 'coming of Jesus' from Nazareth to Jordan and the descent of the Spirit (vv. 9. 10) as the first stage in the development of the Kingdom.

The second stage is its proclamation by Jesus Himself on His return from the wilderness to Galilee (vv. 14-15). This is immediately followed by the call of Simon, Andrew, James, and John (vv. 16-19), whose designation to a future Apostolate seems to be indicated in the words, 'I will make you to become fishers of men' (v. 17). To these is subsequently added Levi or Matthew (214). The method of the earlier ministry, as a scheme of selection from the multitude of those prepared to follow Him, is clearly seen in the avoidance of popularity and the frequent retirement by which it is marked (185-38 44.45 37).

Then follows the first great crisis out of which the incipient community issues with the impress of a definite form, never to be lost through all subsequent developments. Christ retires with His adherents to the Sea of Galilee (3'). He ascends 'the mountain' (v. 18). He calls 'whom he himself would' (v. 13), thus constituting the outer ring of His 'disciples,' who become a society resting upon the Lord's choice, no longer a promiscuous following united only by the uncertain bond of a common, though variable, devotion to one Master. Within this circle Jesus constitutes twelve (v. 14); Luke adds 'whom also he named apostles' (613). But the importance of this appointment is clearly seen by what in a narrative so concise as that of Mark cannot be without significance. He includes the list ( $3^{16-19}$ ) repeated by each of the other Synoptists (Mt  $10^{2-4}$ , Lk  $6^{13-18}$ ), and also in Acts ( $1^{18}$ ). The words 'He made twelve' ( $\epsilon \pi o l \eta \sigma e \delta \delta \delta \delta \epsilon \kappa a$ ) are noticeable. Christ created an office, the are noticeable. Christ created an office, the purpose of which was to extend His own mission by proclaiming the Kingdom and exercising authority in casting out the rival kingdom of Beelzebub (Mk 3<sup>22-27</sup> 6<sup>7-18</sup>). To this end those who now in a narrower sense become 'the disciples' are first to be 'with him' (3<sup>14</sup>, cf. Lk 22<sup>28</sup>), so that are first to be 'with him' (3<sup>14</sup>, ct. Lk 22<sup>26</sup>), so that from this point the narrative acquires a different character, being a record, on the one hand, of growing opposition on the part of the Jews to a movement now definitely embodied in an organized society, and, on the other, of the training of the Twelve for thrones in the Kingdom which Christ has appointed to them (Lk 22<sup>26</sup>. 3). The call to the Twelve is renewed, and further defined by the the Twelve is renewed, and further defined, by the preliminary mission on which they are sent through-out the villages of Galilee. Their commission out the villages of Galilee. Their commission corresponds to the stage which Christ's work has already reached. They preach repentance, cast out demons, and heal the sick. The exact words of the Evangelist (Mk 67) are worthy of attention: 'He began to send them forth' (ἀποστελλεω). Just as the whole narrative is the beginning of that Gospel the history of which is still in process of development, so here we have the beginning of the Apostolate, ultimately to become universal in its scope. its scope.

Two further preparatory stages are, however, necessary, before the Church can be built upon the Apostles (Mt 16<sup>18</sup>; cf. Eph 2<sup>20</sup>, Rev 21<sup>14</sup>)—the confession of Jesus' Messiahship, and the disclosure of suffering and death as the channel through which the gospel of the Kingdom was to become the witness to a crucified and risen Saviour.

The critical conversation at Cæsarea Philippi is narrated with greater detail by Mt. (16<sup>13-20</sup>); cf. Mk 8<sup>27-29</sup>, Lk 9<sup>18-20</sup>). Mt. connects with the Apostolic confession the grant of the keys, and reveals the occasion as a further stage in the building of the Church, against which the gates of Hades are not to prevail. The authority to bind and loose here committed to St. Peter was, according to Cyprian (de Unitate, 4), extended to the Twelve on the occasion recorded in Mt 18<sup>15-20</sup>. It is, however, difficult to suppose that the Ecclesia in nowever, dimenit to suppose that the Ecclesia in v. I' does not primarily refer to the local Jewish synagogue (see Hort, Christian Ecclesia, p. 9), especially in view of the words 'Gentile and publican'; and it is quite in accord with Mt.'s manner to string together utterances not originally related. When, therefore, ἐκκλησία came to be interpreted of the Christian society, it would be guite natural to add not only the promise of quite natural to add, not only the promise of vv. 19. 20, but the charter of authority given in v. 18, which is at least evidence that it was not regarded as applying to St. Peter only. And it is probable that the authority in question was extended to the Twelve, and that v. 18, even if not originally spoken in that connexion, accurately expresses the fact. The Fourth Gospel, in recording one of the appearances of the risen Lord, represents Him as imparting the Holy Spirit by breathing on the disciples, and renewing the authority, not now in the old Hebraic form, but in language connecting the Apostolic ministry with the atoning work: 'Whose-soever sins ye forgive,' etc. (Jn 20<sup>10-22</sup>). The

suggestion that Jesus here addressed not the suggestion that Jesus here addressed not the Eleven, but a promiscuous gathering of disciples (see Westcott, Gospel acc. to St. John 20<sup>28</sup> n.) seems to be negatived by the whole course of the Johannine narrative. It is true that John notes the absence of Thomas (v.<sup>24</sup>). But he is specially mentioned as 'one of the Twelve,' and it is difficult to suppose that an Evangelist who gives at great length the last discourses addressed to the Eleven only does not intend to convey the same impression to the end. Nor can the renewed commission to St. Peter recorded in 21<sup>15-17</sup> be regarded, in the light of the Denial, otherwise than as a specific restoration to a position that might else have seemed to be forfeited.

We find, then, in the Gospels a Christian society already in existence, within which the Apostles are an inner circle of more immediate disciples, recapitulating and intensifying the characteristics of the general body. This becomes apparent from the moment of the choice recorded in Mk 3<sup>14</sup>, and is emphasized in the conversation at Cæsarea is emphasized in the conversation at Cæsarea Philippi. Hort favours the view that the words 'whom also he named apostles' (RVm, cf. Lk 6<sup>13</sup>) belong to the genuine text (*Christian Ecclesia*, p. 22). But it is clear that during the Lord's own ministry discipleship is the prominent feature. They are called 'the Twelve' (Mk 14<sup>20</sup>), 'the twelve disciples' (Mt 20<sup>17</sup>), and simply 'the disciples' (Mt 26<sup>28</sup>). But the name 'apostles' is also given to them, and the second reason for their selection as recorded by Mark viz 'that he their selection as recorded by Mark, viz. 'that he might send them forth'  $(d\pi \sigma \sigma \tau \epsilon \lambda \lambda_{\parallel}, 3^{14})$ , points to the ultimate purpose of their closer companionship. There is nothing to indicate a more permanent commission than that of ch. 6, in relation to which the term  $\frac{1}{4}(\pi r)^{1/2}$ alone the term amborolos is subsequently used (630, alone the term  $d\pi b\sigma ro\lambda os$  is subsequently used (6°°, but see above). Luke, however, clearly employs the word in the light of its subsequent use in Acts (Lk 6°° 17° 22°° 24°°). Matthew uses it only in connexion with the Galilæan mission (10°°), but it is in giving the list of names—a fact in itself significant of the wider purpose lying behind the immediate commission.

When we reach the last Passover, the importance of the narrative attains its height. From the confession at Cæsarea, the training of the Twelve takes a course clearly differentiating it from that of all others. The acknowledgment of Messiahship is not to be the complete witness of the disciples. It not to be the complete witness of the disciples. It prepares the way for a fuller disclosure. From that time 'he began to teach them' (Mk 8<sup>31</sup> ήρξατο, cf. 1<sup>1</sup> 6<sup>7</sup>) concerning his suffering. The Transfiguration anticipated a more spiritual glory than figuration anticipated a more spiritual glory than that of the Jewish Messiah, to be attained through the \$\vec{e}\vec{e}\vec{o} duces his more intimate narrative by calling this select company 'his own,' whom Jesus 'loved unto the end' (13¹). Bearing in mind the general purpose of Mk. (see above), we shall naturally regard his account of the Supper from the point of view of the establishment of the Christian community. It must be remembered that the Eucharist was everywhere celebrated in the Christian congrega-tions as the characteristic act of Church fellowship. Regarding the events of the Upper Room, Mark confines himself, with the single exception of the indication of Judas as traitor, to the shortest possible account of the institution of this rite, as the act by which the Christian community is formally incorporated (14<sup>22-23</sup>). The representative character of the Twelve is indicated by the dependence in which

the Church is thus made to stand upon them. The Eucharist became theirs in virtue of the conditions under which it was first celebrated; and unions under which it was first celebrated; and only through them, and as they transmitted it, does it pass to the community. This is in accordance with the relations brought out by John. Those who are hereafter to believe are to do so 'through their word' (1720). The High-Priestly Prayer reaches out through the disciples, who are to bear the primary witness, to those who are mediately chosen by Christ out of the world.

The post-Resurrection paratives do but confirm

The post-Resurrection narratives do but confirm the impression of the special separation of the Twelve which culminates in the seclusion of the Upper Room. The narrative of Mark is cut short; but the command given to the women, themselves Jesus' disciples, to 'tell his disciples and Peter' (16°) of the empty tomb, shows the Eleven as a distinct body. Mt. gives the commission to make disciples and to baptize as entrusted to the 'eleven disciples and to baptize as entrusted to the 'eleven disciples' (2816). Lk. shows other disciples gathered at Jerusalem when the risen Christ appeared to them (2488). But the Eleven are distinguished from them (ib.), the rest being expressly spoken of as they 'that were with them.' Even if, therefore, the appearance recorded in Jn 2019-23 refer to the same occasion, the words 'Receive ye the Holy Spirit.' etc., must also certainly have a special Spirit,' etc., must also certainly have a special bearing on the Apostolic office.

B. IN THE ACTS.—With the Acts we reach a

further and a final stage in the foundation of the Christian society. The gospel of the Kingdom now becomes the organized witness to the Resurrection. The ministry of reconciliation finds its full expression in the proclamation of forgiveness through the Cross. This we find specially committed to the Apostolate (12. 2. 22. 25 104)—a term which gains of the Eleven is again given in connexion with this developed function (1<sup>18</sup>), and the choice of Matthias is based upon the necessity of completing the number of the official witnesses (vv.<sup>21, 22</sup>). The phenomenon of the control mena of the early chapters are precisely what a study of the Gospels would suggest. The Church enters upon its career as an organized body, the Apostles being differentiated from the brethren. From the first the brotherhood continues in 'the apostles' teaching,' and in 'the fellowship' thus established (242). That this relation did not involve submission to an Apostolic despotism appears in the choice of Matthias and of the Seven. In the former case, two were 'put forward' (123), apparently by the whole assembly, the final decision being reserved for the unseen though present Master (v. 24). In the latter, the brethren were expressly charged by the Apostles to 'look out' from among themselves seven men (63), who, after prayer, were set apart with the laying-on of Apostolic hands set apart with the laying on of Apostonic manus (v. 6). All the elements of ordination are here. At the outset of ministerial appointment it would seem as though the Apostles disclaimed any lordship over God's heritage. They do not even exercise a veto. God's heritage. They do not even exercise a veto. The responsibility of supplying the need of ministrations, as the circumstances of the Christian community disclose themselves, belongs to the society itself. The Apostolic imposition of hands is, like the sacraments, a form of covenanted prayer (Calvin, Instit. iv. 19, § 31: 'I admit it to be a sacrament in true and legitimate ordination'). Those set apart represent, not the Apostles, but Christ. The Seven have been traditionally regarded as the first descent. If this base it is chieve that which that deacons. If this be so, it is obvious that what sub-sequently became the third order of the ministry was not explicitly appointed by Christ. The general impression conveyed by Acts is that of a society extending and organizing itself as opportunity offered or circumstances suggested. But the laying-on of hands in this instance represents a principle con-

spicuous throughout the book, viz. the requirement of mission from Christ Himself, of which Apostolic recognition was the pledge. But there is no evidence even that 'the ministry of the word,' which, in directing the appointment of the Seven, the Apostles expressly reserved (v.4), demanded absolute submission. No doubt, the actual gospel itself was inviolate and unchangeable. But not even an Apostle, according to St. Paul, was to be believed if he deviated from that standard (Gal 18). As primary witnesses to the Resurrection the Apostles have no successors. The gospel is an Apostolic report of incommunicable experience, once for all delivered to the whole body of the saints (Jude 3). The formation of the NT canon was based upon The formation of the NT canon was based upon the test of Apostolicity, and consequently the appeal to Scripture has become the permanent form in which, as regards matters of faith, the Church of every age sits at the Apostles' feet. But, even apart from the gospel, the Acts suggests that a recognition of Apostolic authority was not inconsistent with the freedom of prophecy (19<sup>6</sup> 21<sup>9, 10</sup>) and with the participation of the community 219. 10) and with the participation of the community as a whole in spiritual decisions (1522). What is constant is the maintenance of a Christian society, rendered coherent by dependence on a stewardship of the word mediated through the Apostles from Christ Himself (Lk 1241-42). Philip, for example, though he evangelizes Samaria, cannot complete his work without the intervention of the Apostles at Jerusalem (Ac 814). As local Churches are founded, presbyters are 'appointed' for them (1423; χειροτονήσαντες, being used of Paul and Barnabas, cannot here bear the meaning of 'elect,' which it has already lost in Hellenistic Greek [see Hatch, art. 'Ordination' in DCA]; it equals karastifoartes [cf. Tit 15, Clem. Rom. xliv. 2, Didache 15]; but it is equally far from connoting a particular mode of appointment).

is equally far from connoting a particular mode of appointment).

With two exceptions, the existence of an extended Apostolate beyond the circle of the Twelve is scarcely apparent. Prophets are mentioned five times (Ac 1127 181 153 108 218-10), the gift in one case (129 attesting the presence of the Spirit in the baptized after the imposition of hands. The suggestion in each case is that the prophets have as yet no structural relation to the ecclesia, but are persons of either sex, directly endowed with a gift of declaring the Spirit's mind, and thus indicating courses of action, as when Barnabas and Saul are to be sent forth by the Church at Antioch. Teachers are coupled with prophets in A country as a similar gift, and Barnabas is placed in this combined class. When in A c 218 Philip is called the evangelist, it seems likely that this function was not conferred upon him as one of the Seven, but discharged, like the office of prophet, in virtue of a special gift or xápaqua. It is, however, clear that men exercising what has been called a recognized place in the Apostolic Church (1 Co 122 6, Eph 220 411, cf. Ro 167). But these do not constitute any infringement of the Apostolic authority. Whether Barnabas was an Apostle in the full sense of the word is doubtful, because the name is applied to him only in relation to his missionary labours (Ac 1414). That by imposition of hands in the Church at Antioch he was entrusted with a mission rather than ordained to an office is the probable interpretation of Ac 131-13 (see Hort, Christian Ecclesia, pp. 63, 64), though he was apparently associated with Paul in the appointment of presbyters (1420). But the same cannot be said of James 'the Lord's brother' and St. Paul himself. The former, who is ranked among the pillar Apostles in Gal 29 (cf. 1 Co 157), and who extends the right hand of fellowship to St. Paul, is almost certainly not one of the Twelve (see Lightfoot, Galatians, 119 n.; also dissertation on 'The Brethren of the Lord'. Yet he is evidently the chief authori

The picture, therefore, with which Acts leaves us is that of a federation of Christian communities under the immediate guidance of presbyters, who themselves owe their appointment to Apostlesbody of direct witnesses of the Resurrection, dis-

charging a sort of general episcopate and including the Twelve, whose precise relation to the wider Apostolate is not clearly defined. Within these communities are exercised certain spiritual gifts, among the possessors of which the prophets seem to approach most nearly to a regular order, but are nevertheless not, like presbyters, Apostolic delegates. There is nothing to indicate any method by which the organic structure was to be maintained after the decease of the Apostles. The scope of the book carries us no further than what we now see to have been but a preliminary stage in the accomplishment of Christ's purpose and command—that the Apostles should be His witnesses to the uttermost parts of the earth. When the writer had brought St. Paul to Rome, the task, as his contemporaries would view it, was in a sense fulfilled. A delay of centuries in the return of Christ visibly to reign in the midst of His people was not contemplated. That is the true answer to the suggestion that the method of continuing a Christian ministry was among the things pertaining to the Kingdom, of which the risen Christ spoke not well have been without a revelation as to the postponement of 'the restoration of the kingdom to Israel, which it is clear the primitive community did not possess. The continuance of the Apostolic office itself beyond the lifetime of the original witnesses was, in the nature of the case, impossible. The terms of their appointment involved personal testimony to the facts of our Lord's life. The question, therefore, of ministerial succession could not arise until it became probable that the Apostles were not to tarry until Christ came.

C. IN THE EPISTLES.—The Epistles confirm,

C. In the Epistles.—The Epistles confirm, and in some points render more explicit, the testimony of the Acts. Here we are mainly concerned with the Pauline group, where the corporate aspect of Christianity is always prominent. But the Epistle to the Hebrews enjoins obedience to 'them that have the rule,' clearly implying accountability, not to the congregation, but to that 'great shepherd of the sheep' to whom reference is immediately made (He 13<sup>7.17.20.24</sup>). And as the general tendency of the Epistle is to isolate the eternal priesthood of Christ in contrast with the transitory and therefore successive priesthood of the OT, it is well to remember not only that the body of Christian believers is here represented as a flock with many under-shepherds, but that the same idea is definitely presented under the figure of the house, in a passage distinctly anticipating a later and more developed view of the ministry (3<sup>3-6</sup>). St. James apparently witnesses to a part of the Apostolic commission, viz. the healing of the sick, as vested in the presbyterate (5<sup>14</sup>); and St. Peter develops the conception of the Christian congregation as a flock entrusted to the presbyters under the Chief Shepherd (1 P 5<sup>1-4</sup>; cf. Mt 26<sup>31</sup>, Lk 12<sup>23</sup>, Jn 21<sup>3-17</sup>, Jude <sup>13</sup>, Ps 80<sup>1</sup> etc.). And it is noticeable that, calling himself a 'co-presbyter' (5<sup>1</sup>), he regards the presbyterate as inherent in his own office, and yet again in that of Christ Himself as the 'Shepherd and Bishop' of souls (2<sup>25</sup>). The Apocalypse, being mystical, has little to the purpose beyond the clear fact that the twelve Apostles of the Lamb are indicated as the foundation-stones of the heavenly city (21<sup>14</sup>). The angels of the Seven Churches are almost certainly their mystical representatives, not their earthly presidents (see Swete, Apocalypse, p. 21 f.). But the conception of an ordered life and organic unity, inseparable from the idea of a city, is here, as elsewhere in the NT. prominent.

as elsewhere in the NT, prominent.
St. Paul in his earliest Epistles recognizes the two lines of authority, which subsequent ages have never succeeded altogether in adjusting, and which respectively represent the historical and the evangelical

elements in the Church. On the one hand, there must be no quenching of the Spirit through contempt of the free ministry of prophecy (1 Th 5<sup>19, 20</sup>); on the other, Christians are to know and esteem those that are over them in the Lord (vv. 12.13). The importance of the latter becomes clearer in The importance of the latter becomes clearer in 2 Thessalonians, which shows the forces of disintegration in the community, already operating through the disorders consequent upon the expectation of an immediate Parousia (3<sup>6-18</sup>). That the function of government and discipline is in its origin an 'apostolic' gift, exercised by those entrusted with it in virtue of a Divine commission, is witnessed by St. Paul's treatment of the Corinthian offender (1 Co Paul's treatment of the Corinthian offender (1 Co 53-5) and his vindication of his office (1 Co 1510, 2 Co 41 etc., Ro 1113 1516). The Pastoral Epistles show Timothy and Titus, in Ephesus and Crete, entrusted with a larger measure of government than the presbyters, as delegates of an absent Apostle (1 Ti 13 411.12 51.17, Tit 15 31.10, 2 Ti 22 45), who, in the case of Timothy at any rate, appears to contemplate a continuance of authority beyond his own lifetime (2 Ti 46). Both have that supreme authority which arises out of the commission to ordain others to the presbyters to the terms of the provision made for presbyterate. In them we see provision made for the reproduction of the local pastorate. In them the reproduction of the local pastorate. In them the principle of Apostolic delegation is transmuted into a principle of succession. There is nothing to show that the same method was adopted in the case of other Churches, or that, in making this provision, the writer was doing more than developing, in relation to the immediate needs of the Churches in relation to the immediate needs of the Churches concerned, an authority capable of many applications. But none insists more strongly than St. Paul on the structural character of the Body of Christ (Ro 12<sup>4-5</sup>, 1 Co 12<sup>12-14</sup>, Eph 4<sup>4-15</sup>), on the definite relation of ministry to this structure (Eph 4<sup>11-12</sup>), on the primary character of the Apostolate (1 Co 12<sup>28</sup>, Eph 4<sup>11</sup>), or on the due subordination of spiritual gifts to the development of a socrety (1 Co 12<sup>4-29</sup> 14<sup>12</sup> etc.), a building of which Christ is the cornerstone (Eph 2<sup>20</sup>). The foundation is twofold (ib.), the Apostles and prophets—the latter representing in principle the ministry of the word, the former, in so far as the office is disciplinary, that of sacraments. Both would seem to have been united in the ordination of Timothy (1 Ti 4<sup>14</sup>), as though the historic, external call and the free activity of the Spirit were both apparent in the determinations of nistoric, external call and the free activity of the Spirit were both apparent in the determinations of the primitive community. It was the separation, which inevitably arose in days of decaying fervour, between the outward links of continuity in the historic body and the manifestation of the Spirit, that raised the question of the seat of Apostolic authority in the Christian society. authority in the Christian society.

authority in the Christian society.

Note on priesthood in the NT.—One other point remains to be discussed before leaving the NT. We have already seen that the problem of the ministry is capable of consideration, and ought to be considered, apart from any sacerdotal theory. In the hieratic sense of a caste which, by interposing between the worshippers and God, denies, while it appears to guarantee, the priestly character of the people for whom it acts, sacerdotalism is an idea foreign to the NT. On the other hand, the theory that every individual is in his own right a priest is equally inconsistent with the Christian idea. It is primarily the society that is a royal priesthood (1 P 2º, Rev 16 50), having boldness of access to the throne of grace in Christ (He 104º, Epa 281). It is the people of God, the holy nation (1 P 2º, 10), the commonwealth of the spiritual Israel (Eph 2¹2), that answers to Israel after the flesh, differing from it only in those points wherein the priestliness of the latter was imperfect. It does not imply an absence of differentiation, which is essential to the life of the hody. And the Epistle to the Hebrews, in designating Christ the great Shepherd of the sheep in His priestly character as 'brought again from the dead with the blood of the eternal covenant' (He 1320), statches a derived priesthood to the undershepherds, who have just been spoken of as having rule in the Christian community, and watching for souls 'as they that shall give account' (v.17). But while, in the light of the NT, priesthood is an aspect under which the Christian ministry may be legitimately regarded, it becomes from the 3rd cent. onwards its technical and essential character (see Lightfoot's dissertation on 'The Christian Ministry' in Philippians, pp. 255–264), with the consequent reversion to Jewish, if not pagan, ideas. 'The

ministry of reconciliation' (2 Co 518) never in the NT loses its ethical character. There is nothing to suggest that the performance of any particular rite is in principle restricted to an order, or that a ceremonial investiture must precede the exercise of functions precisely defined and limited. On the other hand, it is something more than a merely moral authority, dependent for its sanction upon results, with which the ministry of the NT is seen to be clothed. It is a principle of organic life.

2. The principle as preserved in the facts of Church history.—Passing from the NT to ecclesiastical history, we have to ask, not what were the opinions of ancient authors on the subject of the opinions of ancient authors of the subject of the ministry, but how as a matter of fact the principles embodied in the Gospels, continued in the Acts, and attested by the Epistles, were retained in the succeeding life of the Church. How was what is seen to be a structural unity preserved from degenerating into a concourse of unrelated units? The Apostolic teaching is preserved in the course of Scientific in the formation of which the canon of Scripture, in the formation of which Apostolicity was the invariable test. Where is the corresponding mark of Apostolicity in the structure of the Christian society?

A. WRITINGS OF THE SUB-APOSTOLIC AGE.—
(1) The Epistle of Clement (c. 97 A.D.), in which, as in the Didache, there is no trace of diocesan episcopacy (the word ἐπίσκοπος being still, as in the NT, apparently synonymous with πρεσβύτερος), definitely asserts the Apostolic character of the ministry as

apparently synonymous with mpeasivepos), definitely asserts the Apostolic character of the ministry as succeeding to a pastoral authority.

The passage is xiiv. 1-3: 'And our Apostles knew through our Lord Jesus Christ that there would be strife over the name of the bishop's office. For this cause, therefore, having received complete foreknowledge, they appointed the aforesaid persons, and atterwards they provided a continuance, that if these should fall asleep, other approved men should succeed to their ministration.' (The translation and readings are those of Lightfoot in The Apostles fathers). A variant, which Gore adopts, and which makes the passage more distinctly 'episcopal' in complexion, will be found in that author's Church and the Ministry (ch. vi. 4). In either case, the writer seems to have believed that the ministry was propagated on a plan directly sanctioned by Christ. His words show that in the West, where the method of 'continuance' is less distinctly traceable than in the communities of Asia Minor, the principle of Apostolic order was unquestioned. The facts of the Church's life are stated in terms of succession. The Apostles appointed their firstfruits to be bishops and deacons' (xiii. 4). 'Christ is from God, and the Apostles are from Christ' (ib. 2). What is thus handed on is a ministry of the gospel and a priesthood of offering (xxxvi. 1, xl. 2-5, xiii. 1-4). The latter phrase, as also the comparison between the resistance of the Corinthians to their presbyters and the rebellion of Korah against the Levitical priests (xiiii, xliv. 4), lends itself in a hierarchical atmosphere to a sacerdotal interpretation, but for Clement himself the point of the analogy is limited to the due observance of order in worship. The 'sceptre of God. . . came not in the pomp of arrogance or of pride' (xvi.). Clement sees the law of service in the adjustments of an organic universe (xx.), and Christ embodies the will and mind of the Creator (xxxvi.). As in St. Paul, nature is the true analogy of the Christian so

The Epistle does not suggest a rigid system by which the performance of sacred rites is the exclusive function of a mediatorial class. But it is conspicuously plain that for Clement the Christian society is prior to the individual, and that the continuity of its vital relation to Christ depends on the persistence of facts of Church life not dependent

on the choice of the several members.

(2) The testimony of Ignatius is not altogether easy to appreciate, because words and phrases are apt to be understood in the light of later develop-Unlike Clement, he nowhere explicitly states the principle of succession, but within the sphere of his experience a ministry of three orders is the type of Church government, and is apparently regarded as universal. The argument from silence, based upon the absence of references to ministerial orders in the epistle to the Romans similar to these which about alcounter in as similar to those which abound elsewhere, is of doubtful force in view of the statement in Trall. 3, that 'apart from these there is not even the name

of a church.' Though there is little reason to doubt that monepiscopacy was established in the Churches of Asia by St. John, as Tertullian and others assert, and though the frequent association in Ignatius between obedience to the constituted ministry and observance of the Divine commands (Magn. 4, Philad. 1, Smyr. 8) suggests the inference that he regards this action of the Apostle as resting upon the explicit injunction of our Lord with respect to the permanent organization of His body, we are not justified in concluding, apart from direct evidence, that any such injunction was in fact given. Irenæus seems to say the same about the work of the four Evangelists; but his conviction of the mysthe four Evangelists; but his conviction of the mystical necessity of a fourfold Gospel (adv. Hær. 11) is parallel to the declaration of Ignatius, that Christ is the mind of the Father, even as the 'bishops that are settled in the farthest parts of the earth are in the mind of Jesus Christ' (Eph. 3),—a mystical inference from the facts of Church life which has no certain value for history. This vein of mysticism in Ignatius must never be forgotten in estimating the evidence of his letters. Nor in his most ing the evidence of his letters. Nor in his most emphatic assertions of episcopal authority does Ignatius appeal only to the word of Apostles, or even of Christ Himself, but to the moral and spiritual results of schismatic action already apparent in the current experience of the Church.

spiritual results of schismatic action already apparent in the current experience of the Church.

The main idea of Ignatius is unity (ἐνότης, ἔνωσις—Ερλ. 4, Μαση. 7. 13, Philad. 5). All things are from God and unto Him (Ερλ. 14, Philad. 9). This is realized primarily in the relation of the Father and the Son (Ερλ. 3. 5, Μαση. 7, εt.). It is the purpose of Christ to unite men to God through Himself (Ερλ. 5. 9, etc.). This result Ignatius in his own case feels to be not yet fully attained. He only begins to be a disciple (Ερλ. 3). Martyrdom he believes to be necessary that this union may be consummated, and that he may 'attain unto God' (Κσπ. 2). This relation is thus no mere technical association through external bonds, but involves the moral elements of faith which is the body, and love which is the blood of Christ (Trail. 3). It is checked by spiritual experience. The Divine method by which the union with Christ is achieved is the Incarnation, expressed in the four facts of the Virgin-birth, Baptism, Passion, and Resurrection of Jesus (Επλη. 1)—those limitations of hard fact which alone give reality and assurance to Christ's work (Μαση. 11: πραχθέντα ἀληθώς καὶ βεβαίως ὑπὸ 'Ίγοτοῦ Χ.), without which it is mere appearance (Smyr. 2: τὸ δοκεύν). Without this acknowledgment there is no 'assurance' (Μαση. 13) in Christian life. It is they who refuse to experience. The teaching which St. Paul combats in the Epistle to the Colossians, which appears in a yet more virulent form in the Pastorals, and which provoked the uncompromising hostility of the disciple who saw the blood and water flow from Jesus' side, had spread like a moral pestilence throughout Asia in the form of Docetism. As in the first age the retention of the pure gospel had been guaranteed by continuance in 'the apostles' doctrine and fellowship,' so now a faithful adherence to Apostolic commandments and submission to the bishop (Ερλ. 6, Τταίl. 2, Philad. 7, Σπιγ. 8), with the presbyters (Ερλ. 4 and passim) and deacons (Μαση. 8, etc.) established everyw

We must observe: (a) That acceptance of the limitations imposed by loyalty to a duly constituted Christian society follows, in the thought of Ignatius, the principle of the Incarnation (e.g. Eph. 3). (b) Obedience to episcopal authority is represented as a moral obligation rather than as a technical condition of salvation. To follow one who makes a schism (*Philad.* 3), or to live without episcopal ministrations, is condemned. 'Do nothing without the bishop' is an injunction expressed in terms so general as to include more than the celebration of sacred rites, and thus indicates a spirit rather than a rule. (c) Baptism and the Eucharist are dependent for their 'validity' not upon the official character of the ministrants (a question not raised), but upon episcopal sanction (Symr. 8: οὐκ ἐξόν ἐστιν χωρίς τοῦ ἐπισκόπου κ.τ.λ.), the spiritual importance of which is apparent in the case of the latter-a sacrament of unity-, the neglect of the principle resulting in decline of faith and love. (d) 'Validity,' i.e. assured spiritual

efficiency, admits of degrees. Disregard of the ministry is the beginning of that spiritual declension which is perfected in the denial of the Son. 'Invalid' does not mean null and void. There is nothing to show that persons baptized 'apart from the bishop' would have been treated as unbaptized. Béfauor as applied to sacraments must be interpreted in view of the wider use of the word and its cognates in these epistles (Magn. 4. 7. 13). The best translation will, perhaps, be 'regular' or 'standard.' (2) While we must refrain from fixing upon Ignatius a conception of the Church which reduces it to a nicely adjusted hierarchical machine, the principle of his thought warrants us in claiming him as an undeniable witness for the continuance into the sub-Apostolic age of a society duly subordinated, in the facts of its exterior order no less than of its spiritual life, to that presbytery which the Father's incarnate Representative gathered around Himself in the persons of the Apostles. Promiscuous powers of association, the alternative to structural continuity, are foreign to his whole conception. In that sense Ignatius is an unimpeachable witness to Apostolical succession in

the early 2nd century.

(3) Polycarp, whom his friend and pupil Irenæus declares to have been appointed bishop of Smyrna by Apostles (Iren. iii. 4), writes to the Philippians, like Clement to the Corinthians, and Ignatius to Ephesians or Trallians, a letter addressed officially to the whole Church, not only in his own name, but in that of his presbyters. The evidence is equivocal as to the existence of a bishop at Philippi; for, though mention is made only of presbyters and deacons, the former are not called êxioxoro: as in the Pauline Epistle to the same Church (Polyc. 5. 6. 11). But it does show that ministerial authority is a particular determination of that which attaches to the whole community acting constitutionally. It is the principle of obedience that Polycarp emphasizes—'Be ye all subject one to another' (10). God is the Father, Jesus Christ His Son the eternal High Priest (pontifex) (12). His coming and those commandments which are its issue, i.e. not moral precepts merely or chiefly, but the witness of the Cross, the Passion and Resurrection, which form the subject of the gospel, involve obedience on the part of Christians to the voices of the prophets who fore-told, and the Apostles who proclaimed the gospel (6). The perversion of this truth, its accommodation to human lusts, by a Docetic teaching which denies bodily resurrection and eternal judgment, is still the fact of experience that constitutes the chief danger to faith (7). Though milder in form, Polycarp's teaching evidently tallies with that of Ignatius, whose letters comprise 'every kind of edification which pertaineth unto our Lord' (13). The Philippians are to submit themselves to the presbyters and deacons as to God and Christ (5).

(4) The importance of the Didache depends upon its character as a Hebrew-Christian document of a date not later than the early 2nd century. Internal evidence suggests that it represents a condition of affairs such as would exist among a community of Jewish disciples in Syria, whose members had been baptized on acceptance of the Pentecostal message that Jesus was the Messiah, had adopted the primary Christian practices of the breaking of bread and prayer, and were subject to the influence and teaching, if not of the Twelve directly, yet of original prophets and teachers like Philip, but were strangers to the developed theology of the Epistles (see J. Wordsworth, Ministry of Grace, pp. 16, 17). In observing the life of this community, we look not so much for settled principles as for indications of the way in which organization was taking shape in an inchoate and

rudimentary stage. We notice: (a) That the community acts and may be addressed as a whole, resembling in this particular both the societies to which Clement and Ignatius write and the Churches of the NT. (b) Prophecy, which at a later date was emphasized in opposition not only to Gnosticism but to an official ministry, occupies a prominent place, not, however, as a promiscuous gift, but as realized in a more or less well defined order (Did. 10. 11. 13). Here again there is correspondence with the Acts and NT generally, where προφητεία with the Acts and NI generally, where  $\pi\rho o\rho \eta \tau \epsilon a$  is already tending to give rise to a class of  $\pi\rho o\rho \eta \tau a a$ . In the Didache they possess a  $\lambda \epsilon t \tau ov \rho \tau a$  or right of service (15), which, while it evidently includes leadership in worship, is not precisely defined, does not apparently depend on ordination, and is moral rather than technical in type. As in the NT, so here  $d\pi d\sigma \tau o \lambda \sigma$  is not confined to the Twelve, but seems to be applied to the προφήται as a class (11: 'if [the apostle] ask money, he is a false prophet'), together with another name, διδάσκαλος (15). They are described by such vague phrases as of τετιμημένοι (15), which devolves also upon the presbyters and deacons as admitted to a share in the same heuroupγία. Clement speaks of other ελλόγιμοι ἄνδρες as γία. Clement speaks of other ελλόγιμοι άνδρε as equally with Apostles appointing presbyters to a λειτουργία (Clem. Rom. xliv.). Taking this passage along with the Didache, there is some ground for the suggestion that the prophets, in addition to the Twelve, St. Paul, and possibly other 'apostles,' were an original source of the succession, which would therefore be Apostolic rather as possessing the sanction of the Twelve than as flowing by direct delegation from them (see Gore, Ch. and Min. ch. 6). It is at any rate clear that this must have been the case with appointments made by St. Paul. Whether prophecy might re-appear from age to age as a constantly renewed and immediate source of authority, is a question not contemplated by the *Didache*, which, especially in view of the expected Parousia, is not concerned with a remoter expected Parousia, is not concerned with a remoter future. But the community is to exercise its right of testing the prophet's claim by the standard of disinterested sincerity and conformity with a rule of faith (11. 12). If, however, he satisfies this test, he is to be admitted either temporarily or permanently to an authority described as that of a high priest (13)—the type, if not the source, of all other ministries. The community are to appoint for themselves bishops (i.e. presbyters) and deacons, who are to 'perform the service of the prophets and teachers' (15). Though xespororipara does not necessarily mean 'elect' (see above), yet the word clearly involves action similar to that required of the Church in the selection of the Seven (Ac 63)—a choice which was not an alternative to the imposia choice which was not an alternative to the imposi-tion of hands. The presumption would rather be, as noted above, that the prophets, whose ministry they were to share, would repeat the action of the Apostles at Jerusalem.

B. DISCIPLIMARY CONTROVERSIES OF THE

B. DISCIPLINARY CONTROVERSIES OF THE THIRD, FOURTH, AND FIFTH CENTURIES.—The limitations of the principle of historic succession are defined in the course of the discussions concerning discipline (A.D. 200-450), which gather round the controversies involved in Montanism, Novatianism, and Donatism. The question in all these disputes was in reality not, What did the Apostles ordain, but What do the facts of the continuous history of the Church involve? The problem is parallel to that which centred round the Person of Christ, and issued in the dogmatic definitions of the 4th and 5th centuries. It may be admitted in either case that the matter is not merely one of terminology, but that a certain inadequacy of thought was often consistent with loyal acceptance of the facts, leading not unnaturally, under stress of new conditions, to positions

ultimately found to be departures from primitive

Christianity.

(1) To describe Montanism as an innovation, in the sense of a conscious rejection of an authoritative system, is to misconceive the situation. Hitherto the inroads of Gnosticism had been met by insistence on submission to the principle of unity expressed in the organization of the Christian society. The appeal of Ignatius was developed by Irenæus (iii. 2, 3, 4, 40) and Tertullian (de Præscript. 30-32), who pointed to the episcopal succession as a guarantee for the preservation of Apostolic teaching. Nor were these alone in their contention. Hippolytus speaks of bishops as 'successors of the Apostles' and guardians of the word (Hær. procem. p. 3). Hegesippus, again, after speaking of the Corinthian Church as continuing 'in the right word' till the episcopate of Primus, says that he had made a list of the succession  $(\delta ia\delta \delta \chi \eta)$  up to Anicetus (ap. Euseb. iv. 22). Such evidence, together with that of the 'Church Orders,' which belong to the same period and in which we find careful regulations for ordination (e.g. the Roman Church Order, commonly called the Canons of Hippolytus), points to the importance attached to the structural unity of the Church by men who, inheriting the spirit of the Fourth Gospel and the Pastorals, regarded Christianity as a life manifested in facts (1 Jn 1<sup>1</sup>), not a system of knowledge. Montanism was not in intention a denial of this position. Writers like Tertullian fell back upon what seemed to them a more sure defence of orthodoxy in the spirit of prophecy. As with Novatian in the next age, who was careful to obtain a regular consecration to the episcopate, there was no separation from the exepiscopate, there was no separation from the external form of the Church. It was the Church itself that condemned them. Nor was the opposition to Montanism based on the illegitimacy of prophecy when unconnected with any outward delegation of authority, but simply on the nature and circumstances of the utterances themselves, which were pronounced on their merits to be not of God. In the continuous of prophecy there of God. In the continuance of prophecy there was nothing inconsistent with the authority of the ministry, and, though doubtless the claim of Montanus might in its issues become fatal not only to a canon of Scripture, but also to the historic fabric of the Christian society, it was only the authority to absolve sinners and repress prophecy that was actually assailed. The 'Church of the Spirit' was not a rival to the historic body, but rather the source of authority within it. And the immediate expectation of the Parousia, characteristic of the Mathematical Parlaments. istic of the Montanists, absolved them from the necessity of thinking out the problem of continuity. There is no evidence of the creation of a fresh local ministry, as with the Irvingites, by the voice of the Spirit. There were Montanist bishops and presbyters, as subsequently there were Arian or Nestorian clergy. But though the question was brought to a final issue, the problem was essentially the same as had been involved in Gnosticism, and it was met by the Church in the same manner. Just as there is a 'form of doctrine, an Apostolic gospel, a written word, so there is a historic structure, 'the witness and keeper of Holy Writ,' 'the pillar and ground of the truth.' This was involved in the claim to 'try the spirits' made on behalf of the Church acting through its organization.

(2) Novatianism produced a definite theory of the facts of organized Church life in Cyprian's de Unitate. To discuss the historical value of the distinctive claims of the episcopate put forth in that treatise does not fall within the scope of this article. It represents the facts as they were in the 3rd cent., and as in the mind of the writer |

they had been from Apostolic times. As a vindication of the Apostolic authority of the Church acting in a corporate capacity, it is in general agreement with Ignatius, Irenæus, and the opponents of Montanism. Its weakness lies in the impetus given to a ministerial sacerdotalism binding the activity of the Spirit to official channels (see Lightfoot, *Philippians*, p. 258). So far as Novatianism, following in the wake of Montanus, was resistance to growing officialism, it stood for the freedom of the gospel. The movement included (a) defraces the confessors who volved: (a) deference to the confessors, who, as manifesting the Spirit, were in deed what the prophets had been in word; (b) supersession of such bishops and other ministers as did not manifestly fulfil certain spiritual conditions. The Roman Cornelius was accounted no bishop, because, like Callistus, he was held to be deficient in a genuinely spiritual rigour. This was in effect to make the voice of the Spirit, not Apostolic succession, the decisive Church principle. Against it Cyprian elaborated his famous doctrine of the episcopate as the true centre of unity. The Apostolic authority, first entrusted to St. Peter, but immediately extended to the other eleven Apostles (de Unit. 4), was transmitted by succession from them to the bishops (5). Each bishop, representing the par-ticular Church which he ruled, possessed an undivided authority, though in practice limited by a similar jurisdiction conferred upon his neighbours, the episcopate being regarded as exercised jointly and severally ('Episcopatus unus est cujus a singulis in solidum pars tenetur,' 5).

It is not easy to see precisely how Cyprian expected this principle to work out, and difficulties arose within his own lifetime in the controversy with Stephen of Rome concerning rebaptism. But there is no uncertainty whatever as to his theory. Christ founded a society, which from the first He entrusted to the college of Apostles, which reproduces itself from age to age in the universal college of bishops. Though, however, the days of exact constitutional limitations had not yet arrived, Cyprian does not appear to have contemplated an episcopal absolutism, for in practice he allows, and even insists upon, something in the nature of an organic exercise of authority on the part of the several dioceses, giving dire recognition to presbyters, deacons, and even the lairy in snodical decisions (Ep. xvii. 1, xxxviii. 1, lxiv. 1, xix. 2). The right of the laity to withdraw from the communion of a simul bishop is recognized (Ep. kvii. 3). To the voice of the Plebes the bishop himself owed his position. But the tendency of this explicit theory and the character of an age which needed a disciplinary system were undoubtedly towards the identification of the Spirit's work with official acts assigned to the various grades of an accredited hierarchy. If Novatian applied a narrow human criterion to the work of the Spirit, by refusing to recognize His presence, when such manifestations as the members of a Church, itself imperfectly spiritualized, could discern, were found to be absent; so imperfectly did Cyprian understand the limits of the principle, by which he opposed the schism, that his hard-shell conception of the Church gave rise to a new Novatianism, in that bureaucratic idea of Christian society which led him to refuse recognition to the baptism of schismatics, which denies spiritual validity out side its own borders, and which finds its latest development in what Cyprian would have vehemently resisted—Ultramontanism and papal infallibility.

(3) The earliest form in which this exclusiveness organized itself was Donati It is not easy to see precisely how Cyprian expected this principle to work out, and difficulties arose within his own life-

organized itself was Donatism, appealing to the authority of Cyprian for the re-baptizing of all who had been 'sprinkled in the schism.' They differed, however, in one important respect, for whereas the latter inconsistently declined to break communion with bishops who, unlike himself, received Novatianists without a fresh baptism, the Donatists refused to recognize as Christians any who held the validity of what, as they viewed it, was a schismatical sacrament. It was claimed that, inasmuch as the Holy Spirit belonged to the Church, schismatics did not possess the gift, and therefore could not convey it. Against this narrow sacer-dotalism Augustine, while not invalidating the principle of authority as expressed in the historic ministry, affirmed a conception of the Christian society wide as the universal purpose of Christ. The Church is catholic; no good thing can fall outside its unity. If there is no salvation outside the Church, the Church for this purpose cannot be interpreted in a merely constitutional sense. The 'validity' of baptism depends, not on the authority of him who administers, but upon Christ's intention. How far-reaching this principle is does not

of him who administers, but upon Christ's intention. How far-reaching this principle is does not at once appear.

That 'valid' here means, as with Ignatius, not 'genuine' but 'regular,' is clear from the fact that Augustine did not regard baptism as spiritually operative so long as the recipient adhered to Donatism. But while in Ignatius there is nothing to show whether baptism administered without episcopal sanction would have been treated as void, Augustine asserts that it may not be repeated. But the hindrance to grace is the absence of charity, which in experience is found to be in opposition to the spirit of unity and love, not the formal exclusion from covenanted channels of those who create division. What Augustine failed adequately to realize, probably owing to the historical fact that on the whole the 'fruits of the Spirit' were conspicuously lacking among the Donatists, was that responsibility for separation is usually divided, and that it is difficult to determine which of two contending parties is schismatic. It is this fact that makes apparent historical parallels seriously defective when applied to later controversies. What is of permanent value is the recognition that schism is a moral fault, not an ecclesiastical situation; that it is to be recognized in spiritual experience and healed by the appeal to conscience, not reduced by contral-regiment. A third point to cherve is that apparently the welfall of a sacrament is not dependent on the order of the minister who dispenses it. If it be argued intar, as handler, of which a layenan may be the minister (see Birghan), Hist. J. Lay-layinm; but cf. Waterland, Letters on Lay-baptism; but cf. Waterland, Letters on Lay-baptism; but cf. Waterland, Jetters on Lay-baptism; but cf. Waterland in minister (see Birghan), Hist. J. Lay-layinm; but cf. Waterland in minister (see Birghan), Mat. xvii. 2. §§ 5, 6). A deposed cleric became a layman whether, therefore, a schismatic priest could create the Real Presence in virtue of a mystic power inherent in his ordin

There are many indications that respect for the ministry as the seat of Apostolic authority did not at first involve the idea that the celebration of sacraments by laymen was essentially sacrilegious. The acknowledgment of lay baptism, for example, already mentioned, which, though not universal, is nevertheless general, rests upon no commission granted to laymen by council or canon, but simply upon practice; and there is no reason in the nature of things why, if occasion had arisen, a similar recognition should not have been extended to the other sacrament so ministered. It seems clear that, though in the NT presbyters tended to labour in the word and teaching (1 Ti 5<sup>17</sup> etc.), and though in the succeeding age the function of the prophet in the succeeding age the function of the prophet tended to devolve upon the bishop, yet the primary function of the local ministry was ruling (1 P 5<sup>1-3</sup>, 1 Ti 3<sup>8</sup>, He 13<sup>17</sup>), and other offices might be discharged by the gifted. Tertullian distinctly affirms that 'where there is no bench of clergy, you offer, baptize, and are priest alone for yourself' (de Each. Cast. 7). It is usual to discount this statement on the ground that it amears in a Montanist traction the ground that it appears in a Montanist treatise, and is contradicted, for example, by his own earlier opinion that 'offering' is a distinctive 'munus' of the clergy. In the de Præscriptione he charges the Gnostics with carelessness in the matter of ordination and of granting even to the laity sacer-dotal functions ('nam et laicis sacerdotalia mu-nera iniungunt,' 41). Not only in the later work does he seem totally unaware that his statement is controversial and contradictory of his former views, but there is really no opposition between

That both the Eucharist and Baptism are rightly celebrated by the ordained ministry he expressly declares, even when he affirms that 'where three are, there is a church, although they be laics' (ib.). 'The difference,' he says, 'between the order and the people' rests on 'the authority of the Church' (ib.) of the Church' (ib.). And it was precisely that authority as Apostolic, and therefore derived from Christ, which he emphasized against the Gnostics. There can be no question that from the time of Clement and Ignatius, or rather from the days of the Apostles (Ac 2<sup>s2</sup>), it was perceived that unity of worship was as vital to the continuity of the Church as stability of doctrine, and that an Apostolic ministry was the guarantee of both. But it is also true, as the present condition of Eastern Christendom testifies, that the territorial conception of 'one bishop one area,' though it may have been the ideal (see Nic Can S. Bincher. have been the ideal (see Nic. Can. 8; Bingham, Ant. ii. 13), is a development that belongs rather to the West. The point, however, is that, although normally and naturally officers were duly appointed by 'Apostolic' authority to fulfil the various functions of both discipline and worship, the dominant conception of priesthood asserted by one early writer after another (as, e.g., by Justin, Dial. c. Tryph. 116), and never lost even in the most narrowly hierarchical age, attached this character, inherited from the OT, to the whole community. Within the society the ministry, belonging as it did to its structure, was the permanent guarantee of its continuity as a vertebrate institution both in faith and in life. When this ministry is likened to the Aaronic priesthood, the shifting manner in which the analogy is applied by various writers shows that this aspect is not essential.

It is the merit of Augustine, in his handling of the Donatist controversy, to have pointed out the lines along which alone Apostolic succession can be given its true place in the Christian economy. Machinery cannot be exalted at the expense of Baptism, been a sacrament incapable of repetition in the life of the individual, it cannot be doubted that the 'validity' of 'schismatic' Eucharists would have been decided in the same sense as that of Baptism. Both sacraments, as so administered, were equally regular or irregular according to the point of view. What may be called the 'channel theory' of sacraments, which regards Christian ordinances as vehicles of grace down which spiritual energy may be led, has operated disastrously, to produce a technical view of a succession equipped with the power of working the 'miracle of the altar.' It is not affirmed that this theory is purely mediæval, and that it was not present in germinant form in the first five centuries, and possibly even in the Apostolic Church. But it is the view of succession as preserving the fulness of Apostolic authority, and as the guarantee of a gospel which is 'not of men neither by man,' i.e. as realizing the principles upon which Christ established His society, that is alike primitive and

While any theory of the ministry, which involves a denial of the personal consciousness of the Spirit in the experience of individuals or the manifestations of His presence in the corporate life of any Christian communities in any age, is inconsistent with plain facts and the Christian conscience, it is yet, in the opinion of the present writer, probable that the present tendency towards reunion among Christians, with the instinct of social and corporate witness which it manifests, will inevitably, as it progresses towards yet wider amalgamations, reveal Apostolic succession as a subject of more than sentimental or antiquarian interest, and quicken inquiry into the conditions

VOL. I .-- 41

which shall be necessary to make the fabric of universal Church life in the future structurally one with the Church of a continuous, though not

undivided, past.

undivided, past.

APOTHEOSIS.—See DEIFICATION.

## APOTHEOSIS.—See DEIFICATION.

APPERCEPTION.—The term 'apperception' was introduced into philosophy by Leibniz, being derived from the French s'apercevoir, 'to be aware of' or 'conscious of.' Its use is not wholly free from obscurity even in its inventor, while it has been applied by his successors in at least two widely different senses. With Leibniz it indicates: (1) a higher degree of perception—a perception which is distinct, vivid, relatively persistent, in contrast with perceptions which, lacking these qualities, affect the soul only in the mass, and which, as they do not emerge into individual consciousness, may be called unconscious.

'There is at any moment an infinite number of perceptions in us, but without apperception and reflexion, i.e. changes in the soul of which we are not conscious, because the impressions are either too slight, or too great in number, or too even (unites), so that they have nothing sufficiently distinguishing them from each other; but, joined to others, they do not fail to produce their effect and to make themselves felt at least confusedly in the mass' (Nouveaux Essais, Pref. [Laugley's ur.] p. 47).

Leibniz's favourite example—the noise or roar of the sea as made up of the insensible noises of the separate wavelets - does not really hold; but a modern instance may be given from Helmholtz: the over-tones which give the peculiar quality or colour to the tones of different instruments cannot be separately noticed or 'apperceived' by the untrained ear, although in their mass they have a quite distinct and recognizable effect (Helmholtz, Tonempfindungen, p. 107 [Ellis' tr.2 p. 62]). In Leibniz also apperception becomes: (2) the basis of a distinction in kind between beings or 'monads.' The lowest monads, which have perception alone, are merely passive mirrors of external events, while the highest monads or 'spirits' rise to apperception, which is consciousness, or the reflective knowledge of this inner state (perception), and which is not given to all souls nor to the same soul at all times' (Principles of Nature and of Grace, § 4 [Latta, p. 410]). In perception proper the soul is passive; in apperception it is active, self-conscious. 'There is not only an order of distinct perceptions which constitutes the empire of the soul, but also a mass of confused perceptions, or passions, which constitutes her slavery' (Théodicée [Janet's ed.], p. 143).

Although not incompatible, these two uses of the term in Leibniz are at least distinct. The

second meaning, in which it suggests an internal sense, or reflexion, and self-activity, is that in which Wolff, and after him Kant, understood the term; but it was applied by the latter in a quite distinctive way (see KANT).

With Herbart, the theory of apperception enters on a new phase. It now means a process taking place between one presentation or idea and another idea or group of ideas (Psychol. als Wissen. ii. § i.

ch. 5 [Hartenstein's ed. vol. vi. p. 190]). When a new sensation, perception, or memory enters the mind, it awakes or reproduces a number of older pre-sentations or ideas referring to the same object. So far as these contain similar elements, it coalesces with them, and assimilates or is assimilated by them (Verschmelzung); so far as they contain opposite elements, there is mutual competition and conflict (Hemmung), each restricting the normal development of the other in the mind. The same process takes place also between those more complex series, masses, or systems, of ideas and thoughts, which result from combinations of all kinds at lower levels. The appropriation or absorption of an idea, from whatever source, by a more complex idea or system already present in the mind, is what Her-bart calls 'apperception.' It is external or internal, according as the idea to be appropriated is a sense-perception or a representation of any kind; but this distinction, really inconsistent with Herbart's psychology, was afterwards rejected by Steinthal. The characteristics of the apperceiving mass are, (1) that it succeeds the apperceived idea in time, and (2) that it is stronger, more powerful, from some cause, and therefore compels the other to modify in accordance with it, while it itself continues to develop according to its nature (ib. p. 194; cf. Lehrbuch zur Psych. § 41). Thus it is relatively the active, the other relatively the passive element. An instance is the way in which our habitual modes of thought and action influence our apprehension of new ideas, our criticism of the conduct of others, etc. Not only how we see things, but what we shall actually see, is determined for each of us by our past experience and the use we have made of it. Psychologically, such experience is active only as a present system of ideas, according to Herbart. Apperception does not take place in the child or in the savage, because such systems are as yet unformed; it fails also under intoxication, fatigue, passion, etc., because the existing systems are disorganized. Education, intellectual and moral alike, is the gradual formation and strengthening of the due apperceptive masses. The slow and painful beginnings, the final rapid mastery and assimila-tion of a science, give further illustration. The modification is not wholly on one side, however; ideas 'act, as it were, chemically upon one another, decomposing one another and entering into new connexions. Apperception is also the basis of memory; nothing can be recalled unless it has been built into a series or system of ideas, forming links by which the mind may reach it and drag it forth (*Psych. Untersuch.* iii. [Hartmann, vii. p. 591]). A further feature is the suppression, by the apper-ceiving mass, of whatever in perception or recol-lection conflicts with itself: in this, with the correlative raising up and isolating of the apper-ceived element, apperception is identical with attention (Briefe, p. 497). See ATTENTION. In Volkmann also 'apperception' is defined as the coalescence of a new and isolated mass of ideas

with an older mass which exceeds it in the number of its constituents, and in internal adjustment or systematization (*Lehrbuch der Psych.*<sup>4</sup> ii. 190). With both Lazarus and Steinthal the range of apperception is greatly extended; it becomes, indeed, coextensive with mental life. It is the creative process in mind; in it one content does not merely 'become aware of' another, but both are transformed, 'melted into a higher and richer third.' An idea becomes a centre of apperception through its Macht, or force, which does not imply either intensity or clear consciousness, but depends on the number of connexions which the idea has with other ideas, and on the closeness of the ties by which its constituents are bound together. Steinthal recognizes four chief forms of appercep-

tion, which are derived from those of Logical Judgment: Identifying, Subsuming, Harmonizing (with its negative, Disharmonizing), and Creative Apperception (Kleine Schriften, i. p. 60; Einleit-

ung in die Psychol. p. 207).
With Wundt there is a return to the theory of Leibniz and Kant. A presentation or idea may be in consciousness simply, or also in the focus of consciousness, which, however, is not strictly a point, but rather a limited field. There are thus two thresholds,—the outer—that of consciousness or intensity; and the inner—that of apperception or clearness. The entrance of an idea into the focus of consciousness is its apperception, which may be either passive or active. Thus it is simply may be either passive or active. Thus it is simply one side or aspect of the process of attention. Apperception is also identified by Wundt with will, and in this connexion acquires a strongly metaphysical colouring. This conception of apperception as a pure activity, which is yet directed or stimulated by presentations, has been criticized from different points of view by Volkmann, Hartmann, and the Associationist Psychologists, such as Ziehen, etc. In English Psychology the theory as Ziehen, etc. In English Psychology the theory of apperception has been developed, mainly along Harbartian lines. by Dr. Stout. The following or apperception has been developed, mainly along Herbartian lines, by Dr. Stout. The following indicates his standpoint:—In all apperception 'a presentation acquires a certain significance for thought, by connecting itself with some mental preformation as this has been organized in the course of previous experience' (Anal. Psy. p. 110).

course of previous experience' (Anal. Psy. p. 110).

APPETITE,—I., Psychological.—Appetite may

APPETITE .- I. Psychological .- Appetite may be defined as a recurring sense or consciousness of want in the bodily organism, accompanied with a craving or desire for satisfaction, leading to efforts at fulfilment, under the impulse of uneasiness, which may become, under certain circumstances, more or less pronounced pain. It belongs to the animal side of our being, and is primordial to the human constitution. Most of the appetites hunger, thirst, sleep, repose, rest—are connected with the conservation and welfare of the indi-vidual; sex has reference to the propagation and

continuance of the species.

The characteristics of these natural physical wants (over and above uneasiness and efforts to remove it) are:—(1) They are not permanent, but intermittent: they disappear on being satisfied, but recur at stated times or periods. (2) If pressed beyond the natural limits of satisfaction, they breed satiety, and injury is done to the system. (3) They constitute our lower wants, in contradistinction to the higher or ideal wants of our nature, such as knowledge and friendship: we do not identify them with our inner self—they are mine, but they are not me.

The uneasiness in an appetite leads to action, mainly reflex and instinctive, not deliberately purposive, for the removal of it, and the gratificapurposive, no the tendovar of it, and the gradular tion of the appetite brings pleasure. Hence, the original propensity to act under uneasiness may come to assume the form of desire for pleasure (as we see in the gourmand or the epicure), and what would be quite sufficient to remove the bare they guide us in a way that calm reason could not appetite (as in hunger) may be superseded by —prompting us effectively, for instance, to eat for elaborate and refined modes of ministering to the the support of life at the time and to the degree

desire, as shown in the art of cookery. It is thus that appetite may be specially effective on the will: it prompts to the acquisition and continuance of pleasure, not only to the acquisition and continuance of pleasure, not only to the getting rid of uneasiness or disquiet. These two things—the pleasure that accompanies (say) eating, and the conscious and deliberate pursuit of the pleasure of eating—are by no means identical. On the contrary, if desire of the pleasure become the predominant fact, the critical parameters and healthy creating in apparities. original normal and healthy craving in appetite may be supplanted by an abnormal craving, such as we see in gluttony; or an artificial craving, 'an acquired appetite,' may be produced, such as we see in the craving for tobacco or for alcohol. There is here, obviously, no appetite proper, but an induced desire, under the prompting of anticipated pleasure, which, in turn, is the product of individual pleasurable experience.

Hence, we must discriminate between appetite and desire for pleasure. Appetite simply craves for its object (the means for the attainment of the object being included in the conception of the object itself), and, given the object (food, for instance, for hunger), the appetite is satisfiedsatisfied, no doubt, gradually, as the object is gradually realized, but fully in the realization of it. On the other hand, desire of pleasure is a consciously representative process, ideational in its nature, dependent on experience of pleasure (therefore, involving memory), and craving for that pleasure and, in the case of 'acquired appetites,' for the increase, as well as for the repetition, of it.

Appetite, like instinct, is native to the human

being; but it differs from instinct in the following respects:—(1) It is an organic craving, whereas instinct acts under external stimulus. instinct, while there are an end to be effected and means to be used for the purpose, the individual is born with ability to employ the means without requiring to be taught how (as seen, for instance, in the sucking of the child)—in other words, the individual can unhesitatingly employ the means from the beginning, without, however, any con-sciousness of the end or deliberate purpose to achieve it. (3) In instinct there is also an untaught propensity, as well as an untaught ability, to act—'a propensity prior to experience, and independent of instruction.'

The pleasure that the satisfaction of an appetite gives is in general proportional to the craving. But there are cases where the strength of the craving is far greater than the pleasure of the gratification. Such a case we find in the glutton or the drunkard, whose passion, being persistent and whetted by successive gratifications, craves an indulgence which the object of it is incapable of adequately meeting. Here, excess has created a situation where pain has got the mastery—the craving does not disappear in its own fulfilment and periodically return, but persists and thrusts itself unseasonably upon attention: in other words, the object of desire when reached fails to appease completely, and the craving for satisfaction con-

Although, therefore, in appetite proper, there is not involved the deliberate control of reason, nor is there any need for such, this control comes to be required when appetite would transgress its bounds. Such transgression is easy because of the pleasure associated with appetite, and because of the readiness with which abnormal conditions of the bodily system may be induced through excess. Hence, the appetites come to have a distinct and an important bearing on Ethics. Although in their normal action and in their rightful sphere they guide us in a way that calm reason could not —prompting us effectively, for instance, to eat for that the body requires, and not leaving the 'when' and the 'how much' to be settled by rational calculation—their pleasure-giving or 'felicific' calculation—their pleasure-giving or 'felicific' property has to be watched, lest it make voluptuaries or debauchees of us; and thus reason has its function in relation to them. This would seem to mark the distinction between man and the lower animals: in man, the appetites are rationalized;

in the brutes, not so.

2. Ethical.—The appetites in themselves are neither selfish nor unselfish, neither virtuous nor vicious: they are simply a part of human nature, indispensable to the being and welfare of the whole. But inasmuch as they are intimately associated with pleasure, they may be abused, and thus become ethically significant. Not that there is become ethically significant. Not that there is anything selfish or morally wrong in accepting the pleasure that they bring—such pleasure is a sign of physical health (as pain is of disease) and is to be welcomed and cherished (as the other is to be avoided or got rid of); but it may be sought for and estimated beyond its value—it may be pursued immoderately or at wrong times or in a perverted manner, to the detriment of the system and to the exclusion of higher good. If it is characteristic of the appetites that they have a tendency to overstep just limit, it is characteristic of them also that they grow imperious in their demands. Eating may degenerate into gluttony, repose into sloth, love (appetitive) into lust; and when degeneracy sets in, each becomes as a daughter of the horse-leech, crying, 'Give, give !' Hence the appetites need to be regulated and controlled: they need to be placed under rational government. If left to themselves unbridled, they would ruin the higher nature. Hence asceticism is but the exaggeration of a deep spiritual truth; and self-mortification, or keeping under the body, has a real justification in psychical fact. But this means that, in a rational being, the appetites become transformed: they cannot be in him what they are in a non-rational creature. A clear conception of their place and function inevitably changes their nature, phages and function merrically oranges and matter, and entails responsibility as to our use of them. As Spinoza puts it (Ethics, v. prop. 3), 'An affection which is a passion ceases to be a passion as soon as we form a clear and distinct idea of it.' This is a very important truth, explaining to us many things in Ethics,—as, for example, how it is that the instinctive love of a mother for her offspring assumes quite a different aspect when we are dealing with human mothers from what it does when we are considering simply the lower animals. In both cases, there is instinct or natural affection; but, in the one case, it is rationalized (duly located in a system of thought or a scheme of values, and so lifted out of the sphere of mere instinct), in the other, not.

The situation as between the appetites and reason, or between the lower and the higher nature, or, still again (in Scripture language), nature, or, still again (in Scripture language), between the flesh and the spirit, was put strikingly from the ethicist's point of view by Plato in the fable of the Charioteer and his Steeds. In Phoedrus, the soul is aptly represented as a charioteer, riding in his car, drawn by two winged horses of different colour, nature, and temperament, requiring different management. On the one side, there is the black and vicious horse, 'ignoble and of ignoble breed,' ever refractory and plunging through unruly desire, 'the mate of insolence and pride,' and needing to be kept back by bit and bridle, yet 'hardly yielding to whip and spur.' On the other side, there is the white decorous horse, 'noble and of noble breed,' ever responsive 'to word and admonition,' on which bit and bridle sit lightly, and for which no whip is and bridle sit lightly, and for which no whip is required. Here is a significant allegory. The

charioteer is reason (τὸ ἡγεμονικόν); the white steed orderly and always harmonious with reason, represents 'the moral and spiritual element in man'; and the gross and sensual tendencies of human nature find their symbol in the dark and untractable steed. But the task of the charioteer is far from easy-not every one can successfully drive a team; the taming of the refractory steed costs him many an effort, and hard work and skill. Obedience is the result of a strong hand and a determined will, and of sore punishment repeated; only 'when this has happened several times and the villain has ceased from his wanton way, is he tamed and humbled, and follows the will of the charioteer.

The right by which reason rules the appetites, or the rational basis of the distinction between higher and lower in our nature, is found here:—The and lower in our nature, is found first - lie-appetites are non-ideal, and, consequently, indi-vidualistic. We cannot share them with any one else, neither is an appetite in itself susceptible of indefinite gratification. On the other hand, all the natural wants that we regard as higher the natural wants that we regard as higher—knowledge, friendship, virtue, religion—are distinguished by this, that  $(\alpha)$  we share them with others, and yet we ourselves are none the poorer but all the richer—they are essentially altruistic and social; and (b) they do not cease with their immediate satisfaction—on the contrary, the desire increases with its gratification, as we see pre-eminently in knowledge, where the more we know the more we desire to know. They aim at an ideal; and it is the ideality with which they are bound up that produces their insatiableness: no limit is placed by nature to their culture, and so satiety cannot ensue; the capacity increases with what it feeds on.

It is needless to say, further, that both human It is needless to say, further, that both human happiness and human progress depend on the rational control of the lower nature; and this control is effective only when it becomes self-control, only when the individual acts as his own 'plagosus Orbilius,' gains the mastery over himself and exercises it spontaneously. How this self-control is acquired, through strengthening and directing the will, may be read in any good treatise on Psychology (e.g. Höffding's). Anyhow, if the individual's soul becomes, as Plato puts it, a well-ordered State — where there are gradation of ordered State - where there are gradation of functions, harmony, and order everywhere, mutual subservience of the parts to the interests of the whole and for the realization of its highest good then the appetites and their pleasures count for much and have their own part to play in the economy of the human being: neither will they be ignored and starved (as Stoicism would fain effect), nor will they be made supreme and cultivated without stint (as some forms of Hedonism would appear to countenance).

But while there is thus a ground for the rationalizing of appetite, and for the subordination of the lower to the higher, in the nature of the different natural wants themselves, there is a further ground in the ethical dangers connected with the appetites. These are mainly as follows:—
(1) In the first place, an appetite, strictly speaking, is neither selfish nor unselfish; but a deprayed or unrestrained appetite is essentially selfish—thus turning a neutral thing into a positive evil. Vile appetites minister to the individual's cravings, but they may be made the means of corrupting others. (2) Deprayed or unrestrained appetites lower the character, and stunt and check moral progress—they bring 'leanness' into the soul; for it is a law of the human mind that we cannot indulge intemperately without lessening our moral force, just as we cannot harbour base desires without thereby shutting out noble ones, or choose false-

hood without rejecting truth. Consequently, while they vitiate the taste, they enfeeble the will-i.e. they deprive us of the power of resisting temptation and of initiating reformation; which, otherwise expressed, means that they leave us the prey to impulse, and so the end thereof, in Scripture language, 'is death.' (3) Perverted appetites are a bondage: they drag us at their heels, and through them we lose our moral freedom—we are enslaved. The peculiarity is that, while we yield to them, we protect the will is overhoome but we ctill retain. protest: the will is overborne, but we still retain protess: the will is overborne, but we still retain our perception of the right and our appreciation of it,—'I see the better and approve, I pursue the worse' (Ovid, Met. vii. 21). In other words, our moral energy is felt not to be adequate to our moral insight; we are conscious of being coerced. This fact of the bondage of the appetites and passions is the theme of all great ethicists, from Plato downwards: it was kept before the medieval world by the Consolation of Philosophy of Boëthius, and it is a heritage to modern philosophy from and it is a heritage to modern philosophy from Spinoza, the fourth part of whose Ethics deals with this very subject of 'Human Bondage,' and the fifth part with 'Human Liberty.' It is also a leading theme of the Christian religion, and lies at the heart of the characteristics. the basis of the scheme of salvation. (4) Appetite unduly set on pleasure leaves a sting behind. 'But what shall I say of the pleasures of the body? This—that the lust thereof is indeed full of uneasiness (against but the sting of preparations) (Bust the sting of preparations). (anxietas), but the sating, of repentance' (Boëthius, Consol. Phil. Lib. iii. prosa 7).

3. Religious.—The distinction thus drawn be-

tween the appetites and reason, the estimation tween the appetites and reason, the estimation put upon it, and the conception of the soul as a well-ordered, self-governed State, were taken over by Christianity; only, it is to be observed, Christianity has its own way of explaining the conflict between the lower and the higher in man, and it has its own means of ending the conflict. That is its peculiarity, marking it off from mere Ethics. On the one hand (using St. Paul as our guide—more specially as he expresses himself in Ro 7 and Gal especially, as he expresses himself in Ro 7 and Gal 5), the lower and concupiscent element in man is identified with 'the flesh'  $(\sigma d \rho \xi)$ . This unruly principle—the black horse of Plato—rebels against the human reason and overpowers the human will ('mind' or roos in Pauline phraseology), and causes the individual to exclaim in agony, 'O wretched man that I am! who shall deliver me out of the body of this death?' The deliverance comes not from the man himself, not even from his active reason, although the natural function of active reason, atthough the hatthal infliction of active reason is to control; but from without—'I thank God through Jesus Christ our Lord.' For man's impotence of will, according to Scripture, arises from a religious cause and needs a religious remedy: it arises from the fact that man is 'fallen,' is 'sold under sin,' has deliberately rebelled against God, and so has forfeited his rightful power against God, and so has forfeited his rightful power of self-mastery; and the rectifying and conquering force must come to him from above—it must be a gift from heaven. This Divine gift, in accordance with the whole Christian doctrine of regeneration and re-creation, is 'the Spirit.' And so, in order to be delivered from the hard bondage of the lower colfs which is the headless of sing reas must be to be delivered from the hard bondage of the lower self, which is the bondage of sin, man must be raised from the 'natural' or 'psychical' plane into the 'spiritual' realm—he must himself become a temple of the Holy Ghost, and through the indwelling Spirit he will conquer. 'But, I say, walk by the Spirit, and ye shall not fulfil the lust of the flesh. For the flesh lusteth against the Spirit and the Spirit against the flesh; for these are contrary the one to the other; that ye may not do the things that we would.

And they that are of Christ that ye would. . . . And they that are of Christ Jesus have crucified the flesh with the passions and the lusts thereof' (Gal 5<sup>16</sup>. <sup>17, 24</sup>). Thus the Christian faith incorporates Ethics, but transcends

it. It is, consequently, effective on human life and practice in a way that Ethics, standing alone,

annot be.

WILLIAM L. DAVIDSON.

A PRIORI.—A Priori is one of those terms, by no means rare in philosophy, the meaning of which has in the course of centuries undergone divers changes. Originally an unobjectionable expression, denoting an ordinary mental act about which there can be no controversy, it has eventually become the index of one of the most stubborn problems which set the minds of men at variance. According to Prantl,\* the earliest occurrence of the phrase is in the writings of Albert of Saxony (14th cent.), who draws a contrast between demonstratio a priori, the proof from what is before, i.e. from the cause, and demonstratio a posteriori, the proof which retrocedes from the effect. The usage can be traced to Aristotle, who in the Second Analytics states that that upon which proof is based must be prior to, and better known than, that which is to be proved, and continues thus: 'The earlier and better known has a twofold meaning. That which better known has a twofold meaning. That which is prior by nature is not identical with what is prior for us; nor again is that which is in itself better known the same as what is better known to "The prior and better-known in relation to us" is the name I give to what lies nearer to our sense perception; what lies farther from that I call "the prior and better known in itself." The most remote of all is the universal; the nearest is the individual object.' The connexion of the term A Priori with Aristotle is thus quite evident. But while he differentiates the meaning of 'prior' ac-cording as the starting-point is the thing perceived or the process of perception, Albert of Saxony does not take this difference into account: with him demonstratio a priori signifies the proof from causes. It merely denotes a special mode of mental opera-tion; in other words, a priori is a term of formal logic. The knowledge which proceeds from cause to effect, or knowledge a priori, rightly claims a higher degree of certainty than knowledge a posteriori, or from effect to cause, so long as the terms keep rigidly to the meanings assigned, and so long as the limits of formal logic are not transgressed. But the problem of knowledge goes beyond the scope of formal logic. The moment any shifting takes place in the meaning of A Priori and A Posteriori, and they show a tendency to coalesce respectively with knowledge based upon conceptions and knowledge based upon experience, and when, further, the province of logic is relinquished for that of psychology, it is no longer possible to maintain the higher certainty of a priori knowledge. For, with such change, perception appears as the earlier and more certain, while the general conception is the later, and thus A Priori and \*Geschichte der Logik, iv. 78. A Posteriori have simply exchanged meanings. Hence Gassendi, in his polemic against the Aristotelians, impugns the dictum that the demonstratio a priori is more certain and conclusive than that a posteriori, and demands its warrant. Since on his view the demonstratio a priori becomes the proof from causes and general conceptions, and since the demonstratio a posteriori becomes the since the demonstratio a posteriori becomes the proof from effects and less general conceptions, he shows that he has abandoned the strictly logical usage of the terms. But in that case it is clear that there is but one answer to his question whether effects are not better known than causes; and the inevitable inference is that a priori knowledge depends upon a posteriori.\* Gassendi's criticism shows that the term A Priori had become ambiguous; it was so far free to assume a new meaning.

come ambiguous; it was so far free to assume a new meaning.

Its new content was supplied by Leibniz. It is indeed true that Leibniz did not always use the term in one and the same sense. Thus, in connexion with the ontological proof of the existence of God, he argues that existence does not follow from conception, but that the possibility of the fact signified by the conception must first of all be established. This possibility, however, may be cognized either a priori or a posteriori: the former, if the various characteristics of the concept are mutually consistent; the latter, when the thing itself is an object of perception. † A similar usage appears in the passage where the criterion of a clear and distinct idea is said to be its capacity of yielding the knowledge of a number of truths by yielding the knowledge of a number of truths by a priori proof. Here A Priori is really concerned with the elucidation and explanation of conceptions, and with knowledge won from conceptions by correct reasoning. It is employed in a somewhat different sense in the passage where the knowledge which proceeds from God to created things and that which recedes from created things to God are respectively designated a priori and a posteriori.§ respectively designated a priori and a posteriori. Still another usage is observable in the statement that in regard to the mysteries of the Christian faith, such as the Trinity and the Incarnation, a priori proofs on rational grounds are neither possible nor requisite, and that in this case the knowledge of the fact is sufficient, though the why remains unknown. A priori proof is here equivalent to the intuition of rational cause. why remains unknown. A priori proof is here equivalent to the intuition of rational cause. In discussing the relationship subsisting between the human and the animal soul, Leibniz comes to the conclusion that the faculty of simple empirical association is common to both. A dog being trained to perform a trick gets a tit-bit; a Dutchman travelling towards Asia will ask for his beer, perhaps even in a Turkish inn. The connexion between trick and tit-bit, between inn and beer, is in each case casual, not necessary; but the man differs from the animal in that he seeks for a necessary connexion. The mere data of experience are not sufficient for him, nor does he rely on experiments alone; he goes beyond them a priori, by means of first principles. A Priori thus acquires an implication of necessary relation. According to Leibniz, then, knowledge a priori is found in the following contingencies:—(1) when the possibility of a fact is established by showing the self-consistency of its conception; (2) when from a clear and distinct idea further cognitions are deduced; (3) when thought proceeds from God to created things; (4) when the rational grounds of an actual truth are investigated; (5) when an essential relation is established. Thus A Priori has various shades of meaning; but it may be asserted that, as used by Leibniz, the expression has various shades of meaning; but it may be asserted that, as used by Leibniz, the expression \* Exercitationes paradoxicæ adversus Aristoteleos, lib. il.

exerc. 5. † Leibniz, Werks, ed. Erdmann, p. 80. † Ib. 451b. || Ib. 494b.

tends generally to become identified with know-ledge gained from pure reason. This is its mean-ing when he contrasts knowledge par la pure raison ou a priori with philosophie expérimentale qui pro-cède a posteriori;\* and when, in the Nouveaux Essais, the reason which is the basis not only of our judgment, but also of the truth itself, is made to rank as reason in the distinctive sense, or reason a priori.† A Priori is thus an attribute of that species of knowledge of which every constituent is furnished by reason alone.

species of knowledge of which every constituent is furnished by reason alone.

Lambert also is of opinion that 'without qualification and in the strictest sense the term a priori can be applied only to that in regard to which we owe nothing whatever to experience.' Wolff, on the other hand, reverts to the more general sense of the term, applying it to any kind of knowledge arrived at by reasoning, even when the conceptions employed in the premises are derived from experience.

arrived at by reasoning, even when the conteptions employed in the premises are derived from experience.

The view of Kant demands a somewhat fuller treatment, since in this as in other respects he marks the consummation of the previous development, and the starting-point of the new. Besides, the problem indicated by the phrase a priori, according to him, stands at the very centre of thought, as it does with no philosopher before him. His entire system, indeed, may be regarded as an answer to the great question, How are synthetic judgments a priori possible? Alike in his theoretical and his practical philosophy, in his treatment of æsthetics and of religion, his aim was to discover and establish synthetic judgments a priori. He is at one with his predecessors in assuming the existence of a priori cognition, and in believing that it cannot be regarded as originating in experience. But he felt that justice had not been done to the problem involved.

It such a priori knowledge really exists, he argues, then it must be exversible in indements which are a priori and indeed

that it cannot be regarded as originating in experience. But he felt that justice had not been done to the problem involved.

It such a priori knowledge really exists, he argues, then it must be expressible in judgments which are a priori, and, indeed, synthetic. Merely analytical judgments, i.e. those which do no more than analyze and elucidate a given concept, while they render our knowledge explicit, do not augment it; only synthetic judgments, i.e. those which link a new predicate to the subject, turnish a genuine addition to knowledge. Hence the judgments a priori which are of any use at all are precisely those the predicate of which goes beyond the subject, adding something that was not contained therein. Such a synthetic judgment is exemplified in the dictum, 'Every event has a cause.' It is synthetic, since the concept 'event' does not involve the idea of a cause; the predicate, therefore, adds something new; it is a priori, since, while mere experience, or perception, certainly shows that events follow one another, it does not show that they are causally connected, still less that they are always so connected. Clearly we have a problem here. It is easy to understand how there should be synthetic judgments a posteriori, since perception itself supplies the predicate and its connexion with the subject. When I say, e.g., that lightrays are refrangible, I am merely telling what I have learned by a simple experiment. But how can I say that every event has a cause, seeing that experience cannot be my warrant? How then are synthetic judgments a priori possible? Clearly because reason itself must contain a priori elements; and one great desideratum will be a complete inventory of these elements. But the mere fact of their existence does not warrant their embodiment in judgments having a real value for knowledge; hence their applicability must be vindicated, their relevancy made good. But even this demonstration does not complete our task. For there is an illegitimate as well as a legitimate use of them, and we

<sup>\*</sup> Leibniz, Werke, ed. Erdmann, 778b. ‡ Neues Organon, Dianoiologie, § 639.

of reason. Such rules, however, will be suggested by the following reflexions. In trying to discover what belongs to pure reason, we must isolate it by eliminating all alien material. Now, since the faculty of knowledge has two aspects, namely, the receptivity of perception and the activity of thought, these will necessarily meet us again in pure reason. But as the material element, that which is given in sensation, obviously lies outside the territory of pure reason, we may perhaps delimit the work of the control of the cont

where all things coalesce, knowledge is out of the question. Only the categories of modality afford the requisite gradation, enabling us to take into consideration questions regarding Possibility and Impossibility, Actuality and Non-Actuality, Necessity and Contingency. Thus, to sum up, it is by means of the categories alone that we can attain to knowledge, to experience in the proper sense; and contrarivise, the actual existence of knowledge and experience wincesses to the validity of the categories. Our second problem is thus solved.

3. The answer to the question involved in our third problem, viz., To what extent is the a priori element valid? is given in what has already been said. Our conclusion so far is that true experience is made possible by the A Priori. We must now say: Experience alone, nothing beyond it. It is mere illusion to suppose that by means of the categories we can attain to a knowledge entirely beyond experience. Bational Psychology, which undertakes to prove the existence of the soul as immeterial and inestrucible, is naught but a mass of illegitimate inferences. Rational Cosmology, which presumes to decide regarding the beginning or non-beginning of the world in time, and its limitation or infinity in space, the simplicity and indivisibility of atoms, or their infinite divisibility and the consequent impossibility of indivisible atoms, the universality of natural causation and the denial of freedom, or the assertion of it, the existence or non-existence of an absolutely necessary being—simply lands us in antinomies, of which both the thesis and the antithesis may be shown to be equally valid. Rational Theology, again, achieves its aim of proving the existence of God only by the manceuver of making the conclusion contain more than the premises, as, for instance, in the ontological proof, according to which the existence of God only by the manceuver of making the conclusion contain more than the premises, as, for instance, in the ontological proof, according to which the existence of thei

ception and thought are a priori; their function is to make experience possible, and they do not avail beyond experience. But with a view to a complete explanation it remains to establish the two following theses: (1) the A Priori is not to be interpreted psychologically; and (2) the A Priori is not equivalent to innate.

(1) A psychological interpretation was given by Schopenhauer, who writes: 'The philosophy of Locke was a criticism of the functions of sense; Kant furnishes a criticism of the functions of Helmholtz agrees with this, as does also F. A. Lange, who states that 'the psychological equipment which constrains us to condition objects by space and time, is certainly anterior to all experience. He but so to understand Kant is to misunderstand him. Such an interpretation of the A Priori places it on a level with the other psychical functions. For we likewise see colours and hear tones in virtue of our psycho-physical constitution, and we should thus have to recognize an a priori element in these also. Kant, however, would altogether repudiate this. To understand anything psychologically is to apprehend it as the property or state of a subject, a soul, a psychophysical organism. Psychology never goes beyond \* World as Will and Idea, I. i. † Hist. of Materialism, ii. 38.

the psychological subject and its relations to the surrounding world, whether that world be looked at from the standpoint of Realism or of Idealism in the Berkeleyan sense. The true A Priori compasses both the psychological Ego and the world. A variation in our psychological organization would never involve more than the alteration of a part of our knowledge. If, for instance, the faculty of colour-perception were to become more sensitive or less so, were it even to disappear altogether, then, with the solitary exemption of colour exempthing. with the solitary exception of colour, everything would be as before; and, in fact, were the senses as a whole to suffer any drastic change, some being lost, some displaced by others, it would signify no more than the donning of a new garment; the intrinsic constitution of the mind would remain inviolate. But an alteration in the A Priori would be nothing less than a revolution. Take away space and time, and the world itself falls to pieces. We must accordingly guard against a psychological reading of the A Priori.

The difference between the A Priori and the psychological may be further illustrated as follows. The a priori space-perception of Kant and psychological space-perception are by no means identical. It may be the case that Kant ignored the distinction, but that is irrelevant meanwhile. It is a mistake to suppose that we refute Kant by showmistake to suppose that we refute Kant by showing that the faculty of space-perception is not congenital, but is acquired gradually, that our perception of a surface is prior to that of tridimensional space, and that we localize accurately only after having learned to do so. All that is true, but it does not conflict with the theory of Kant. The development of the psychological space-perception presupposes the a priori. Psychological space is limited, and we can in a manner discern space is limited, and we can in a manner discern its limits; a priori space knows no limit. Hence we may assert that what is a priori is not psychological, and vice versa. Once a psychological interpretation was put upon A Priori, it was quite proper to proceed to its analysis, as was done by the evolutionists. They maintained that what is now an A Priori for the individual was at first an A Posteriori for the race; that in the course of thousands or even millions of years mankind at length acquired what is now the congenital endowment of the individual person (so Spencer, Haeckel, etc.). Such a theory, however, though valid as against what we may call the psychological A Priori, cannot infringe the true A Priori.

(2) The proof of the second thesis, viz., that a

(2) The proof of the second thesis, viz., that a priori is not equivalent to innate, is contained in what has just been said, and for its elucidation a few words will suffice. We may rightly apply the term 'innate' to anything which belongs to the natural endowment of the psychological subject, but precisely on that account it is not a priori. The innate is what is given, but, from Kant's point of view, the given and the A Priori are antithetical. What is given must needs be enable of being set or view, the given and the A riori are annual what is given must needs be capable of being set forth as a quality or as something passive; but this is impossible in the case of the A Priori, which is from first to last an activity of the mind. We is from first to last an activity of the mind. We do not discover it as we discover an external object of perception; it forms the presupposition of all our thinking. We cannot seek for it as for other things, for in our very search that which we are looking for is already in operation. If, on the other hand, we wish to elicit the innate, the object of our search is not a factor in the process. Kant also insists that the A Priori must not be taken as applying to supposed inborn, ready made ideas. He writes: 'Criticism admits the existence of no such ideas at all, but regards all ideas, whether belonging to perception or conception, as acquired. There is, however, also an acquisitio originaria (as writers on Natural Law were wont to say), and

therefore also of something which did not previously exist, nor belonged to anything before the act.'\*
Hence, if criticism has to do with the A Priori, it has, for that very reason, nothing to do with the

Having thus explained the A Priori in Kant's theoretical philosophy, we proceed to deal with his assumption of a similar element in the practical activity of reason or mind. In respect of morality and religion, no less than logical thought, reason possesses something all its own, and not derived from experience, which can be expressed in syn-thetic judgments a priori. This consists, in a word, of Ideas, by which the empirically real must needs be controlled. The demands of the moral law and be controlled. The demands of the moral law and of the Kingdom of God must be realized in the external world. It has, indeed, been recently questioned whether we can justifiably speak of a practical A Priori. Thus Stange, in his Einleitung in die Ethik, holds that there is hardly any resemblance between the A Priori of the Critique of Pure Reason and that of the Critique of Practical Reason, and points out the following contrasts:

(1) The Critique of Pure Reason treats of an A Priori both of sense and understanding, viz. the pure perceptions. Space and Time, and the pure pure perceptions, Space and Time, and the pure forms of judgment, viz. the Categories; the Critique of Practical Reason treats only of an A Priori of Reason. (2) According to the first Critique, the A Priori and the empirical must collaborate; according to the second *Critique*, the A Priori alone must determine the will. (3) In the former work, universality and necessity are given as the characteristics of the A Priori; in the latter, those tests are not applied, since they do not suffice to determine the A Priori. Thus the desire for happiness is also universal and subjectively necessary, but it is not a priori. These strictures are canvassed by Hägerström in his comprehensive exposition of Kants Ethik.

Hägerstöm in his comprehensive exposition of Kants Ethik.†

Admitting, however, as we must, the differences between the two Critiques, we must likewise admit the propriety of applying the term A Priori in the practical sphere. There, too, we discover an endowment peculiar to the mind, and not derived from experience—a fact which is evinced by the Categorical Imperative, which reveals itself as a synthetic judgment a priori. This Imperative imposes unconditional commands upon the will, declaring that this or that ought to be done, and paying no regard whatever to human desire or pleasure, to natural disposition or circumstances—hence it is a priori; and further, as since the obligation to obey an unconditional command cannot be deduced from the concept 'will' by simple analysis, the Categorical Imperative is a synthetic judgment. In the Grund-legung zur Metaphysik der Sitten, Kant decomposes the Imperative into the following three principles: (1) Act as if the maxim of thy action were to become by thy will a universal law of nature; (2) so act as to treat humanity, both in thine own person and in that of every other, always as an end, never as a means only; (3) act according to the idea that the will of every rational being is a universally legislative will. The constituent elements of these three principles we may denominate Ideas, by which human conduct must be ordered if it is to be morally good, and thus we discover the Ideas of a motive, an end, and a law, each of which is universally valid. They are not the resultants of experience, but are severally ideal creations of the practical reason, and as such are a priori. Just as we saw, however, in the case of the categories, that a material element was also necessary to the existence of actual knowledge, so must the practical A Priori be referred to empirical reality as the material for its elaboration. In other words, the practical A Priori, on Kant's view, is, equally with the theoretical, of a formal, not a substantial, character. But even as the theoretica

<sup>\*</sup> Hartenstein's ed., vi. 37. Cf. Caird, Crit. Phil. of Kant, i. 480. † Pp. 346-349.

action; on the contrary, it is necessarily concerned, not merely with the individual practice of morality, but with the genesis of a moral world. The proposition, 'There ought to be a moral world' is itself a synthetic judgment a priori—a priori, because a moral world is not an object of experience; and synthetic, because the proposition, not being involved in the conception of morality, is not discovered analytically, but reveals itself only when to the conception of morality there is added that of an end of moral action. How, then, is the moral world possible? Manifestly not in virtue of human action only, since we cannot conceive how the moral action of mankind should evoke a moral world from a world subject to entirely different laws. If our proposition, therefore, is not to be a mere futility, we must inevitably proceed to affirm the existence of an omnipotent Being who will secure the result aimed at in human morality. We can accordingly assert that there is a God—a proposition shown to be an a priori synthetic judgment, by the manner of its deduction. We must finally note that, as the realization of the moral ideal is an endless task, it postulates the endless existence of man. Thus we arrive at the a priori synthetic judgment that man is immortal. Religion also, then, has an A Priori, and is indeed based upon it. The religion that we actually find in the world is often but a sorry mixture, but in the process of development its a priori element is able to realize itself and to produce ever purer forms. For it does not subsist in severance from empirical reality, any more than does the A Priori of the theoretical or the practical sphere.

It was Kant's belief that every genuine form of

It was Kant's belief that every genuine form of human experience was a combination of a priori and a posteriori factors. The absence of either was a sure sign of sophistry; no knowledge was possible save by the corporate union of both. Without the A Priori, our perceptions were formless and law-less, and therefore fitful and evanescent; without the A Posteriori, we should have but the blind play the A Posteriori, we should have but the blind play of concepts. No less in the sphere of religion and morality must the empirical data be controlled and moulded by the A Priori. In the absence of the latter, we should have no morality, no religion, only the lawless flux of desires, only the figments and fabrications of superstition, while, if the empirical factor were absent, the a priori ideas, having no material to organize, would resemble the shades of the under world in the Odyssey, which must first have blood in their veins ere they can

come to life.

It was Kant's design in these conclusions to arbitrate between Rationalism and Empiricism. He had striven to do justice to both the contending schools, and at the same time to confine each to its proper and at the same time to confine each to its proper province. To rationalism in its fancied independence of the A Posteriori, as to empiricism in its repudiation of the A Priori, he rejoined that genuine knowledge resulted only from the interaction of the two elements. But the dispute was by no means at an end. Kant's solution was felt, after all, to be dualism, which it was necessary to transcend; Fichte, Schelling, and Hegel were sensible of the impossibility of regarding the A Priori and the A Posteriori as two distinct sources of knowledge, of which only one sprang from reason. They held that everything belongs to reason, since even the material element of knowledge has no other origin. So far, therefore, all is a priori. It was not, of course, the empirical consciousness of the individual, with its slow development and its gradually multiplying contents, to which they attributed this creative power; it was rather, to use meanany multiplying contents, to which they accurate this creative power; it was rather, to use meanwhile a non-committal phrase, a hyper-individual spiritual something, which at once produces and comprises all that is real. From the standpoint of the merely individual consciousness, everything is a posteriori. Thus, according to Fichte, 'the science of knowledge, quite irrespective of perception a priori, traces out that which, in accordance with the same, must be present in perception a posteriori. For that science, therefore, these terms apply, not to different objects, but to different aspects of one and the same object; very much as a clock is used a priori as pointing the hour, but a posteriori in our actual reading thereof.\* Schelling's view is set forth in his System des transcendentalen Idealismus. He regards not merely \* Sämtliche Werke, ed. L. H. Fichte, ii. 355.

the a priori conceptions, but also the objective world, as beyond the empirical consciousness, adding only: 'As the Ego generates everything from itself, so everything—not merely this or that conception, or, as has been supposed, only the form of thought—all knowledge whatever, indeed, as one and indivisible, is a priori. But as we are not conand indivisible, is a priori. But as we are not conscious of this generative process, there is nothing a priori for us: everything is a posteriori.'\* Hegel, too, draws a distinction: a posteriori knowledge is the concern of the empirical sciences. Their function is important, but subordinate to that of philosophy, since they can only discover facts without being able to demonstrate the necessity thereof, whereas philosophy deduces all reality from one supreme principle, thus giving to the contents of the empirical sciences the form of the freedom of thought pirical sciences the form of the freedom of thought and the warrant of necessity.† Thus, while for Kant every real cognition is a product of both a priori and a posteriori elements, his successors recognize not only a pure a priori, but also a pure a posteriori knowledge. Either kind has its own truth, but only the a priori is perfect, and forms the special method of philosophy. We must, however, incidentally remark that these philosophers are not perfectly at one regarding the A Priori: are not perfectly at one regarding the A Priori: according to Fichte, the vital element of mind is moral action; according to Schelling, it is artistic creation; according to Hegel, logical thought.

Vast as was the influence of these systems, and

of the Hegelian in particular, yet their solution of the problem could not long prove satisfactory. Of necessity it came to be felt more and more that the attempt to resolve all existence into Pure Reason was one which, though made with signal courage and amazing ability, had in the event come to nought. The mind of man was obviously in-adequate to such a task. True, as indicated above, it was no purely human faculty to which was assigned the work of generating and sustaining the universe; nevertheless, the human spirit was credited with the power of penetrating directly into the creative activity of the absolute spirit, and of beholding it at work. A reaction was inevitable. Philosophy was thrown aside, and the empirical sciences, notably exact physical science, made vigorous advance. With the question of an A Priori, science had no concern; it looked for A Priori, science had no concern; it looked for direction to experience, to perception alone. But, as might be expected, it was not possible for any length of time to ignore the fact that experience itself involves a problem. Of necessity it came to be recognized that perception as such does not make experience; that the mind, far from being make experience; that the mind, far from being merely passive, is very largely active, and that this activity is the truly constituent element in experience. What then are the resources which the mind brings to its work? With this question we are again face to face with the problem of the A Priori. The influence of Kant entered upon a new lease of life, the turning-point being signalized by Liebmann's Kant und die Epigenen (1865), with its ceterum censeo, 'Back to Kant.' Once more knowledge came to be viewed as the joint product of the A Priori and the A Posteriori. From this of the A Priori and the A Posteriori. From this

of the A Priori and the A Posteriori. From this point the theories regarding the nature of, and the shades of meaning therein assigned to, the A Priori became so numerous and varied that it is quite impossible even to distinguish them all by name.

The A Priori is frequently regarded as equivalent to consciousness in general, on the ground that all we know lies within consciousness, which must therefore form the logical prius to any particular constituent thereof. Just as objects in space are subject to the universal laws of space, so must the facts of consciousness accord with its universal laws. It is impossible to abstract from consciousness. Thus Ferrier points out that in everything the ego knows, it always recognizes

 $\frac{1}{\sqrt{2}}\sum_{i=1}^{N}\frac{1}{(i+1)^{N}}\frac{1}{\sqrt{2}}\sum_{i=1}^{N}\frac{1}{\sqrt{2}}\frac{1}{\sqrt{2}}\sum_{i=1}^{N}\frac{1$ 

<sup>\*</sup> Sämtliche Werke, iii. 527 ff. † Ct. Encyklopädie, ed. 2 (1843), 1. § 12 [Wallace, Logic of Hegel, 19 ff.].

something of its own. Green, again, sets forth the real universe as an all-embracing system of relations, the presupposition of which, however, is a unitying principle, a combining agency, such as we find in our individual consciousness. To these must be added Shadworth H. Hodgson, who, though he rejects a priori forms, holds that existence in the philosophical sense means that which exists in consciousness. By A Priori, again, has been understood the peculiar uniformity which briefly have been understood the peculiar uniformity which the period in the operations of thought in the operation of the properties of the first of the properties of the properties of the properties of the first of the properties of the properties of the properties of the first of the properties of the propert

I Ib. ii. § 72,

Every experience consists of two elements, the facts of the environment and the judgments of the mind, distinguished by Avenarius as R-values and E-values respectively. Both are equally present: there is no essential difference between them: they inhere in the one experience. An A Priori is therefore out of the question.\*

In the question as to the recognition of an A Priori in Consciousness, the point at issue is really whether the mind is like an empty vessel, filled only from without, or whether it manipulates its own materials. When we state the question thus, we necessarily imply that we have to deal with something more than a problem in Epistemology. The matter cannot be settled in reference to knowledge alone; it also involves morality, art, religion, culture, and these perhaps in a more marked degree. The utterly misleading character of the empty-vessel metaphor appears from the fact that knowledge never simply comes to us, but is won only by effort. Such a passive acquisition as the metaphor would imply is a sheer impossibility. Even natural science, the experiential sibility. Even natural science, the experiential science par excellence, depends upon and advances by mental activity. Consciousness, therefore, is not anything quiescent, or merely receptive; it is something operative and constructive. We must further ask, however, whether the mind works simply as a machine, elaborating raw material into definite shape, and is thus of a merely formal character, or whether it does more. According to Kant, as to most of the present-day thinkers whose views have been touched upon in the foregoing survey the mind's contribution is entirely whose views have been touched upon in the lorgoing survey, the mind's contribution is entirely restricted to the formal, the material quota being furnished in full by experience. Now it must certainly be admitted that natural science—to refer tainly be admitted that natural science—to refer to it once more—is grounded in experience; it must begin with experience, and keep in constant touch with it. But it is none the less certain that natural science is continually begetting ideal entities, without which it could make no headway; such are, for instance, the conceptions of 'atom,' 'law' even 'matter' itself, not one of which is yielded by the senses. Thus the mind interweaves the data of sense with its own products. Nor is this discredited by the fact that such ideas as 'atom' and 'matter' are vicorously assailed at the present day. matter' are vigorously assailed at the present day, and may eventually be abandoned, since any con-ceivable surrogate thereof must come, not from bare experience, but from the mind itself, as is illustrated, for example, in Ostwald's Vorlesungen über Naturphilosophie, where the conception of matter gives place to that of energy. Everywhere, in short, does natural science set up a scaffolding of ideal construction, without which it would fall to pieces. Thus the mind exhibits even in this sphere a real productivity, which is certainly called into operation, but is in nowise created, by

experience.
When we come to Art, the case is clearer still. To think of art as having no other function than to reproduce the external world as accurately as possible is totally to misconceive it. In its transition stages such extrinsic work may be of importance—e.g. in painting, the representation of light, atmosphere, and colour, and in the drama, the imitation of vernacular dialect and idiom; these things make for a more flexible technique. Nevertheless, they are but preparatory. Genuine art begins in the bodying forth of spiritual entities. It must express the best that men feel and think, It must express the best that men feel and think, that to which language in itself would be inadequate. The highest art, in fact, has often a prophetic cast; it is the herald of what ought to be; or, again, it wrestles with the deepest problems of life, being intimately connected with one's philosophy of things. In all this, however, it does not draw upon external reality, but manifests \*Kritik der reinen Erfahrung: Der menschliche Weltherriff

\* Kritik der reinen Erfahrung ; Der menschliche Weltbegriff.

<sup>\*</sup> System der Philosophie, ed. 1, 218. † Einleitung in die Philosophie, 329 f. ‡ Logik, ed. 2, ii. § 62. § Ib. ii. § 66.

creative power, and is thus an additional witness to the fact that the mind has something all its

In Morality, again, everything depends upon the inner life. Morality cannot conceivably be a product of experience. For in this province the mind furnishes its own laws, and frames the ideas to which the outer world must conform, e.g. the idea of justice, of brotherly love. The man who sees in morality nothing more than the rules of conduct indispensable to human intercourse, is simply blind to its essential character. It is not designed to institute some commonplace relationship amongst men, being primarily directed towards the realization of truth and purity in the individual; indeed, it may even be the most uncompromising enemy of a given social state, and, should unveracity, luxury, or baseness have become dominant therein, it must threaten the fabric with destruction whatsoever outward grandent may destruction, whatsoever outward grandeur may perish in its fall. It was thus, for instance, that early Christianity sapped the foundations of a civilization which had become a sham.

early Christianity sapped the foundations of a civilization which had become a sham.

Now, it forms no reasonable objection to this theory of a productive energy in mind to say that, since these Ideas are, like all else, facts of consciousness, as is maintained by the thinkers who would identify philosophy with psychology, they are therefore evolved from mere experience. If consciousness is to cover everything, then all its various 'facts' would be co-ordinate and of equal value, and any gradation amongst them out of the question. Arbitrary changes of consciousness, or even changes determined by mechanical causality, would simply follow upen one another, and no arrangement or grouping thereof would mean more than any other. Amid such conditions we could not even so much as ask for the truth. Now, in point of fact, all distinctively mental creations claim to have judicial authority; judgments purport to be more than collocations of psychical port to be more than collocations of psychical products; esthetic and ethical Ideas involve more than feelings and desires. They claim, in short, to be authoritative, to be the standard of truth and law for what is given in experience. We must distinguish between the questio facti and the questio juris; it is one thing to ask what is, quite another to ask what ought to be. In dealing with the distinctively mental, we discover something beyond the fact of determination by natural with the distinctively mental, we discover something beyond the fact of determination by natural law, namely, regulative law. The laws of logic, of asthetics, and of morality, unlike the laws of nature, formulate that which ought to take place, not that which actually and invariably does take place. Thus we cannot deny the fact of the mind's peculiar heritage, as evinced by this unique claim to regulative authority. We must allow, nevertheless, that the objection indicated above, namely, that even these peculiar intellectual products must manifest themselves in consciousness, is something more than a truism; it expresses the fact that the real cannot be evolved by purely logical processes from abstract conceptions alone. Speculation at large is mere sophistry; typical examples of the from abstract conceptions alone. Speculation at large is mere sophistry; typical examples of the method are Hegel in philosophy, and in theology Rothe, who, in speaking of thought, says: 'While engaged in speculation, it shuts its eyes for the time to all that is external, and looks only within, contemplating the dialectic movement amid which it has placed itself. Without a single side-glance, it pursues only the dialectic necessity with which each concention as it comes to birth in with which each conception as it comes to birth in with which each conception as it comes to bright in turn begets new conceptions in virtue of its inherent fertility.'\* But it is manifest that this speculative method cannot evolve reality, even spiritual reality, from conception. It is therefore quite legitimate, in opposition to a mode of thought \*Theologische Ethik, ed. 2, i. 19.

which arrogates to itself creative omnipotence, to emphasize the experiential character of our knowledge. But, on the other hand, empiricism is in error when it narrows down experience to ex-perience of what is external; the mind has also an experience of itself. The real nature of mind can be manifested only in consciousness-and upon this be manifested only in consciousness—and upon this fact depends the experiential character of our mental life; but what concerns us here is the mind's experience of its own peculiar endowment, which, as we have seen, claims to possess regulative authority, and thus carries us beyond the bare experience of empiricism.

This doctrine is not only in conflict with the

purely speculative method, but is also at variance with the view of Kant. Kant believed that he could completely and finally determine that which belonged to mind or reason; but his conclusions were of a purely formal kind. The view advocated here involves not only a much greater amplitude in our mental life, but also a capacity for producing even real elements. What the mind really is cannot be determined once for all; an avenue must ever be left open for further developments. In other words, there is a historical element in consciousness, or at least in human consciousness. We are not for ever tied down to the same unwe are not for ever their down to the same that varying forms, into which all kinds of material must be pressed; the truth is, rather, that we possess creative Ideas which are ever proposing fresh problems to experience, and setting it new tresh problems to experience, and setting it new tasks. We must insist upon the fact of development and movement in our intellectual life, and decline to identify its essential principle with the invariability of its formal determinations. In giving birth to Ideas, the mind puts definite questions to the empirically real, and assimilates the answers thereof, thus winning for its Ideas a structure increasingly delicate, and an organization increasingly

The answer given by empirical reality varies according to the kind of question put to it. It is obvious that, on the one hand, Aristotle's investigation of nature by means of the conception of entelechy, i.e. a form realizing its own Idea in matter, and, on the other, that of modern science, with its expectation of a carsel priferring realizing the conception of a carsel priferring realizing the carsel priferring realizing the conception of a carsel priferring realizing the carsel priferring realizing the carsel priferring t matter, and, on the other, that of modern science, with its conception of a causal uniformity reducible to mathematical formulæ, must result in wholly diverse views of the world. Neither entelechy nor causality is as such a product of experience; both are concepts of the mind, both purport to be questions regarding the materials of sense, to which appropriate answers can be given by empirical reality, and thus to be capable of bringing the world under the domain of mind. That the Aristotelian conception has been supplanted by the would interest the transfer of the modern does not imply that the former was an illusion pure and simple, or that it was inferior to the latter; as a matter of fact, each is a hypothesis; but the modern conception of causal uniformity has shown itself better adapted to certain purposes than the ancient entelechy. Even the belief that the world can be interpreted on mathebelief that the world can be interpreted on mathematical and mechanico-causal principles was at first an Idea, regarding which it could not be ascertained beforehand whether experience would ratify or confute it. But the Idea has proved fruitful, and has accordingly become increasingly rich in content. From the first it signified more than the purely formal, involving indeed a conviction regarding the actual constitution of the world.

Similarly the manifold esthetic and ethical Ideas, which are certainly more than mere forms, find their function in organizing the real. We need

their function in organizing the real. We need not go further into that matter here. Suffice it to say that the human mind has brought a great variety of Ideas to bear upon the real, and that it did not begin its task with the same inherent equipment with which it pursues it. In fine, the

mind also has a history.

Now the question arises whether these Ideas should be called a priori. If they are related to history, they must also be related to experience. Nothing save the tedious discipline of facts could have compelled man to form a fresh Idea. may say with absolute certainty that the mind is may say with absolute certainty that the mind is not something ready-made, anterior to all experience; it is in reality built up by intercourse with the facts of experience and history. But for that very reason it is not the product of these. What they supply to the mind is but the stimulus to its own creative activity. Accordingly the fresh element generated by this spontaneous activity is an A Priori in reference to the whole province of empirical reality, which thus becomes the mind's patæstra, that which is to be organized by means of the Idea. Just as, according to Kant, the a priori the Idea. Just as, according to Kant, the a priori forms of reason are the necessary condition of experience in the higher sense, so also are the Ideas generated by the mind. We must likewise note that these Ideas exist only in virtue of the mind's own these Ideas exist only in virtue of the mind's own activity, and that, were this to cease, they would forthwith pass away—another link of affinity with the A Priori of Kant. We must accordingly assign to them the efficiency which marks the A Priori. The fact that they undergo changes and transformations, or that they supplant one another, need not perplex any one who does not postulate the original perfection of the mind. We must grant, of course, that we can win a truth only by much effort, and that our approach to the ultimate and supremend is asymptotic, never issuing in complete realizaend is asymptotic, never issuing in complete realization. Nevertheless in all our effort and travail we assume the reality of absolute truth; we must, in fact, make this assumption, else were all our striving fruitless, and even partial truth beyond our grasp. Just as the various parts of space lie within one and the same Space, so partial truths are constituents of the one absolute Truth. That this eternal, absolute truth is no ignis fatuus appears from the fact that there exists in us a mighty unrest, ever urging us beyond the position we have won. Whence this unrest? Certainly not from without. Were our mind sufficient to itself, no external force could move it onwards. There must exist, therefore, something in itself, which ever and anon provokes it to dissatisfaction with what it has achieved, and exposes the errors and imperfections thereof. Hence it is no arbi-trary assumption that the human consciousness is interpenetrated by an Absolute Consciousness. The actual existence of this Absolute Mind would thus be the ultimate and supreme A Priori, and we recognize it as such even though we must refrain from analyzing it more particularly. We cannot once for all expiscate its constituent elements by logical operations or by introspection; but it gradually reveals itself in the process of our intellectual life.

To sum up: The A Priori has a threefold significance. It embraces (1) the formal laws of mind, of which logic furnishes the best example; (2) the Ideas generated by the mind; and (3) the contents of the absolute mind. This view, or one all but identical, is championed by the new Idealism, whose principal representative is Prof. R. Eucken, of Jena.

It remains to deal shortly with the significance of the A Priori for Religion. It was Kant's conviction that an A Priori is necessary to the very existence of religion; that genuine religion has its source in pure reason. All externals, according to him, such as rubrics and creeds, are incidental, and to look for the procreative forces of religion anywhere else than in pure reason leads to sheer error. Here we have a truth of paramount importance. For if reli-

gion is possible only in virtue of an original, inherent resource of the mind, it is clear that every effort to trace the origin of religion to something which is not religion is foredoomed to failure. Research into the most primitive cults never discovers the spot where religion issues from a non-religious soil: it can never get behind some primordial element of the mind. Still less convincing are the hypotheses —ingenious as they often are—which profess to explain the origin of religion. A vast prestige is enjoyed by the theory that it arises from the antinomy between our feeling of dependence upon the environment and our consciousness of freedom. Man sees himself conditioned at every point, and in thrall to non-spiritual forces, yet at the same time he is cognizant of his freedom and of his superior dignity in comparison with all that is merely natural; and so, in order to preserve his spiritual personality, he seeks to attach himself to the Absolute Spirit, the result being religion. But it is simply inconceivable how religion should ori-ginate in this way—to say nothing of the unproved assumption that such ideas as dependence upon environment and personal freedom prevailed among primitive mankind. Religion as we now have it may perhaps have some connexion with the antinomy in question; its natural growth may even be accelerated thereby; but it cannot possibly arise therefrom. We must carefully distinguish between what can and what cannot be done by historical and psychological research in this sphere. Historical investigation may disclose a continuous regress cal investigation may disclose a continuous regress from highly developed religions to forms ever more simple, till at length the ostensibly lowest is reached; indeed, circumspect reasoning may warrant us in postulating an even more primitive stage, but what is thus elicited is still of the nature of religion. Again, by psychological study we may try to ascertain the particular modes of thought, feeling, and volition with which religion is specially connected—to determine, for instance, whether it is mainly concerned with the conservawhether it is mainly concerned with the conserva-tion and furtherance of the physical or of the moral life; but religion is presupposed in the very inquiry. Kant is therefore quite justified in recognizing an A Priori in religion. His characteristic error lay in the attempt to fix its limits once for Here also, however, we must insist upon the fact that fresh formations emerge in the process of development, as, for instance, in the prophets of Israel, or in Jesus. That religion has a link with history is beyond controversy; only in the fulness of time—to use the very language of religion—does the New Revelation come. Nevertheless the fact remains that what is essential, new, and great in such revelation is never an outcome of the actual historical situation, but always a creation of the spirit itself. No scrutiny of nature or history, however assiduous, can of itself bring us into touch with the God of holy love acknowledged by Christianity. We conclude, therefore, that there is an A Priori in religion also, and that its contents are of such a character as cannot be definitely ascertained, but are revealed in what they create.

Kant's results require modification in still another respect. He approached religion from the side of morality. He regarded the A Priori of the former, in contrast with that of the latter, as in some degree derivative. In point of fact, he was not resolute enough in regard to the independent position of religion, and it is Schleiermacher who makes good the deficiency. The latter vindicated the distinctive character of religion as something independent of thought or moral action. True, his way definition of religion as the feeling in the latter who may definition on the feeling as the feeling in the latter was the feeling. own definition of religion as 'the feeling of absolute dependence' is most defective. It may be, and has often been, misunderstood, since 'feeling' has a psychological reference which tends to obscure its

a priori signification. Hence the protest of Hegel: 'It is matter of experience that the ingredients of feeling are of the most fortuitous character; they may be of the purest, or of the basest. If God lives in feeling, He is in no way superior to the worst, for on this soil the kingliest flower may shoot up beside the rankest weeds.'\* Schleiermacher's real meaning, however, is not affected by this criticism. His 'feeling of absolute dependence' has nothing in common with the emotions aroused by sensuous phenomena, and distinguished as pleasant or painful. Within the limits of the purely empirical we can never have the feeling of absolute, but only of partial, dependence. Schleiermacher's definition has thus a metaphysical reference, and lies beyond the scope of ordinary psychology. But the misinterpretation is in part due to himself; he fails to give adequate and unambiguous expression to the non-experiential side of religion, i.e. its A Priori. He does justice, however, to its independence of thought and morality. We may now, in fact, take for granted that neither thought (as it was applied, e.g., in the so-called proofs of God's existence) nor morality can of itself create religion or the elements thereof. Religion, with all that belongs to it, is something sui generis. It must, therefore, carry its own authority. Its independence implies its inherent certainty.

We have thus been brought to the question regarding the truth of religion, and at the same time have given an answer in part, viz., that a truly logical demonstration is yielded neither by history nor experience, neither by scientific thought nor morality. The truth of religion lies ultimately in itself alone. It is based neither upon experience, nor science, nor art, nor morality, nor culture; on the contrary, all these are ultimately based upon religion. All of them purport to be more than merely subjective activities, and this larger significance is valid only if the spiritual life of man is encompassed and sustained by a super-human, cosmical spiritual Life. But no other proof of the presence of the Absolute Spirit in the human is so convincing and incisive as that afforded by religion. It is possible, indeed, that our religi-ous certitude may be shattered; but when that happens, we only need to show, in order to restore it, that science, art, morality, and culture must likewise go by the board, and that accordingly the assured position of these indirectly endorses the truth of religion. Such an indirect proof cannot, of course, finally override every doubt; only a more intense experience of the religious facts themselves are dot that the light scene to show the importance. can do that. All this goes to show the importance of the A Priori for the truth of religion. In the A Priori the independent and self-evidencing character of religion finds its clearest manifestation; in it likewise is revealed the operation of a Power superior to the human. In the religious sphere, as everywhere else, the A Priori claims to have the authority of law. Not man's present condition, but the Imperative of the a priori Idea, at the which must be a priori Idea, is that which must prevail; and the emergence of such Ideas in human life is inexplicable save on the view that the spiritual life of man is interpenetrated by an Absolute Spirit. The ultimate and supreme A Priori subsists in God, and without His self-manifestation, without revelation, there could be no religion.

COULD OF NO FEIRION.

LITERATURE.—Special treatises on the subject are few; particular mention must be made of Eucken, Gesch. und Kritik der Grundbegriffe der Gegenwart, 1st ed. 1878, 2nd 1898, 3rd (under the title Geistige Strömungen der Gegenwart) 1904 [the three editions differ thus: the 1st is mainly historical, the 3rd mainly analytical, the 2nd combines both aspects]. To these may be added: Eucken, Gesch. der philos. Terminologie, 1879; Eisler,

Wörterbuch der philos. Begriffe, 1904; Scheler, Die transzendentale und die psychologische Methode, 1900; Prantl, Gesch. der Logik, 1855 fl.; Tröltsch, Psychologie u. Erkenntnistheorie in der Religionswissenschaft, 1905; Cassirer, Das Erkenntnisproblem in der Philosophie u. Wissenschaft der neuern Zeit, 1906-7. The works of the philosophers themselves must be studied; above all, Kant's Kritik der reinen Vernunf, to be read along with Valhinger's Kommentar zu Kanis K. der r. V. i. 1881, ii. 1892. The A Priori in Kant's ethics is dealt with by Stange, Einleitung in die Ethik, 1900; contra Stange's view, Hägerström, Kants Ethik, 1904; the A Priori in Kant's philosophy of religion, by Kalweit, Kants Stallung zur Kirche, 1904; ct. also Caird, Urit. Phil. of Kant, 1889, passim, see Index.

PAUL KALWEIT.

AQUINAS.—In the church of St. Catarina at Pisa, at the third altar on the left, is a picture by Francesco Traini, the most gifted pupil of Orcagna, representing St. Thomas of Aquino. The figure of the saint is of colossal size. Upon his knees are four books, representing the four parts of his Summa contra Gentiles. In his hands is a larger volume, the Sacred Scriptures, displaying Pr 8' Veritatem meditabitur guttur meum, et labia mea detestabuntur impium.' Above is Christ enthroned in a mandorla, surrounded by cherubim. From His mouth proceed rays of light, one to each of the six Biblical teachers, prostrate at His feet—to His left Moses, St. John, and St. Mark; to His right St. Paul, St. Matthew, and St. Luke. Three rays pass down to the head of St. Thomas, which also receives one ray from each of the Biblical teachers. To the right of the saint stands Aristotle, holding up his Ethics; to the left Plato, with the Timeus. From these proceed rays reaching the ears of the saint. From his own books proceed rays illuminating the faithful, grouped to right and left. In the middle lies Averroës, struck down by the light—the impious, whom the lips of the great teacher abhor. By his side lies his Great Commentary, transfixed by a ray proceeding from the books on St. Thomas' knees.

This picture faithfully represents the position of the greatest teacher of the mediæval Church, her greatest philosopher, who was also her greatest theologian, absorbing into himself all the sources of wisdom, human and Divine. In his teaching he brought Scholasticism to its highest development, harmonizing the Peripatetic philosophy with the doctrine of the Church.\*

r. Life.—Aquinas was born in 1225 or 1227 (the date is uncertain), most probably at the castle of Rocca Secca, 5 km. from Aquino. His father was Count of Aquino, a rich fief in the kingdom of Naples. His mother, Theodora, was of the line of the old Norman kings of Sicily. His family was therefore connected with the Hohenstaufen, and so the great doctor of the Church was related to Frederick II., its scourge. At the age of 5 he was placed under the charge of his uncle, the Abbot of Monte Cassino, and he there received his first instruction. This he completed at the University of Naples, recently restored by Frederick II. (1224), and specially favoured by him in opposition to Bologna, which had incurred his wrath by joining the Lombard League. The mendicant orders were then at the zenith of their fame. Thomas was drawn towards them, and in the year 1243 joined the Dominicans without the knowledge of his family. His pious mother was at first not at all dissatisfied with the decision. She only wanted to be allowed to see her son. This the friars were not disposed to permit, fearing lest the claims of family ties might make them lose their promising convert. The mother made known her grief to her other sons, who held high rank in the Emperor's

\* Sandys, Hist. of Classical Scholarship?, p. 582, gives a copy of this picture from Rosini, Pittura Italiana. (See also Renan, Avervoes?, p. 305; Gseil-Fels, Mittel-Italian, p. 561). For a similar picture in the Cappella degli Spagnuoli at Florence (Taddeo Gaddi?), ib. p. 385.

<sup>\*</sup> Religionsphilosophie, i. 73.

army, and besought them to get their brother back again. They succeeded in recovering him from the Dominicans, but no pressure could induce him to lay aside the habit of the order, and even two years' imprisonment in the castle of Rocca Secca years' imprisonment in the castle of Rocca Secca could not break his purpose. He employed this time of solitude in studying the Bible and the Sentences. When his mother was convinced that it was impossible to change his will, she herself helped him to escape. He let himself down by a rope from the window, and rejoined the Dominicans. Towards the end of 1244 he accompanied Johannes Teutonicus, the head of the order, to Cologne, to study under Albertus Magnus. They travelled on foot, and reached their destination in 1245, after a journey of three months.

in 1245, after a journey of three months.

The many stories told of his youth, e.g. the wellknown one of the Bos mutus Siciliæ, show that, as is the case with many great intellects, his development was slow, but before the age of 20 Albertus had discovered his powers, and made him his alter ego. On the 4th of June, 1245, at a general chapter of the order held at Cologne, it was decided to send them both to Paris. In 1248 they returned to Cologne. In 1252 Thomas was sent back to Paris to receive his degrees, and to establish an independent school there. This residence was interrupted by the contest of the mendicant orders with the university authorities headed by William of St. Amour. Thomas was sent to Rome to plead the cause of his order before Alexander IV. This he did with success. On his return to Paris he received in 1256 the degree of Magister which had been refused him before on account of known one of the Bos mutus Siciliæ, show that, which had been refused him before on account of his habit. The University bore him no ill-will, and shortly afterwards referred to the young doctor the much agitated question whether the accidents in the Eucharist really exist, or are only

appearances.
In 1261 he was summoned to Italy by Urban IV.,
who tried in vain to persuade him to accept high who tried in vain to persuade him to accept high ecclesiastical preferment. He taught at Ostia, Viterbo, Anagni, Perugia, Bologna, and Rome. In 1269 he returned to Paris, and taught there for three years.\* He was then sent by the Order to Naples at the request of the king of Sicily, brother of St. Louis, to give the authority of his name to the school where he had himself received his first important instruction. In 1273 he was summoned by Gregory X. to the Council of Lyons, which was convoked to promote the Crusade and the re-union of the Greek and Latin Churches. Though in bad health, he started, accompanied by brother Reginald, his ever faithful assistant. At the Castle of Magenza—the possession of one of his nieces, the Countess of Cecano—he fell into a long ecstasy, which much enfeebled him, and after which he felt his end to be near. As he wished to die in a house of his own order, he continued his journey, but was obliged to stop at the Cistercian Abbey of Fossa Nuova near Terracina. There he died, 7th March, 1274. At the time of his death, he was, at the request of his

the time of his death, he was, at the request of his hosts, dictating for them an exposition of the Song of Solomon. He had got as far as 'Filiæ Jerusalem dicite dilecto meo, quia præ amore morior,' when his strength gave way. The report was current that he had been poisoned by Charles of Anjou.†

For nearly a century the Dominicans and Cistercians disputed the honour of possessing his remains. The quarrel was not yet settled when, 49 years after his death, he was canonized by John XXII. It was finally decided in 1368, by a bull of Urban V., that the body should be surrendered to the Dominicans of Toulouse, the

mother church of the order. An arm was given to the Convent of St. Jacques at Paris, where St. Thomas and B. Albertus had taught. In 1286 he was raised by the Dominicans to the rank of Doctor Ordinis. In 1567 he was made by Pius v. the fifth 'Doctor of the Church,' and thus placed on an equality with St. Jerome, St. Ambrose, St. Angustine, and St. Gregory the Great.\*

His works fill 17 folio volumes in the edition of Pius v. (Rome, 1570). Their exact chronological order is not yet completely decided, and the genuineness of some is disputed. He began his literary work at Cologne with the de Ente et Essentia (No. 30 of the Opuscula in the Roman edition). The

work at Cologne with the de Ente et Essentia (No. 30 of the Opuscula in the Roman edition). The most important are the Summa contra Gentiles, the materials for which he began to gather at Paris, during his first period of teaching there, at the request of Raymond de Pennaforte; the Summa Theologica, begun in 1265 in Italy and left incomplete at his death; the Quastiones disputatæ (1261-1264); the Quodlibeta, of which the first five were composed at Paris, the last six at Rome: and the Aristotelian commentaries, begun Rome; and the Aristotelian commentaries, begun at the instance of Urban IV.† Besides these, there are commentaries on books of Sacred Scripture, of which the best known is the Catena Aurea, properly called Expositio continua, and the commentary on the Sentences, which was the first extensive work composed by him.

This enormous literary output is all the more remarkable, when it is remembered that it was far from being the only occupation of these strenuous twenty years. During the whole time Aquinas was busily engaged in teaching. The attraction of his lectures was so great that it was Adunas was pushy engaged in caching: The attraction of his lectures was so great that it was difficult to find a hall large enough to contain the audience. At times he employed three or four secretaries at once, and dictated to them about different subjects without confusion. It is a mistake to speak of him as 'pure embodied intellect perfectly passionless.' This is not the meaning of the primacy of the intellect over the will as taught by him. His hymns are proof enough of this—'the famous sequence, "Lauda Sion Salvatorem," "Pange lingua gloriosi corporis mysterium," "Verbum superne prodiens" (there is a hymn of St. Ambrose beginning with the same line), "Sacris solemniis juncta sint gaudia," and "Adoro te devote latens Deitas." They were written for the festival of Corpus Christi, the observance of which was decreed by Urban IV. at his instance (1264). They are 'powerful in thought, feeling, and expression,' decreed by Urban IV. at his instance (1264). They are 'powerful in thought, feeling, and expression,' and probably exercised important influence on the general acceptance of the dogma of transubstantiation, the doctrine of which is set forth in them with a wonderful degree of scholastic precision. Every day he had a portion of a book of edification read aloud to him (Rufini collationes Patrum); and when asked why he withdrew this time from speculative thought he asswered that time from speculative thought, he answered that he considered the rousing of the spirit of devotion to be the due preparation for the sublimity of speculation. When the feeling of devotion was roused, the spirit rose all the more easily to the contemplation of the highest truth. He never began to study, to lecture, or to write, without first giving himself to prever to obtain Divine first giving himself to prayer to obtain Divine illumination. When doubts intruded upon his investigations, he interrupted them to seek en-

lightenment in prayer. The fact that the Summa Theologica was left incomplete was not due entirely to want of time. In the Acta we read:

The witness—Bartholomew of Capua—declared that brother Reginald, seeing that the holy doctor did not continue the third part of the Summa, after the questions dealing with the sacrament of penance, asked him why he had stopped this great work, which he had begun for the glory of God, and which would enlighten the world. St. Thomas, filled with the thought of having soon to appear before the Supreme Judge, replied that he could not continue: that all he had written so far appeared to him to be nothing in comparison with the wonderful things that God had been pleased to reveal to him recently.' St. Thomas had a sane mysticism of his own, not the spurious kind that would banish reason from religion altogether, and drown itself in the wild fancies of the Evangelium aternum, but that which recognizes, with St. Augustine, that no real progress in the religious life can be made without corresponding progress in knowledge, and for which the supreme communion with God has no other content than

that of the Visio Dei, i.e. essential knowledge.\*

2. Sources.—(1) The Sacred Scriptures.—St. Thomas has, of course, a profound knowledge of Scripture according to all the four methods of interpretation (Sum. Theol. 1. i. art. 10). He insists very strongly on the importance of not sacrificing the historical. For instance (ib. I. cii. 1), in discussing the question Utrum Paradisus sit locus corporeus, he says: 'Ea, quæ de Paradiso in Scriptura dicuntur, per modum narrationis historicæ proponuntur. In omnibus autem, quæ dis Scriptura tradit et un fundamente de la constitution sic Scriptura tradit, est pro fundamento tenenda veritas, et de super spirituales expositiones fabri-candæ.' It is to be noted that in his exposition of Isaiah 8 he has so faithfully presented the sensus litteralis, that Cornelius a Lapide and others de-clare it 'judaica expositio, Divi Thome ingenio prorsus indigna.' The three other senses are ex-plained (ib. 1. i. 10): 'Secundum ergo quod ea quæ sunt veteris legis significant ea quæ sunt novæ legis: est sensus allegoricus. Secundum vero quod ea quæ in Christo sunt facta vel in iis quæ Christum significant sunt signa eorum quæ nos agere debemus: est sensus moralis. Prout vero significant ea quæ sunt in æterna gloria: est sensus analogicus.

The testimony of Erasmus to St. Thomas' merits as an interpreter of Scripture is amply justified: 'Nam meo quidem animo nullus est recentiorum theologorum, cui par sit diligentia, cui sanius ingenium, cui solidior eruditio: planeque dignus erat, cui linguarum quoque peritia, reliquaque bonarum litterarum supellex contingeret, qui iis qua per eam tempestatem dabantur tam dextre sit usus' (Rom. i. 5, le Clerc, vol. vi. p. 554).

He had at hand some who were not unacquainted with Hebrew (e.g. he knows that היה is feminine), but this does not prevent him from falling into pitfalls of translation, e.g. the use of verbum in Lk 1<sup>87</sup> (Sum. Theol. I. xxv. 3).†
(2) The Fathers.—De Rubeis has counted 56

Greek and 22 Latin Fathers as used by Aquinas. The greater part are taken at first hand. informs us himself: 'Quasdam expositiones doc-torum Græcorum in Latinum feci transferri' (Preface to Catena aurea). He makes special use of Dionysius. The charge of Monophysitism made against this author, which has recently been revived, has been amply examined and refuted by de Rubeis in his ninth Dissertation.

(3) Secular authors.—Dr. Sandys has noted that the Summa Theologica is an embodiment of the scientific spirit of the 13th cent., which stands in

\*For a full account of the mysticism of St. Thomas, see Harnack, Dogmengesch. iii. 383. He notes that Denifie has shown that Meister Eckhart owed everything to St. Thomas. † See de Wulf, Hiss. de la philos. médiévale, p. 330, note 2, from

sharp contrast with the literary and classical spirit of the 12th.

(a) Aristotle is, of course, the chief. How far his Aristotelianism is pure, and how far coloured by Neo-Platonism, is still sub judice. It must be remembered that this process of Platonizing Aristotle had begun by the time of Alexander of Aphrodisias. When Prantl + says that St. Thomas corrupted Aristotelianism and Platonism by the mysticism of the book de Causis, this statement needs a good deal of qualification. Aquinas was well aware that Proclus was the author of this book, and he gives the correct title to it, 'elementatio [not elevatio] theologica.' It is to be noted that in the crucial question of the νοθε ποιητικόε he is quite free from Neo-Platonic influences. Brentano says: 'He gives an explanation, which is most notably, in all the points above mentioned, in agreement with the fragment of Theophrastus which is preserved in the paraphrase of Themistius.' And again: 'If we ask which of the earlier interpreters has come nearest to the truth, it is undeniable that we must give this honour to St. Thomas. I do not know whether I ought not to say that he has grasped correctly the whole teaching of Aristotle. § This question of the νοῦς ποιητικός was the central point of the discussion with Averroism (see Opusc. 16, 'de Unitate intellectus'). The charge brought against St. Thomas and Scholasticism in general of following Aristotle blindly has been too often refuted to need any notice.

(b) Of Plato he knows only the *Timœus* in Chalcidius' version. He says expressly that the

Republic was not accessible.

(c) Of the Latin philosophers he uses mainly Boethius, Cicero, Macrobius, and Seneca. He is familiar with the Digest. De Rubeis (xxx Dissertatio, c. iv.) notes that in the Summa Theologica there are quoted 46 Greek, Latin, and Arabic philosophers, besides orators and poets.

(d) The Arabic and Jewish philosophers.—The indebtedness of Aquinas to these sources has been the subject of much controversy. Some have gone so far as to say that had there been no Maimonides there would have been no Aquinas. This is an exaggeration, but Aquinas had certainly learnt much from the *Moreh Nebuchim*. Compare the arguments about the creation of the world in *Sum*. ments about the creation of the world in sum. Theol. I. xlvi. I with Mor. Neb. ii. c. 15 [ed. Munk, vol. ii. p. 121]. His attitude to Ibn Gebirol is very hostile. 'In opposition to the Franciscans, who carefully preserved and circulated certain opinions of Avencebrol, St. Thomas, like his teacher Albert, rejects his opinions.' He is the bitter enemy of the Andalusian school of Arabic philosophers, and is as well acquainted with Avenpace, who is very is as well acquainted with Avempace, who is very often referred to in the Summa contra Gentiles, as with Averroës.

Of equal importance with his own contributions to the interpretation of Aristotle is the fact that Aquinas secured the making of new translations from the Greek, which displaced the earlier ones which were made from the Arabic. It was at his instance that William of Brabant—William de Moerbeka—is said to have produced in 1273 doubtless with the help of others—a literal translation of the Greek text of all the works of Aristotle.¶

tion of the Greek text of all the works of Aristotle. In connexion with this work, the question has \*History of Scholarship², p. 583, after Abbot Gasquet. See also Mandonnet, Siger de Brabant, p. 20.

been raised as to St. Thomas' own knowledge of This question cannot be answered decisively until all his works have been critically edited. De Rubeis has shown that he was certainly not a complete stranger to the Greek language. 'In his commentary on the Ethics, the presentation of the right reading misspelt, and of a ludicrous etymology side by side with one that is very nearly right, seems to show that, while Aquinas had about him people who knew Greek, he had himself no

substantial knowledge of it.'

3. Main points of system.—The age of St. Thomas was also that of Frederick II. of Hohenstaufen and of St. Louis, and these names are representative of the conflicting tendencies of the period. The 12th cent. had witnessed a revival of learning, which was less important than that of learning, which was less important than that of the Renaissance, only in point of literary form. It had two sources—Arabian and Byzantine. The former has been fairly well investigated. There is a great deal about the latter that is still obscure. The result was seen at first in the rapid growth of speculative heresy, popular pantheism (David of Dispart) and they prove sorious and therefore more Dinant), and the more serious, and therefore more dangerous, tendency of thought which afterwards crystallized into Averroism. Hence the prohibition of 1210, and the letter of Gregory IX. to the Parisian masters of theology, 1228.† The question at issue was whether the Church would be able to assimilate the new learning, or whether its doctrines would be gradually corosed away by it. That the former was the case is due to the work of Albertus as completed by St. Thomas. That work was therefore twofold—to harmonize the new scientific teaching with the doctrine of the Church, and to refute heresy.

The distinctive characteristics of the system of philosophy which Thomism displaced in the Western Church are well summed up by de Wulf as follows: 'Absence of any formal distinction between the domain of philosophy and that of theology, i.e. between the order of rational and of revealed truth; primacy of the notion of the good over that of the true, and in consequence primacy of the will over the intellect both in God and man; the necessity of an immediate illuminative action of God in accomplishing certain intellectual acts; actuality, in a low degree, but still some positive actuality in primitive matter independent of any substantial form; the presence in matter of rationes seminales; ‡ even spiritual substances are composed of matter and form; plurality of forms in natural things; individuality of the soul independently of its union with the body, especially in man; the identity of the soul with its faculties (Gilles de Lessines, p. 15). The philosophical element incorporated in this school was essen-

tially Platonic.

For this Thomism substitutes Aristotelianism: not blindly, for 'locus ab auctoritate est infirmissimus' (Sum. Theol. 1. i. 8, ad. 2), but critically, 'si audierit omnes quasi adversariorum dubitantium' (Metaph. iii., Lect. 1), though respectfully. The novelty of the teaching of St. Thomas is universally dwelt upon—novelty not only in method but in methor. method, but in matter. The main novelties were: strict distinction between Natural and Revealed Theology; unity of the substantial principle, as opposed to the plurality of forms; passive evolution of matter, as opposed to the theory of rationes seminales; the doctrine of subsistent forms, as opposed to the notion of spiritual substances being composed of matter and of form; the real distinc-tion of the substance of the soul and its faculties,

\* Sandys, Lc. p. 583 f.; de Rubeis, xxx. c. 3; Mandonnet, Lc.

as opposed to the Augustinian doctrine of their identity; the primacy of the intellect over the will.\* The new system was, of course, not received without a struggle, which continued long after the death of St. Thomas. The articles of 1277 were directed not merely against Averroism, but against

Peripateticism in general.+

Notwithstanding the vast extent of St. Thomas' writings, a sufficient knowledge of his whole system may be obtained from the two Summa. The Opuscula are useful for giving a more elaborate treatment of special subjects, but the whole is to be found in the two great works. There is little sign of gradual development in his writings, because he early reached his complete system. In the Actu, p. 670, we have the evidence of Ægidius of Rome (afterwards bishop of Bourges): 'In this maryellous and memorable doctor, it was a manifest token of the subtlety of his genius and the accuracy of his judgment, that as a master neither in teaching nor in writing did he change the new opinions and arguments which he upheld as a bachelor, with very few exceptions.' The fact is that Albertus had laid the foundations, St. Thomas completed and elaborated in detail. But both the Summer must be employed. The better known Summa Theologica handles many philosophical problems very briefly, which are dealt with at length in the other, which is in consequence often called 'Summa Philosophica.' In the short preface to the Sum. Theol. the author says that it is intended to be a compendium for beginners, and that he will deal with the questions 'breviter et dilucide.' These questions are dealt with in the Commentaries on Aristotle at even greater length; but it is a mistake to expect to find in these invariably St. Thomas' own opinions. Those of Albertus are modelled after Avicenna, and are therefore dissertations on the principal points dealt with by the Greek philosopher. St. Thomas proceeded quodam singulari et novo modo' (Acta, p. 661). This new method was that of Averroës, not following the text servilely, but expressing its meaning as faithfully as possible. They therefore are intended to give Aristotle's own meaning, which may or may not be that of the writer. They ought not, therefore, to be quoted as always giving St. Thomas' views; there may even be found in them some traces of the influence of the great commentator whose system it was the object of St. Thomas to overthrow.

SUMMA PHILOSOPHICA.—Summa de veritate catholicæ fidei contra gentiles is the title as given by Uccelli from the autograph MS, though the work is not addressed to Gentiles in the proper sense, but to Muhammadans, Jews, heretics, and unbelievers of all sorts, i.e. all outside the Church. Since the opponents either do not recognize the authority of sacred Scripture at all or only imperfectly, and do not recognize that of the Church, it is necessary in their case 'to have recourse to natural reason, although in things Divine this is insufficient.' The work is divided into four books. In the First, Aquinas deals with the existence and attributes of God. In the Second, he shows how all things proceed from God as regards their being and their distinctive characteristics. The development of this subject leads him to speak of the different kinds of substances, and especially of the substantiæ intellectuales, regarded in them-

\*On this matter Mandonnet, l.c. p. 66; de Wulf, La Philos. médiévale 2, p. 369, and Gilles de Lessines, p. 15.
† One of the strongest opponents of Thomism was John Peckham, Abp. of Canterbury. See the two letters in the Rolls edition of his register (vol. iii. p. 864), to the Chancellor and University of Oxford, and (p. 870), to certain cardinals. See Acta Sanct., March 7, p. 710.
† These exceptions are to be found mainly in his commentary on the sentences. For them see Mandonnet, l.c. pp. 63 and 259; de Wulf, Philos. médiév. p. 370; de Rubeis, xiii. cap. 5, xxvii. cap. 2.

<sup>†</sup> This letter is given in Denzinger's Enchiridion, § 379.
† On rationes seminales—an idea derived from St. Augustinesee Kleutgen, Philos. der Vorzeit, i. 125.

selves, in their relations to body, and in their operations. He dwells specially, of course, upon the human soul, demonstrates its spiritual nature and its personality, and develops his theory of knowledge. The *Third* shows that all things are ordered towards one end, which is God, and that the supreme and final blessedness of man consists in the contemplation of God; that Providence embraces the whole universe, that it extends to intelligent creatures, without destroying their liberty, and prescribes to them laws, which are the norm of all their duties. The Fourth gives an exposition of revealed truth. This is above the powers of unassisted human intellect. All that can be done, therefore, is to show that these truths

are beyond, not contrary to, human reason.

SUMMA THEOLOGICA.—This is divided into three parts. The First deals, in 119 Quæstiones, with God, and the procession of all things from God. The Second is divided into two sections, the first of which deals with Ethics in general, in 114 Quastiones; the second with Ethics in speciali, in 189 Quastiones. The Third deals with Christ and the sacraments, but breaks off in the middle of the sacrament of penance. In the short preface to this part the scheme is laid down to deal first with the Saviour Himself; then with the sacraments by which we attain salvation; thirdly, with immortal life, which we reach through Him by the Resurrection. To complete the work, therefore, the rest of the sacraments and the eschatology have been added from the commentary on the Sentences.\* Each Quæstio is divided into a number of Articuli, and each article consists of three parts. (1) The difficulties are alleged, which seem to negative the Questio; (2) the authorities are quoted, sacred and secular; (3) then follows the philosophical discussion based on first principles, and the resolu-tion of the difficulties. The whole is one of the most magnificent monuments of the human in-tellect, dwarfing all other bodies of theology into insignificance. Apart from its importance as the authoritative code of Latin Christianity, it is great as a work of art. At the Council of Trent it was placed on the desk, side by side with the sacred Scriptures, as normative of the discussions.

The Preambula Fidei.—The principal novelty in theology is the strict separation of natural from revealed. It had not so been laid down by any of the Fathers, or by any of the preceding School-men; but it has remained in force, not only in Catholic but in Protestant countries.† The principles of the division are laid down as follows: It is the object of wisdom, taken absolutely, to discover the truth, and therefore, incidentally, to unmask falsehood. By truth is here meant, not any special truth, such as is the object of a special science, but the ultimate absolute truth, which is the foundation of all special truths (Sum. c. Gent. i. 1). The way of attaining to this truth is double. There are some things which are true about God, which transcend entirely the powers of human reason, such as the doctrine of the Trinity in unity, and all the distinctively Christian dogmas. There are others to which natural reason can attain, such as those of the existence and the unity of God. These things the philosophers have demonstrated exactly, under the guidance of the light of human reason (ib. i. 3).

When we speak of this double nature of truth, this must be understood relatively to ourselves, not as concerning the nature of truth absolutely. When we speak of a double truth in things divine, this is not to be understood in reference to God

\* On this supplementum see de Rubeis, xiii cap, 6.

† In 1271 a decree was made at Paris that no teacher of the philosophical faculty should deal with any of the specifically theological questions. See Thurot, De Vorganization de l'Enseignement dans l'Université de Paris, p. 105.

Himself, who is the one and simple truth, but in reference to our own knowledge, which has different ways of reaching this Divine truth (ib. i. 9).

(1) The first way is ratio naturalis. It is not the intention of St. Thomas in any way to vilipend reason, and so to drive it outside the sphere of religion altogether. It is deficiens, i.e. insufficient for ascertaining the truth completely, but not deceptive. It is 'the impression of the Divine light in us.' The light of natural reason by which we discern between good and evil, in that which appertains to the natural law, is nothing else than the impression of the Divine light in us.' the impression of the Divine light in us (Sum. Theol. II.a. xci. 2). Human reason is perfected by God in two ways: first, by a natural perfection, according to the light of reason; secondly, by a supernatural perfection, by means of the theologi-cal virtues. Although this second perfection is greater than the first, the first perfection is pos-sessed by man in a more perfect way; for the first is held by man, as it were, in full possession. The second is held only imperfectly, because such is our knowledge and love of God (ib. II.a. lxviii. 2).

(2) The second way is faith. The knowledge of God by faith comes to us by Divine revelation (Sum. c. Gent. iv. i.). Since the knowledge of God to which man can attain by reason is deficient, He has, out of His superabundant mercy, to make it more perfect, revealed to us certain things about Himself which transcend human knowledge. In this revelation a certain order is observed, such as is suited to man, so that he may proceed by degrees from the imperfect to the perfect. At first they are so revealed as not to be understood, but only to be believed, as it were, on hearsay, because the intellect of man, when in that state in which it is bound to things of sense, cannot raise itself at all to behold those things which exceed all the analogies of sense; but when it is freed from the bondage of sensible things, then it can rise to contemplate the things that are revealed (ib.). There is therefore in one sense a triple division of man's knowledge of Divine things, on account of this division of faith into two degrees (ib.).

This second means of reaching truth is needed: (α) On account of the imperfection of natural reason. The human intellect cannot succeed by its natural powers in grasping the substance of God, because the knowledge of our intellect according to the mode of this present life begins with the objects of sense. We see that there are various grades of intelligence. The simple rustic cannot understand what is intelligible to the philosopher, nor can the philosopher understand that which is intelligible to the angel (ib. i. 3). (b) Out of mercy it extends even to those things which natural reason could discover, because few could thus attain to them. The process of investigation takes a long time, and is not certain to be successful, because falsehood creeps in on account of the weakness of the intellect and the disturbing element of the fancy (ib. i. 4). Faith, therefore, supersedes but does not destroy reason. The lesser light is not darkened by the greater, but is rather increased, as the light of the air is by that of the sun; and in this way of the air is by that of the sun; and in this way the light of science is not darkened, but rather grows brighter, in the soul of Christ by means of the light of Divine knowledge (Sum. Theol. III. ix. 1 ad 2). Still less is it contrary to it. Because it transcends reason, it is thought by some to be contrary to it; but this is impossible (Sum. c. Gent. i. 7). The relation, therefore, between philosophy and theology is clear.—(i.) Each has its proper province. In the teaching of philosophy, which considers the creatures in themselves, and leads us from them to the knowledge of God, it is the creatures who are considered first, and finally God. creatures who are considered first, and finally God. But in the teaching of Faith, which considers the

creature only in its relation to God, it is God who is the first object of consideration and the creatures afterwards (Sum. c. Gent. ii. 4). (ii.) Natural reason must keep to its own department. Only those things can be known about God by natural reason which belong to the unity of His essence, but not those which belong to the division of the Persons. Therefore the attempt to prove the doctrine of the Trinity by human reason injures faith in two ways: (a) as concerns the dignity of faith itself, i.e. that it is concerned with things invisible, which, therefore, transcend human reason; (β) as regards the benefit of bringing others to the faith. For when a man brings reasons that are not cogent to demonstrate the faith, he only provokes the scorn of the unbelieving (Sum. Theol. I. xxxii. 1).\* But natural reason can defend the Articles of the Faith, by showing that they are not repugnant to reason (Sum. c. Gent. iv. 1). (iii.) Those truths that can be discovered by natural reason, though they form part of revelation, are not articuli fidei, but only præambula ad articulos (Sum. Theol. I. ii. 2).†

Ethics.—To Ethics is devoted the third part of the Sum. c. Gent. and the second part (in two divisions) of the Sum. Theor. The sources of St. Thomas' learning have led to much sources in his ethical system. It is based complexity in his ethical system. It is based on that of Aristotle, but the fourfold division of Plotinus is also introduced (II.a. lxi. 5 from Macrobius). In the development of the idea of virtue, and the division of virtues into moral and intellectual, he follows Aristotle. The intellectual take precedence, because the contemplative life, if the contemplation be theological, stands higher than the practical: 'Ultima et perfecta beatitudo non potest esse nisi in visione divinæ essentiæ' (II.a. iii. 8), and 'beatitudo est præmium virtuosarum operationum' (n.a. v. 7). The moral value of actions is determined by three elements: (1) ex objecto; (2) ex circumstantia; (3) ex fine (II.a. xviii.), and 'bonum virtutis moralis consistit in adæquatione ad mensuram rationis' (II.a. lxiv. 1). There are three intellectual virtues: (1) sepientia (que considerat altissimas causas'); (2) scientia (conclusionum); (3) intellectus ('habitus primorum principiorum,' II.a. lvii.). The moral virtues differ according to their objects. Some regulate actions, some passions. The first are comprised under the general name of justitia ('omnis virtus quæ facit bonum debiti et recti in operationibus est justitia, II.a. lx. 3). The other ten Aristotelian virtues are brought under the heads of (1) prudentia ('omnis virtus que facit bonum in consideratione rationis'); (2) temperantia ('quæ cohibet passiones et de-primit'); (3) fortitudo ('quæ facit firmitatem animi contra quascunque passiones,' II.a. lxi. 3). These are the virtutes acquisitee, and are sub-ordinate to the theological virtues ('virtutes infusæ'), viz. Faith, which completes our knowledge by the truths, which can only be known by revela-tion; *Hope*, which renders accessible the Divine end, which passes the forces of nature; and Charity, by which the will unites itself to that end, and so to speak transforms itself into it. Fides without caritas is informis.

The question of the will and its freedom is discussed at length (I. lxxxii. and lxxxiii.): 'voluntas media est inter rationem et concupiscibilem et potest ab utroque moveri' (II.b. clv. 3). It corresponds to the understanding, just as the natural appetite does to the senses (II.a. cix. 2). The question is discussed 'utrum homo possit velle et facere

\*This point is elaborated in his contra Gracos, Armenos et Saracenos, cap. 2, No. 3 of Opuscula in Roman edition.

† Therefore, of course, philosophy is ancilla Theologia (Sum. e. Gent. i. 4: "Unde et theologia maxima sapientia dici debet, utpote semper altissimam causam considerans, et propter hoc ipsi, quasi principali, philosophia humana deservit."

bonum absque gratia.' The answer given is carefully qualified.

It is a characteristic of Thomism that it maintains that good is per se, not ex institutione ('perseitas boni'). This is based upon Aquinas' view of the will, which in God as well as in man has knowledge for its presupposition and basis.

One of the most remarkable sections of the Prima Secundæ is the discussion on law (xc.cviii.)—the first scientific discussion of the subject in post-classical times, and, says Jourdain, the best introduction to the study of law which has ever been written.\* In the operation of the moral law on the mind, Aquinas distinguishes between the synderesis and conscientia, the former being the general moral consciousness—the latter applying this to particular cases (I. lxxix. 13 ad 3): 'Habitus autem ex quibus conscientia informatur etsi multi sunt, omnes tamen efficaciam habent ab uno primo principio, scilicet ab habitu primorum principiorum, qui dicitur synderesis.' Aquinas is decidedly anti-Socialistic (II.b. lxvi. 1), and, of course, no advocate

of toleration (I. b. xi. 3).

The influence of Aquinas has been all-powerful over those who have come after him, not merely within the limits of Scientific Theology; e.g. in Dante's Paradiso, x. 8. 2, it is St. Thomas who speaks in heaven; † his writings had a mysterious influence over Savonarola; ‡ and Baillet tells us that St. Thomas was the favourite author of Descartes, and the only theologian he ever wished to study. How much Hooker was his debtor any one may see who compares the first book of the *Ecclesiastical Polity* with St. Thomas' section upon 'law.'

Is Thomism a system still valid for our times, or are we to regard it as an overpassed standpoint? This is the question that lies at the root of the debates about the Encyclical Pascendi. One thing is clear, that Thomism is absolutely incompatible with the conception of Evolution—Transformism that dominates modern thought. 'Nulla forma substantialis suscipit magis et minus' (de Potentia, III. ix. ad 9; de Wulf, Gilles de Lessines, p. 59). But is Transformism compatible with the theology of the Catholic Church?

But is Transformism compatible with the theology of the Catholic Church?

LITERATURE.—An elaborate Bibliography of works bearing on St. Thomas is given in Ueberweg-Heinze's Gesch. der Philos. 3 ii. p. 272ff. Since then have appeared (among many others): Wittmann, Die Stellung des hl. Thomas von Aquin zu. Aveneebrol, 1900; Grünwald, Gesch. der Gottesbeweiss im Mittelalter, 1907 [both in Baeumker's Beiträge]: Luquet, 'Anistôte et l'Université de Paris pendant le xiiie Siècle,' 1904 (Bibliothèque de l'Ecole des hautes études); Eucken, Thomas von Aquino und Kant, ein Kampf zweier Welten, 1901; Picavet, Hist. générale et comparée des Philosophies Médévales's, 1907, where ch. ix. gives a useful survey of Neo-Thomism.

The authorities fer the life are in the Bollandist Acta Sanctorum, March 7. The principal one is William de Tocco. Mandonnet (l.e. p. 81) considers him weak in chronology.

The fullest account of Thomism (philosophical) is Kleutgen, Die Philos. der Vorzeit vertheidigt's, 1875; (theological) do., Die Theol. der, Vorzeit vertheidigt's, 1876; (theological) do., Die Theological, In the first are the invaluable dissertations of de Rubeis. Theore is a convenient edition of the Complete works (Leo xIII.), 12 vols. have now appeared, the last completing the Summa Theologica. In the first are the invaluable dissertations of de Rubeis. There is a convenient edition of the Complete work

# ARABS (ANCIENT).

[TH. NÖLDEKE].

THE term 'ancient Arabs' is used in this article to denote the pre-Muhammadan population of the greater part of the Arabian Peninsula and of the neighbouring districts to the North, which were inhabited by Arabs (i.e. the Syrian Desert, etc.). But the ancient civilized population of Southern Arabia, the Sabæans or Himyarites, is not included, since their religion demands a separate

treatment. See SABÆANS.

The evidence which we possess does not enable us to form anything like a complete and vivid picture of the religion of the ancient Arabs. Wellpicture of the religion of the ancient Arabs. hausen was therefore quite justified in entitling his treatise *Reste Arabischen Heidentums* ('Remains of Arabian Heathenism')\*—a work which throws into the shade all previous books on the subject, and sets forth very many of the results embodied in the present article. As regards the older period, we are dependent mainly upon isolated statements of Greek writers, and upon Greek or Semitic in-scriptions, which mention various deities, either expressly or implicitly, as one of the elements in compound proper names of human beings, but supply us with scarcely any detailed information. These authorities relate exclusively to the Arabs of the northern regions. Somewhat fuller evidence, respecting the religion of the tribes who inhabited the Peninsula in the latest heathen period, is furnished by Arabic literature. Occasional references to the heathen religion are found in the ancient poets,‡ and some information may be gathered from the polemical allusions in the Qur'ān. Moreover, the ancient narratives which deal with the manners and customs of the heathen Arabs contain some passages bearing on the religion of those times. Much credit is due to a few of the early Muhammadan scholars, who laboriously collected, and handed down to posterity in a systematic form,

Muhammadan scholars, who laboriously collected, and handed down to posterity in a systematic form, whatever it was possible to ascertain about the \* 1st ed. Berlin, 1887; 2nd ed. 1897. See the review in the ZDMG xii. 707 ff., by the author of the present article.

† In the first few centuries after the Christian era the Nabatans and the other Arabs of the North-West wrote their inscriptions in Aramaic, but their Arabian nationality is proved, beyond doubt, by the names which they bore and by other indications. The Palmyrene inscriptions liewise contain many Arabic names; a large proportion of the Palmyrenes were unquestionably of Arabian origin, though they had probably in all cases become assimilated to the Aramæans. We possess very many Greek inscriptions set up by Arabs or Aramæans, at that period or later still. The inscriptions in the district of Safā, to the south-east of Damasous, are in Arabic. Of these latter the author of the present article has not made an independent investigation, and he has accordingly followed the decipherments of Enno Littmann—see his 'Semitic Inscriptions' (New York, 1904), p. 102 ff., in Part iv. of the publication of an American Archæological Expedition to Syria in 1899 and 1900.

† Some references of this kind have been obscured by alterations of the text on the part of Muhammadans; in a few rare cases a verse has been transmitted to us both in its original and in its altered form. Fortunately this process of tampering with heathen passages was never carried out systematically. In dealing with the ancient poems, early Muhammadan philologizal worthy of great praise. This is shown, in particular, by the fact that they have handed down to us poems which contain virulent personal attacks upon the Prophet.

heathen mythology and ritual. Among these scholars a specially prominent place must be assigned to Hishām b. Muhammad al-Kalbī, usually known as Ibn al-Kalbī († 819-820 A.D.), the author of the 'Book of Idols' (Kitāb al-aṣnām), the substance of which is known to us in the form of quotations, though the work itself is no longer extant.\* Finally, we have to take into consideration the fact that Muhammad incorporated in his religion a number of heathen practices and beliefs, with little or no modification, and also that various relics of heathenism, which are alien to orthodox Islām, have been retained by the Arabs down to the present day. That the adoption of a new faith does not completely transform popular beliefs, and that the old conceptions, disguised under somewhat different names, frequently persist, with or without the sanction of the religious authorities, is a matter of common observation. a matter of common observation.+

But, scanty as the evidence is, it suffices to show that Muhammad's contemporaries and the generations immediately preceding them were, as a rule, little influenced by their religion. They followed the religious customs of their ancestors out of mere respect for tradition, the genuine Arab being essentially conservative; but no great significance was attached to such things. Nowhere do we find an instance of real devotion to a heathen deity. The hardships of nomadic life—and it must be remembered that the great majority of the Arabs were nomads—are, in general, unfavourable to the development of religious feeling, as we may perceive even at the present day. Moreover, the leading spirits, without being clearly conscious of the fact, had to some extent outgrown the old religion, which, taken as a whole, was of a very low type; and, in addition to this, Jewish and Christian influences had begun to make themselves felt. Such influences are particularly evident in the case of some of the most famous poets, Nābigha and A'shā, for example, who had much intercourse with Arabian Christians, chiefly at the courts of princes on the northern frontier, where a more or less superficial Christianity prevailed. Hence the vehe-ment opposition which Muhammad encountered is ment opposition which management and encountered to be explained as due, partly to the dislike of a personal ruler and of any firm government what seever, partly to the desire of retaining certain material advantages which were inseparably connected with the local sanctuaries; but to suppose that the Arabs fought against the Prophet on behalf of their religion would be a mistake. Among his opponents no trace of heathen fanaticism appears. A marked tendency to religious fervour, and even to fanaticism, is generally characteristic of the Semites; among the Arabs of the period these capabilities existed in a latent condition, and were manifested on a great scale as soon as they had imbibed the new religion. Similarly, at the present time, Bedawin, who are lukewarm about religion, no sooner adopt a settled mode of life than they become transformed into bigoted Muhammadans.

Of the deities who were worshipped in Arabia a long list might be drawn up. They are known to us chiefly through so-called 'theophorous' proper names, that is, names which describe the bearer as 'servant,' 'gift,' 'favour,' etc., of this or that deity. But as to the nature of the gods, these names do not tell us much. How little should we know of the more important Greek deities, if our information about them were derived, to a great

extent, from such names as Znybôoros, Hoosebôupos,

\* See especially the Geographical Dictionary of Yaqut († 1229

A.D.). The 'Book of Idols' was still extant in the time of the author of the Hizānat al-adab († 1682 A.D.), who quotes it

independently.

† See, for example, Lucius, Die Anfänge des Heiligenkults in der christlichen Kirche (Tübingen, 1904), where the survival of ancient hero-worship, in the form of the veneration of martyrs. is elaborately proved.

'Απολλόδωρος, 'Αθηναγόρας, Θεοφάνης, etc.! It would therefore be futile to reproduce all this 'rubbishheap of divine names,' as Wellhausen calls it. For the present we must confine our attention to those gods who are prominent in some respect or other, particularly by reason of the diffusion of their cult over a wide area. But of Arabian mythology there is very little to relate. The luxuriant imagination which gave birth to the mythologies of the Indo-European race was denied to the Arabs, nor had they anything at all resembling the highly artificial and somewhat prosaic theology and cosmology

of ancient Babylonia.

of ancient Babylonia.

This is not, of course, the place to discuss the origin of the religious sentiment among the Arabs, for it we attempted any such thing it would be necessary to inquire into the origin of religion itself. To deal with these obscure questions is a task which we must leave to others. But it may be not inappropriate to observe that the saying Primus in orbe dees feet timor is, with some qualification, to be accepted as true.\* At all events we cannot fail to notice that, even in later times, the dread inspired by the more mysterious phenomena of nature leads man to personity the powers that produce them, and such powers he timidly endeavours to conciliate. The fear of God afterwards assumes a nobler character, but nevertheless retains traces of its origin.† The Arabic terms strage to be plous, tarred or true? "bietry," tarp" 'niors," properly denote the idea of being on one squard against sometries it in strage to one squard against sometries it in strage that it is nown to be included from him by the night procupoes that man must have prime to pacify them. In primitive ages the relation between man and the delay was not regarded from a moral standpoint. It is true that in historical times the original meaning of strage, target, etc., as religious terms, was no longer clearly present to the minds of the Arabs. But the weith beings who were supposed to haunt the desert and the darkness had not ceased to inspire terror, and are still dreaded by the Bedawin of to-day (see below, p. 670).

### I. INDIVIDUAL GODS AND GODDESSES.

I. THE HEAVENLY BODIES AND OTHER POWERS OF NATURE.—It has often been supposed that the religion of the Arabs, or even of the Semites in general, is entirely based upon the worship of the heavenly bodies. This theory, however, is scarcely in accordance with the facts. That the Arabs, at a comparatively late period, worshipped the sun and other heavenly bodies, is unquestionable, but they had various other deities also who cannot be explained as astral powers. The Sun (Shams, construed as feminine) was honoured by several Arabian tribes with a sanctuary and an idol. The name 'Abd Shams, 'servant of the Sun,' is found in many parts of the country.§ In the North we meet with the name Amrishams ('Αμρίσαμσος), 'man of the Sun.' According to Strabo, Helios was the chief god of Petra; but there he seems to have

chief god of Petra; but there he seems to have borne a different name (see below, p. 663).

For the worship of the rising Sun we have the evidence of the name 'Abd ash Shārig, 'servant of the Rising One,' which, it is true, occurs only once. In the extreme South there was a god called Dharih or Dhirrih, which appears likewise to denote the rising Sun. In both of these cases the Sun is treated as masculine contrary to the general usage. treated as masculine, contrary to the general usage. Once we meet with the name ' $Abd\ Muharriq$ ; here Muharriq, 'the Burner,' may perhaps be another title of the Sun-god. The Muharriq who is mentioned as the ancestor of certain royal houses

admits of a similar explanation.

The constellation of the Pleiades (ath-Thuraiy $\bar{a}$ ), which was supposed to bestow rain, appears as a deity in the name 'Abd ath-Thuranyā'; the name 'Abd Najm probably refers also to the Pleiades, for the latter are often called simply an-Najm, 'the constellation.'

\* For the contrary view see Robertson Smith, Rel. Sem. 2 p. 54 ff.

† The Greek σέβεσθαι likewise expresses primarily the notion of Iright; see Iliad, iv. 242, xviii. 78, and esp. the Hymn to Demeter, 190, αίδως τε σέβας τε ίδὲ χλωρὸν δόος.

† See a paper by the author of the present article in ARW i. (1935) p. 361 ff.; and cf. η πρὸς (οτ περὶ) το θείον εὐλάβεια, Plut. Camillus, 21, Numa, 22; also the μετὰ εὐλαβείας καὶ δέους of Fra 1935.

1 Mis name is more widely diffused than would appear from the statements of Wellhausen, Reste<sup>2</sup>, p. 10.

The evidence for the worship of Sirius (ash-Shi'rā) is not altogether above suspicion. Possibly the statements on the subject are mere inferences drawn from the Qur'an, Sura liii. 50, where God is called 'the Lord of Sirius'; this may have been interpreted as a condemnation of the belief that Sirius itself is a divine power.

Far more important, at least in historical times, was the cult of the planet Venus, revered as a great goddess under the name of al-'Uzzā, which may be rendered 'the Most Mighty.' The Syriac poet Isaac of Antioch, who lived in the first half of the 5th cent., bears witness to the worship of Uzzā by the Arabs of that period; in another passage he identifies Uzzā with the planet Venus. In the first half of the 6th cent., Mundhir, the Arab king of Hīra, sacrificed to Uzzā a large number of captive nuns, as we learn from a contemporary Syriac author. Procopius, also a contemporary, tells us that this same Mundhir slaughtered in honour of Aphrodite (i.e. Uzzā, the planet Venus) the captive son of his Christian rival, king Arethas (Hārith). The Arabian cult of the planet Venus is mentioned likewise by Ephraim Syrus (who died in A.D. 373), by Jerome, Theodoret, and later still by Evagrius. Nilus, about A.D. 410, gives us an account of a wild Arab tribe who offered sacrifices of a singularly barbarous kind to the morning star, doubtless under the name of 'Uzzā (see below). As early as the 2nd cent., or thereabouts, references to a priest of this goddess occur in two Sinaitic inscriptions, found not far from the district in which the scenes described by Nilus took place. Another Sinaitic inscription mentions the name 'Abd al-'Uzzā, which at a later time, just before the rise of Islām, was extremely common among the Arabs.\* The phrase by the two 'Uzzās,' used in swearing, presumably refers to Venus as the morning and as the evening star. In the same manner we may explain the two pillars or obelisks, called *al-Gharīyān*, 'the two objects smeared (with blood),' which appear in connexion with human sacrifices offered by a king of Hīra, the very place to which reference has been made above. 'Uzzā figures in the Qur'ān (Sūra liii. 19) as one of the three great goddesses of Mecca, who were supposed to be daughters of Allāh. That Muhammad himself offered sacrifices to her in his younger days is expressly stated by tradition. At Nahla, near Mecca, this goddess had a sanctuary, which is said to have consisted only of three trees. Whether the Meccans and the other inhabitants of central Arabia at all realized the astral character of 'Uzzā is very doubtful. A deity is, in the eyes of its worshippers, an actual person, and does not necessarily represent anything else. We are not to suppose that the pious men who sacrificed to Apollo or Athene thought of inquiring what was the original significance of these deities as personifications of natural phenomena.

The expression by the Lord; of the blessed (sa'ida) 'Uzzā and by the god before whose house (i.e. the Ka'ba) Sarii; lies' is once used by a poet as a form of oath. Hence Wellhausen 'very plausibly argues that the term sa'Sa'ida' the Blessed,' which occurs elsewhere as the name of a deity at Medina and of a sanctuary on the lower Euphrates, whither the Arabs made pilgrimages, is nothing more than an epithet of 'Uzzā which had come to be regarded as a proper name.

Kuthrā, which probably means 'the Most Rich,' the name of an idol destroyed by order of Muhammad, is perhaps only another title of 'Uzzā. We also read of a man called 'Abd Kuthrā, belonging to the tribe of Tai, in the very centre of Arabia. Here the absence of the definite article proves that the name Kuthrā is ancient.

Qozah was possibly at one time a god of storms. \* Finally, 'Uzzā has been found to be a goddess of the Sabæans

This is probably a Muhammadan correction for 'by the life." Sarif is a place about  $5\frac{1}{2}$  miles from Mecca.

This we may infer from the fact that the rainbow is called in Arabic 'the bow of Qozah,' and also from the use of Qozah as the name of a certain spot, within the sacred territory of Mecca, where spot, within the sacred territory of Mecca, where pilgrims were accustomed to kindle a fire. This god had once been worshipped by the Edomites, as we learn from Josephus (Ant. xv. 253 [Niese], where the name is spelt Kojé); but among the later Arabs he had lost all significance, and his cult does not seem to have survived anywhere.\*

The Sun-god who, according to Strabo (784), was held in especial honour by the Nabatæans, is very probably to be identified with Allāt, as Wellhausen has pointed out. We have already seen that the sun is properly feminine in Arabic and in most other Semitic languages; hence the name Allāt, which, so far as we can judge, means simply 'the Coddess' is particularly suitable in this case. The Goddess, is particularly suitable in this case. The same goddess appears in Herod. i. 131, iii. 8, as 'Allat', the older form of Allat (cf.  $AFil\bar{a}h$ , the identifies her with Objavin. But from this we can infer no more than that she was a great celestial goddess; to regard it as a definite interpretation would be illegitimate. Similarly we find that in later times her worshippers identified her with Athene.† In the second passage Herodotus goes so far as to assert that 'Αλιλάτ and 'Οροτάλτ are the sole deities of Arabia; the latter name, which he describes as the equivalent of Dionysus, unfortunately does not admit of any plausible explanation. Thus Alilat must have occupied a very prominent place in the religion of those Arabs to whom Herodotus alludes, namely, the inhabitants of the Sinaitic Peninsula and of the immediate neighbourhood. That  ${}^{\prime}A\lambda\lambda\lambda\delta\tau$  is identical with Allāt, a goddess frequently mentioned, has long been an acknowledged fact. References to Allāt are found in several Nabatæan inscriptions; in one of them she is called 'the Mother of the gods.' Moreover, proper names compounded with Allāt appear both among the Nabatæans and the Palmyrenes. the inscriptions of Safā her name is spelt 'LT and perhaps HLT, which apparently should be pronounced Hallāt. Among the later Arabs this goddess was no less venerated. In the Quran (Compilie 10) the convenience of the three later and the state of the s (Sūra liii. 19) she is one of the three daughters of Allah. She is also mentioned occasionally in Allāh. She is also mentioned occasionally in poetry. Thus one poet says: 'I swore to him, in the presence of the throng, by the salt, by the fire, and by Allāt, who is the greatest of all.' Of the names compounded with Allāt, which were widely diffused, some at least must be of considerable antiquity, since the first of the two component parts is an obsolete word.: The cult of the goddess flourished, in particular, at the sanctuary of Tā'if, a town to the east of Mecca; the tribe of Thaqif, who dwelt in that district, spoke of her as their 'mistress.' The tradition that she once was worshipped there has survived among the inhabitworshipped there has survived among the inhabit-

ants down to the present day.

2. ABSTRACT DEITIES.—Some Arabian deities were originally personifications of abstract ideas, but they appear to have been conceived in a thoroughly concrete fashion. In particular, it is to be noticed that the Arabs, from a very early period, recognized the existence of certain powers on which human prosperity and adversity were supposed to depend. It is true that most of these beings are mere poetical, not real, personifications.

Thus, for instance, Time in the abstract was popularly imagined to be the cause of all earthly happiness and especially of all earthly misery. Muhammad in the Qur'an  $(S\bar{u}ra\ xlv.\ 23)$  blames the unbelievers for saying, 'It is Time that destroys us.' The poets are continually alluding to the action of Time (dahr, zamān), for which they often substitute 'the days,' or 'the nights.' Time is represented as bringing misfortune, causing perpetual change, as biting, wearing down, shooting arrows that never miss the mark, hurling stones, and so forth.\* In such cases we are often obliged to render 'time' by 'fate,' which is not quite correct, since time is here conceived as the determining factor, not as being itself determined by some other power, least of all by a conscious agent. But it must be admitted that the Arabs themselves do not always clearly distinguish the power of Time from that of Destiny pure and simple. Occasionally we come across such passages as the following: 'Time has brought wee upon him, for the days and the (allotted) measure (qadar) have caused him to perish. 't Or again: 'I submit not to the injustice of Time, and I behave as though unaware that the measure (allotted to me) hindered me from attaining aught.' Various other expressions are used by the poets in speaking of the 'portion' allotted to them, or of the goal that is set before them. The notion of a personified Molpa is here vaguely present, but she has not yet become a living deity. The fatalism of the poets, as we might expect, is neither clearly formulated nor consistently carried out. Rigid dogmas on the subject of determinism and free-will were quite out of the question. Once we meet with the phrase 'till it be seen what the Apportioner shall apportion to thee' (mā yamnī laka 'lmānī), which apparently refers to a god; but this is an altogether exceptional case. The word here translated 'apportion' originally means 'to count,' hence 'to reckon' a thing to some one. From this root is derived Maniya, 'doom of death,' 'destruction,' a favourite expression with the poets; the plural Manāyā is used in the same sense. Manīya appears in poetry as driving man into the grave, piercing him with an arrow, handing to him the cup of death, lying in ambush for him, receiving him as a guest (when he is about to die), and so forth. Not unfrequently the possessive suffix is added, 'when my Manīya overtakes me,' 'his Manīya has come upon him,' and the like. We also find, but rarely, the synonymous forms Manā and Manān, the latter derived from the cognate root MNN. These pernerived from the cognate root MINN. These personifications, as we have seen, are merely poetical. But the same etymological group includes the ancient Měnī (Is 65<sup>11</sup>), perhaps a Canaanite deity, and also the great goddess Manāt, who figures in the Qur'ān (Sūra liii. 20), by the side of 'Uzzā and Allāt, as one of the three 'daughters of Allāh' revered at Mecca. Since she had been reised long. revered at Mecca. Since she had been raised long before to the dignity of a real goddess, we may assume that her worshippers were no longer conscious of her original character. Curiously enough, the two oldest documents which mention her, namely, a Nabatæan and a Latin inscription, tuse the plural form Manawāt (spelt Manavat in Latin), just as the plural Manāyā is used for Manāya. Among the Arabs, Manāt had a sanctuary in the Mecca. She was especially venerated by the inhabitants of Yathrib (afterwards called Medina).

<sup>\*</sup>The opinion of some native scholars that Qozah was 'a Satan' is merely a deduction drawn from the name of the rain-

Satan' is merely a deduction drawn from the name of the rain-bow.
† The son and co-regent of Zenobia, Wuhballāt (Οὐαβάλλαθος, Vabalathus), i.e. 'Gift of Allāt,' also calls himself 'λθηνόδωρος.
† Among these names we must reckon Tuim Allāt. Tuim is not, as has been commonly supposed, a synonym of 'albā,' ser-vant'; perhaps it should be rendered 'distraught,' 'franzied,' so that Tuim Allāt would mean 'frenzied by (or for the sake of Allāt.'

<sup>\*</sup> Many examples are given by W. L. Schrameier in his work, Ueber den Fatalismus der vorislamischen Araber, Einleitung (Bonn, 1881). But the list is very far from being exhaustive. † With this it agrees that from the word tim, 'moment of time,' 'brief period,' is formed the verb kāna, 'to be handed over to one's time,' 'to be doomed to death,' and also the substantive hain, 'death.'

1 Referring to a soldier in Hungary who was of Palmyrene extraction (CIL iii. 7954).

Moreover, a number of proper names compounded with Manāt prove that her cult extended over a great part of Arabia.

There exists in Arabic a rare word for 'time,' namely, 'aud.\* A poet, who belonged to the tribe of Bakr b. Wā'il, in the North East of Arabia, says in describing his old age: 'The arrows of 'Aud have pierced my limbs and joints.' This does not differ at all from those poetical personifications which have been enumerated above; the cations which have been enumerated above; the same poem, it may be observed in passing, alludes to 'the changes wrought by time' (surif ad-dahr). But an isolated verse, not unfrequently quoted, contains the phrase, 'I swear by the blood (of the sacrifices) that flows round 'Aud'; here 'Aud, 'time,' 'fate,' appears as a real deity, with a regular cult, and Ibn al-Kalbī expressly states that 'Aud was an idol worshipped by the Banū Bakr b. Wā'il, the very tribe of which the aforessid poet was a member said poet was a member.

Gad, equivalent in meaning to τύχη but construed as masculine, is the name of a deity who was venerated by various Semitic peoples (see Is 65<sup>11</sup>). That the Israelite tribe of Gad derived its name from this cult is not improbable. The form Gadda, which occurs in Nabatæan inscriptions, might appear to have been borrowed, at a comparatively late period, from the neighbouring Aramæans. But since we meet with the proper name 'Abd al-Jadd in a few cases (which, it is true, are confined to the coast of Yemen), and since the noun jadd, 'luck,' remained in current use among the Arabs, it is more natural to regard the Nabatæan Gaddā as an Aramaized form of the native Arabic word al-Gadd (al-Jadd).

To this category belongs Sa'd, 'fortune' (used the state of the stat

in a good sense only). According to a certain verse and the statements of the commentator, Sa'd was the name given to a rock not far from Jidda, to which divine honours were paid. Moreover, we meet with the name 'Abd Sa'd in quite a different part of Arabia, to the north-east. At an earlier period a man's name which seems to be compounded with Sa'd occurs in the inscriptions of Safa.

Another deity who appears to have been desig nated by an abstract term is Rudā, 'good-will,' favour.' The commentary on a verse in which the name is mentioned informs us that Rudā was worshipped, in the shape of an idol, by the great tribe of Tamim. The proper name 'Abd Rudā is found among several Arabian tribes. To the nature of the deity in question the name supplies no clue. It might even be supposed that it was originally a euphemistic title given to some malignant power. The remarkable fact that in the above-mentioned verse Rudā is construed as feminine (whereas this grammatical form would be normally masculine), naturally suggests that at that period, about the time of Muhammad, people still realized that Rudā was merely an epithet applied to a goddess who properly bore some other name. But against this hypothesis it may be urged that the name is of considerable antiquity, as is proved by the Palmyrene inscriptions, where it occurs separately in the form 'RSU, and in the ophorous proper names as RSU; the pronunciation is fixed approximately by the Latin transcription *Themarsa*.+ The RDU of the Safā inscriptions seems to denote the same deity.

Wadd, also pronounced Wudd or Udd, i.e. 'friendship,' 'affection,' t was, according to the Qur'an (Sura lxxi. 22), a god worshipped by the contemporaries of Noah. But it would be a mis-

† It is used chiefly as an adverb, meaning 'at any time.' † CIL viii. 2511, 2512. A similar form is given by Syriac

authorities.
That we should take the word as an adjective, meaning friendly, is a less probable view.

take to conclude that his cult was obsolete in Muhammad's time, for we have sufficient evidence to the contrary. The poet Nābigha says once, 'Wadd greet thee!' There was a statue of this god at Dūma, a great oasis in the extreme north of Arabia. The name 'Abd Wadd occurs in a number of wholly distinct tribes. But Wadd is another instance of a deity whose character remains altogether obscure. As we are told that mains altogether obscure. As we are told that his statue had a bow and arrows attached to it, we might be tempted to imagine that he was a kind of Eros, and this would imply a foreign origin. But though the root WDD means 'to love,' 'to feel affection' for an object, it is never used in a sexual sense.\* Moreover, the statue in question bore not only a bow and arrows, but likewise a sword and a lance from which hung a flag; the god was also fully clad, and therefore does not look like a copy of the Greek Eros. Finally, it should be remembered that there were other Arabian idols which had weapons suspended to

The name Manāf, 'height,' 'high place,' is also a kind of abstract noun. That Manāf was worshipped as a god is proved by the testimony of a snipped as a got is proved by the occurrence of the name 'Abd Manāf,' which was especially common at Mecca and among the neighbouring tribe of Hudhail. Furthermore, J. H. Mordtmann has pointed out that the word Máraφis, in an inscripof this god (= Mardφωs); he also makes the very plausible suggestion that, in an inscription set up in Hungary by an Oriental soldier, the sentence dispatriis MN · PHO + et Theandrio votum solvit is to be understood as a reference to the same

deity.;
3. DEITIES BEARING NAMES OF ANIMALS.—
The Arabian deities who bear animal names are few in number, and it is naturally impossible for us to ascertain their true significance. That they were originally totems is scarcely probable, for of totemism no clear traces are to be found among the Arabs, and the hypothesis that these names date from a very primitive age does not rest on sufficient evidence. In the case of the Lion-god, whose existence is proved only by the mention of a man named 'Abd al-Asad, 'servant of the Lion,' belonging to the tribe of Quraish, such a supposition would be especially hazardous, since asad is a comparatively modern word for 'lion,' not the old word common to the various Semitic languages.

One of the gods worshipped by the contemporaries of Noah, according to the Qur'an (Sūra Ixxi. 23), was Nasr, 'the vulture.'¶ The Talmud ('Abodah zara, 11b) and the Syriac Doctrine of Addai (of the 4th cent.), p. 24, mention Neshrā, the Aramaic form of Nasr, as an Arabian god. These statements, taken by themselves, might be explained as referring to some cult practised. explained as referring to some cult practised among the Arameans in the Roman province of

\*For the idea of sexual affection the Arabic language has plenty of other expressions.

† This is the reading now adopted, see CIL iii. 3668; Ephem. Epigr. ii. 390, No. 22. We may assume that the original spelling, or at least the spelling originally intended, was MANAPHO. Mordtmann had before him the incorrect form MANALPHO, which rendered the identification all the more difficult.

timestic. t zDMG xxix. 106. The god Theandrios (with some variations of form) occurs repeatedly in inscriptions from the Hauran. What Oriental name lurks under this Greek disguise

Hauran. What Oriental name lurks under this Greek disguise we cannot say.

§ This point has been discussed by the author of the present article in the ZDMG xl. 156 ff., and in his Betträge zur semit. Sprachwissenschaft (Strassburg, 1904), p. 74.

[Viz. laith.

This is the meaning which the word always has in Arabic. In the North-Semitic languages the corresponding form (with sh) is applied to the eagle, but, in the case of large birds of prey, popular usage does not sharply discriminate between the various species. Even in the NT (Mt 242, Lk 1737) carrion vultures are called àerol.

Arabia, since elsewhere we undoubtedly meet with an Aramæan god Neshrā, for instance, in the Syriac proper name Neshryabh, 'Neshr has given.' But it is to be noticed that the Sabæans likewise had a god called Nasr. Thus the worship of the Vulture-god was once widely diffused over the Semitic lands; in Arabia, however, it became nearly obsolete. Ibn al-Kalbī was unable to find any personal name compounded with Nasr; nevertheless it is not impossible that the Neopalos mentioned in the ancient inscription of Memphis \* was

'Auf, in the fairly common name 'Abd 'Auf, means 'the great bird (of prey).' This signification, it is true, does not actually occur in Arabic, but there are certain phrases in which a trace of it remains.† 'Auf has, in particular, the sense of augurium, and it may be that the name of the god did not refer to the bird but to the omen drawn from it; in this case, 'Auf would be a synonym of

Sa'd (see above).
4. DEITIES NAMED AFTER PLACES.— Dhu 'sh-Sharā, 'pertaining to ash-Sharā,' seems to have derived his name from a place. But there were several places called ash-Sharā, and the difficulty of determining with which of them the god was originally connected is increased by the fact that his cult goes back to very early times. The localities which bore this name appear to have been moist and rich in vegetation; such a spot, in the midst of a sterile country like Arabia, easily became a centre of worship. The inscriptions of became a centre of worship. The inscriptions of the Nabatæans and of the neighbouring peoples not infrequently mention a deity whose name is spelt Δουσάρης in Greek; there is a corresponding Semitic form, and the theophorous names 'Δbū Dhū Sharā, Taim Dhū Sharā (Sinaitic), Δουσάρως also occur. Greek authors ‡ supply us with some information respecting him. The most important of these statements is that at Petra, the Nabatæan capital he was worshipmed in the form of a fourcapital, he was worshipped in the form of a fourcornered block of unhewn black stone, 4 feet in height and 2 in width. The blood of sacrificial neight and 2 in width. The blood of sacrificial victims was poured upon it, or in front of it; underneath it stood a golden pedestal, and the whole sanctuary blazed with gold and with votive offerings. According to Epiphanius, the festival of Dusares was celebrated at Petra and the neighbouring town of Elusa on the 25th of December, that is to say, about the time of the winter solstice. This we may accept as true; it indicates, no doubt, a connexion with Sun-worship.§ In the district which formed the centre of his cult, Dusares was identified with Dionysus; hence it is natural to regard him as the patron of luxuriant vegetation, which agrees with the fact that his home was at ash-Sharā. Nor does this view at all conflict with his character as a Sun-god. The interpretation which Greek authors obtain by changing Δουσάρης into Θευσάρης, and treating the latter form as equivalent to Θεός "Αρης, has, of course, no value. Among the later Arabs Dhu 'sh-Sharā did not occupy a prominent position. He was represented by an idol in the territory inhabited by the tribe of Daus, not far from Mecca, and among them the proper name 'Abd dhi 'sh-Sharā still survived.

Another god who appears to have been named after a place is Dhu 'l-Halasa or Dhu 'l-Hulasa. He was greatly venerated at a place in the north He was greatly venerated at a place in the north of Yemen, apparently the district now called 'Asīr. 'This inscription dates from the 2nd cent. B.C.; see the RA for Feb. 1870, p. 109 ff., and Cat. gén. des. Ant. Eg. du Musée de Catre (Gr. inscr.), Oxford, 1905. It is a curious coincidence that among the names here enumerated we find the Greek 'Aeröe. 'Thus the verb 'āfa, which is derived from it, means 'to wheel in the air,' as birds of prey are wont to do.

1 See the excellent paper by J. H. Mordtmann in the ZDMG xxix. 99 ff.

\$ Ct. Wellhausen in GGN, 1905, p. 131.

Between his sanctuary and the sanctuary at Mecca there existed a certain amount of rivalry.

5. DEITIES NAMED AFTER LIMBS BODY.—From a grammatical point of view, the gods Dhu '1-kaffain, 'He who has two hands,' and Dhu 'r-rijl, 'He who has a foot,' must be classed with the two foregoing ones. Perhaps these names may have been originally applied to sacred stones or fetishes, which by means of rude carving were made to bear a partial resemblance to the human form.

6. ANCESTRAL AND TRIBAL DEITIES.—Sometimes Arabian deities are designated by titles fashioned after the manner of 'the God of Abraham,' 'the God of Nahor' (Gn 31<sup>58</sup>). Thus among the Nabatæans we meet with 'the god of Rab'el, 'the god of Qaṣīū,' and the phrase Θεφ Μαλειχάθου occurs in an inscription which mentions also a man named  $Ma\lambda\epsilon(\chi a\theta os\ (Malikat),\ not\ to\ quote\ other\ instances.$  Similarly, Muhalhil b. Rabī'a swears by 'the god of Rabī'a'; perhaps  $Rab\bar\imath'a$  here refers not to the father of Muhalhil, but to the great group of tribes called Rabī'a, to which he belonged. This would be after the analogy of the formula 'by the god of the Quraish,' which occurs elsewhere.

Here we may mention a god who bore the curious title Shai' al-qaum (apparently 'the Companion of the people'), as we learn from a Palmyrene and a Nabatæan inscription. In the former he is called 'the kind god who rewards (or, who is grateful), and who drinks no wine,' i.e. to whom no libations of wine are offered. In the Safā inscriptions he appears as Sh'HQM, which should probably be

read She' haqom.

7. OTHER DEITIES OF THE TIME OF NOAH .-The god Yaghūth, whose name evidently means 'Helper,' was according to the Qur'an (Sūra lxxi. 23), another of the deities worshipped in the time of Noah. Unless we are willing to adopt the very hazardous conjecture of Robertson Smith, who identifies Yaghūth with Yĕ'ūsh,\* an ancestor of the Edomites mentioned more than once in Gn 36 and elsewhere in the OT, we find no trace of this god in early times, for his namesake Teyoûθos, a man who figures in the above-mentioned inscription of Memphis, cannot be cited as a proof. But at a later period we hear of a god Yaghūth, whose idol was an object of contention among the tribes of northern Yemen, and the name 'Abd Yaghūth occurs'

northern Yemen, and the name 'Abd Yagnuth occurs in various parts of Arabia, even in the tribe of Taghlib on the north-eastern frontier.

The name of the god Ya'ūq, who is mentioned in the Qur'ān together with Yaghūth, probably means 'the Preserver'; his cult seems to have been confined to Yemen. Suwā', who is also included among the gods worshipped by Noah's contemporation (Sawa law; 20) was appropriated for meaning the contemporation of the sum of the contemporation of the same appropriate of the gods. raries (Sūra lxxi. 20), was apparently of no great importance. He had a sanctuary at a place in the know, elsewhere. The meaning of his name is altogether obscure. Neither Suwā' nor Ya'ūq seems to occur in theophorous proper names. It is hardly necessary to remark that the transferring of all these Arabian deities to the age of Noah was a fantastic anachronism due to Muhammad

himself.

8. HUBAL.—Hubal was worshipped at Mecca; his idol stood in the Ka'ba, and he appears to have been, in reality, the god of that sanctuary. It is therefore particularly unfortunate that we have so little information respecting him. Wellhausen has plausibly suggested that Hubal is no other than Allāh, 'the god' of the Meccans. It would be unsafe to trust the descriptions of the idol in question which are given by writers of a later

<sup>\*</sup> The correct pronunciation is, perhaps,  $Y\bar{a}^*ish$  or  $Y\bar{a}^*is$  (with  $s\bar{u}n$ ); we may assume that originally the name was always spelt Y'Sh, without any vowel-letter after the '.

period; there is reason, however, to believe that the god had a human form. We may likewise accept as historical the statement that near him were kept divining arrows, used for the purpose of ascertaining his will or forecasting future events. It is related that the idol was brought by 'Amr b. Luhai from Ma'ab (Moab), a tradition which may contain some element of truth, for we have independent evidence indicating that this god was known in the North. He seems to be mentioned in a Nabatæan inscription at Hejr; and the tribe of Kalb, who dwelt in the Syrian Desert, used or kaib, who dwert in the Syrian Joseph, ased Hubbal as the name of a person or clan; the same tribe, it may be noticed in passing, used in like manner the names of Isāf and Nā'ila, two other deities peculiar to Mecca. Moreover, 'Amr b. Luhai is the representative of the Huza'a, a tribe who, according to tradition, occupied the sacred territory of Mecca before it passed into the hands of the Quraish. The assertion that 'Amr introduced the worship of idols into Mecca for the first time is, of course, utterly incredible. But the hypothesis that Hubal was a late importation from a foreign country is further supported by the fact that we hear nothing of him in other parts of Arabia, and that even at Mecca personal names compounded with *Hubal* were unknown. When the Meccans had gained a victory over the Prophet in the immediate neighbourhood of Medina, their leader shouted, 'Hurrah for Hubal!' Thus they regarded him as the natural enemy of the God preached by Muhammad.

9. 'LORD' AND 'GOD' — Here we may notice

certain deities whose titles in themselves seem to

certain deities whose titles in themselves seem to designate them as occupying a position of supreme importance in the eyes of their worshippers. Among these is al-Malik, 'the King,' a name which corresponds to the North-Semitic Malek (not to mention other forms)\* as applied to a god; in Arabia, however, al-Malik is represented only by the rare personal name 'Abd al-Malik.'

The divine title Ba'l or Ba'al, 'the Lord,' which was very common among the Northern Semites, survived among the Arabs of the Sinai Peninsula in the form al-Ba'lū, which occurs in their inscriptions together with the proper names 'Abd al-Ba'lī, Aus al-Ba'lī 'gift of the Lord,' and Garm al-Ba'lī, probably 'act of the Lord.' A trace of the worship of this god may be found in Sharaf al-Ba'l, the name of a place which lay somewhere on the route between Medina and Syria. The Arabs of later between Medina and Syria. The Arabs of later times were not aware that any such deity had existed, but certain phrases in their language clearly prove that he had once been known. Thus the term 'soil of Ba'l,' or simply 'Ba'l,' is applied to land which does not require rain or artificial irrigation, but has an underground water supply, and therefore yields fruit of the best quality. In this case the god seems to be regarded as the lord of the cultivated land. That here the word  $Ba^{\circ}l$  really refers to him is shown by the synonymous, or nearly synonymous, expression 'aththar,' derived from 'Aththar, a deity whose name had likewise sunk into oblivion among the Arabs of that period, whereas it appears in all the older Semitic languages with the parally navieties of form '(Aththar) languages with the usual variations of form ('Ashtart, 'Athtar, and so forth). Again, the verb ba'ila and other derivatives of Ba'l mean 'to be bewildered,' properly to be seized by the god Ba 1.

Among the Northern Arabs of early times, particularly in the region of Safa, the word El, 'God,' was still very commonly used as a separate name

wall of the

1 This applies primarily to the date-palm, which requires much materials at its root but none above.

of the Deity. It is true that it does not actually occur except in compound proper names of persons,  $O\delta\delta\delta\eta\lambda$ os,  $Wahb\ El$ , and many others. Some of these, such as  $Wahb\bar{t}l$ , 'gift of El,' ' $Abd\bar{t}l$ , 'servant of El,' appear also among the Arabs of a later age, but at least in certain cases they must have been borrowed from the Sabæan language,\* while in other cases they are restricted to the extreme north of Arabia. It may be added that the divine name  $Iy\bar{a}l$ , which occurs once in an ancient verse, is possibly a plural of majesty formed from El;  $Uv\bar{a}l$ 

is a variation of the same name.

Allah, in the Safa inscriptions Hallah, 'the god enters into the composition of numerous personal names among the Nabatæans and other Northern Arabs of an early period, e.g. Zaid Allāhī, 'increase of God' (that is, increase of the family through the son given by God), 'Abd Allāhī, and so forth. In the Nabatæan inscriptions Allāh does not seem to occur separately as the name of a god, but in the inscriptions of Safā the separate use is found. Among the heathen Arabs of later times Allāh is extremely common, both by itself and in theophorous names. Wellhausen cites a large number of passages in which pre-Islāmic Arabs mention Allāh as a great deity; and even if we strike out some passages (for instance, on the ground that the text has been altered by Muhammadan scribes), so many still remain over, and so many more which so many som remain over, and so many more which are quite above suspicion can without difficulty be found, that the fact is clearly established. Moreover, Allāh forms an integral part of various idiomatic phrases which were in constant use among the heathen Arabs. Of special importance is the testimony of the Qur'an, which proves, beyond all doubt, that the heathen themselves more add Allāh doubt, that the heathen themselves regarded Allah as the Supreme Being. Thus, men turn to Allah when they are in distress (Sūra x. 23, xxix. 65, xxxi. 31). Solemn oaths are sworn in his name (vi. 109, xvi. 40, xxxv. 40). He is recognized by mankind as the Creator and the Giver of rain (xxix. 61 ff.). Their crime consists only in the fact that they work his they are also had been consisted in the they work his they are also had a suprementation. that they worship other gods beside him; the three goddesses, Manāt, Allāt, and 'Uzzā are believed to be his daughters (xvi. 59 ff.).

In the Nabatæan inscriptions we repeatedly find the name of a deity accompanied by the title Alāhā, 'the god.' Hence Wellhausen argues that the Arabs of a later age may also have applied the epithet Allāh, 'the god,' to a number of different deities, and that in this manner Allāh, from being a mere appendage to the name of a great god, may gradually have become the proper name of the Supreme God. In any case it is an extremely important fact that Muhammad did not find it necessary to introduce an altogether novel deity, but contented himself with ridding the heathen Allah of his 'companions,' subjecting him to a kind of dogmatic purification, and defining him in a somewhat clearer manner. Had he not been accustomed from his youth to the idea of Allah as the Supreme God, in particular of Mecca, it may well be doubted whether he would ever have come for-

ward as the preacher of Monotheism.

### II. THE NATURE OF THE GODS.

As to the manner in which the Arabs conceived of their gods, the theophorous proper names give us some information, though it does not go very far. We have, of course, to remember not only that the persons who coined these names naturally wished to be on the best possible terms with the deities in question, and to approach them in the most conciliatory fashion, but also that later generations, who made use of ancient names, did not pay much attention \* Names commonly used in dynasties, or distinguished families, who originally came from districts where Sabsan or some other peculiar dialect of southern Arabic was spoken, naturally had a tendency to spread among the Arabic in general.

<sup>\*</sup>Amlāk, the plural of majesty, formed from this noun, is used in Ethiopic as the ordinary word for 'God.'
† In the days of Islam, al-Maiik became one of the epithess of Allah, and hence the name 'Abd al-Maiik re-appears among Multaumhadans.

to the original meaning; \* hence it may be concluded that, when Muhammad first proclaimed his mission, popular ideas as to the relation between gods and men had already begun to grow dim. It is also to be noticed that, in consequence of the abbreviations which names of persons are liable to undergo in daily life, compound proper names were often deprived of their divine element; thus Aus Manāt, 'gift of Manāt'; Zaid Allāt, 'increase (bestowed) by Allāt'; 'Abd Allāh, 'servant of God,' became Aus, 'gift'; Zaid, 'increase'; 'Abd, 'servant,' respectively. In theophorous proper names the deity sometimes appears as a lord, while the human individual is his servant, his handmaid, his obediindividual is his servant, his handmaid, his obedient subject (tau'); sometimes, again, the deity is described as gracious, while the human individual is his gift, his reward, his act of favour, the aid which he supplies, his prottgé who seeks refuge with him, etc. At other times the deity is represented as increasing the family, as sending a good omen and good fortune. The human individual is also said to be the man of the deity, his companion' and so forth. Some of these companies panion,' and so forth. Some of these compounds are of doubtful meaning. With the exception of a very small number of uncertain cases found in inscriptions, there are absolutely no names which designate a human being as the kinsman or descendant of a deity, like those which we find among the Hebrews and other Semites.†

#### III. THE CULT.

I. IDOLS, ALTARS, AND SACRIFICES.—It has already been remarked that the scantiness of our knowledge respecting the Arabian gods is largely due to the fact that our information dates, for the most part, from the close of the heathen period, that is to say, from a time when the Arabs themselves had no very clear ideas on this subject. traditional cult was duly practised; but mythology, not to mention religious dogma, could scarcely be said to exist. Even as to the fundamental ques-tion of the relation in which the Deity stood to the sacred stones, idols, and other objects of worship, no definite belief seems to have prevailed. If the heathen Arabs reflected about such matters at all, they probably imagined that the block of stone which served as a fetish (after the primeval Semitic fashion so clearly portrayed in the OT) was pervaded by a divine power, and, in its turn, exercised a divine influence. We have already had occasion to mention the black stone of Dusares at Petra; to this, it would appear, Clement of Alexandria alludes when he says that 'the Arabs worship stone' (*Protr.* iv. § 46). The veneration of the black stone in the wall of the Ka'ba has been adopted even by Islām; and, as Snouck Hurgronje has shown, there exist in Mecca and the immedihas shown, there exist in Mecca and the immediate neighbourhood various other sacred stones, which were originally fetishes, but have acquired a superficially Muhammadan character by being brought into connexion with certain holy persons. Stones of this kind served at the same time as alturs; the blood of the victims was poured over them or smeared upon them, an act whereby the worshipper entered into communion with the god worshipper entered into communion with the god to whom the drink-offering of blood was presented. Upright blocks or slabs of stone (στήλαι) formed an

Upright blocks or slabs of stone (στήλαι) formed an essential part of the cult; the Arabic equivalent of στήλη is πισιού (pl. απςαδ), also παπςιό (Heb. \*These remarks, and many of those which follow, apply to other peoples also, both Semitic and non-Semitic. † On all these questions see the art. 'Names' in EBi, p. 3271 ff. (by the author of the present article); and Littmann, Oriental Inscriptions, p. 121 ff.
1 Mekka, i. (Hagne, 1889) p. 21.
1 Very similar rites exist among other nations, e.g. in Bengal—see the JRAS of Bengal for 1908, Anthropol. Series, p. 82 ff. For blood ritual in Syria and Arabia, from heathen times to the present day, see Curtiss, Prim. Sem. Rel. To-day (London, 1902). Cf. also Musil, Arabia Petræa, iii. (Yienna, 1908); and Tauzzen, Coutumes des Arabes au pays du Moab (Paris, 1908).

maṣṣēbāh). As early as the time of Herodotus, our oldest authority, the Arabs were accustomed to establish a blood-brotherhood by smearing sacred stones with their own blood, while they invoked the god and the goddess (iii. 8). Examples of a similar use of blood, in the solemn ratification of a

similar use of blood, in the solemn ratification of a treaty or in the swearing of an oath, occur at a much later period.\* The blood is licked, or the hands are dipped in it; sometimes water or a perfumed liquid is employed as a substitute.†

A detailed account of a kind of sacrifice, performed about A.D. 410, is given by Nilus (Migne, kxi. 612 ft.). The wild 'Saracens' of Arabia Petrea, he tells us, had no image of a god, but only an altar rudely built of stones, i on which they sacrificed, in great haste, a human being or a white camel to the morning-star (i.e. Venus, or 'Uzzā; see above, p. 660) before surrise, evidently in order that the star might be visibly present during the whole ceremony. Thrice they marched round the sacred spot, chanting a hymn; then the chieftain, or an aged priest, struck the first blow at the victim, and drank some of the blood, whereupon the crowd, rushing forward, devoured the animal, raw and only half-flayed, together with the bones and entrails, before the sun appeared. One of the most peculiar features in this description is the drinking of the blood; in other cases, the Arabs, like the ancient Hebrews, allowed the blood of the victim to flow away, giving back the element of life to the deity, or else they applied it directly to the idol.

As is stated above, the Arabs of Petræa sacrificed not only animals, but also human beings; the son of Nilus was on the point of being slaughtered in honour of the morning-star, and escaped by a more caridost. Textimery of a servery better the content of the morning star, and escaped by a more caridost.

in honour of the morning star, and escaped by a mere accident. Testimony of a somewhat earlier date is supplied by Porphyry, who tells us (de Abstin. ii. 56) that 'the people of Duma, in Arabia,' annually sacrificed a boy and buried him under the altar, which served also as an idol  $(\xi \delta a \nu o \nu)$ ; here we have another instance of the same object being used for both purposes. The vast human sacrifices offered, at a later period, by king Mundhir of Hira to the planet Venus, the goddess to whom Nilus also refers, have already been mentioned. But in Arabia proper we have no clear trace of human sacrifice.\*\* Possibly among the Arabs of the extreme North, the continuance, or it may be the revival, of the ghastly ancient rite was due to the influence of the neighbouring peoples, whose religion had remained barbarous in spite of their advanced material civilization.

At the period to which our principal authorities At the period to which our principal authorities relate, the Arabs sacrificed camels, sheep, goats, and apparently less often kine.+† We frequently \*Count Landberg, La Langue arabe et ses dialectes (Leyden, 1905), p. 74, mentions a remarkable specimen of blood-ritual which is still practised in a certain district of South Arabia at the conclusion of a contract of service.

† The anointing of fetishes, as we find it in Gn 2818, and as it appears elsewhere, both among the Northern Semites and other peoples, is likewise to be considered a secondary form of homage.

The administration to the state of the state of the state of the appears elsewhere, both among the Northern Semites and other peoples, is likewise to be considered a secondary form of homage.

‡ Similarly, at an earlier period, the altar in the sucred palm-grove, probably near the southern extremity of the Sinaitic Peninsula, was & στερεοῦ λίθου, according to Agatharchides, cited by Diodorus, iii. 42.

§ In like manner the 'Aisāwa, a Muhammadan confraternity existing at the present day in the district of Tiemsen, Aigeria, perform a religious rite in the course of which they devour a he-goat raw, with the skin and hair—see Doutté, Les Aissaoua & Tlemgen (Châlons-sur-Marne, 1900), p. 13. This must be a piec of primitive African savagery; it was certainly not imported from Arabia. But there is reason to believe that similar things took place in the paroxysms of excitement which accompanied the Dionysiac cult. The Bacchæ of Euripides contains no very precise evidence on the subject.

¶ Probably not the oasis Dūmat al-jandal, where Wadd was worshipped (see above, p. 662), but Dūma in the Haurān, which was included in the province of Arabia.

¶ These sacrifices may be compared with the savage custom of 'devoting' vanquished enemies, which was in vogue among the ancient Hebrews (see, for instance, Nu 213, Dt 234, Jos 210, 18 15).

\*\*\*The word'hadā, 'conducted,' cannot be cited as an argument. When applied to a single individual, it denotes a prisoner, a person who is under the protection of another, or a bride who is brought to her husband. When applied to sacrificial victims, it is always a collective, the singluar being then hadāya. Thus it would not be correct to say that a prisoner is called a 'victim.' †† The most usual words for animals offered in sacrifice are 'tir and 'ativa'; hence we may conclude that the Heb. hatīr, 'to entreat,' ne'tur,' to be moved by entreaty,' originally referred to sacrifice, accompanied by prayer, and to the effect which it produces on the deity.

read of the blood of the victims being applied to the sacred stone or pillar. The number of the animals slaughtered must sometimes have been very large, since the poets hyperbolically compare warriors slain in battle to a multitude of sacrificial victims. victims. Offerings of other kinds are rarely mentioned. On one occasion we hear of a milk-offering, presented to the god Wadd (see above, p. 662), and another passage refers to an oblation consisting of another passage letters to an obtained barley and wheat over which milk was poured. Most of the Arabs being very poor, these less pre-Most of the Arabs being very poor, these less pretentious kinds of offering may perhaps in ordinary life have played a larger part than we should at first be inclined to suppose. But the words nusuk, manāsik, 'outpouring,' which are applied to religious ceremonies in general, and have become part of the terminology of Islām, certainly do not refer, in the first instance, to drink-offerings of this sort (as is the case with the Hebrew nesekh), but to the outpouring of blood. The flesh of the sacrifice was usually eaten by the worshippers, the god contenting himself with the blood. Sometimes, however, sacrifices were left to be devoured by vultures; hence a certain idol which stood in the neighbourhence a certain idol which stood in the neighbourhood of the Ka'ba was called mut'im at-tair, 'the feeder of the birds (of prey). In this case the god was probably imagined to be—through human instrumentality, it is true—an example of those virtues which the Arabs place above all others, namely, hospitality and munificence. But originally every sacrifice, properly so called, was regarded as food consumed by the god, or at least as a means of gratifying his sensations.\* Thus the sacrificial meal brought the worshipper into close connexion with the Deity.

The Arabs, like the Hebrews, were in the habit

of sacrificing the firstlings of their flocks and herds. But how far the custom extended it is impossible to say. + Soon after the birth of an infant, his head was shaven, and a sheep was sacrificed on his behalf; perhaps this was originally a ransom, offered as a substitute for the sacrifice of the child.

We may here mention a totally different kind of offering, namely, the practice of setting an animal at liberty, either in fulfilment of a vow or as an expression of gratitude to the deity for the increase of the flock; thenceforth the animal in question was not to be used for any purpose, except perhaps by needy travellers who might be allowed to milk it. Of these consecrated animals there were various sorts, each denoted by a distinct term. But as to the precise meaning of the terms, no trustworthy information was possessed by later scholars, since the Qur'an had abolished these customs, together with the religion of which they formed a part. It is probable that the animals to which we have referred pastured in districts sacred to the deity, and generally were held inviolable.

generally were held inviolable.

The practice of marching round the sanctuary on the occasion of a sacrifice, as the Saracens described by Nilus were wont to do, prevailed in many parts of Arabia. Sometimes, at least in Mecca, this marching took place also when no sacrifice was being offered. It would seem that among the Arabs of later times the solemn shout (tahlii) corresponded, in some measure, to the 'hymn' of the early Saracens. We may be sure that what the Qur'an contemptuously calls 'whist-

ling and clapping' (Sūra viii. 35) was not confined to the Meccan sanctuary.\* The act of standing ('ukūf) in a devout posture before the sacred stone or image likewise formed an essential part of the

In addition to these traditional forms, there were other means of influencing the gods, namely, extemporized prayers, requests for special favours, benedictions, and, above all, imprecations. The effect of an imprecation was heightened by its being uttered in a sacred month and at a sacred spot, for instance, in the month of Dhu 'l-qa'da at 'Okāz.

We have already seen that the gods were represented not only by rude blocks of stone, but also by statues executed with more or less skill. The most usual word for a divine statue, whether of stone or wood, is sanam, derived from the Aramaic selem, and perhaps introduced into Arabia together with the object itself. The other word, wathan, is certainly indigenous, and seems primarily to mean nothing more than 'stone.' †

othing more than stone. I Examples of tree-worship are likewise to be found mong the Arabs. The tree known as Dhāt mwāt, 'that on which things are hung,' received among the Arabs. The tree known as Dhat Anucit, 'that on which things are hung,' received divine honours; weapons and other objects were suspended from it. We also hear of a sacred palmtree which was decked with apparel. At Nahla, as has been mentioned above (p. 660), the goddess Uzzā is said to have been worshipped in the form of three trees. We may assume that the deity was supposed to stand in the same relation to the tree as to the fetishes of stone. The garments, rags, and other things which were placed upon it are to be regarded as a substitute for sacrifice. ‡

The kindling of a fire in honour of a god was quite exceptional among the Arabs. It took place in connexion with the great festival of the pilgrimage, at the spot called Qozah; moreover, the term as-Sa'ir, which occurs in an ancient verse of poetry referring to some particular cult, may not impro-bably be explained as meaning 'fire,' 'blaze,' in accordance with the ordinary use of the word, rather than as the name of a god, although the latter interpretation might seem, at first sight, to suit the context.

2. PLACES OF WORSHIP.—Temples, properly so called, were certainly very rare, unless we include buildings in the Græco-Roman style erected by the Arabs of the extreme North. The primitive simplicity of the Ka'ba, which was held in such especial honour, proves that the sanctuaries of Arabia are by no means to be imagined as imposing edifices. The three temples which stood, according to Agatharchides (Diod. iii. 45), on a hill near the Arabian seacoast, may have been somewhat handsomer specimens of architecture, but it would seem somer specimens of architecture, but it would seem that they were built by a foreign prince, probably a Sabæan. Yet in spite of their humble appearance, the houses of the gods were regarded with extreme veneration, as is shown by the proper names 'Abd ad-dār,' servant of the (holy) dwelling' (the ancestor of the family who were actually in charge of the temple at Mecca); 'Abd al-bait,' servant of the (holy) house'; and 'Abd al-Ka'ba,' servant of the Ka'ba.' § The word masjid, 'mosque,' temple,' which has become part of the terminology of Islām, was originally derived from the

of the temple.'

<sup>\*</sup> Hence, wherever human sacrifices are offered—and this can be proved to have been the case among almost all peoples—we may assume that in the very earliest times cannibalism also existed. The idea that sacrifices are consumed by the gods appears, for instance, in Dt 32<sup>28</sup>, but it is entirely rejected in Ps 50<sup>8</sup>-18.

Ps 50<sup>9-13</sup>,

† The remarkable, but well attested, statement that the Arabs considered it unlucky if the firstborn of a woman was a boy, may perhaps be explained as a survival from a time when they, like the Hebrews, ofered to the deity their own firstborn, as well as the firstborn of animals. That the father should have been specially unwilling to sacrifice a boy is natural.

<sup>\*</sup>Robertson Smith very justly remarks (Rel. Sem.<sup>2</sup> p. 340, note 2): 'The festal song of praise (7m, tahtāl) properly goes with the dance round the altar (Ps 266ff.), for in primitive times song and dance are inseparable.'
† As to the distinction in meaning between these two expressions the native authorities supply no trustworthy information.
† Sacred trees, to which rags are attached, exist in Arabia at the present day, and still more frequently in Syria. They are found in other countries also, but the rites connected with them present many difficulties of interpretation. On tree-worship in general see Frazer, Golden Bough?, i. 166 ff.
§ Among the Syrians we find the name 'Ebedh haiklā, 'servant of the temple.'

Aramaic, as is shown by the occurrence of masgedhā, 'place of worship,' in the Nabatæan inscriptions. The sanctuary in which an idol stood was usually not enclosed with walls, but marked off by means of boundary-stones, after the fashion

described by Nilus.

3. PRIESTS.—That all the details of the cult could not be mastered without special training is sufficiently obvious. In connexion with several of the sanctuaries and idols we read of ministrants, who bore the title of sādin (pl. sadana); this term originally meant 'one who holds the curtain,' that is, one who admits to the shrine. But it is improbable that in the times with which we are mainly concerned there were men who had no other function than that of priest. At an earlier period, it is true, such persons existed. We learn from Agatharchides (Diod. iii. 42; Strabo, 776) that a man and a woman acted as priests, during their whole lifetime, in the sacred palm-grove, and wore the costume of primitive ages, consisting entirely of skins. In the Sinaitic inscriptions several individuals are expressly designated as 'priests,' which implies that they occupied posts of some dignity. This conclusion is supported by the fact that some of the persons in question appear from the inscriptions to have belonged to the same family.\*
Furthermore, Ibn al-Kalbī, in his account of the various gods, sometimes mentions the name of the priestly family by whom this or that god was served, and in the case of the Ka'ba we possess a considerable amount of detailed information as to the division of the several departments of the cult among a number of families closely related to one another. Wellhausen points out that in some cases the ministrants of a sanctuary belonged to a tribe other than that which owned the surrounding country. Usually this is to be explained by the supposition that the priestly family remained attached to the spot after their fellow-tribesmen had emigrated or been driven out. Occasionally it may have happened that a strange clan acquired control of a sanctuary by force or fraud; that this was the case at Mecca itself is not impossible.† In the inscriptions the word for 'priest' is kāhin, which seems to have been borrowed from the Aramaic; these persons, it is evident, were priests in the full sense of the term, as appears from the fact that one of them is called a 'kāhin of 'Uzzā.'

#### IV. MECCA.

THE 'OMRA AND THE HAJJ .- The Kaba at Mecca was an unpretending edifice, erected, in the second half of the 6th cent. after Christ, on the site of an older sanctuary which had been destroyed by fire. The new building was constructed by a native of the Roman Empire, partly out of timber obtained from a stranded ship, wood suitable for architectural purposes being a rare article in most parts of Arabia. To the heathen Arabs the Ka'ba was an important centre of worship, and it afterwards acquired, through Muhammad and Islām, a world-wide fame, surpassing even that of the Church of the Holy Sepulchre or of St. Peter's at Rome. At what period a Ka'ba, that is, a durable building with rectangular walls, ‡ was set

durable building with rectangular walls, ‡ was set

\*A man named 'Amēū calls himself 'a priest of 'Uzzā' (Euting,
550), and a certain Harishū, son of 'Amēū, is also a priest
(Euting, 249). A second Harishū is likewise so described
(Enting, 348). In another inscription, which is unfortunately
not quite clear, we find an allusion to a priestess; and the name
'Amēū appears again (Euting, 228). Although these names
occur elsewhere, the fact that they are both contained in the
only inscriptions which refer to priests plainly indicates some
relationship between the persons in question.

† The native tradition itself supplies tolerably clear evidence
that Qusai, the ancestor of those families who had charge of the
Ka'ba and the pilgrims, belonged to the tribe of 'Odhra, whose
territory lay far to the north of Mecca.

† The word Ka'ba occurs thus, as an appellative, in the
Mufaddalāyāt, xxx. 72. 'The castle of Sindād with the Ka'ba'

up for the first time in that altogether sterile valley, we have absolutely no means of determining. It has been plausibly conjectured that the selection of the spot was due to the existence of the well called Zamzam, which has a tolerably abundant supply of water, and might naturally be regarded as a gift of the gods by the caravans which passed to and fro between Yemen and Syria, though the water of Zamzam, it must be admitted, is of an inferior quality, judged even by Arabian standards, and as compared with some other springs which are to be found no great way off. But, however this may be, the primitive structure in question, which was little more than a box containing, it is true, a repository for treasures, first appears in history as a sanctuary in the hands of the Quraish, surrounded by a stretch of sacred territory (haram), and visited by strangers who performed a pilgrim-age ('omra') to the place. The traditions which relate to the early history of Mecca are extremely untrustworthy, and many of them have been perverted in the interest of various parties; but there is no reason to doubt the statement that this territory, unattractive as it is in itself, had once, if not oftener, been overrun and seized by violence.\* The ceremony of marching round the Ka'ba, and The ceremony of marching round the Ka'ba, and the accompanying rites, such as the procession between the two great stones, called Safā and Marwā, which stood in the immediate vicinity, were rigidly fixed. The greater part of this ritual was incorporated into Islām by Muhammad, who from the first recognized the Ka'ba as the temple of Allāh (Sūra cvi. 3); only a few modifications were introduced, but there is reason to suspect that the changes made by the Prophet chiefly affected those very details which, if they were known to us, would have supplied the surest clue to the original meaning of the whole. In particular, he abolished all the idols† after the capture of lar, he abolished all the idols + after the capture of his native city, whereas he retained a sample of the most primitive fetishism, the Black Stone, con-necting it, as he connected the Ka ba itself, with Abraham. According to one tradition, which has Alraham. According to one tradition, which has all the appearance of trustworthiness, the Prophet forbade his followers to march round the sacred spot naked; the practice in question must therefore have existed previously. The idea seems to have been that those who took part in the festival ought not to appear before the Deity in their ordinary marks. garb; hence, if any one had not the means of borrowing a suit of clothes at Mecca, he was obliged to perform the ceremony in a state of nudity. The custom of wershipping at a shrine in garments lent by the priest occurs also elsewhere in Arabia. In one case, we are told, a Bedawi, who belonged to the neighbouring tribe of Hudhail, marched round the Ka'ba with his buttocks uncovered, apparently imagining that this was a

covered, apparently imagining that this was a (Ibn Hishām, 57. 3, and elsewhere), was doubtless a group of buildings, or at least a structure composed of separate parts. The theory that there was ever a sacred tent in the valley of Mecca is sufficiently refuted by the consideration that dwellers in tents, i.e. nomads, could never have found pasture there. Robertson Smith's statement that 'almost every holy place at the time of Muhammad was a little centre of settled agricultural lite' (Rel. Sen.² p. 113), is wholly inapplicable to Mecca.

\*Compare the account by Agatharchides (Diod. iii. 43; Strabo, 777) describing the subjugation of the tribe which was in possession of the sacred palm-grove by another tribe.

† It is expressly stated that traces of the paintings which had been effaced were still visible on the inner walls of the Kaba when the building was wrecked in the days of Ibn Zubair (A.D. 683). We have no reason to doubt this assertion, though it is naturally impossible for us to say what objects were there represented—a matter about which scarcely any information could be obtained at the period in question. But it seems by no means improbable that the tradition according to which the Kaba contained portraits of Jesus and the Virgin Mary is actually correct, for it might easily have occurred to the artist (whose name is said to have been Baqum, i.e., presumably Pachomios, showing that he was an Egyptian Christian) to paint such figures in a temple owned by ignorant and inoffensive heathens.

peculiarly effective means of appealing to the god. It is said that the Meccans and certain tribes known as Hums, who were nearly akin to them, used to wear sandals when they went through the ceremony-a rule which may be explained by the supposition that they regarded the place as their home; members of other tribes, on the contrary, always entered the sacred precincts barefoot.

Wellhausen has had the merit of discovering and carefully pointing out that the solemn pro-cession from the hill called 'Arafat to the valley of Mins, the real pilgrimage (hajj) κατ' εξοχήν, originally had nothing whatever to do with Mecca and the Ka'ba.\* It is true that the route followed by the procession lay, for the most part, within the limits of the haram, which was generally acknowledged to be the sacred territory of the Meccans; but the fact that the opening ceremonies, the halt on the hill of 'Arafāt + and the kindling of lights on the hill of Ilāl, took place outside the haram—for which reason the Meccans and the Hums as a whole had no share in them—is quite sufficient to prove that the festival was not really connected with the city. Moreover, it should be observed that even at the present day, in spite of the changes introduced by the Prophet, who en-deavoured to assimilate the ritual as far as possible to the theory of Islām, the festival, properly so called, comes to an end when the sacrificial victims have been slaughtered at Minā; the subsequent visit to the Ka'ba is not an integral part of the hajj. Nevertheless, we cannot deny that by the time of Muhammad the pilgrimage had come to be closely associated with Mecca. The Quraish were sufficiently astute to appreciate the advantage which they derived from the sacrosanct character of their domain, and from the annual assemblage of pilgrims out of all parts of the country; these two circumstances together formed the basis of their trade, which rendered them intellectually far superior to other Arabs. The hospitality which they extended to the starving Bedawin at the time of the festival was amply repaid by the security guaranteed to the Meccan caravans.

Hagg or hajj is a very ancient Semitic expres-on; whatever its original meaning may have sion; whatever its original meaning may nave been, it corresponds for practical purposes to our word 'festival' (see, for instance, 1 S 30<sup>18</sup>). In Arabic the verbal form of this root is used also transitively, signifying 'to visit' a shrine. How familiar the idea of pilgrimage was to the ancient and its shown by the fact that Haggāgū, alfamiliar the idea of pilgrimage was to the ancient Arabs is shown by the fact that *Haggāgū, al-Hajjāj*, 'he who is wont to go on pilgrimage,' appears not unfrequently as a proper name; furthermore, *mahajja*, which originally meant a 'pilgrim-route,' is used for a 'route' in general, and *hijja*, 'annual festival,' has become a synonym for 'year.' That the festivals attended by pilgrims could take place only at fixed seasons is obvious; thus the pilgrimages were intimatally connected. thus the pilgrimages were intimately connected with the remarkable institution known as the sacred months, that is to say, months during which a universal peace prevailed, no vengeance could be executed, and even the murderer enjoyed security. How such an institution can have established itself among uncivilized nomads remains a profound mystery; § in any case it was generally

\*On the whole of this subject see the excellent inaugural dissertation of Snouck Hurgronje, Het Mekkaansche Frest (Leyden, 1880), which errs only in being somewhat too sceptical on certain points; and also his great classical work, Mekka (Hague, 1888, 1889).

† We also meet with the sing. form 'Arafa; perhaps this refers properly to some particular summit, whereas the pl. 'Arafat may be used to include the whole ridge.

† The theory that it primarily refers to 'dancing' rests on no syndence.

evidence.

§ It is less difficult to understand how sacred spots and districts came to be regarded as inviolable, for in early times it was natural to suppose that the god of the place would punish those who profaned it, and this reverence would acquire the

accepted among the Arabs. Its existence is attested by Procopius (*Pers.* ii. 16), though, of course, we cannot be quite sure that the months to which he refers are precisely the same as those with which the concourse at Mecca was associated. The question is closely connected with the theory of the ancient Arabian calendar, about which some doubt still prevails. It appears tolerably certain, however, that Rajab, the sacred month which stood by itself, which was the favourite season for sacrifices, and seems to have been the proper time for the pilgrimage ('omra) to the Ka'ba, normally fell in the spring, whereas the three consecutive sacred months, in the second of which the great han took place, coincided with the autumn.\* Similarly, we place, coincided with the autumn.\* Similarly, we learn from Nonnosus, who lived during the first half of the 6th cent., that two annual festivals were celebrated in the sacred palm-grove, which is probably to be identified with the grove described by Agatharchides (see above, p. 666), but is nowhere mentioned in Arabic literature.† At the beginning of the hajj, a man who belonged to a certain family renowned for skill in such matters solemnly informed the assembly whether the ensuing year was formed the assembly whether the ensuing year was to contain an intercalary month or not; in this manner the calendar was fixed annually. But the methods employed by the Arabs were of a crudely empirical kind, and hence, as we might have expected, their year gradually shifted to a considerable extent. The pilgrims, who came to the festival from far and near, all wore a peculiar but very simple costume, known as the ihram, and abstained from shaving their heads until the ceremonies were over. It would seem that washing also was forbidden—a privation which most of the Arabs probably did not feel very keenly. Among certain tribes it was the rule that no one might enter a house by the door so long as he wore the garb of a pilgrim; in other words, during the time of the pilgrimage they dispensed with every sort of shelter; if, however, a man found it necessary to enter his house, ever, a man found it necessary to enter his nouse, he was allowed to creep in at the back (see Sūra ii. 185). § The animals brought by the pilgrims had sandals, strips of plaited bark, and other objects attached to them, in order to show that they were intended for sacrifice. The festival began at 'Arafāt on the 9th day of the month of Dhr'l hiji is is the worth of the feastly have the Dhu'l-hijja (i.e. the month of the feast); here the assembled pilgrims made merry with lighted torches and probably with other adjuncts which are not known to us. From the first day to the last—and this applies to the institution even in its Muhammadan form—the proceedings were conducted with much noise and, from a European point of view, without solemnity. On every side were heard cries of 'Labbaika!', 'At thy service!'||; but whether this invocation was addressed by every one to the same deity is uncertain. A little before sunset the whole of the vast throng, on foot or on camels, began to race towards Muzdalifa, a journey of some two hours; here they were joined by the

force of a tradition. But how a widely dispersed and altogether lawless people, who had no conception of the heinousness of bloodshed in itself, can have been induced to suspend their feuds for the space of whole months, it seems quite impossible

feuds for the space of whole months, it seems quite impossible to imagine.

\* In the Arabian calendar as given by Epiphanius (*Hær.* Ii. § 24), the month called *haggat albait*, i.e. \* pilgrimage to the (holy) house, 'likewise falls in the autum. This name probably refers, not to the Meccan sanctuary, but to some other.

† According to Agatharchides, a great festival, at which hecatombs of camels were slaughtered, took place every fifth year—a very remarkable statement.

\* If the addition of the statement.

a very remarkable statement.

† If the adjustment of the lunar months to the solar year had been carried out at all rationally, Muhammad would hardly have conceived the unfortunate idea of imposing upon his followers a purely lunar year without any intercalation whatsoever.

§ Similar naive attempts to deceive the Deity occur among other peoples.

|| The grammatical derivation of this term is altogether obscure. Perhaps Professor Bevan is right in suggesting that it may be the Aramaic lappath, 'towards thee (O God)!'

Quraish and their associates the Hums (see p. 668). At Qozah, in the immediate neighbourhood, a fire At Qozan, in the immediate neighbourhood, a nre was kindled. During the night spent at Muzdalifa every one remained awake, and as soon as the sun rose, the assembly started for the valley of Minā, about two hours farther on. On the way thither, at three different places, every individual three some pebbles upon a heap of stones. At Minā the semificial enimals were also whereast next. Minā the sacrificial animals were slaughtered; part of the flesh was consumed by the owners on the spot, and distributed among those who had nothing to offer, while part of it was cut into strips and Thereupon dried in the sun for subsequent use. the pilgrims shaved their heads, and the festival came to an end.

The practice of kindling lights on the hill of Hal, the fire at Qozah, combined with the observation of the setting and rising sun as temporal limits, seem to indicate that the festival was held limits, seem to indicate that the festival was held primarily in honour of the Sun-god. Just as the Saracens described by Nilus were careful to offer their sacrifice to the morning star before it vanished in the brightness of the dawn, so the pilgrims at 'Arafat regulated their proceedings by the sun.\* But whether the whole march from 'Arafat to Minā was determined by a single plan, having a consistent mythological signification, whether, in other words, each individual rite is to be regarded as an integral part of a mythological whether, in other words, each individual rite is to be regarded as an integral part of a mythological drama and is capable of being so interpreted by us, appears extremely doubtful, notwithstanding the ingenious theory which Houtsma has propounded.† The custom of throwing stones is particularly hard to explain. We have to take into account the fact that ceremonies of the same

into account the fact that ceremonies of the same kind were performed by the Arabs in at least two other places, and occur in every part of the world.‡ The great festival which we have described had gradually thrown all others into the shade. At several places not very far from Mecca, feasts, which originally had a religious character, were calchested on find days in the convention of the same and the sam celebrated on fixed days in the course of the sacred months; but these assemblies became in process of time little more than fairs, where men came together for purposes of business or pleasure. This applies, in particular, to the fair held at 'Okāz. It must, of course, be understood that the great hajj itself was also utilized for commerce and other secular objects. The influence of these gatherings extended over a vast area. Thus at the fair of Dhu'l-majāz, a place some four miles from 'Arafāt, peace was concluded about the beginning of the 6th cent., through the intervention of Mundhir, king of Hīra, between the two kindred tribes of Bekr and Taghlib, who had long been deadly enemies, although the town of Hīra and the territory of the tribes in question lay far to the north-east of Dhu'l-majāz.

It is necessary to add that there were certain tribes, not very distant from Mecca, who did not recognize the sanctity of the festivals associated with that city, and even went so far as to plander months; but these assemblies became in process

with that city, and even went so far as to plunder the pilgrims. The case of the brigand-poet Shanfarā, who boasts that he slew a pilgrim at Minā in the midst of the festive throng, thus violating at once the holiness of the place and of the occasion, belongs to a somewhat different category, since

\*Muhammad deliberately modified the connexion of the festival with the sun, for he ordered that the departure from 'Arafat should take place soon after sunset, and the departure from Muzdalita shortly before sunrise.

† 'Het Skopelisme en het steenwerpen te Mina,' p. 22 ff. (= Verslagen en Mededeelingen der Kon. Akad. van Wetenschappen, Letterkunde, 4th ser, vi. 206 ff.)

‡ See, especially, Frazer, Golden Bough? ili pp. 3-13, where the rite is explained as an attempt to transfer an evil. Cf. also Doutté, Les Tue de pierres sacrés en Marco (Algiers, 1903). The practice of pelting with stones the graves of unpopular persons probably has a different origin, although the belief of Muhammadans, that the stones which they throw in the valley of Minā are directed against Satan, suggests this explanation.

this was merely an example of individual impiety on the part of a man who in more than one respect showed a contempt for established usages.

## V. VARIOUS PRACTICES AND BELIEFS.

- I. CIRCUMCISION.—The practice of circumcision (q.v.) was universal among the Arabs.\* Obscure as its origin is, it seems highly probable that the rite in the oldest times was connected with religion. In historical times the Arabs regarded circumcision as obligatory, not offering any reason for it except that it had always been their custom; hence, without any formal sanction, it was adopted into Islām.
- 2. THE SACRIFICE OF INFANTS.—It is possible 2. THE SAURIFICE OF INFARTS.—ID IS POSSIDE that the habit of burying female infants alive, which prevailed very widely, was likewise associated with some crude religious belief. The child may have been originally offered as a sacrifice to subterranean deities. In any case it is important to observe that the victim was slain without shedding of blood. But the real motive for the act was doubtless that which is assigned in the Qur'ān (Sūra vi. 152, xvii. 33), namely, poverty. It is well known that the same cause has led to infanticide in other countries.
- 3. DEMONS. In addition to the gods who were publicly recognized, though sometimes half-forgotten, we meet with a great mass of shadowy beings, everywhere present yet nowhere distinctly beings, everywhere present yet nowhere distinctly perceived, the demons or, as the Arabs call them, the Jinn. The meaning of the name is probably 'covert' or 'darkness'; another form is Jānn (pl. Jinnān), to which the Ethiopic Gānēn, 'demon,' approximately corresponds.† The demons are always, in the main, objects of fear, crafty, mischievous, or even destructive beings. The notion that the Jinn were regarded by the heathen Arabs as partly benevolent seems to have arisen under as partly benevolent seems to have arisen under the influence of Islam, which teaches that at least some of the Jinn are true believers, though it cannot be denied that, even in the pre-Islāmic age, certain friendly acts may occasionally have been ascribed to them: the Devil himself has moments ascribed to them: the Devil himself has moments of good temper, and strict consistency is not to be expected in a world of phantoms. The Jinn are usually invisible, but are capable of assuming various forms, especially those of snakes, lizards, scorpions, and other creeping things; hence the word jāmm may be used to denote a snake. In this case also two separate ideas have been confounded; on the one hand that of repulsive springs forms care the one hand, that of repulsive animal forms, par-ticularly of the snake, which in every country has given rise to weird fancies; on the other hand, the invisible terrors of the desert.‡ It is related that the Meccan clan of Sahm once suffered injuries at the Meccan clan of Sahm once suffered injuries at the hands of the Jinn, and accordingly marched out to a certain spot, where they proceeded to kill so many snakes, beetles, etc., that the Jinn were forced to sue for peace; here the creatures slain are evidently regarded as being themselves Jinn. It was natural to suppose that these demons haunted particular places, remarkable either for their loneliness or for their unhealthy climate. When Harb, the grandfather of the Khalīf Mu'āwiya, together with another man, was engaged in clearing a marsh for purposes of culti-
- \*This might be inferred from the account of the circumcision of Ishmael in Genesis. The Jewish treatise Mekhilitä, composed in the 2nd cent., expressly states that all Arabs were circumcised.

circumcised.

† The word is possibly connected with other religious terms used in the Semific languages, but on this point nothing can be affirmed with certainty.

† Jāḥiz, an author of the 9th cent., gives a very rational explanation of the belief in demons (see van Vloten's remarks in the WZKM vii. 241); the passage is cited by Mas'ūdi, (Prairies d'or, iii. 323 ff.). The articles by van Vloten, 'Dämonen, Geister und Zauber bei den alten Arabern,' in the abovementioned periodical (vols. vii. and viii.), are peculiarly instructive.

vation, white serpents were seen to fly out of the burning weeds; and when both persons died forth-with, every one perceived that the Jinn had slain them. Perhaps we may hazard the rationalistic conjecture that their death was due to the poison-ous air which they had been breathing. There are ous air which they had been breathing. There are many other stories in which the Jinn kill or carry off human beings; their spiteful nature also leads them sometimes to prevent cattle from drinking. They utter a peculiar sound.\* Their limbs are often very powerful; hence a strong man is said to resemble them. Occasionally they ride upon ostriches, as befits inhabitants of the pure desert. A brave warrior is described as alarming even 'the dogs of the Jinn,' so that they growl. These are merely samples of the fantastic notions connected with them; as we might have expected, there were equally fantastic devices for the purpose of warding off their influence.

Frequently a Jinnī (i.e. one of the Jinn) enters into a human being, rendering him possessed or mad.† But this belief, familiar as it was to the Arabs in historical times, seems to have been originally a foreign importation, or at least to originally a foreign importation, or at least to have been greatly intensified through contact with foreigners. In the OT scarcely a trace of such a conception appears, whereas in the NT it is extremely common, phrases like δαιμονιζόμενος, δαιμόνιος ἔχειν occurring repeatedly. The idea was introduced into Palastine from Iran. The Persian introduced into Palestine from Iran. The Persian word for 'madman' is dēvāna, literally 'demoniac' (from dēv, originally daiva, 'demon'), whence comes the Aramaic daiwān; on the other hand, the Aramsic shēdhān (from shēdh, which was used as the equivalent of the Persian dēo) passed into Persian in the form shēdhā. In pre-Islāmic times the Arabs borrowed from their northern neighbours not only many of the elements of civilization, but also much that was fanciful and superstitious; the latter class includes the belief in demoniacal possession. Even heathen Arabian poets speak of Palmyra as having been built for king Solomon by the Jinn; this case the foreign origin of the legand is grite abricant.

legend is quite obvious. The Arabs almost invariably use a collective noun in referring to demons; an individual demon has no distinct character, and consequently bears no personal name. To regard Shatifan as a proper name is scarcely permissible. It seems tolerably certain that this word was known to the Arabs before the days of Muhammad, and it actually occurs as the name of human individuals; but its form agrees so closely with that of the Ethiopic Shatifan, which is derived from the Heb. Sātān, \$ that we are forced to consider it a loan-word. The occasional use of shatifan for 'serpent' is even less primitive than the use of jānn in the same sense.

Though the Jinn have no individuality, they fall into various classes, and certain of these are sometimes mentioned as particularly harmful. The most dangerous kind of all is the Ghūl (a feminine noun), of which the plural is Ghīlān or Aghwāl; this word comes from a root signifying 'to destroy,' perhaps originally 'to assault.' The 'to destroy,' pernaps originally to assault. The Ghul is supposed to lie in wait at some place where men are destined to perish; she also entices them thither, especially by night. 'The Ghul has carried him off' is sometimes merely a poetical expression meaning 'he has perished.' She has the power of changing her shape, that is to say, the continuous men in order to destroy them. But of beguiling men in order to destroy them. But

of beguiling men in order to destroy them. But \*The word applied to it is 'azu', apparently a harsh, dull sound. It is also used to denote the clanging of a bowstring.

† To be possessed' is junna, and the participle majnun means 'possessed.' is junna, and the participle majnun the idea that Solomon was concerned in the building of Palmyra (Tadmor) is due to an ancient textual corruption in 2 Ch 84, where Tadhumör stands for Tāmār (see 1 K 918). The demons were brought into the story because the edifices of the city seemed too marvellous to be the work of men.

§ From the Hebrew and the Aramaic several religious expressions passed into the Ethiopic language at an early period, through the influence of Jewish or Christian missionaries.

§ This is by no means the only Arabic word which was borrowed from the Ethiopic.

usually she is described as a hideous monster. A poet relates how the Ghul, 'the daughter of the Jinn,' came one night to the fire which he had kindled, and how he cut off her head. It was a frightful object, like the head of a cat, but with a forked tongue; moreover, she had the legs of an infant prematurely born, limp and fleshless, and a hairy skin, resembling that of a dog or a rough and crumpled garment. In another poet we meet with the phrase 'arrows sharp as the canine teeth of Ghuls.

The poets also mention a kind of female demon called Si'lāt, of which the plural is Sa'ālī; this term scarcely ever occurs except as a simile, for the purpose of describing swift horses or camels, formidable warriors, and frightful women. A certain Arabian clan was supposed to have sprung from a marriage between a man and a Si'lat. Whether marriage between a man and a Si'lat. this ancestry was originally regarded as an honour or the reverse is doubtful; in any case no great importance can be attached to the story which was related on the subject.

In passages referring to the Jinn we occasionally meet with the expression *Habat*, *Hābit*, or some other derivative of the root *HBL*, which primarily means 'to destroy,' and is applied, in particular, to the destruction of the reason, or, in other words, to madness. Usually the term is employed in an abstract sense and as a mere figure of speech, but sometimes the beings so designated are conceived as personal; thus, for instance, a poet says to his wife, 'Leave me in peace, even though I should give away my substance to the Jinn and the Tabal 🖰

The mysterious tribe called Banū Uqaish seem likewise to be a class of demons. In order to scare them away, it was the custom to rattle a number of dry skin-bottles one against another.\*

The demons were never the objects of a cult, in the demons were never the objects of a cult, in the strict sense of the word; but on certain occasions, as, for example, at the building of a house, it was thought prudent to conciliate them with some offering, lest they should frustrate the work.† The curious proper name 'Abd al-Jinn, 'servant of the Jinn,' may here be mentioned. Whether it was actually in use does not seem quite certain; in any case it cannot have been common.

The belief in this motley assemblage of inferior spirits was, on the whole, maintained by Islām; in fact, the Prophet went so far as to recognize the existence of the heathen gods, classing them among the demons (see Sūra xxxvii. 158). Hence these primitive superstitions not only held their ground in Muhammadan Arabia, but were further developed, spread over the rest of the Muhammadan world, and often combined with similar, in some cases much more elaborate, conceptions which prevailed among foreign peoples. Thus later narratives which refer to such subjects may, if examined with due caution, be used to illustrate the ideas of the ancient Arabs; but we must beware of accepting too readily the statements of those Muhammadan scholars who endeavoured to reduce demonology to a system.
4. SOOTHSAYERS AND MAGICIANS.—The notion

that certain persons are under the immediate influence of the gods, and so possess the power of foretelling events or of performing other super-human feats, prevailed generally in the ancient

\* Some words which are often understood as referring to demons really have a different sense. Thus zauba'a is not a personal being, but simply 'whirlwind.' 'Ifrit in the Qur'an (Siara xxvii. 39) is an epithet of somewhat doubtful meaning, applied to a demon, but it is not the name of a particular class of demons. The belief current in later times, that the 'Ifrits or 'Afrits are demons of a specially dangerous kind, is due to a misunderstanding of this passage.

Here we have an instance of the so-called 'foundation sacrifice' which is practised in many parts of the world; see, in particular, ZE, vol. xxx.

world. It is certainly significant that the term kāhin, which, as we have seen (p. 667), retained kāhm, which, as we nave seen (p. 001), renameu among the Sinai-Arabs its original meaning of 'priest,' was used by the later Arabs in the sense of 'soothsayer.' In early times the Deity had been wont to make revelations to His priests; the divining arrows of Hubal and of other gods-things which, we may be sure, only the ministers of the sanctuary ventured to use—survived as relies of a more primitive age.\* In the various stories which refer to soothsayers, we find no other traces of their connexion with the gods properly so called. We are sometimes told, it is true, that a sooth-sayer or a magician had a 'follower' (tābi'); in other words, a familiar spirit + who occasionally revealed secrets to him, but was not always at his disposal. This spirit seems also to have been called a  $ra^{2}\bar{\imath}$ , 'one who is seen,' or perhaps we should translate 'seer,' assuming that the term was originally applied to the soothsayer himself, like the Heb.  $r\bar{o}^{2}e$ , the ancient word for 'prophet.' The Hebrew synonym hōze has an exact equivalent in the Arabic hōzī, 'seer,' 'presager,' 'diviner,' which is often used, as well as the verb corresponding to it.‡ In the same category we may sponding to it.‡ In the same category we may include the 'arrāf,' sage,' who is acquainted with hidden things, to some extent the  $tab\bar{\imath}b$ , 'physician,' literally 'skilful, well-informed,' who in many cases is an enchanter  $(r\bar{\alpha}q\bar{\imath})$ , and even the man whose wisdom qualifies him to act as arbitrator ( $\hbar akam$ ). The word  $s\hbar\bar{a}'ir$ , 'one who knows,' must in early times have denoted a man who uttered sayings inspired by some higher power; afterwards it gradually became the technical term for a 'poet.'§ In general, any one who possesses secret powers is called a  $s\bar{a}hir$ , 'magician.' Among the Arabs, as among other nations, it was particularly Arabs, as among other nations, it was particularly in this sphere that the mysterious depth of the feminine soul made itself felt; we read both of female soothsayers and female enchanters. A female familiar spirit  $(ra^{\bar{i}ya})$  is likewise men-

Arabic literature contains many stories about to them; but of all these only a very small proportion can be considered trustworthy, and a great deal is pure invention due to later writers. Nevertheless the passages in question enable us at least to form an idea of the style in which the soothsayers expressed themselves; the same style re-appears in the oldest chapters of the Qur'an. The fact is that the conceptions which the soothsayers embodied were raised by Muhammad to a far higher level. He felt in himself an inspiration which proceeded from the one true God. But if he had not had before him the example of the heathen kāhins, it is hard to believe that any such idea would have entered his mind; on the other hand, we cannot wonder that his prosaic fellowcitizens called him a soothsayer, a magician, and a 'possessed poet.' Nor is it impossible that his most formidable rival, Maslama || ibn Habib of the tribe of Hanifa, was likewise sincerely convinced of his own divine inspiration.

\* Cf. 1 S 307 etc.

\* Cf. 1 S 307 etc.
† Hence any man noted for his intelligence is supposed to have a tābi', who reveals all manner of things to him.
† The root was no longer employed by the Arabs in the simple sense of 'beholding'; even in Hebrew this usage is confined to the poetical or rhetorical style.
§ The connexion between poetical inspiration and the unseen world was not entirely forgotten even in later times, though the allusions which a poet makes to his 'demon' or 'Satan' are little more than jests. A very primitive stage in the development of this idea is represented by the story of Balaam in Nu 22-24; of. Goldziher, Abhandlungen zur arab. Philologie, i. (Leyden, 1896) pp. 1-205.

| By the Muhammadans he was contemptuously called Musathina, i.e. 'little Maslama.'
| This would partly account for the fact that his adherents were the only Arabs who displayed real courage and stubbornness in contending against Islam.

5. OMENS.—The belief in signs as betokening future events was, of course, no less common among the Arabs than among other nations. Some birds were regarded as lucky, some as unlucky. The animals that crossed a man's path and the direction in which they moved alike conveyed a meaning. Many of these signs were such as every one could understand; others were intelligible only to persons specially trained. One peculiar art consisted in scaring birds and drawing omens from their flight; this operation was known Various other superstitions of the same order might be enumerated, but such beliefs and practices do not properly belong to the domain of religion, and it is therefore sufficient to notice

them in passing.

6. THE SOUL.—The Arabs, like all other Semites, identified the breath (nafs) with the principle of life, or the soul.\* So completely did nafs convey, from the earliest times onward, the idea of human personality, that the word is used, with the addition of the possessive suffix, as an ordinary reflexive pronoun: nafsi, 'my soul,' means 'myself'; nafsaka, 'thyself'; linafsihi, 'for himself,' etc.† When the nafs permanently quits a man, death is the result; but the words of the Qur'an (Sūra xxxix. 43), 'Allah takes the souls to Himself when they die, and those who have not died (He takes) in their sleep,' presuppose the belief that during sleep also the soul is absent from the body.; It is true that the conception of the 'breath' as the principle of life does not harmonize very well with the theory that the life resides in the blood (see above, p. 665). But this latter view is much less popular among the Arabs than it was among the Israelites, and when the nafs of a man dying from wounds is said to flow away,' we need not assume, with the native flow away, we need not assume, with the native Arabic commentators, that nafs here means simply 'the blood.' Even the Heb nephesh (the equivalent of the Arabic nafs) is identified with the blood only in so far as the shedding of the blood causes death. It would appear that the life-giving soul (nafs) was supposed to have its seat in the heart; when the soul moves upwards, it is about to depart; in other words, death is imminent. The 'breath' escapes through its natural passage, the mouth or the nostrils. Thus, in passages referring to deadly peril, we read, 'when your soul had reached your throat,' 'before the soul rises above the ribs,' 'he just escaped with his soul in the corner of his mouth,' etc. In phrases of this kind nafs is sometimes omitted as being the implied subject of the sentence; for instance, in the words subject of the sentence; for instance, in the words of the Qur'an, 'when it (i.e. the soul, which is unexpressed) reaches the throat' (Sūra lvi. 82, lxxv. 26), meaning, 'when a man is at the last gasp.' A view which at first sight seems to differ from the foregoing appears in a story told of a certain aged Arab who fell into the hands of a hostile clan. Seeing that they were determined to shed his blood, he presented a sword to them, saying, 'Cut off my head, for the soul (nafs) is in it,' which they accordingly proceeded to do.

\* The Ethiopic nafest, 'that which contains the nafs (breath, life)' means the living human body (of. animus, anima, etc.). The Arabic rūk properly denotes the 'breath' only; its use in the sense of 'spirit' was unknown to the heathen, and when so employed it is to be regarded as one of the foreign religious terms which were introduced by Islâm.

† The corresponding forms are similarly used in Hebrew and

Aramaic.
† This conception prevails very widely. It is due to the belief that dreams are real experiences through which men pass while they are apparently lifeless. See Frazer, Golden Bough?, i. 255 ff. § See Frazer, op. cit. i. 251.

|| The common phrase māta hatfa anfhī, 'he died a natural death,' similarly refers, it would appear, to the cessation of the breath, since the 'nose' (anf) is here associated with the idea of 'dying' (māta); but the special meaning which hatfa has in this connexion remains obscure.

¶ See the Commentary on the Naqā'id of Jarīr and al-Farazdaq,

is called sadā, 'echo.'

These words, however, are probably to be taken as nothing more than a statement, based on ordinary experience, that the severing of the head puts an end to life, not as the expression of an idea opposed to the deeply-rooted popular belief which has been described above (see also footnote ||, p. 671b).

In reading the Qur'an we might be tempted to conclude that the bestbar Araba management of the conclude that the bestbar Araba management.

onclude that the heathen Arabs regarded the departure of the nafs as equivalent to annihilation; but in reality all that Muhammad's opponents denied was the novel, and to their minds absurd, doctrine of the resurrection and the other world.\* Their notions as to the state of departed souls were, of course, vaguer, if anything, than the notions of Homer's fellow-countrymen as to the  $\psi u \chi \dot{\eta}$ . Nevertheless, the usual invocation addressed to the dead, 'Be not far away!' does not admit of any satis factory interpretation, unless we presuppose the belief that the dead had a dwelling-place, and might be induced by entreaty to remain in the neighbour-hood of his people.† It is true that the formula in hood of his people. The is true on a construction dates from a period when such things were more vividly conceived. Sometimes we meet with sober reflexions of the following kind: 'They will saw when they bury me, "Be not far away!" but say, when they bury me, "Be not far away! what place can then be far away, if mine is not?

Nothing seems to the Arabs more obvious than that blood must be expiated by blood.‡ Hence one who has been slain longs for vengeance, and thirsts for the blood of the murderer. These phrases must originally have been understood in quite a literal fashion, whence we may conclude quite a literal fashion, whence we may conclude with certainty that some sort of life was ascribed to the departed. On this subject strange fancies prevailed. The soul of the murdered man was represented as appearing in the form of an owl, and as continually crying out, 'Give me to drink!' until vengeance had been executed. It must be remembered. bered that the scene of the murder was, in most cases, a lonely spot where the weird cry of the feathered anchorite would not be out of place. The term applied to the departed is hāma, properly 'skull,' the skull being the most characteristic part of the dead body; || the voice of the departed

Bodleian MS (Pococke, 390, fol. 53b): the passage in question has been communicated by Professor Bevan to the author of

Rodleian MS (Pococke, 390, fol. 53b): the passage in question has been communicated by Professor Bevan to the author of the present article.

\*Primitive man must have been quite unable to grasp the idea of his personality being completely annihilated at death. Even to us such a thing is, strictly speaking, unimaginable.

† Poets modify the expression in various ways; thus, when one poet says, 'May Aliah not suffer thee to be far away!' we must beware of taking the words to imply a definite religious idea. Moreover, the poets use the same formula with reference to other things, e.g. 'May God not suffer youth to be far away!' One poet, whose hand had been cut off, actually says to it, 'Be not far away!' The primitive sense of the phrase is completely lost in the verse of the poetess Hansā, alluding to her departed brother, 'May the grave that contains his body not be far away!' The invocation 'Be not far away' is even at the present day addressed to the dead by certain Bedawin.

‡ The substitution of a blood-wit divigal for blood-revenge is a later modification. But in historical times the blood-wit had become very common; well-disposed persons eagerly furthered this device for maintaining peace, often at great sacrifice to themselves. Nevertheless it was not considered quite honourable to accept 'milk' (i.e. camels or other animals that could be milked) instead of 'blood.'

§ In reality, of course, the thirst for blood is felt by the surviving relatives. The daughter of the aged hero Duraid ion Simma, who was miserably slain by a Muslim just after the battle of Hunain (A.D. 630), says in a poem, 'When we march against them, may He (i.e. Allâh) give us to drink of the blood of their noblest ones on the day of battle!' This is evidently metaphorical; but we can scarcely doubt that the blood of their slain enemies, partly in order to quench the burning thirst for vengeance, partly, it would seem, in order to absorb the strength of the vanquished. It must not be forgotten that, after the battle of Ulud, Hind bith' O

camel, which had previously been lamed, near the grave, + and to let it die of starvation. This usage can be explained only on the hypothesis that the soul of the camel was supposed to be ridden by the dead man. The custom of slaughtering sacrifices at a grave has maintained itself in various parts of Arabia down to the present day. It is particularly interesting to note that about the year 1100 after Christ certain Arabs of Northern Yemen 'Asīr) (apparently near the mountain-range of showed their respect for a dead man, in accordance with their traditional practice, by breaking 1000 swords and 300 bows, and by laming 70 horses; \$ this was undoubtedly a survival of an ancient heathen rite. That the objects destined for the service of the departed must be rendered useless to the diving its an idea which print exist section. the living is an idea which might easily occur to the fancy of primitive man. We likewise find traces of hair-offerings presented to the dead, but scarcely any traces of drink-offerings. Poets, it is scarcely any traces of drink-offerings. Poets, it is true, often express the wish that the graves of those whom they love may be refreshed with abundant rain; ¶ but whether this implies a belief that the dead themselves are capable of being refreshed is extremely doubtful; such passages may be mere figures of speech, referring to the verdure with which the grave is to be covered. In like manner, the greetings which poets sometimes address to the dead are purely rhetorical, and do not presuppose any notion of real intercourse with the denarted. the departed. The practice of refusing sepulture to an enemy,

come to be used as designations of the ghostly bird, or owl, that cries for vengeance.\* Moreover,

the rites of burial, simple as they were, presuppose some kind of future existence. In order to show

honour to the dead, it was the practice to tether a

Hence 'skull' and 'echo'

and of casting forth his corpse to be devoured by beasts and birds, prevailed no less among the Arabs than among the Homeric warriors or the peoples of Palestine (1 S 174, cf. Ezk 295). There can be no doubt that this was originally regarded as a positive injury to the dead, as depriving them of rest in the grave, or the like. But in historical times such conceptions had begun to become obsolete; \*\* the poet Shanfarā (see above, p. 669), who was outlawed by his tribe, disclaims all wish for burial, and invites the hyæna to rend his dead body on the battlefield. †† In general, however, the Arabs paid great attention to proper interment, and special care was taken to construct the grave so that it could not be violated by the hyenas. That

that it could not be violated by the hyænas. That all this may be done without any notion of bene\*As Professor Goldziher has observed, the saying ascribed to Muhammad, that the souls of believers slain in fighting for the faith are deposited in the stomachs of green birds, which drink of the rivers of Paradise, eat of its fruits, and perch upon the lamps suspended in the shadow of God's throne, obviously stands in contrast to the gloomy beliefs of the heathen. The beatified martyrs do not thirst for blood, and the birds that contain them are clad in the colour of vegetation, which to the inhabitants of the desert is synonymous with life.

† The Arabs practised burial only; the burning of corpses was unknown to them. It should be observed that the root QBR, which properly expresses the idea of 'burying,' is common to all the Semittle languages, and that the synonymous root DFN is not confined to Arabic.

† See Goldziner, Muhamm. Studien, i. (Halle, 1888) 239 ff.;

not confined to Arabic.

¶ On the other hand, a curse sometimes takes the form of a prayer that no rain may fall upon the grave of the individual in cuestion.

question.

\*\* The substitution of a crudely material Paradise and Hell for
the vague or wholly negative beliefs of the heathen respecting a
future existence, was doubtless one of the most important factors
in the conversion of the Arabs to Muhammad's teaching.

†† Nevertheless in an elegy composed upon his death the
ancient formula occurs, 'May Shanfarā be not far away!'

fiting the departed is sufficiently obvious from the

usages of modern Europe.

The belief which exists among many primitive races, that the dead are malevolent, and seek to injure the living, is one of which no traces are to be found among the Arabs.

## VI. MORALS.

It is almost superfluous to say that the Arabs It is almost superfluous to say that the Arabs had a generally recognized code of morals, which, we must admit, did not always reach a very high ethical standard. Some element of religion is contained in the maxim, which the poets repeat in various forms, that the misuse of strength leads to calamity; † there are likewise narratives which inculcate the same doctrine. Moreover, the poets sometimes bring the Deity into immediate connexion with the fulfilment of duties, for instance, as vindicating the sanctity of compacts. But in as vindicating the sanctity of compacts. But in general it may be said that the maintenance of morality was due much more to respect for traditional usages and public opinion than to fear of

TH. NÖLDEKE.

ARAKH. — A tribe of cultivators and fieldabourers in Northern India, of Dravidian origin, which at the Census of 1901 numbered 76,436, practically all of whom are found in the United Provinces. They claim to be Hindus, but their religion is really an advanced form of animsm, rengion is really an advanced form of animism, and they are never initiated into any of the orthodox sects. Their tribal goddess is Devī, whom they propitiate by a sacrifice of goats, the service being done by a class of Brāhmans of low rank. They observe the usual Hindu feasts, and at that of the Karvā Chauth in October-November their women worship the moon by pouring water on the ground from an earthen pot with a spout (karvā). In Central India, as in the United Provinces, they are not assisted in their domestic worship by Brāhmans, and their worship is chiefly devoted to a snake god whom they call Kartal Deo.

## ARAMÆÁNS.—See SYRIANS.

ĀRANYAKAS.—The Aranyaka literature of the Hindus holds a position intermediate between the Brāhmaṇas and the Upaniṣads; in a formal and technical sense supplementary to the Brāhmanas, but sharing generally the themes and subject-matter of the Upanisads, which in their turn are appended to or form a part of the Āranyakas (see art. UPANISADS). These treatises are therefore *śruti*, revealed and inspired Scripture. The name indicates either that they were composed in the forest (aranye) by the hermits who devoted themselves there to a life of seclusion and meditation, or that they were intended to be there read and studied. The latter is the Indian view.

\*The outburst of popular indignation which proved fatal to the victorious commanders after the battle of Arginusæ shows that, near the end of the 5th cent. s.c., the bulk of the Athenians, notwithstanding the rationalistic doctrines of the Sophists, still adhered to the belief that funeral rites were of great importance to the dead. From the same standpoint we must regard the conduct of Antigone; it is not merely a formal expression of riety.

of piety.

† For example, one poet says, 'Those who graze on the pasture of iniquity are smitten with pestilence.'

‡ Sāyaṇa on the Taittirīya Āraṇyaka: 'The rule is that this

Perhaps both are correct. Strictly speaking, also, each Brāhmana had its own Āranyaka, just as each sākhā, or school of Vedic teaching, had its Brāhmana; and the Āranyaka was completed and sup-

mana; and the Aranyaka was completed and sup-plemented by a corresponding Upanisad.

This accepted classification of the Sanskrit sacred literature is not unconnected with the theory of the four āśramas (see art. ĀŚRAMA). The Brāhmanas were the text-books of the Brāhman householder, upon which he relied for the due performance of his obligations as grhastha. Later in life, during the third period, after his retirement into the forest as vanaprastha, he devoted himself to the study of the Aranyaka, as sanctioned and adopted in the śākhā to which he belonged.\*

It has been shown that the Āraṇyaka literature in general is chronologically of more recent date than the samhitās of the Veda, which are known to it essentially in the form in which they have come down to us; and that it is later also than the Brāhmaṇas. On the other hand, the greater part at least is anterior to the period of the sūtra compositions, to the character and style of which the more recent portions of the Āraṇyakas approximate. Pāṇini† is said to be unacquainted with them: but in this instance the supposed ignorance It has been shown that the Aranyaka literature them; but in this instance the supposed ignorance may be only a matter of name.

them; but in this instance the supposed ignorance may be only a matter of name.

The extant Āranyakas belong to the Rigveda and the Yajurveda. There are no known Āranyakas of the Sāmaveda or the Atharvaveda.

The Attareya Āranyaka of the Rigveda is described as a distinct and separate treatise, not forming a part of the Att. Brāhmana. It consists of five divisions, or āranyakas, of which the last two are ascribed to the authors Āśvalāyana and Saunaka, and are written in a later style, suggesting the peculiar features of the sitra literature. Chapters 4-6 of the second āranyaka form the Upanisad proper. The first āranyaka details the rules for the morning, mid-day, and evening offerings on the mahāvrata, or great vow it. Lie is st day but one of the gwamayana, the 'procession of cows.' The first three chapters of the second āranyaka treat of the allegorical significance of the autham, the spoken word; while in the third part is discussed, quite after the upanisad manner, the meaning of the letters of the alphabet and their combinations.' The Kaupitati Āranyaka also belongs to the Rigveda, but is attached to a different sākhā, or school, that of the Kaupitakis. It contains fifteen aāhyāyas, or chapters, some of which coincide with chapters of the Aitareya Āranyaka. Adhyāyas 3-6, according to the susual numbering, form the Upanisad; but their position is said to vary in the different manuscripts, as though the four chapters of the Upanisad had originally existed, and been in circulation apart from the Āranyaka. Delonging respectively to the White and Black Yajurveda. The former is part of the Satapatha Brāhmana, of which it forms the last six adhyāyas or five prapāṭhakas of the fourteenth or last book according to the Mādhyandina school; but in the sākhā of the Kānyaka se the Kanayaka. The Taittirīya Ār. consists of 10 books or prapāṭhakas, of which the first six are the Āranyaka proper. These books discuss the mantrus for various ceremonies, the training and Vedic studies of a Brāhman, and the offerings to the Fa

style and contents seem to betray a comparatively late date.\*\*

āranyakam is for forest-study; it should be studied, therefore, in the forest, etc. (Max Müller, Ancient Sanskr. Lit.² p. 313).

\*Āruņeya Upaniṣad, 2: the sannyāsin (kuṭichara) is to live without the mantras of the Veda, but to observe the three daily ablutions, to meditate on the ātman, and 'of all the Vedas to recite the Āranyaka and the Upaniṣad' (Deussen, Sechzig Upan. p. 693). Cf. Yāṇiavalkya, Dharmaśāstra, S. 110: 'He who wishes to attain Yoga should know the Āranyaka'; Mahābh. 1.258: 'this body of the Mahābhārata is truth and immortality; it is . . . like the Āranyaka from the Vedas.' The last two quotations are in Max Müller, pp. 330 n. 2, 315 n. 1. See also E. W. Hopkins, Great Epic of India, New York, 1901, p. 9.

† About the latter half of the 4th cent. B.C. (B.C. 350 acc. to O. Böhtlingk). Others assign to him an earlier date. See C. M. Duff, Chronology of India, London, 1899, p. 7; Macdonell, Sanskrit Literature, p. 430f.

A. S. GEDEN.

ARBITRARINESS is, according to the popular use of the term, that quality which is ascribed to an act of will (arbitrium), and whatsoever follows from it, not merely in so far as it is free, but in so far as the choice of the individual who wills is not influenced by consideration for others or respect for any law which is not self-imposed. Hence arbitrarines tends to imply capriciousness, irrationally and as included the control of the contro ality, and an incalculable character generally. It must be in this wider sense that the word is employed by critics of the indeterminist theory of the Freedom of the Will (wh. see), when they say that that doctrine implies total arbitrariness of the will.

The theory of the arbitrariness of good, advanced by the Scotists, Occam and Descartes, is the doctrine that good is good because it proceeds from the undetermined will of God, who has chosen and commanded it; a moral act is not intrinsically good. Cf. Windelband, *Hist. of Philos.* (Eng. tr.) 332, 394. G. R. T. Ross.

ARBITRATION is an arrangement by which two persons, having a difference, agree to submit to the decision of a third, and to abide by that decision when it has been given. Such an agreement precludes either party from instituting a suit in the ordinary Courts of law on the matter in question; and indeed those Courts are so favourable to arbitration that they will make the submission to arbitration a rule of Court, so that the decision of the third person, called the arbiter or arbitrator, may be enforced at law by either party against the other.

The reasons which induce persons who would otherwise become litigants to prefer a reference to arbitration to a suit at law are: (1) that it does not involve the personal hostility caused by legal proceedings; (2) that it is more economical in its cost; (3) that the arbitrator is at liberty to consider the whole circumstances of the matter in dispute, and to arrive at what in his opinion is an equitable solution of it; (4) that the arbitrator is a person selected by themselves upon the ground of his special fitness to deal with that matter.

It does not often happen, however, that the two parties at variance are able to agree upon a third who possesses equally the confidence of both. The ordinary form of arbitration is, therefore, the appointment by each party of a different arbitrator, and the appointment by the two arbitrators of a third person as oversman or umpire, by whom any difference between the two arbitrators shall be decided. In England the proceedings in arbitration are regulated by statute, and are, therefore, only a degree less formal than those of a suit at law. They begin with a submission to the arbitrators of the question in dispute; then there is the acceptance by the arbitrators of the burden of the reference, and the fixing by them of a time for hearing the parties. At that time each party may be heard in person or by solicitor or counsel; the evidence of witnesses and of documents may be tendered, and the arbitrators may administer an oath to each witness, or take his affirmation, which will render him liable to the penalties of perjury if his evidence be false in any material particular.

duly arrived at, is binding upon both parties, and the Courts will not enter upon any inquiry whether it is right or wrong. He draws it up in the form of an award, and, speaking generally, the Courts accept that award as conclusive. There are cases, however, where it may appear to the Court that the arbitrator has neglected the elementary principles of justice, as by refusing to hear evidence, or has not brought his mind to the consideration of the subject, or has not disposed of the question really at issue, or has in some other way failed in the due exercise of his functions; and the Court will in such case either refer the matter back to him, or hold that it is not ousted of its own inherent jurisdiction to determine that matter. For these reasons the parties in their choice of an arbitrator, and the arbitrators in their choice of an umpire, should be careful to select a person who, whether a practising lawyer or not, has a mind imbued with the principles of law, and has had some experience in their practical application, as well as an expert knowledge of the definite questions at

In certain cases, in order to avoid the cost of litigation, a recourse to arbitration has been prescribed or authorized by statute. The Savings Banks Acts, the Friendly Societies Acts, the Building Societies Acts, and the Industrial and Provident Societies Acts contain provisions to this effect. In the case of the Savings Banks, including the Post Office Savings Banks, all disputes between a depositor or other claimant and the Bank are to be settled by the Registrar of Friendly Societies, and the jurisdiction of the Courts of law is ousted. As, however, the depositor has no choice in the matter, this is in effect only the creation of another Court having final jurisdiction, and using cheaper and more speedy methods than those of the ordinary Courts. In the other cases the statutes enable a society to provide by its rules that all disputes shall be referred to arbitration, and to define in those rules the manner in which the arbitrators shall be chosen. Where the rules contain such a provision, the jurisdiction of the Courts of law is equally ousted, and the member or other claimant has no other remedy than to avail himself of the arbitration thus provided.

In regard to the trade disputes between employer and employed, which frequently lead to much suffering and loss when pursued by the ordinary methods of trade warfare—strikes and lockouts much may be done by means of arbitration and conciliation. Thus among the ironworkers of the country a permanent Board of Conciliation has been established, consisting of a given number of workmen and of representatives of the employers, who meet periodically to adjudicate on any questions of dispute that may have arisen in the course of the employment, and to prescribe any change in the current rate of wages that may be necessary. Their decisions are accepted by both parties, and the establishment of the Board has procured a long industrial peace in that particular trade. By the Conciliation Act of 1896 the parties to any trade dispute may apply to the Board of Trade to appoint a conciliator, and this method has been adopted with success in many important trade disputes. Lord Rosebery, Lord James of Hereford, Mr. Asquith, and other eminent statesmen have accepted the office of conciliator, and the results have been in general satisfactory-not only in saving the workmen and their families from much distress and the employers from heavy loss, but o oath to each witness, or take his affirmation, hich will render him liable to the penalties of between them. In like manner, arbitration has frequently been invoked in the United States in articular.

The decision of the arbitrator or umpire, when

Roosevelt appointed a Board of Arbitration which satisfactorily settled the disputes in question. Some States, as New Jersey, have regularly ap-

pointed State Boards of Arbitration.

Another still more important development of the principle of arbitration, rich in its promise for the peace of the world, has been its application to disputes between nations. Such disputes, even more than those between individuals, are apt to be coloured with local prejudice, amour propre, and all the elements that go to make up the sentiment of patriotism. Nothing is more difficult than for the people of one country, party to such a dispute, to appreciate the strength of the case of the other The nation's honour and prestige are thought to be at issue on the result of the dispute; and nothing is easier than to create an unreasoning popular clamour for war. To substitute for the appeal to arms—with all its consequences to both countries in bloodshed, suffering, waste, and de-moralization—an appeal to argument and to calm reason is a triumph of civilization. The superstition of the ancients led them to think that the gods would defend the right, and even in Christian times we have seen two hostile armies each appealing to the god of battles for success upon that ground; but, in fact, the recourse to war is nothing but a resort to brute force.

ground; but, in fact, the recourse to war is nothing but a resort to brute force.

An instance in point is afforded by the dispute between Great Britain and Venezuela. A question arose between those two States as to their rights in certain portions of the territory called British Guiana. In 1890 the Venezuelan Government proposed a reference to arbitration on this question, which Great Britain refused. Thereupon the Government of the United States of America interposed, upon the ground that any hostile action taken by Great Britain against Venezuela would be an infringement of the Monroe doctrine, and President Cleveland took upon himself to appoint a Commission to ascertain the rights of the matter. The British Government having refused to recognize this Commission, a wave of warlike enthusiasm swept over the United States, and if popular exottement had had its way, a war between those two great and kindred nations would have resulted, with all its horrible consequences, arising out of a matter of no real importance to either. Fortunately, better counsels prevailed, and Great Britain and Venezuela agreed to a reference to arbitration. The result of that arbitration was a concession to Venezuela of territory which Great Britain had more than once offered to that State, and the confirmation in other respects of the contentions of the British Government.

A still more famous instance is that known as the 'Alabama' arbitration. During the Civil War in the United States, resulting from the secession of the Southern or Confederate States, a vessel was built at Birkenhead, which was allowed to leave English waters, and was armed and commissioned by the Confederate Government. The United States ambassador had complained to the British Government of the breach of neutrality involved in the building and equipment of this vessel, and orders were given to stop it; but by an accident those orders were delayed till after the ship had actually sailed. In the course of the following two years this ship, named the 'Alabama,' d

E. W. BRABROOK. ARCANI DISCIPLINA.—The name given by Dallæus to the custom in the Early Catholic Church of keeping the administration of Baptism and the Holy Supper, with related doctrines and rites, a secret from all except the baptized. Various reasons for this practice have been suggested by scholars. It was not due to any teaching of the NT, and the openness with which Justin Martyr describes the worship of the Church, and the fact that the followers of Marcion had not the practice, show that it was not usual before the third quarter of the 2nd century.

There is every reason to suppose that the celebra-tion of the Holy Supper by the congregations in Apostolic times was virtually private. Danger of persecution led to concealment of the Christian assemblies and rites. The measures of the Roman

government prevented the celebration of the Supper and the Agapæ at night, and compelled the ob-servance of the former in connexion with the open preaching of the word in the daytime, and perhaps the gradual abandonment of the latter. The catechumens were then dismissed before the communicants entered upon the Holy Supper itself. The catechumenate afforded a period of probation. In the first part of it the candidates were instructed in the general principles of religion. It was just before their baptism that they were instructed in the mysteries of the faith. The Creed, and perhaps the doctrine of the Trinity which explained the formula of Baptism, were not imparted to them until just before their baptism; and the Lord's Prayer not until afterwards. The example of the heathen Mysteries was felt. Those who had been admitted to the Communion, having gone through the grades of the catechumenate, and having transacted successive renunciations and exorcisms, were spoken of as 'The Initiated.' Finally, it became usual to regard those rites from which all but the full members of the Church were excluded as 'Mysteries,' and to transfer to them the awe that belonged to ethnic Mysteries. As Th. Harnack says, 'The mystical became mysterious, and the liturgical became theurgic.' He traces the great change to the gradual concentration of all the authority of the Church in the episcopate, due to the necessity of opposing its authority to Gnostic sects and their teachings. The rites of the Church were thought to have no validity apart from the bishops; and those performed by them were invested with mysterious awfulness. To this conception of Divine worship, Roman Catholic writers have joined the notion of a secret tradition of doctrine from the Apostles, in addition to the teaching of the NT. To this tradition they ascribe, for instance, the doctrine of Transubstantiation, and also the reverence for images and for the saints.

This Secret Discipline, beginning about A.D. 175, was in vogue until the end of the 5th century. Its features may, perhaps, be best set forth by the following quotations from Fathers and teachers of

the 3rd and 4th centuries.

Tert. (Prescrip. Her. xii.): 'To begin with, it is doubtful who is a catechumen and who a believer; they have all access alike, they hear alike, they pray alike—even heathers, if any such happen to come among them. That which is holy they will cast to the dogs; and their pearls, although to be sure) they are not real ones, they will fling to the swine. Simplicity they will have to consist in the overthrow of discipline, attention to which on our part they call pandering.

Basil (de. Sp. 27): 'Of the beliefs and practices whether generally accepted or publicly enjoined which are preserved in the Church, some we possess derived from written teaching; others we have received delivered to us "in a mystery" by the tradition of the Apostles; and both of these in relation to true religion have the same force.'

religion have the same force.'
(In a note in the Nicene Fathers, vol. viii. p. 41, Photius is quoted: 'In this work Eulogius (Patriarch of Alexandria 578-607) says that of the doctrines (διδαγμάτων) handed down in the church by the ministers of the word, some are δόγματα, and others κηρύγματα. The distinction is that δόγματα are announced with concealment and prudence, and are often designedly compassed with obscurity, in order that holy things may not be exposed to profane persons or pearls cast before swine. Κηρύγματα, on the other hand, are announced without any concealment').

exposed to profate persons or pearls that before same. Experment).

"For we are not, as is well known, content with what the
Apostle or the Gospel has recorded, but both in preface and
conclusion we add other words as being of great importance
to the validity of the ministry, and these we derive from unwritten teaching. Moreover, we bless the water of baptism and
the oil of the chrism, and besides this the catechumen who is
being baptized. On what written authority do we do this?
Is not our authority silent and mystical tradition?. Does
not this come from that unpublished and secret teaching which
our fathers guarded in a silence out of the reach of curious
meddling and inquisitive investigation? Well had they learnt
the lesson that the awful dignity of the mysteries is best preserved by silence. What the uninitiated are not even allowed
to look at was hardly likely to be publicly paraded about in
written documents. . . . Moses was wise enough to know
that contempt attaches to the trite and to the obvious, while a
keen interest is naturally associated with the unusual and the
unfamiliar. In the same manner the Apostles and Fathers

who laid down laws for the Church from the beginning thus guarded the awful dignity of the mysteries in secrecy and silence, for what is bruited abroad at random among the common folk is no mystery at all. This is the reason for our traditions of unwritten precepts and practices, that the knowledge of our dogmas may not become neglected and contemned by the multitude through familiarity. "Dogma" and "Kerygma" are two distinct things: the former is observed in silence; the latter is proclaimed to all the world."

Oyril Jer. (Catech. vi. 29): 'These Mysteries, which the Church now explains to thee who art passing out of the class of Catechumens, it is not the custom to explain to heathen. For to a heathen we do not explain the mysteries concerning Father, Son, and Holy Ghost, nor before Catechumens do we speak plainly of the Mysteries; but many things we often speak in a veiled way, that the believers who know may understand, and they who know not may get no hurt.'

Ambrose (c. Myster. i.): 'The season now warns us to speak of the Mysteries, and to set forth the purport of the sacraments, which if we had thought it well to teach before baptism to those who were not yet initiated, we should be considered rather to have betrayed than to have portrayed the Mysteries. And then, too, another reason is that the light itself of the Mysteries will shed itself with more effect upon those who are expecting they know not what, than if any discourse had come beforehand.'

Origen (c. Cels. i. 7): 'Crucifixion, Resurrection, Incarnation are well known. But that there should be certain doctrines, not made known to the multitude, which are (revealed) after the exoterio ones have been taught, is not a peculiarity of Christianity, but also of philosophic systems, in which some truths are exoteric and some esoteric.'

When, in consequence of the conversion of the Empire and the prevalence of

When, in consequence of the conversion of the Empire and the prevalence of Infant Baptism, the old catechumenate of adults fell away, the Disciplina Arcani ceased to be, although in the Greek Liturgy the distinction between a Missa Catechumenorum and a Missa Fidelium is still marked by the deacon's warning to all the catechumens to go out of the church.

out of the church.

EDWARD T. HORN.

EDWARD T. HORN. ARCHÆOLOGY.—I. Archæology is a descriptive science, dealing with the interpretation of the remains of past phases of human civilization. Etymologically, the name denotes the study of origins generally (from Gr. ἀρχή, 'origin'; ἀρχαίος, 'original'), and strictly it implies that the remains which it studies are interpreted as members of an originative or developmental series, members of an originative or developmental series, irrespective of their nearness to the present time. Popularly, however, archæology is restricted to mean the 'study of antiquity,' and is understood to mean the interpretation, either, generally, of all the available evidence for past phases of civilization (in which sense it includes formal thistory,' among its subdivisions). 'history' among its subdivisions); or, more par-ticularly, of such evidence as is furnished by the material remains of human handiwork. In the latter and commoner sense, archæology stands alongside formal history, which is concerned with the interpretation of documents; and it is to be regarded essentially as the 'past tense' of technology, and of the æsthetic criticism of manufactured objects. Archæology, like palæontology and geology, which are the analogous 'past tenses' or 'historical' aspects of biology and geography, is a science of observation solely. Experiment is contemplated only in so far as it may be possible to tast interpretation (or of the pride passible to tast interpretation). to test interpretation (e.g. of the evidence for an obsolete mode of manipulation) by re-constituting now the presumed conditions of the ancient process, so as to attain an analogous result.

It is only in its wider signification that archæ-

ology comes into contact with the study of religion or ethics. Ancient technology and ancient æsthetic, considered specially, occupy their own domain apart. But there are few, if any, religions which have not prompted the pro-Ancient technology and duction of monuments, ornaments, utensils, and other ritual accessories; or affected the form and decoration of the instruments of daily life. And as these material expressions of religious ideas, once produced, are capable of preservation inde pendently of their makers, they may be, and often are, the only evidence which has been preserved of the religion of an extinct people, whose beliefs

and traditions have perished with it.

2. Archæological evidence may establish the occurrence of an act or a custom within assignable

limits either of (a) space or of (b) time.

(a) To prove the distribution of an occurrence in space, the method of archæology is geographical. The instances which have been observed are tabulated in their geographical context, and in the absence of evidence to the contrary may be presumed provisionally to indicate a continuous distribution over the intervening areas. Such evidence to the contrary would be supplied *inter alia* by diversity of physical circumstance, exempting humanity locally from the need, or the inducement, to act in the manner presumed; or by evidence of the presence locally of other human observances inconsistent with the act or custom in question. The quality, with the act or custom in question. The quality, as well as the quantity, of evidence requisite to give archæological proof varies almost indefinitely. But in general, quality is incomparably more cogent than quantity, and positive evidence than negative: a single really well-authenticated occurrence (e.g. of an object of human manufacture or of recognized style in a given area), not only supplies the contradictory instance to all negative generalities, but gives a positive though indefinite presumption that further instances exist. This characteristic, archæology shares with all branches of knowledge which are concerned with discontinuous series; the area actually open to inspection is at the same time so arbitrarily assigned, and so small a proportion of the whole, assigned, and so small a proportion of the whole, that the probable value of every positive instance is in any case somewhat greater, and of every negative instance somewhat less, than it would be in a region of which the larger part has been already explored. This theoretical consideration already explored. This theoretical consideration is in the main confirmed by a retrospect of the archæological work of the last century. As in geology, a very small number of well-selected data from small areas isolated from each other, and indicated by accidental circumstances, have permitted a hypothetical re-construction of the human culture of wide regions, which enhancement human culture of wide regions, which subsequent evidence, more copious, continuous, and cogent logically, has done little if anything to modify, or even to confirm.

Archæology, being concerned with evidence which has already been exposed for a while to the accidents of time, is confronted with discontinuous evidence in another sense also. classes of objects, no less characteristic and instructive than the rest, are composed of materials which decay readily, and leave little or no trace even when deposited in closed chambers. Consecuently, and leave in trace of the consecuently applications of the consecuently applications. quently, archæology is concerned in most cases with evidence which has already undergone a process of quite arbitrary selection, and is com-pelled to qualify its conclusions accordingly. And even where the remains themselves are durable, the ravages of man or animals—the latter often far more elusive and perplexing than the former—have restricted the evidence again, objects of intrinsic value, or distasteful signifi-

cance (such as the monuments of a hated ruler or an alien creed) disappearing most readily, and causing the most serious breaks in the record.

causing the most serious breaks in the record.

(b) To prove the distribution of similar occurrences in time, or the sequence of dissimilar occurrences, archæology depends, again, like geology, on the comparison of simultaneities. Sequence of manufacture, among a series of relics of antiquity, may be determined either directly on the evidence of sequence of deposition (as in a stratified rubbish-heap, where the under layers must be older than those which overlie them); or indirectly, by comparison of style. The latter method, however, gives, strictly speaking, a series method, however, gives, strictly speaking, a series which is only morphological, not historical; it is evidence of change, not of development; and in many cases such a series is capable of being read in either direction since no preside criterion script. in either direction, since no precise criterion exists to distinguish immaturity from decadence. When doubt arises from this cause as to which is the initial end of a series, recourse must be had in the long run to the evidence of stratification; but an approximate proof can frequently be constructed if it is possible to correlate a number of concurrent series.

concurrent series. For example, on a given site, a large number of tombs may be found, each containing examples of pottery, metal-work, stone-work, and other manufactures, of varying design. There is a probability that the tombs represent burials of a considerable number of successive generations. The pottery, weapons, and so forth, form morphological series, independent but approximately concurrent;  $\lambda e$ , phase D of the pottery is always found with phases c d or e of the metal-work; phase Q always with phases p q or r, never with o or e. In these circumstances, clear evidence as to the direction in which any one series is to be read biologically is conclusive for the remainder, and for the culture as a whole; and such evidence would be supplied if any one kind of object began to appear suddenly and copiously as a useful implement at k, for example, and was replaced in adjacent phases by substitutes of less appropriate forms or materials, or otherwise clearly imitative. If these after-types occur at l, m, and after, the historical order of the whole series is from a to z; if at j and before, the order is from z to a.

It is, of course, often the case that a purely morphological series is concurrent at one or more points with another series which belongs to a 'historic' civilization, that is, to one in which the relative antiquity of each phase can be represented by an 'absolute' or chronological date. In these circumstances alone is it possible to deter-mine the actual rate of technological progress, and thereby of other elements of a civilization.

Such cases of contact between concurrent series representing the civilizations of different areas or régimes can only show valid contemporaneity when the proof is bilateral.

In locality A, for example, a group of objects of diverse styles are found together as the result of a single act of deposition, such as a burial, or the laying of a foundation-stone. In such a case, obviously, none of the objects which compose the group can be of a later date of manufacture than the date of its deposition in that group. On the other hand, any of them may have been of any imaginable age already, at the moment of deposition. External evidence (of custom, workmanship, and the like) alone can decide in each case whether the indigenous objects aca included in the find-group fairly represent the phase of culture α, at which it has been ascertained that the group was deposited in the place where it was found. Now, if this find-group at Λ contains, not only indirections of rects aca of relative date α in the series characteristic of tills locality Λ, but also an object of exotic origin δ, the circumstance (otherwise demonstrated) that the object b is of the relative date β in the series B does not prove that the phase α, to which the group as a whole belongs, is contemporary with phase β, but only that it is not of any later date; for the object δ may have been of any age already at the moment of its deposit at Λ. If, however, even a single object of origin α and date α is found at B with objects of origin δ and date β in the B-series, then by the same reasoning α is not of later date than the objects bb with which it has been found. And if so, the proof is complete, that α and δ are contemporary; for it was already known that an object δ could not be of later date than the objects of other or any given case it is certain that the exotic object

could not be of later date than aaa.

It is merely a matter of accurate observation to determine whether in any given case it is certain that the exotic object was really deposited simultaneously with the rest of the find-group, and not intruded into it at some later time.

3. The combination of evidence derived from distributions in space and sequences in time gives archæological proof of the transmission of new observators from one centre of civilization to characters from one centre of civilization to another.

characters from one centre of civilization to another.

A character x which has already appeared at phase y in series (or region) A does not appear in series B until phase (which has been shown otherwise to be contemporary with x in series A); it is absent, moreover, from series C until phase k. Here alternative interpretations are offered. The character may have been introduced from A to B, or it may have arisen spontaneously also at B. At C, moreover, it may have arisen spontaneously also at B. At C, moreover, it may have arisen spontaneously also at B. At C, moreover, it may have arisen spontaneously also at B, at C, moreover, it may have arisen spontaneously or have been introduced directly from A; or in addition, it may have been introduced directly from B and only indirectly from A, and so forth, the number of alternatives increasing directly with that of the series or regions in question. The conclusive proof of direct transmission is given only when, in addition to objects of similar style to the archetype at A, but of demonstrably local origin, B yields an object which demonstrably originated at A. Such proof is furnished most clearly by unpremeditated evidence supplied by the physical composition of the object; s.g. knives of an unusual style but made of bronze occur on an island B which yields copper and tin but not iron; there is no adequate proof that these are not due to indigenous invention. But if there occurs also at B a knife of the same style but made of iron, and iron knives of exactly this exotic style are also found in an accessible iron-yielding area A, the probability becomes very strong that the knife found at B is exotic, and the prototype of the bronze examples, which differ from it only in being of indigenous material. The proof, however, becomes conclusive only when it is shown that bronze, or this particular variety of bronze, was not in use at A. Otherwise there is still the possibility that the bronze knives at B may also be imports either from A or from some other region C which

very existence the greatest scholars were sceptical, very existence the greatest scholars were sceptical, reads like a fairy story. Since then a long series of excavations, carried out with greater and greater scientific precision throughout the whole Ægean area, has provided for us a mass of material which it will probably require the scholarship of many years to analyze and reduce to anything like systematic order. As yet no conclusions can be more than tentative.

clusions can be more than tentative.

This pre-Hellenic architecture can hardly be considered the parent of Greek architecture: its influence was on the whole smaller than might have been expected; indeed, the difference between them serves to emphasize the originality and independence of the Hellenic style that came after. It is convenient to term this architecture and the civilizations to which it belonged 'Ægean, as it flourished not only in Greece itself but throughout all the coasts and islands of the Ægean Sea. But, at the same time, although there is a certain continuity of development with no decided break, such as exists between itself and the architecture of the Hellenes, it is nevertheless marked by changes and new departures that seem to imply influences from without, if not political and racial upheavals. These are at present ex-ceedingly obscure and open to controversy, and it is difficult to do more than glance at the main

trend of development.

(1) During the neolithic age in the Ægean, at some (1) During the neolithic age in the Algean, at some time which may be put approximately 6000 years before the Christian era, there was a primitive but flourishing civilization, implying a highly developed commerce, extending as far as Egypt, with some powers of navigation. Its centre apparently was in Crete, and is marked by the exploitation of the obsidies in the island of Melos exploitation of the obsidian in the island of Melos, exploitation of the obsidian in the island of Melos, which, some considerable time afterwards, developed its own resources during the flourishing epoch of the town, now known to archæologists, from the name of the neighbouring village, as Phylakopi. In this very remote era the neolithic remains at Knossos contain obsidian, and Melos is the only known source of obsidian anywhere near the Eastern end of the Mediterranean. Obsidian beads are found in Egypt in remains to which a rough date of the seventh millennium may be assigned, and obsidian flakes occur there some be assigned, and obsidian flakes occur there some 600 years or so later. By the time of the foundation of the first city at Phylakopi the trade was very considerable. The architectural achievement of this age must have been of an exceedingly simple nature, probably merely wattle and daub huts, as the marked clay strata testify wherever there have been settlements. Wooden or half-timber houses may conceivably have succeeded them, but they have left no remains, and we have nothing but an inference from a later mode of construction to point in this direction. Something, however, of the working of quarried stone is seen, at any rate towards the close of the neolithic period, in the cist graves found principally at Amorgos and at Pelos in Melos. It is therefore quite possible that a few of the more important buildings may have been of stone, but of these buildings may have been of stone, but of these there is practically no evidence. At the very close of the neolithic period we seem to have stone-walled houses appearing at Purgos in Paros and also in S.W. Naxos, and these may represent an older tradition. It is also conceivable that sun-dried bricks may occasionally have been used, which, under certain conditions, can disappear, leaving practically no trace of their form.

(2) A definite style of stone building begins to

(2) A definite style of stone building begins to appear about the commencement of the fourth millennium. The settlements are marked by their unwalled and unfortified nature, and, as far as the slight evidence goes, seem to have been laid

out almost as scattered groups of buildings, yet out almost as scattered groups of buildings, yet in the main preserving a certain parallelism of plan, although they do not seem to be arranged along definite street lines. The building is rough rubble work of comparatively small stones built with clay and mud, and plastered over with the same; lime mortar is not yet used. So far there are no signs of any religious buildings as such, and indeed throughout the whole of the Ægean development there seems to have been hardly anything of the nature of religious architecture. This is one of the essential contrasts between This is one of the essential contrasts between these peoples and the Greeks, whose religious buildings were of such marvellous excellence and occupied so prominent a place in their style. The nature of the architecture, however, is of importance for the purposes of this article, as it is necessary to grasp both the resemblances and the differences between the architectural principles of the two styles, in order fully to understand the position of Greek religious architecture in the

(3) A third architectural stage is reached roughly about B.C. 3000, when a closer system of town building, generally although not necessarily forti-fied, is adopted. It is marked by an elaborate system of street planning, with a distinct preference for rectangular rather than convergent systems. There is a very considerable advance in the art of building, with a regular drainage system beneath the streets. We find lime beginning to be used. There are great walls and fortifications, and the There are great walls and fortifications, and the towns in the generality of cases are no longer open. The probable cause seems to have been pressure from the north, which rendered these fortifications necessary. They apparently first made their appearance upon the mainland, and worked their appearance upon the mainland, and worked their way southward, the cities of the maritime power of Crete remaining unwalled, probably on account of that very sea power. The great brick city of Troy, the second in the series, already shows this type completely developed, and its final destruction must have been at least as early as B.C. 2000. type completely developed, and its final destruction must have been at least as early as B.C. 2000. The second city at Phylakopi is of this type, and it was probably founded somewhere about B.C. 3000, reaching its prime about B.C. 2500.

Of the general character of building, it may be called that it reconstructions.

said that it passes from a comparatively rude to a highly developed style, and indeed might be divided into periods. But the variations of type are far greater in their local than in their chronological aspect, which latter is much more visible in the paintings and the minor arts of pottery. Architecturally, the second city of Troy is more akin to the great sixth city than either is to any period of Knossian architecture. The architecture seems to reach its zenith somewhat earlier than the other arts, and begins to show signs of decadence while they are still in some ways advancing.

ence while they are still in some ways advancing.

It may seem strange to sum up a period, running into many hundreds of years, as though there were a single style throughout. But in the present state of our knowledge, particularly in the extreme uncertainty of the chronology, some such simplification is necessary if lengthy controversial matter is to be excluded. Very approximately it may be said that the architecture was at its finest at a time ranging round the 17th century B.C. But certain broad general characteristics may be noticed. tain broad general characteristics may be noticed. The materials and construction used seem to have The materials and construction used seem to have differed very considerably locally, such intractable material as basalt appearing at Phylakopi, and limestone, gypsum, brick, schist, etc., in other places; and varying from the roughest blocks, hardly shaped at all, to the finest jointed masonry, such as we see at Phaistos or in the walls of the great megaron at Knossos. Even early in the period there is good sound work with headers and

stretchers roughly shaped, as at Phylakopi. the whole, work on the Greek mainland is rougher and less carefully finished, the so-called cyclopean masonry at Tiryns and elsewhere being typical. This would point to the civilizing influence proceeding from the south northward. Troy seems to be somewhat outside the main stream. Its architecture, particularly its fortifications, is very advanced, although in other particulars its civilization seems to be behind the rest of the Ægean.

There is a great tendency from the first to use rubble for interior walls and for less important structures. This is faced with plaster and frequently elaborately painted, as in the fresco of the Flower Gatherer at Knossos, or the absolutely delightful example of the Flying Fish at Phylakopi. Another method is to build one or two courses with great blocks of ashlar masonry and raise the rubble walls upon the top. In and raise the rubble walls upon the top. In outside work some such foundation is almost

FIG. 1.

necessary. In the early second city of Troy, built mainly of sun-dried brick, there is a substructure of stone to protect the brick from the wet. Rubble tends to become more common in later work, and sometimes later rubble walls are found built upon older stone foundations. The system may be the origin of the orthostatai of later Greek architecture (q.v.). Sometimes there is also a projecting plinth, as in the case of the limestone blocks below the gypsum in the West Court at Knossos, or the reverse arrangement, with the gypsum blocks below, on the southern terrace (fig. 1). This is quite possibly the grigin of terrace (fig. 1). This is quite possibly the origin of another Greek feature, the stylobate [see Architecture (Greek)]. Another method, which on account of its material was not likely to survive to our day, seems to have been something of the nature of a half timber construction, in which courses of short lengths of timber set transversely in plaster across the wall were used at intervals in the ashlar, or plastered rubble, as the case might be (fig. 2). There are grounds for sup-posing that we have the remains of such a course in the megaron at Knossos. In interiors the ends of these were masked by rosettes or medallions. In the last phase of Ægean architecture, the

esting survival of this technique executed in stone | examples of similar shape but of much later date

over the doorway of the so-called Treasury of Atreus [see p. 683 and figs. 3 and 17].

On the whole it may be said that there is a distinct architectural decadence which in Crete becomes obviously marked about the 14th century But in the north it seems to be otherwise, and the masonry continues to improve until a later date, as, for instance, in the very fine beehive tombs at Mycense, which may be not much earlier than the 13th century. This may be accounted for by the fact that the artistic impulse spread from the south. Hence the north would be longer in developing; and, on the other hand, a northern subjugation of Crete, which seems to be probable, would have greatly arrested progress there.

The spanning of openings seems in most instances to have been with timber lintels, and in early work the stones are not even gathered over above. Stone lintels, however, were sometimes used. The jambs of doors were very commonly of stone, and in later work certainly an inward inclination was in later work certainly an inward inclination was usual, which is very possibly the origin of the same feature in Greek doorways (fig. 3 below and fig. 8, ARCHITECTURE [Greek]). Windows, as contrasted with Greek architecture, seem to have been of frequent occurrence. They appear to have had timber lintels, jambs, and sills, and we may notice a remarkable anticipation of the modern window in the division into 'panes' of which we have clear evidence in tablets found at Knossos (fig. 3). The nature of the filling is unknown; it may The nature of the filling is unknown; it may

FIG. 3.

have been oiled cloth or parchment, and is indicated in red colour on the tablets.

Timber seems to have played a large part in the construction, especially in the columns, which were commonly of wood, although with bases of stone. The columns, and generally the bases, were circular in form, and it is noticeable that the columns tapered towards the lower end (figs. 4 and 12), the exact contrary of columns in Greek architecture. The taper, however, is generally exaggerated in drawings. The charred remains of actual columns

FIG. 4.

Mycenæan, there seems to have been an inter- were found both at Knossos and at Phaistos. Stone

occur at Eleusis and Mycenæ. They were treated with different kinds of fluting as ornaments, sometimes vertical, sometimes diagonal (fig. 4), and this may even have suggested the Doric flute. They were treated The anta was used both in stone and in wood, and is possibly the prototype of that feature in Greek architecture. It is interesting to notice that when stone columns were used they were almost always stone columns were used they were almost always square in section, especially in early work, as in the case of the Northern Portico at Knossos, the so-called 'pillar rooms' at Phylakopi, and at Knossos both in the palace and in houses outside. They are also of rectangular shape in the court at Phaistos, and by the N. entrance at Knossos, and even in the and by the N. entrance at Knossos, and even in the megaron itself, although there they are recessed. This is important in view of the discussion regarding the origin of the Greek column [see Architecture (Greek)]. The inter-columniations were wide, and the architrave apparently was a wooden beam upon which the upper masonry rested. In spite, however, of the use of wood, it does not seem to have been used for floors. The floor joists were of circular logs of wood, and above these was laid clay, and upon that a fine hard cement or a pavement. On the ground floor cement seems to have been the favourite material for exterior work, and is often laid over paving:

for exterior work, and is often laid over paving; but in interiors fine gypsum slabs are not uncommon. The ceilings, where there was no floor above, were in all probability of thick reeds covered with plaster. Remains of plaster have been found

FIG. 5.

at Phylakopi, clearly showing the shapes of the reeds embedded in the plaster (fig. 5). The plans are in almost all cases characterized

The plans are in almost all cases characterized by numerous offsets, angles, and returns in the outer walls, which must have given a most delightful effect of light and shade to the complete elevation, and which are carried out with a lofty indifference to the extra work that they must have entailed (figs. 6, 8, and 9). Where

fortifications occur, an arrangement may also be noticed by which the entrance is guarded by a complicated and circuitous means of approach, as complicated and circuitous means of approach, as at Syros and Siphnos, and which attains its fullest development at Tiryns (fig. 8, E). This seems to have been due to northern mainland influence, and gradually to have spread southward. The buildings of greatest importance were the palaces of the kings, which show in almost all cases a remarkable complexity of plan; but there are

certain marked variations. Both in the north and in the south there is a distinct parallelism in the arrangement, but the Cretan plan is more regular and conceived more definitely as an artistic whole. The equal balancing of the main masses about a central court is also a southern fortune. In the north this is less obvious that feature. In the north this is less obvious, and the court partakes more of the nature of a fore-court, and is surrounded by a colonnade. The greater regularity is doubtless mainly because in the islands the question of fortification was of

FIG. 7.

minor importance. In the north the buildings

were castles as well as palaces.

But there is also a difference in the artistic motified that cannot thus be explained. The northern plan tends to rooms comparatively square in shape; the

FIG. 8.

Cretan type is long and narrow. The difference is most noticeable in the smaller chambers and magamost noticeable in the smaller chambers and magazines, which are very characteristic features of the style (figs. 7, 8, and 9), but it holds good throughout, and is true even of the great halls. Tiryns and Knossos, the finest examples and the best known, may be taken as typical (figs. 8 and 9). The fortress of Goulas or Gla in Beetia, although northern in its main features, is to some extent an exception, and shows affinities with the southern type. Propyleas are common throughout, but here a northern type. are common throughout, but here a northern type

can be distinguished which is almost the exact counterpart of the later Greek examples (fig. 10).

FIG. 9.

(The magazines are the narrow chambers on the left.) But the most marked difference between north and south is in the megaron itself. The northern megaron is a broad rectangular chamber with an antechamber and a portico, and contains the hearth

in the centre. Above the hearth was probably an opening, and the sides of the opening were normally supported upon four columns which in all likelihood carried a sort of elerestory admitting light and allowing the smoke to escape. The typical Cretan megaron, on the other hand, has no central hearth, possibly on account of the warmer climate; but it has a feature peculiar to itself in the open chamber at the end of the hall, apparently open to the sky for the admission of light. This 'light-well' is found alike at Knossos Pheistos and Hagia Triada

has a feature peculiar to itself in the open chamber at the end of the hall, apparently open to the sky for the admission of light. This 'light-well' is found alike at Knossos, Phaistos, and Hagia Triada.

The southern type also contains columns which presumably supported the roof; but they are arranged in lines, as the square arrangement around the hearth is unnecessary. Moreover, whatever may have been the case in the north, there is no doubt that in Crete there were halls upon different storeys one above the other.

The northern type, although belonging to the ruder style, eventually supersedes the other, and we find it appearing in the south in the late third city at Phylakopi (compare the examples in fig. 11). In this northern type we see a plan closely resembling that of the classical Greek temple; and if it is really the origin of the temple form, it may be considered the most important of the Ægean influences upon later Hellenic architecture.

It is, of course, natural that we should know a

great deal more about the plans than the elevations, but we have a certain amount of valuable

FIG. 11.—MEGARA, DRAWN TO COMMON SCALE, SHOWING N. AND S. TYPES,

evidence about the latter. In the south there is no doubt that there were several storeys, and in each storey the column played an important part. As in Spanish architecture, the main architectural features were in the interior, but the deep wells, with their tiers of columns and great staircases, must have produced a fine effect (fig. 12). There is some evidence that columns played a part in the external façade also. In

PIG. 12.-RESTORATION OF GENERAL REPART; HALL OF COLONNADES, KNOSSOS.

the north, upper storeys, above the megaron, were unlikely because of the hearth.

On the whole, it may be said that the northern influence is much more marked in the temple architecture of Greece than any influence we can trace to the southern types.

The columned storeys rising magnificently one above another are startling indeed, occurring at a date some 18 centuries before Christ, in a European civilization of which we had never previously heard; but the elaborate drainage system is almost equally surprising, finding its parallels only in the beautiful systems of the best work of the Middle Ages, and in those of modern times. Street drains were generally built of stone with large flat slabs above and below, but an open terra-cotta channel sometimes occurs. In small underground drains terra-cotta pipes with a collar were used (fig. 13), whereas in the great palace systems the main drains were well built passages large enough

to allow of a man entering them for cleaning purposes. Sanitary conveniences were supplied; and if there was not the extensive accommodation that was demanded in the Middle Ages, where in that was demanded in the Middle Ages, where in many instances every room has its own separate arrangements, at least there is no reason to suppose that it was less than satisfied the last generation, or than is commonly found on the Continent to-day. The same remarks apply to bath-rooms, which were plentiful, and often elaborately treated. Sometimes there was a sunk bath with steps, sometimes merely a move-

able bath with a channel all round the floor to

carry off any splashings.
Such is a very brief description, enough to indicate the highly developed character of the style. When we turn to consider religious architecture, it is obvious that there was little architecture, it is obvious that there was little or none, and the main importance from that point of view is the influence exerted upon succeeding styles. Yet there are just a few points that may be noted. We have in the 'pillar rooms' at Knossos and Phylakopi something of obvious religious significance. It does not seem to be necessary to suppose that the pillar was not purely structural in its function,—even a sacred sign upon the top does not preclude the possibility of its supporting other blocks. Many of the blocks of the palaces in Crete are marked with sacred signs, which may be paralleled by the numerous masons' marks upon our own mediaval buildings. But there does seem to have been a special sacredness attaching to the pillar form, and in the case of a 'pillar room' in a house at Knossos, a great number, some in a house at Knossos, a great number, some 200, of little inverted cups were discovered, beneath which were found the charred remains of small vegetable offerings (fig. 14). If we cannot

FIG. 14.

say that these rooms are examples of religious architecture, it can at least be said that some religious significance was attached to their architecture.

We have also a fresco, mentioned above, which in the light of the secular architectural discoveries of the palaces, admits of interpretation, and seems to represent a temple or shrine (fig. 16). Below we have the great gypsum blocks that we have seen in the palace, and above half timber work with its frescoes on the plaster. The pillars, presumably of wood, are of the usual inverted form

thought to be indicated by the horned cult object thought to be indicated by the normed cuit object set before them. An interesting frieze, resembling that of porphyry-like stone found at Knossos (fig. 15), or the alabaster example from Tiryns, occurs below the central opening. This seems to be

FIG. 15.

the progenitor of the triglyph frieze of the Doric order. The triglyphs in this instance, judging by the colour, were apparently of wood. There is order. The triglyphs in this instance, judging by the colour, were apparently of wood. There is also indication of the blue glass pasts or enamel which occurs at Tiryns—a delightful form of architectural decoration—the κάσνος of Homer, so long a stumbling-block to the critics. In this connexion may also be noticed some little gold ornaments found at Mycenæ, which are also generally supposed to represent a shrine (fig. 16). The lower part is again of ashlar masonry, the upper part is apparently of timber. There are three timber framed doorways through which appear columns; but it is difficult to say whether they are meant to be within the building or form appear columns; but it is difficult to say whether they are meant to be within the building or form part of the façade. In front of them are the same sacred horns. The most interesting point is that the central part is higher than the sides, and it certainly does suggest a nave and aisle construction with clerestory lighting. On the other hand, it might equally well represent a lantern rising above the hearth, which would, of course, be visible from a point of view a little distance in front of the shrine, and could therefore quite legitimately be represented pictorially in the plane elevation. the plane elevation.

FIG. 16.

Lastly, there remain to be considered the tombs, Lastly, there remain to be considered the tomos, which were of a sacred and in some instances definitely religious character. The famous shaft graves of Mycenæ—deep shafts sunk vertically in the rock—represent for us a stage of burial that can hardly be considered architectural. So also with the lamax burials of Crete, where the corpse was first skeletonized in the earth and afterwords denosited in an earth-anyware serconbegue. wards deposited in an earthenware sarcophagus wards deposited in an earthenware sarcopnagus work with its frescoes on the plaster. The pillars, presumably of wood, are of the usual inverted form of Ægean architecture, and their sacredness is structures we have something very different.

They are found widely distributed over the Greek mainland, where the best specimens occur, but have been found at Phaistos, Palaikastro, Praisos, in Crete, and also in Melos.

The chambered form is that of a square chamber cut in the rock, with a gabled roof and approached by a dromos, or passage. It seems probable that it is merely a development of the shaft grave, and the dromos is simply a means of closer and more ready approach to the tomb itself for the worshippers of the shade of the deceased. This finally develops into the great domed chamber out of which in some cases the tomb itself opens, and which can hardly have served any other purpose than one connected with religious ceremonies in relation to the deceased. This development is borne out by the shaft-construction of the grave at Orchomenos, in some respects the finest example of these beehive tombs. It is, however, not in as perfect a condition as the so-called Treasury of Atreus at Mycenæ, which was a trifle larger than this example (fig. 17).

FIG. 17.

In both cases a large domed chamber, of beehive shape, about 47 feet in diameter, is cut out in the hill-side and lined with masonry of large blocks

FIG. 18.

built on the corbelled system (fig. 17). Opening out of the central chamber is a smaller side chamber, which in the case of the Orchomenos example was, like the shaft graves, clearly excavated by a shaft sunk from the top. The bottom was first lined with small stone masonry and then covered with marble slabs. This was roofed over with great slabs of green schist elaborately decorated with a typical Mycenæan

pattern (fig. 18), and the marble walls were decorated in the same way. Above was another chamber to relieve the ceiling of weight, and above that again the shaft was filled up with débris.

The vault part is marked with numerous holes, some still containing bronze nails, and, as was also the case with the Mycenæan example, it was covered with bronze rosettes.

The fine doorway to the latter tomb can be restored with some degree of accuracy. A great door, narrower at the top than at the bottom, is flanked by two half columns, which taper downwards and are adorned with zigzag flutings. Above is an enormous lintel, the pressure upon which is relieved by a great triangular space originally filled with a light triangular slab. The architrave was ornamented with a pattern, clearly recalling the short log construction mentioned above, and below this was probably a series of lions' heads.

a series of lions' heads.

LITERATURE.—There is no work on Ægean Architecture as such, but some of the most useful sources of information are: T. J. Dörpfeld, Troja und Ilion, Athens, 1902; C. Schuchardt, Schliemann's Executions, tr. Engenie Sellers, London, 1891; Excavations at Phylakopi in Melos, conducted by the British School at Athens, London, 1904; C. Tsountas and J. I. Manatt, The Mycenean Age, London, 1897; see also The Annual of the British School at Athens, esp. vol. vi. f., London, and Monumenti Antich's dei Lincei, Rome.

J. B. STOUGHTON HOLBORN.

ARCHITECTURE (American).—Both in character and in material the dwellings and temples of the American Indians present the widest variety.

ARCHITECTURE (American).—Both in character and in material the dwellings and temples of the American Indians present the widest variety, ranging from the brush wikiws of the Pai Utes, and the snow igloss of the Eskimos, to the elaborate stone palaces of the Mayas of Yucatan. This diversity, however, must not be construed as racial in origin, since closely related neighbouring tribes frequently have dwellings of different types; nor is the cause any essential intellectual limitation. The divergency is climatic and economic in source. The snow-covered wastes of the extreme north, the forests of the Atlantic coast, the prairies which once abounded in herds of bison, the arid regions of the south-west, and the tropical luxuriance of Central America, each produced a distinct type of architecture. The dwellings of the American Indians admit of a triple classification: temporary, portable, and permanent, the first being exemplified by the Pai Ute wikiup, the second by the Dakota tipi, and the third by the stone pueblo.

1. The temporary dwelling is represented in its molest form by the wikiwa of Arizona. This is simplest form by the wikiup of Arizona. constructed by placing branches about 10 feet in length so as to form half or three-quarters of a circle. The tors one that circle. The tops are then brought together and smaller branches are thrown over them. The entire structure is, therefore, little more than a wind-break, and may be a development of the kisi of the Hopis, which is a rough shelter set up in the fields to protect those who watch the flocks. This general type of temporary dwelling is especially characteristic of the less developed tribes of the western desert, where the arid soil furnishes little building material beyond brush and mud. Closely akin to the wikiup is the Navaho hogan, a hut built either of branches covered with smaller boughs or of poles plastered with mud; and the same statement holds true of the Pimas and Mohaves. Such dwellings are frequently abandoned, since the materials of which they are composed are not portable, and the region affords no other kind. Religion also enters into the migrations of these tribes, since they do not occupy a dwelling which has been entered by death. Here too may be mentioned the grass houses still built by the Wichitas, but formerly characteristic of the Codonn (avenut the Paymers and Avilance who Cadoans (except the Pawnees and Arikaras, who built, instead, the 'earth lodges' noted below).

2. A higher grade of American architecture is found, under more favourable economic circumstances, among the prairie tribes. Here the wikiwp yields place to the tipi. The typical form of this structure is found among the Omahas, and is constructed by tying twenty or thirty long poles together at the top, and spreading out the bottom so as to form a circle. This frame is covered with skin or canvas, and an opening is left at the top for the escape of the smoke. Yet these tribes were by no means restricted to the tipi, since in the summer they sometimes built lodges covered with bark or earth, the former suggesting the Algonquin wignam, and the latter what may be supposed to have been an earlier stage of pueblo construction. At all events, both represent a transition to the permanent dwelling. While the wiking is naturally devoid of any ornamentation, the tipi often received somewhat elaborate adornment, this decoration being frequently totemistic, and sometimes the result of a vision or other omen. Here the form of the dwelling is conditioned by the material at hand, since trees are comparatively rare, while the herds of buffalo, which formerly ranged the plains, furnished an abundance of skins to form the covering of the poles. According to Dakota tradition, the tribes formerly dwelt in houses of bark in the present State of Minnesota, and were first forced by the invasions of the whites to adopt a nomadic life, and, in consequence, portable houses.

3. The tipi thus forms the transition from the temporary dwelling to the permanent. The latter form of house is characteristic of a settled people, and is, therefore, found among the most highly civilized American Indians. In its simplest form it may be exemplified by the wigwam of the Algonquins, which is constructed of a framework of poles, as are the tipi and the wiking, but is covered with bark instead of brush, mud, or skins. This type is possible only in a wooded country, where the abundance of game and other necessities of life renders a certain degree of permanence possible. At the same time, the dwelling is capable of enlargement, and thus secures an advance in social life. The permanent type of dwelling was common throughout the continent at the time of its discovery, being found not only among the Algonquins and Iroquois, but in the Mississippi valley, Florida, the North-West Coast, and Arizona, and, in its highest form of development, among the Aztecs and Mayas. From the permanent house was evolved, moreover, the permanent village, in contrast to the temporary encampments found, for example, among the Pai Utes and the Dakotas. These villages were frequently defended by palisades, as among the Algonquian Lenni-Lenape, the Virginians, and the Cadoan stocks of the Mississippi valley. A remarkable feature of many of these permanent dwellings was their elevation on mounds of earth, which were frequently formed artificially. The original motive was, in the main, sanitary, dampness being thus avoided. This practice was also common among the natives of Florida, where these artificial elevations are described as being 'a kind of platform two or three pikes in height, the summit of which is large enough to give room for twelve, fifteen, or twenty houses, to lodge the cacique and his attendants. At the foot of this elevation they mark out a square place, according to the size of the village, around which the leading men have their houses.

To ascend the elevation they have a straight passage-way from bottom to

temples naturally stood at a still higher elevation than the houses of the people. Even dwellings of the permanent type here described, however, were liable to speedy decay if long abandoned for any reason, and the ruins of such houses no longer exist. Yet in them probably lies the secret of exist. Yet in them probably lies the secret of many of the mysterious mounds so common in the Ohio valley, which were formerly supposed to be the work of a race differing widely from the American Indians. Excavations of these structures have shown that their builders were simply American Indians, differing in no respect from their congeners elsewhere in the continent. The great majority of mounds are doubtless mortuary in origin, and thus do not properly come within the scope of architecture (cf. Yarrow, Introduction to the Study of Mortuary Customs among the North to the Study of Mortuary Customs among the North American Indians, Washington, 1880, pp. 17-29). Others, such as the Serpent Mound of the Ohio valley or the pyramid of Cholula in Mexico, were structures designed for purposes of religion, the latter, at least, serving as the base of a temple. Yet it is not impossible that the religious mounds rel it is not impossible that the religious mounds (though not the mortuary) are ultimately identical in origin with those designed to support ordinary dwellings. The hodenosotes, or 'long houses,' of the Algonquian and Iroquoian stocks—mere developments of ithe wigwam noted above—find their analogues in the slab houses of the North-West Here the shundares of codes. analogues in the slab houses of the North-West Coast. Here the abundance of cedars, which may readily be split, renders it possible to construct houses of planks instead of poles and bark, these structures being more permanent than the eastern wigwams. In the dwellings of this type, moreover, as in the Iroquois 'long house,' separate rooms were partitioned off, thus marking a distinct step forward in civilization. Farther to the north, the Alaskan Aleuts construct their houses of ribs of the whale, driftwood, stone, turf, or any material the whale, driftwood, stone, turf, or any material which may be at hand in that barren region. The dwellings are not infrequently built entirely of turf cut in slabs. The most curious form of turf cut in slabs. The most curious form of American Indian architecture, in some respects, is the Eskimo igloo (properly iglugeak, 'housesnow'). This is made by cutting compact blocks of snow, which are so laid on a circular base as gradually to slant towards the centre, thus forming the only case of a true arch among the North American aborigines. A house designed for occupancy throughout the winter is some 12 feet in height and 15 in diameter. It is heated with stone lamps filled with seal oil, while additional light is admitted by a window of ice or the intestine of a seal. Whenever his supply of material renders it possible, however, the Innuit constructs renders it possible, however, the Innuit constructs a still more durable dwelling of whale-ribs, driftwood, and the like, thus approximating to the Aleut house. In this same region, moreover, were semisubterranean dwellings, especially among the Aleuts, Eskimos, coast Salishans, and kindred tribes. Their affinity with the subterranean houses of the Gilyaks, Kamtchatkans, Koryaks, Chukchees, and Yukaghirs of North-Eastern Asia is too chees, and Yukaghirs of North-Eastern Asia is too striking and too close not to be due to borrowing on the part of the American Indians (Jochelson, in XV\* Congrés international des Américanistes, Quebec, 1907, ii. 115-128). Among the Pawnees, as among the Arikaras, Osages, Omahas, Poncas, and other tribes, are found 'earth lodges,' also semi-subterranean and somewhat analogous to the Navaho hagans mentioned above. Navaho hogans mentioned above.

Navaho hogans mentioned above.

Of these dwellings Miss Fletcher writes as follows (in Hodge, Handbook of American Indians, i. 411): 'These tribes are said to have abandoned the grass house of their kindred at some distant period and, under the teaching of aquatic animals, to have learned to construct the earth lodge. According to their ceremonies and legends, not only the animals were concerned with its construction—the badger digging the holes, the beaver sawing the logs, the bears carrying them, and all obeying the directions of the whale—

but the stars also exercised authority. The earlier star cult of the people is recognized in the significance attached to the four central posts. Each stood for a star—the Morning and Evening stars, symbols of the male and female cosmic forces, and the North and South stars, the direction of chiefs and the abode of perpetual life. The posts were painted in the symbolic colours of these stars—red, white, black, yellow. During certain ceremonies corn of one of these colours was offered at the foot of the post of that colour. In the ribuals of the Pawnee the earth lodge is made typical of man's abode on the earth; the floor is the plain, the wall the distant horizon, the dome the arching sky, the central opening the zenith, dwelling-place of Tirawa, the invisible power which gives life to all created beings.'

The room, found in the permanent dwellings of the Iroquois and on the North-West Coast, reaches

the Iroquois and on the North-West Coast, reaches a high stage of development among the 'cliff-dwellers' and the Pueblo tribes. In the deserts of the south-western United States the country is arid and treeless, although verdure at once springs up if irrigation be successfully practised. Canons and cliffs abound, and the caves in the sides of these precipices, often modified artificially, are utilized as dwellings, especially since trees of any considerable size are extremely rare. A cliffconsiderable size are extremely rare. A chindwelling, moreover, is usually comparatively difficult of access and easy to defend, an important consideration when hostile Apaches stand ready to attack less warlike tribes. The houses in the cliffs are generally at a considerable elevation, and have the crevice on the face of the rock carefully walled up, both for shelter and for protection. An excellent example of this kind of dwelling is found in the Mesa Verde, where in a large crevice in the cliff is constructed a regular pueblo building, forming a marked contrast to the simple wall on the edge of the rock. The crevice is frequently modified to suit the requirements of its inhabitants, and the cliff-dwelling is divided into rooms. These apartments, which are of various shapes, average 7 feet in height and 10 by 17 feet in area. The only communication with the outer world is by a door, which is usually approached by steps cut in the face of the cliff. The floor was levelled off, and an effort was evidently made to avoid dampness by constructing low adobe ridges, across which we have been been always and the construction of the construction which poles covered with skins may have been laid. The chief districts of the cliff-dwellers were the Northern Rio Grande valley, the valley of the San Juan river, the San Francisco mountain region, and the valley of the Rio Verde.

4. Where cliffs were not available, and, perhaps,

where a higher grade of civilization had been attained, the American Indians of the South-west constructed the so-called pueblos, the most remark-able type of communal dwelling on the American continent. The settlements of this type now in existence number about thirty, and are found chiefly in New Mexico and Arizona, although the area formerly extended from the Pecos to the middle Gila, and from central Colorado and Utah to Mexico. Many of the pueblos were constructed upon plateaux or mesas—an evident reminiscence of the cliff-dwellings—while all are obviously designed for defence, especially against the Navahos and Apaches. The pueblo consists of a number of square rooms of adobe or stone, which are constructed either side by side or one upon the other, the latter type being either pyramidal or in a series of steps, with the back of the entire structure dropping perpendicularly. The roof of each room is flat, and has a trap-door which forms the only is flat, and has a trap-door which forms the only entrance, the approach being a temporary ladder placed against the side of the building. As occasion requires, the pueblo is enlarged. The roof of one tier, which forms the floor of another, has as its basis a number of small logs, across which poles are laid at short intervals and covered with grass or twigs, serving to support the visible floor of adobe and earth.

The puebles are also important as forming the

transition to stone structures. The Pecos ruins in North-western New Mexico have walls of sandstone slabs; and round stone towers, frequently with two or three concentric walls, are not in-frequent in the South-west. Some of these latter structures seem to have been like the modern Moki kivas, or places of general assembly for the men of the pueblo. The method of construction of the walls of the *pueblos* varies considerably. In the *pueblo* of Pewa they consist of stone slabs laid in mortar of adobe (mud mixed with straw), while the Rio Grande pueblos are built of adobe bricks. The famous Casa Grande, near Florence, Arizona, was built by the cajon method, in which adobe mud is rammed into large wicker frames and left to dry, after which the mould is removed and used for the next portion of the wall. This mode of building was modified in some of the buildings in the Salt River valley, by ramming earth between two rows of posts wattled with weeds and plastered on the outside with adobe mortar. These frames, unlike those on the cajon method, were permitted to remain. This system of construction is termed pise, while a third system of plastering a single row of wattled posts on both sides with adobe mud so as to form a thin wall is called jacal. In Mexico the pueblo type of construction seems to have been common at the time of the Spanish conquest. Although these dwellings have long since disappeared, except in the remains of the Casas Grandes in Chihuahua, their modern representatives, as well as the accounts of the Spanish conquerors, show that the habitations of the common people differed little from those of their New Mexican congeners, except that they were usually but one storey in height, or at most two. They covered a large area in many instances. two. They covered a large area in many instances, and may sometimes have been communal dwellings. In the valley of the Lake of Mexico many houses were built on piles over the water, finding an analogue on the one hand among the American Indians of the North-West Coast, and on the other among the South Americans of Lake Maracaibo. The adobe dwellings were frequently constructed on foundations of stone, while the temples, as already noted, were elevated on high platforms of earth or stone, the Toltec pyramid of the sun at Teotihnacan having measured 680 ft. at the base by 180 in height. The so-called pyramid is, in fact, one of the chief characteristics of Aztec, Toltec, and Maya architecture. It differs essentially from the Maya architecture. It differs essentially from the Egyptian pyramid in its object, since it is designed simply and solely as a foundation for a building, while the African structure is a gigantic tomb. The Great Mound of Cholula is almost 1000 ft. square at the base, and reaches an altitude of 200 feet. The pyramid of Huitzilopochti and Tlaloc in Mexico itself had five terraces, the lowest 360 ft square and the bighest 70, and was exceeded. ft. square and the highest 70, and was ascended by a flight of 113 steps, the processions to the chapels on the summit winding round each terrace before mounting to the next. Not only temples but palaces were constructed on platforms, so that the Maya palace of Palenque stands on an oblong mound 310 ft. in length by 260 in width, and 40 ft. in height.

5. North and Central American architecture reached its zenith among the Mayas of Yucatan, Honduras, and Guatemala. Over all this territory are scattered ruins of ancient cities, and many more, hidden in the tropical vegetation, doubtless still await discovery. The final history of the art and architecture of this region cannot, therefore, be written for many years, for it is by no means unlikely that even more extensive and important remains may yet be found than are thus far known. The sites hitherto best described are as follows: in Yucatan, Uxmal, Kabah, Zayi, and Labná in what may be termed the central group; ChichenItza and Tuloom in the east; Izamal, Ticul, Mayapan, Mérida, and Aké in the north; Labphak in the south; in Honduras there are Tenampua, Calamulla, and, above all, Copan; and in Guatemala mention must be made of Quirigna, Cinaca-Mecallo, Patinamit, Utatlan, and Tikal. Here, too, must be classed the ruins of Palenque, in the Mexican State of Chiapas, which are akin to those of Yucatan, but with western Honduras theiline of architectural remains in Central America seems to be drawn.

Of the sites here noted—the list does not pre-tend to be complete—the most important for a knowledge of Central American architecture are Palenque, Uxmal, and Chichen-Itza. From these three centres a general idea may perhaps be gained of the main outlines of a Maya city, supplementary information being obtainable from a study of other sites. It becomes, therefore, advisable to give a brief summary of the principal structures still preserved at each of these three cities. Palenque the chief ruins are those of the Palace and the Temples of the Three Tablets, the Cross, and the Sun. By far the most elaborate of these is the first-named, though there is, of course, no evidence that it was actually intended to be a palace. This structure is erected on a quad-rangular pyramid some 40 ft. high, measuring about 260 by 310 ft. at the bottom, originally faced with stone (perhaps once painted or plastered) and ascended by broad central stairways on the east and north. The palace itself, which nearly covers the upper surface of the pyramid, measures about 180 by 228 ft. and has a height of 30 ft. In the outer wall were some 40 doorways, 8½ ft. high and 9 ft. wide, while above them runs a cornice pierced with small holes which may have held poles for the support of an awning. 'The main building is found to consist of two corridors, formed by three parallel walls and covered by one roof, which extend entirely round the circumference of the platform, and enclose a quadrangular court measuring about 150 by 200 ft. This court also contains five or six buildings, some of them connected with the main edifice, others separate, which divide the court into four smaller ones (Bancroft, Native Races, iv. 308). The walls of the corridors vary between 2 and 3 ft. in thickness, and the corridors themselves have a width of 9 ft. and a height of 20 ft., the latter half of which is formed by corbel vaulting. In the main doorway through the central wall is found a trefoil arch, and niches of similar form occur frequently on either side of it. The pavement of the interior courts is 8 or 10 ft. below that of the corridors, and is approached by stairways. Of the buildings which divide this court into four parts, the most remarkable is a tower of solid masonry about 50 ft. high, in its present state, resting on a base about 30 ft. square, and with three storeys, each receding slightly and each having a door in the centre of each side. The pyramid itself contains 'apartments, or galleries, with walls of stone plastered, but without ornament, of the same form and construction as the corridors above. . . . The southernmost gallery receives a dim light by three and ascended by broad central stairways on the east and north. The palace itself, which nearly and construction as the corridors above. . . . The southernmost gallery receives a dim light by three holes or windows leading out to the surface of the pyramid; the other galleries are dark and damp. pyramid; the other galleries are dark and damp.
... These rooms are variously regarded as sleeping-rooms, dungeons, or sepulchres, according to the temperament of the observer' (Bancroft, op. cit. p. 320 f.). The restoration of the palace, given, for example, by Bancroft (p. 323), well illustrates the high architectural abilities of the Mayas. Mention should also be made, in this connexion, of a bridge in the vicinity of Palenque, built of hewn stone, with a convex conduit 9 ft. wide. The bridge itself is 56 ft. long, 42 ft. wide, and 11 ft. high.

At Uxmal the ruins are still more extensive than at Palenque, the principal remains being the Casa del Gobernador, Casa de Tortugas, Casa de Palomas, Casa de Monjas, and Casa del Adivino, as well as a number of pyramids. The most remarkable of these is the Casa de Monjas, or Nunnery.

as well as a number of pyramids. The most remarkable of these is the Casa de Monjas, or 'Nunnery.'

'This is perhaps the most wonderful edifice, or collection of edifices, in Yucatan, if not the finest specimen of aboriginal architecture and sculpture in America. The supporting mound... is in general terms 350 ft. square, and 19 ft. high, its sides very nearly facing the cardinal points. The southern, or front, slope of the mound, about 70 ft. wide, rises in three grades, or terraces, 3, 12, and 4 ft. high, and 20, 45, and 5 ft. wide, respectively, from the base. There are some traces of a wide central stairway leading up to the second terrace on this side, but none of the steps remain in place. On this platform stand four of the typical Yucatan edifices built round a courtyard, with unequal intervals between them at the corners. The southern building, 264 ft. long, 28 ft. wide, and 25 ft. high; the northern building, 264 ft. long, 28 ft. wide, and 18 ft. high; the northern building, 264 ft. long, 28 ft. wide, and 25 ft. high; the eastern, 188 by 85 ft., and 22 ft. high; the western, 178 by 55 ft., and 20 ft. high. The northern building stands on a terrace of its own which rises about 20 ft. above the level of the main platform on which the others stand. The court formed by the four edifices measures 288 by 214 ft. It is 24 ft. lower than the foundations of the eastern, western, and southern buildings, and traces of low steps may set be seen running the whole length of the sides. Its area is paved with stone, much worn by long usage. Each of the four buildings is divided longitudinally into two parallel ranges of apartments . . with doorways opening on the interior court. The only exterior doorways are on the front of the southern building and on the ends of the northern; these, however, afford access only to the outer range of rooms, which do not communicate with the interior. In only one instance do more than two rooms communicate with each other, and that is in the centre of the eastern building, where are w

pp. 173-179, 1871.)

The chief remains at Chichen-Itza are the Nunnery, Akab-Tzib (Maya, 'Writing in the Dark,' from the hieroglyphics upon its walls) originally level with the plain instead of on a mound, but with the ground surrounding it excavated, the Castle (or Pyramid), the Gymnasium (also called the Temple, and by the natives the Iglesia), the Chichanchob ('Red House,' also called the Prison), a series of 380 pillars from 3 to 6 ft. high recalling the 'Hall of Columns' (on a miniature scale) at Mitla, and the Caracol. The last is the most curious structure and is unique of its type. It is curious structure and is unique of its type. It is a circular, domed building, 22 ft. in diameter and some 24 ft. high, with two narrow corridors sur-rounding its apparently solid core. It rests on a

pyramid of two rectangular terraces, the lower 150 by 223 ft., and the upper 55 by 80 ft.

As already noted, many other ruins of Central America are of deep interest. Here mention may be made of the Casa de Justicia at Kabah; the Casa Grande at Zayi with its three storeys built around (instead of upon) a mound, the first storey being 120 by 265 ft., the second 60 by 220 ft., and the third (on the summit of the second 10 be as a constant of the summit of the second 10 be as a constant of the second 10 be a constant of the second 10 be as a constant of the second 10 be the third (on the summit of the mound) 18 by

the third (on the summit of the mound) 18 by 150 ft.; a room with an acute-angled roof at Nohcabab; the Castle at Tuloom; and the great fort of El Resguardo at Utatlan.

It is thus clear that among the Mayas, as among the Aztecs, and even the Cadoans, Floridians, and at least some of the 'Mound Builders,' the mound is almost universally the substructure, and though only the palaces and temples remain, the dwellings of the people having long since disappeared through the destructive climate, enough has survived to of the people naving long since disappeared through the destructive climate, enough has survived to give some idea of the civilization adopted by the ruder Aztecs when they invaded Mexico. The walls of the Maya structures are of oblong dressed stones, usually laid without mortar, and richly carved. The walls were very thick, and the buildcarved. The walls were very thick, and the buildings were only one storey in height. The rooms were long and narrow, since the Mayas possessed little skill in roofing. Thus at Uxmal the main rooms of the 'Governor's Palace' are 60 ft. long and only 11 or 13 wide. The roof was frequently constructed by a sort of corbel arch, each course of masonry being gradually advanced towards the other until the opening could be covered with a single slab. On the roof was a roof comb—one of the most distinguishing features of Maya architecture. The comb on the 'Temple of the Cross' at Palenque was a latticed superstructure of stone at Palenque was a latticed superstructure of stone and stucco in two storeys, one 7 ft. in height and the other 8, the main building being 40 ft. high. Closely similar was the architecture of the Zapo-tecs, of which the best remains are preserved at Mitla in the Mexican State of Oaxaca. Here, as among the Mayas, the rooms were long and narrow, one of them being 121 ft. long by 12 wide, while the architecture again resembles that of the Mayas in having no windows. The roof comb was lacking, however, and the structure of the roof was essentially different, the corbel arch being abandoned in favour of wooden beams covered with earth and slabs of stone. The most remarkable feature of Zapotee architecture is found in the 'Hall of Columns,' a part of the palace of Mitla. This hall contains six monoliths about 12 ft. in height and 9 in circumference, set at intervals of some 15 feet. These are the only monolith columns thus far discovered in American Indian architecture, although built up piers are found in *pueblos*, and wooden columns are frequent in the slab houses of the

columns are frequent in the slab houses of the North-West Coast.

6. In South America the types of architecture are as varied as in North and Central America. The early Brazilian houses, according to Lafitau (Maxurs des sauvages amériquains, ed. Paris, 1727, iii. 8), were 'faites en forme de berceau. . . . Elles iii. 8), were 'faites en forme de berceau. . . Elles sont fort longues; cinq ou six cabanes composent un gros village. Il est vrai que dans chaque cabane il y a jusqu'à soixante et quatre-vingt personnes partagées en différents menages.' In Guiana pile-dwellings are common, those of the Warraus being 7 or 8 ft. long, and built on piles 5 or 6 ft. high. Similar structures are found even on the savannahs. The walls are of leaf or bark plastered with mud, although thatches are also common. In the forests the Arawaks, Ackawais, and Caribs build open unwalled houses, whereas in the open savannahs the Macusis, Arecunas, and Wapianas construct dwellings with thick mud wattled walls, often 2 ft. in thickness. The Ackawai houses, moreover, are generally com-

Service of the

munal, frequently having eighteen hammocks in a structure 20 by 30 ft., while the Arawak dwellings often have partitions of palm-leaf or bark. ings often have partitions of palm-leaf or bark. The development of the Guiana house is shown by the temporary dwelling, or beneboo, a rough affair, triangular in base and covered with palm-leaves, the triangle being later replaced by a square, the usual form of the houses of this region (Im Thurn, Among the Indians of Guiana, London, 1883, pp. 202-210). The Chiriguanos of Bolivia had quadrangular thatched houses with frameworks of reeds or posts arranged in circular villages having an or posts, arranged in circular villages, having an open space in the centre. Those of the Guatos of the Amazon are about 4 metres square and thatched on the sides with leaves (Schmidt, Indianerstudien in Zentralbrasilien, Berlin, 1905, pp. 177-178), while the Laguas of the Paraguayan Chaco construct dwellings of long, low, rough booths, either of papyrus reed or of sticks thatched with grass, although for stormy weather they place poles in a circle, and then bring them together to be covered with rushes, leaves, and similar material (Grubb, Among the Indians of the Paraguayan Chaco, London, 1904, pp. 72-73). On the Pampas tents were used, consisting of a framework of poles covered with horse-hide, and in Patagonia likewise tents of skin were used. The framework of these latter structures was frequently between 10 and 12 ft. in length, 10 in width, and 7 in height, and the interior was divided into a number of rooms, thus forming a sort of small communal dwelling. In Tierra del Fuego, on the other hand, with its far inferior civilization, wretched huts are built of sticks wattled with grass or rammed with mud, marking one of the lowest types of archi-tecture to be found on the American continent.

7. Midway between North and South America stands the architecture of the Antilles. The majority of houses on these islands were round, pointed huts, with leaf roofs and wattled sides, majority of houses on these islands were round, pointed huts, with leaf roofs and wattled sides, often of perfumed reeds and elaborately adorned. The villages were small. There were, however, large houses, especially in Cuba, where some lodged between 100 and 200 men, and the residences of the caciques naturally received special adornment. The larger dwellings frequently had covered porches, and were divided into a number of rooms. While it is not impossible that in the most archaic period the inhabitants of Porto Rico, Haiti, Cuba, and other West India islands were, at least in part, troglodytic, by the time of the first discoveries they were largely village-dwellers, their groups of houses being palisaded as in Florida, Virginia, etc. The Haitian (and probably the Porto Rican) houses, called buhios, caneyes, and eracras, were of two types: circular, with upright sides supporting a sloping roof converging at the apex and thatched with leaves or stalks of cane, the door forming the only opening; and rectangular, constructed of similar material, but with windows and a small porch. No remains of stone or adobe houses are known on any of these islands; but since the accounts of the early discoverers and such analogues as may be traced in the modern cabins (which resemble the second rather than the first type) agree in general with the domiciles along the Orinoco and its tributaries, 'this resemblance is one of the many which can be advanced to indicate kinship of the people of South America with those of Porto Rico and Neighbouring Islands,' in 25 RBEW p. 46).

8. Architecture reached its zenith in South 25 RBEW p. 46).

8. Architecture reached its zenith in South America among the Chibchas of Colombia and the Quichuas of Peru. The ordinary houses of the former people were built of straw and earth, and were frequently 100 ft. long and 20 wide; and even in Cuzco the common houses were of wood

and thatched with straw (Botero, Relationi uniand unatened with straw (Botero, Kelatrom universali, Venice, 1600, i. 234). Stone structures, however, were unknown, even in the case of the temples. This is the more remarkable since sculpture was known to the Chibchas, who were also acquainted with the column. The architecture of the Perwines forms the South America. tecture of the Peruvians forms the South American counterpart to that of the Aztecs and the Mayas, although its spirit is entirely different. The Peruvian buildings which have survived are mostly of vian buildings which have survived are incestly or stone, and many of them, unlike those of Mexico and Central America, are true examples of cyclopean construction. A monolithic gateway at Tiahuanaco measures 13 ft. 5 in. in length, 7 ft. 2 in. in height above the ground, and 18 in. in thickness, with a door 4 ft. 6 in. high and 2 ft. 9 in. wide. At this same site are a large number of monoliths bounding a rectangle 445 ft. in length by 388 in width. These pillars vary from 14 ft. to 2½ ft. in height. Elaborate sun-circles, bounded by monoliths, also occur, as at Sillustani; and the latter site and its vicinity are also of importance for the chulpas, or funeral towers. These are plain towers, usually round, with corbelled cupolas, and ranging from 16 to 40 ft. in height, containing, within walls of extreme thickness, a very small funerary chamber (cf., further, art. DEATH AND DISPOSAL OF THE DEAD [Peruvian]).

The chief sites of ancient Peruvian (and Bolivian) stone, and many of them, unlike those of Mexico and

DISPOSAL OF THE DEAD [Peruvian]).

The chief sites of ancient Peruvian (and Bolivian) remains are Pachacamac, Gran Chimu, Marca Huamachuco, Huanuco Viejo, Vilcas Huaman, Cuzco, Ollantaïtambo, Pisacc, Sillustani, Tiahuanaco, and the islands of Lake Titicaca. At Pachacamac are found the ruins of the Temple of the Sun and the House of the Virgins of the Sun, the forman covering on a pres 600 by 450 ft. and the the sun and the house of the Virgins of the Sun, the former covering an area 600 by 450 ft., and the latter one of 350 by 200 ft. Over the four hills which form the site of the ancient city are scattered the remains of other large structures, including communal dwellings which recall the pueblos of New Mexico. But Pachacamac, like Ancon, is more noteworthy for its nearonalis then for its architecture. worthy for its necropolis than for its architecture; nor are the coast sites of Peru, generally speaking, as important in their contributions to a knowledge of the ancient architecture of the country as the more inland remains. Nevertheless, mention should be made of the elaborate fortress at Para-monga. Here a hill about 825 ft. high, surrounded by an adobe wall, sustains a fortress of three terraces with a detached quasi-bastion of similar construction facing the sea. A similar, but far more extensive, wall is found at Marca Huamamore extensive, wall is found at Marca Huamachuco; and the presence of such structures in Peru is the more noteworthy when it is remembered that in the corresponding culture-regions of Mexico and Central America the sole clear example is found in the Maya site of Tuloom. This wall at Marca Huamachuco is nearly 10 ft. high, and it encloses the still imposing ruins of two oblong rectangular buildings, originally of three storeys, surrounding central courts. The exact purpose of these buildings, known locally as the Church and the Castle, is uncertain; but close by are the undoubted remains of extensive llama-stables. On undoubted remains of extensive llama-stables. On a third hill—the Cerro de la Monja—surrounded by a triple wall, is the Convent, an appellation which may not be without reason. The entire

nearly a league, even when the dwellings of the people have disappeared, and only the palace, baths, temples, and wall surrounding the principal buildings remain. The building material is hard grey stone, and a noteworthy feature is the baths 'se composant de onze piscines murées en pierre et surmontées de parois d'un appareil admirable, pourvu de niches au fond desquelles sont fixés des bancs en pierre' (Wiener, Pérou et Bolivie, p. 211). Mention should likewise be made of the elaborate system of courts and of an avenue with four large pylonic gates. Vilcas Huaman is noteworthy chiefly for a truncated rectangular pyramid in three stages, ascended by a flight of steps, and surrounded by a wall with doors whose sloping sides resemble those of Huanuco Viejo. The structure is strikingly suggestive of the Aztec The structure is strikingly suggestive of the Aztec

The structure is strikingly suggestive of the Albertand Maya pyramids.

At Ollantaïtambo, some 12 leagues from Cuzco, are the remains of vast palaces, with their terraces, pylons, stairs, aqueducts, and cisterns, and distinct traces of the ancient city, as well as of the so-called Tribunal and Prisons; while about 2 miles away are enormous fortifications. Pisace also has an interesting group of ruins, comprising a fort, a interesting group of ruins, comprising a fort, a temple of the sun (intihuanatuna), and traces of the ancient city. There is, in this series of elaborate fortifications throughout Peru, a marked divergency from the architecture. divergency from the architectural remains elsewhere in America (unless an exception may be made in certain structures of the 'Mound-builders'). And it is also noteworthy that not only does the building material change from adobe to stone as one proceeds from the coast, but that the construction becomes, pari passu, more and more

cyclopean.

Peruvian architecture reached its height of grandeur in the structures at Tiahuanaco and the islands of Lake Titicaca. At the former site are the remains of the Fortress, Temple, Palace, Hall of Justice, and Sanctuary. The Temple measures 388 by 455 ft., with a sunken court 280 by 190 ft.; while the Hall of Justice is a cyclopean platform 131 by 23 ft. with a group of seats at each end and in the centre, these groups being separated by monolithic doorways. Copper clamps were used to hold the stones together. (On the entire site of. Strübel and Uhle, Die Ruinenstätte von Tiahuanaco, Breslau, 1882). On the islands of Titicaca and Coati are buildings dedicated respectively to the sun and the moon. The former island contains the Palace of the Incas (also called the Temple of the Sun), the Storehouse of the Sun, and the Peruvian architecture reached its height of the Palace of the Incas (also called the Temple of the Sun), the Storehouse of the Sun, and the Bath of the Incas. The Palace, or Temple, 51 by 44 ft., is in two storeys, and originally had painted and stuccoed walls; while the Bath is 40 by 100 ft. and 5 ft. in depth. The island of Coati is especially famous for its Palace of the Virgins of the Sun, which, also in two storeys, is 183 by 80 ft. It contains numerous anartments, but, rather curiously tains numerous apartments, but, rather curiously, none of the structures on these two islands is cyclopean in type, nor is there any approach to such monuments as the monolithic gateways at

Tiahuanaco, mentioned above.

Although less ornamental than the Maya structures, Peruvian architecture is of a higher type. The arch is occasionally found, especially at Pachacamac and Vilcas Huaman, and windows which may not be without reason. The entire group of structures at Marca Huamachuco is dominated by the Cerro del Castillo, where the rulers evidently dwelt; and the entire community was, accordingly, thus divided, running from north to south: Cerro Amara (residences of the warriors and citizens), Cerro del Castillo, Cerro de la Falda (llama-stables), Cerro de la Monja (nunnery), and Cerro Viejo, (purpose unknown).

Huanuco Viejo, which, according to the conquistador historian Xerez, covered an area three leagues in circumference, still has a perimeter of leagues in circumference, still has a perimeter of lates and vilcas Huaman, and windows were not unknown in the interior, though they do not seem to have been constructed on the coast. The most important advance over the architecture of Mexico and Central America, however, was the roof, which obviated the necessity of the excessively narrow room which forms so marked a characteristic of the more northern style. The smaller structures seem to have been covered with a hip roof, at least in some cases, while in the larger buildings it has been suggested that the interior was lined with wooden columns supporting a sort of verandah which did not cover the entire floor space. Although there is, naturally, no trace of columns in the present condition of the Peruvian columns in the present condition of the Peruvian ruins, this hypothesis is confirmed by the small footpaths which border the interior of the walls. Such a form of roof, moreover, would admit the necessary light to the dwellings, and the entire structure would thus present an analogue to the Roman atrium. Rooms were formed in the Peruvian barrees the contribution. Roman atrium. Roomswere formed in the Peruvian houses by curtains. The doors varied remarkably in form, some of them being trapezoids, while others were truncated ovals, and still others resembled the reversed spade of the conventional playing card. A noteworthy feature of Peruvian architecture was the niche in the wall, usually either a rectangle or a trapezoid, sometimes perhaps serving for a closet and again for ornament. Stairs of considerable elaboration were frequent. Again, deviating from Maya and Aztec architecture, many of the larger structures, especially the palaces, contained many rooms, presenting ground-plans of much complexity, as in the palaces at Chimu. Structures of several storeys were at Chimu. Structures of several storeys were erected, as in the case of the palace at Marca Huamachuco and the palace of the Inca on the siland of Titicaca, the ground-plan of the second storey of the latter structure being entirely different from that of the first floor. Some buildings, notably the fortress of Paramonga, almost suggest the pueblo type of North America in their pyramidal construction although patther metives are midal construction, although neither motive nor type of building was at all analogous. A decided analogy of form also exists between the Aztec teocallis and the Peruvian huacas, although the latter were used, not as pyramids to support the temples, but as places of interment. Finally, it may be noted that the Incas—altogether the most civilized race of South America, and the rivals even of the Mayas of Yucatan—were able to con-struct bridges of stone and elaborate aqueducts, as well as admirable roads and cyclopean terraces.

as well as admirable roads and cyclopean terraces.

LOUIS H. GRAY.

ARCHITECTURE (Assyro-Babylonian).-In the absence of clear statements as to the history of the architectural forms found in the sacred buildings of the Babylonians and Assyrians, much doubt as to their origin naturally exists. The two principal forms are the temple on its earthen foundation, without any upper storeys, and the temple-tower, or *ziqqurat*, in stages. It is probable that the former preceded the latter in date.

As elsewhere, the temple in Babylonia has been regarded as originating from the tomb-a very natural development, in view of the probability that certain of the gods of the Babylonians were nothing more than venerated heroes of remote ages who had become defined. So far, however, no sepulchre which may be called an edifice in the true sense of the word has been found, either in

Babylonia or Assyria.

Most of the temples probably originated from small beginnings, as is suggested by a document of about 2000 B.C. in the British Museum. In this Nar-ili-su founds a temple to Nar-ili (or Lugala) and Sullat (probably Merodach and his spouse Zer-panitum), and dedicates it for the preservation

of his life.\* One priest only is named, so the building was probably a very simple structure—an oblong hall with a recess at one end for the statues or emblems of the deities to whom it was dedicated, and one or two rooms for sacred utensils and robes. In this case the motive for the foundation seems to have been to provide a temple for the gods of Babylon in a district where the sun-god was the patron deity, and it seems not improbable that other temples and shrines may

have been founded in the same way.†
One of the most interesting temple-plans is that of the goddess Nin-mal, as excavated at Babylon by the Deutsche Orient-Gesellschaft (Delitzsch, by the Deutsche Orient-Gesellschaft (Delitzsch, Im Lande des einstigen Paradieses, p. 39). The ruin lies on the eastern side of the Istar-gate, and, as is usual in the sacred buildings of Babylonia and Assyria, has its corners towards the cardinal points. It is of sun-dried brick, and its remains have even now traces of white decoration. The entrance on the N.W. led into a large vestibule communicating with a room on the left, and giving access to a court-yard with six other doorways serving the remaining chambers, eleven in ways serving the remaining chambers, eleven in number. Four of these had smaller rooms, pro-bably the sanctuaries where were kept the statues or the shrines of the deities worshipped there (for the temple E-mah probably resembled others in the temple E-mah probably resembled others in Babylonia in associating certain companions with the principal divinity). The first hall was entered from the court-yard by a doorway nearly facing that giving access to the court-yard from the vestibule, and this, in its turn, led to the inner hall—the holy place. There seems to have been no rule for the position of the small rooms which probably contained the statues or shrines, some of them being at the S.W. end (when the halls to which they were appended ran N.E. and S.W.), and at the N.E. end (when the room ran N.W. to S.E.). The court-yard was not in the centre of the building, but set more towards the S.W. side, the building, but set more towards the S.W. side, so that there was space on that side for only one row of two narrow rooms, whilst on the N.E. side there are two rows of rooms, narrower and longer,

there are two rows of rooms, narrower and longer, with sanctuaries for statues or shrines. Behind the 'holy place' are two narrow rooms only. To all appearance the temples of Babylonia and Assyria were built upon the same general plan. From the outside the visitor gained access to a vestibule, which, in its turn, admitted him to the court-yard, or to a hall around which were the doorways leading to the remaining halls and chambers.

chambers.

More ornate, to all appearance, than the temple of Nin-mah at Babylon was that built by Sargon of Assyria at Khorsabad. This edifice lay in the 'temple-court' of the palace, on the S.E. side of which were the 'priests' rooms,' the temple itself being on the S.W. side of the court, facing the state-apertments. A flight of stone steps cover the state-apartments. A flight of stone steps gave access to a platform of crude brick (faced by a retaining wall of black basalt with a cornice of grey limestone). Two chambers were traced, floored with a mixture of stone and chalk. The fragments of black basalt bas-reliefs found here showed that the ornamentation was the same as that in the palace, but the subjects were religious. ‡

A better example, however, is the Assyrian temple excavated by Sir H. Layard in the mound of Nimrûd (Calah). This lay at the S.E. angle of the great temple-tower, but was apparently unconnected with it. Here also we have an outer court, an entrance leading into a vestibule, a sidechamber (with two entrances), and a hall with a

<sup>\*</sup> JRAS, Jan. 1899, p. 103 ff.
† A temple of these modest dimensions may have been simply an enlargement of the popular household sanctuary.
‡ Rawlinson's Monarchies, vol. i. pp. 369-371.

recess at the end. It differs from the Babylonian recess at the end. It differs from the Babylonian temple of Nin-mah, however, in having no interior court-yard. Its importance for Assyrian art, on the other hand, was considerable, many slabs of a religious nature having been found; and its pavement-slabs give the history of the reign of Assur-nasir-apli (B.C. 885-860), its builder. Its main entrance was adorned with winged manheaded lions, and the entrance leading into the side-room had reliefs showing the deity expelling on evil spirit, represented as a winged dragon, from an evil spirit, represented as a winged dragon, from the place.\* At the side of this doorway was the arch-headed monolith with the representation of the king (Aššur-naşir-apli) in his divine character, with an altar before it, implying that sacrifices of some kind were made to him. † The smaller temple apparently had no vestibule, and the visitor entered at once into the holy place, which had a recess for the statue or shrine at the lefthand end. Chambers supplying the place of the vestibule were constructed at each end. Altars for libations were placed in angles made to receive them on each side of the main entrance. These objects were hollow, and were decorated with gradines, similar to those of the walls already described.

On one of the sculptures found at Khorsabad is a small building which has been regarded as a fishing-pavilion,‡ because built on the banks of a stream, and also, by some, as a small temple. It is one storey high only, and is built, as usual, upon a platform. The roof is supported by two columns resembling the Doric of the Greeks. Above the columns the entablature broadens out into a deep cornice, which is surmounted by gradines like those above the walls of the temples and temple-towers, but rather smaller. No doorway is shown, so that the building looks like a mere shelter from the rain.§ That it is really a temple is also implied by the similar structure sculptured on a slab from the palace of Aššurbaní-apli in the British Museum. It shows a temple on rising ground beside a terrace on arches (possibly the 'hanging gardens' of Babylon). | It is flanked by thickish columns, and has two is lanked by thickish couldnis, and has two slender ones in the centre, but no entrance is shown. The entablature above the columns has gradines, but its cornice is provided with a more elaborate moulding. On the left is an outbuilding surmounted by a shallow moulding and gradines, but otherwise, to all appearance, plain. The archheaded stele in front was evidently detached from it. It has the figure of a Babylonian king in the it. It has the figure of a Babylonian king in the usual conventional attitude, and an altar like those found by Layard at the smaller temple, at Nimrud, already described.

Though there may be doubt as to the origin of the Babylonian temple—whether it was a develop-ment of the tomb or of the simple household shrine—the testimony in favour of the templetowers of Babylonia being tombs is exceedingly strong, and is rendered still more so by the analogy of the pyramids of Egypt, which they resembled in their general appearance. Ctesias says (Diodorus, II. vii. 1) that the great sepulchral mound built by Semiramis at Nineveh on the Tigris was erected over the body of her husband Ninus; and Ovid (Metam. IV. 98) speaks of the 'tomb of

Ninus,' under whose shadow the tragedy of Thisbe and Pyramus took place. On the other hand, this tomb-theory of the origin of the Babylonian this tomb-theory of the origin of the Babylonian temple-towers is quite unsupported by the older writings (Gn 11<sup>4x</sup>; Berossus, ap. Euseb. Chronicon, 13, Prap. Evangel. IX.; Jos. Ant. I. iv.; Syncellus, Chron. 44), which state that the tower at Babylon was for the purpose of reaching heaven. As far as the Babylonian records are known, this statement is likewise unconfirmed though the records are statement is likewise unconfirmed, though the use of the Bab. term (ziqquratu), applied to them to indicate the 'peak' of the mountain on which the Babylonian Noah sacrificed on coming out of the ark, would seem to support the idea that these erections were for the purpose of getting nearer to the deity when sacrificing, and likewise, probably, when offering prayers. It has also been suggested that the original inhabitants of the plain of Shinar, having come from a mountainous country, desired to break the monotony of their new home, and therefore built these mountain-like structures,

which they turned to pious uses. Apart from the descriptions given by explorers, perhaps the best account of a Babylonian templetower is that of Herodotus when describing the temple of Belus at Babylon (i. 181-183) - the building called by Nebuchadrezzar 'the Tower of Babylon.' Herodotus describes it as a massive Babylon. Herodotus describes it as a massive tower 200 yards square at the base, within an enclosure 400 yards each way, and provided with gates of bronze. The stages, or 'towers,' as Herodotus calls them, amounted to eight in number, and, like the temple-tower found by the French explorers at Khorsabad, were provided with an inclined nethway on all four sides of each with an inclined pathway on all four sides of each, enabling the visitor to reach the top. About the middle of the ascent (apparently the fourth stage) was a stopping-place, with seats to rest upon. On the topmost stage was a large cell, with a couch and a golden table, but no image, as the god himself was said to descend thither when he visited the woman chosen by him to pass the night there. The image of the god was in a cell below, with a table, probably for offerings, and an altar outside. Image, table, and altar are all said to have been of gold, and the last-named was for sucklings only. An altar for full-grown animals, and one for frankincense on the occasion of the god's

festival, were also there. See ALTAR (Sem.), p. 353.

A detailed description of this famous temple is much needed, that given by Nebuchadrezzar being altogether inadequate. The late G. Smith was once fortunate enough to have in his hands a once fortunate enough to have in his hands a Babylonian tablet in which the building was described, and this is probably the most trustworthy account of it in existence.\* Adopting his estimate of the metric system used, the 'grand court' of the temple measured 1156 ft. by 900 ft., and the next, 'the court of Istar and Zagaga,' 1056 ft. by 450 ft., with six gates admitting to the

temples.

The next division is described as a space or platform, apparently walled, called, in Sumero-Akkadian, kigalla or zur, and in Semitic Babylonan enclosed and levelled space. It was described as square, 2 ku each way (this is possibly the portion described by Herodotus as 'the temple' or sacred precinct, which measured 2 stadii—1213 ft. 6 in.—each way, and was furnished with bronze gates). In accordance with the usual Babylonian custom, the angles indicated the cardinal points, and each side had an entrance. Inside the enclosure, at the time the tablet was written, stood some kind of erection 200 ft. square, connected with the ziqqurat, or tower, and having round its

\* The Athenœum, Feb. 12, 1876; repeated by Prof. Sayce in his Hibbert Lectures, 1887, p. 437ff.

base the chapels or temples of the various gods, on

all four sides, and facing the cardinal points.
On the E. side was a building 70 or 80 cubits long and 40 broad, containing sixteen shrines, the chief ones being dedicated to Nebo and Tasmêt, his consort. On the N. were temples to Ea or Aa and Nusku, and on the S. a single temple dedicated to Anu and Bel.

It was on the W. side, however, that the principal buildings were to be found—a 'double house' or temple with a court between two wings of differing dimensions. The building at the back was 125 cubits by 30. Mr. Smith was unable to make out with certainty the disposition of all the erections, but in the W. chambers stood the couch of the god, and the throne of gold mentioned by Herodotus, besides other furniture of great value.

The main building was the ziqqurat, or templetower, square, and with its corners towards the cardinal points. The lowest stage was also the largest, being 300 ft. square by 110 ft. high. It had the usual recessed or panelled ornamentation of Babylonian architecture. The second stage was 260 ft. square by 60 ft. high. An obscure term was applied to it, which G. Smith suggested might mean that it had sloping sides; probably they were hollowed out. This change in form would break the monotony of the structure.

The third stage commenced a regular series all equal in height, namely, 1 gar or 20 ft., but decreasing in size. The third was 200 ft. square, the fourth 170 ft., the fifth 140 ft., the sixth (the dimensions of which were omitted) apparently 110 ft. On this was the topmost stage, the seventh, which was the upper temple or sanctuary of the god Bel-Merodach. Its dimensions G. Smith makes to be 80 ft. long, 70 ft. broad, and 50 ft. high, the total height of the tower being 300 ft., exactly equal to the dimensions of the base. The raising of the base above the level of the ground would naturally make the height above the plain greater than this.
Weissbach's estimate of the measures does not

differ greatly from that of G. Smith; he makes the base to have been about 100 metres, or 328 ft.

The differing heights of the stages of the great 'Tower of Babylon' are in contrast with the regularity of Sargon of Assyria's well-proportioned structure at Khorsabad. At present this latter shows portions of four stages on a low platform; and those who visited it gained the summit by means of the gently sloping exterior passage leading to the topmost portion, which was about 140 ft. above the platform. Though in their restorations Perrot and Chipiez + do not place any chambers in the structure, it is not improbable that such existed, if not at some intermediate point, at any rate on the topmost platform.

Exceedingly noteworthy, however, are the excavations made by Layard in the ruins of the temple-tower at Nimrtd (Calah). Wishing to find out what authority there might be for supposing that Ctesias and Ovid were right in indicating that these towers were of the nature of tombs, he cut through the masonry in certain places, and was at last rewarded by finding a vault on the platform-level 100 ft. long, 12 ft. high, and 6 ft. broad. There is no doubt that this discovery justified him in regarding these temple-towers as being originally tombs, as stated, but that it is 'the tomb of Sardanapalus which, according to the Greek geographers, stood at the entrance of the city of Nineveh,' must be left doubtful, notwithstand-ing that Calah (Nimrûd) may have been regarded

† Hist. de l'Art dans l'Antiquité, 'Chaldée,' pp. 404-405.

as part of Nineveh, at least in later times. Layard's statement that it had been entered at some unknown period by people who must have known exactly where to make the opening, is also in favour of his supposition: they had apparently entered for the purpose of rifling the tomb. The vaulted gallery found by Layard runs east and west. Details concerning the upper part of the monument are unfortunately wanting. Layard regarded it as having been a tower in five stages, which is probable enough, but the dimensions of all but the lowest are unknown. This last was built massively with a thick facing of stone, exactly 20 ft. high, and finished at the top with a line of gradines. The stones were carefully fitted together, without any mortar, though mud may have been used instead, as at the present time. As far as preserved, the upper part is of brick.\*

As has been pointed out by Canon Rawlinson, the Babylonians and Assyrians made their temples insignificant in comparison with the dwellings of their kings, thus apparently not imitating the Egyptians. As the Babylonians and Assyrians, like all the Semitic nations, were exceedingly religious, this shortcoming was probably due to some extent to climatic conditions and the want of suitable building-stone; perhaps, too, more of the temple-revenues may have been appropriated by the priests. The want of stone was more especially felt in Babylonia; the Assyrians made use of it largely, though not to the same extent as brick. The possession of stone enabled the Assyrians to adorn their temples with many fine bas-reliefs.

As an accessory of a temple, and therefore belonging to religious architecture, may be mentioned the Istar-gate at Babylon. This is situated near the ruins of the temple E-mah, and consists of massive walls—the sides of the gate—decorated with bulls and the fabulous creatures called sirhussü-strange and impossible serpent-dragons. These alternate vertically from top to bottom, and are exceedingly well preserved. The beauty of the workmanship and the excellence of the enamel were not surpassed even by the artizans of the Persian period. From the Istar-gate a 'festival-street' led northward to 'the place of Fate,'† where the oracles were declared yearly in Nisan. This is an excellently-paved causeway, apparently decorated with tiles imitating valuable stones.

In the temple of the Sun at Abu-habbah (Sippar,

identified, though doubtfully, with the Biblical Sepharvaim), bitumen seems to have been used for the pavement; and beneath this, in a corner of one of the rooms, was found an earthenware coffer containing the celebrated 'sun-god stone' ‡ (see ART [Assyr.-Bab.]). Receptacles for sacred objects were probably made in all temples in Babylonia. It seems likely that there were but few erections of the kind which had not closed recesses, at each corner, for the reception of the cylinders recording the building, re-building, or repairing of the edifice.

Naturally there are a number of religious erections whose real use is at present difficult to discover or to prove. At Babylon, on the site which the German explorers regard as being that

which the German explorers regard as being that 
\*Layard's Nineveh and Babylon, plan 2, and p. 123 ff. The 
stones 'were bevelled with a slanting bevel, and in the face of 
the wall were eight recesses or false windows, four on each side 
of a square projecting block between gradines' (Layard, p. 125). 
The northern side had a semicircular hollow projecting in the 
centre, flanked by three pilasters on the E. and five on the W. 
The western side had no projection, but the pilasters were 
eleven in number. The eastern and southern sides were perfectly plain.

had been overlaid with silver; but this he took away, substituting ourse gold.

ing pure gold.

1 See H. Rassam's 'Recent Discoveries of Ancient Babylonian Cities' in TSBA, vol. viii. pp. 175-176.

<sup>\*</sup> Das Stadtbild von Babylon (1904), p. 23. The site of this temple-tower is the rectangular depression now called Sahan, which is of the dimensions stated.

of 'the place of Fate,' several chambers were found, which may have formed part of that edifice. This seems to point to the probability that the oracles of the Babylonians and Assyrians were declared in special buildings, though such things may, from time to time, have been delivered in the temples, such as are described above. At present we know nothing of the lives of the declarers of their oracles, or of the rites which accompanied their declarations of events, so that the nature of the building they needed receives no illustration from

the ruins which have come down to us.

the ruins which have come down to us.

At Lagas were discovered a number of cells whose uses seemed to be religious, though in what way was not clear. Some of them contained a bronze figure of a kneeling bull upon a shank or tang, others had a figure of what has been described as 'the god with the firestick.' They were accompanied by inscriptions on stone dedicating them to a deity. The figures are thought to have been for the protection of the buildings to have been for the protection of the buildings in which they were found. Here and there tanks and cisterns occurred, suggesting some connexion with libation-ceremonies. Two tombs were discovered, containing skeletons, a lamp of glazed ware, and vases with short handles. Notwithstanding the early objects found in the tombs, it is regarded as certain that they are of late date.

In the inscriptions referring to offerings, at least one reference to a bit-ili or bethel, 'house of god,' is found,\* but in what these differed from other religious buildings is unknown. The large temples seem always to have been dedicated to some special deity, notwithstanding that several deities may have been worshipped within them. These bethels, however, had no special designation: any deity, it may be supposed, could be worshipped there. Perhaps, as they were regarded as the abode of the god without specifying his attributes, any worshipper could enter, and perform his religious duties there. That it was simply an emblem of divinity, or of the presence of the divinity, without any walls to shield it from the gaze of the careless passer-by, seems, from the inscriptions, to be unlikely. The places where oracles were declared must have contained chambers where the animals were killed when it was intended to examine their entrails or

other parts.

The bricks used by the Babylonians and Assyrians vary in size from 11½ in. square and 2½ in. thick to 13 in. square by 3 in. thick and 16 in. square by 7 in. thick. Sometimes crude and burnt brick are used in alternate layers each several feet in thickness, but more commonly the unbaked brick was used for the internal parts of a building or for the core of a temple-tower, and the baked brick for the parts exposed to the weather. The brick for the parts exposed to the weather. The layers of reed-matting which are found seem to have been used for buildings of unbaked brick. The use of this is exemplified by the ruins of the temple-tower at Warks (Erech), dedicated to Istar, which is now called *Bowariah*, 'reed-mats.' The mass of the structure is of unbaked brick, the lower part buttressed with baked brick. That these buildings have resisted so long is remarkable, but they must always have been unsatisfactory. but they must always have been unsatisfactory. As a contrast to the temple of lister at Erech may be mentioned that of Nebo at Borsippa (the traditional Tower of Babel), where there are masses of brickwork of extraordinary hardness. This ruin still awaits complete excavation.

Besides brick in Babylonia, and brick and stone in Assyria, the building-materials mentioned in the inscriptions are cedar, terebinth (?), oak (?), palm-wood, cypress, pistachio-wood, etc. Nebu-

chadrezzar speaks of the cedar-beams from Lebanon which were used for the roofing of the temples of Babylon, which, he adds, were overlaid with shin-Babylon, which, he adds, were overlaid with shining gold. Besides this, silver, bronze, copper, rare stones, and ivory were used for their adornment. As before mentioned, baked and unbaked brick took the place, with the Babylonians, of the building-stone used by the Assyrians, bitumen being generally used for mortar, as stated in Gn 11<sup>3</sup>.

Concerning the ornamentation, the inscriptions give but little information. The principal architectural decoration of the upper terminations of the walls were the gradines already referred to. The panellings of the walls, which were also a speciality of Assyro-Babylonian architecture, are an application of the gradine pattern to form recesses in the brick or stone walls in a vertical direction, and, when well carried out, had a sufficiently decorative effect.

Failing stone, certain of the buildings of Baby lonia were decorated with reliefs of enamelled brick; and though this cannot be proved for the temples, it is extremely probable that some of them at least had ornaments of this nature, more especially as some of the fragments found seemed to have been parts of fabulous or mythological beings (see ART [Assyr.-Bab.]). In these there was an attempt at reproduction in natural colours, and there were inscriptions in white characters on a blue ground, the whole showing considerable knowledge and skill.

The Babylonians seem often to have employed, however, the same method of decoration as the Assyrians, namely, fresco, traces of which have been found. In the case of the temple £-mah at Babylon, the distemper, as far as preserved, is white, probably chosen as the groundwork for decorations in colours, similar to the more or less geometrical flower-forms of the painted tiles and other decorations of the temple called Kidimuri at Calah. The centres of the tiles, which were circular or lozenge-shaped, are generally provided with a knob pierced with a hole, probably for the purpose of hanging a lamp, though no remains of lamps are stated to have been found. Other Assyrian ornamentation consists of rosettes between two coloured borders, and red, blue, and black rosettes above a similar border supported by a kind of arcade-ornament—perhaps the original suggestion for the true arcades of architecture. The colours in Assyrian distemper-ornamentation

were exceedingly bright.\*

The principal portals of the temples of Assyria were guarded by colossal bulls and lions, with the usual sacred figures, which, in the case of the smaller temple at Nimrûd, were generally covered with inscriptions. The bas-reliefs always represent religious subjects. The exterior walls of this building seem to have been faced with enamelled brights some of which were faced. bricks, some of which were found. Whether the temples at Babylon had their entrances flanked by colossal winged bulls or not is doubtful, but this seems probable, at least in some cases, as they are to all appearance referred to by Aššur-banî-apli, king of Assyria, in his account of the destruc-tion wrought by his grandfather Sennacherib at Babylon on the occasion of his final conquest of the city (see Aššur-banî-âpli's great cylinder, col. iv. line 70).

T. G. PINCHES.

ARCHITECTURE (Celtic).†—We have no definite information about the religious architecture of the Gauls. In the case of the Celts, ancient writers never describe places devoted to worship by the word vao's or ædes; they make use of vaguer

<sup>\*</sup> See The Bavylonian and Oriental Record, vol. ii. pp. 142-145. See also Hastings' DB, vol. ii. p. 301b, where the bethel of cedar at Haran is referred to.

<sup>\*</sup> See Layard's Monuments of Ninevah, 1st series, pl. 86, 87. † This art. deals with pre-Christian Celtic Architecture; for Christian Celtic Architecture see Architecture (Christian).

terms, such as locus consecratus (Cæsar, de Bell. Gall. vi. 13. 17), lepór (Diod. v. 27. 4; Strabo, iv. 4. 5; Plut. Casar, 26; Dio Cass. lxii. 7; cf. xxvii. 90), templum (Livy, xxiii. 24. 11; Suet. Casar, 54), τέμενος (Strabo, xii. 5. 2; Diod. v. 27. 4), and σηκός (Strabo, iv. 1. 13).

The sacred places of the ancient Celts, therefore, resembled neither the sanctuary of the Greek temples nor the great buildings which constituted the temples of the Romans. There is no doubt that they were enclosures frequently situated in the woods. Lucan (iii. 399-425) describes a sacred wood near Marseilles where sacrifices were offered to the gods with barbaric ceremonies, and where there were altars on which cruel rites were performed; all the trees in the wood were purified with human blood; the miserable effigies of the gods were devoid of art—shapeless masses of tree-trunk. Pomponius Mela (iii. 2. 17) remarks that the large sacred woods of Gaul lent a pleasing appearance to the country. Cæsar mentions the sacred place in the territory of the Carnutes where year by year the Druids assembled to administer justice (de Bell. Gall. vi. 13), and states that in the sacred places of many races were to be seen pieces of spoil taken from enemies, and that a Gaul would never dare to keep a part of the booty in his house, or carry off anything from these stores (vi. 17). The Arverni had hung up in front of a temple  $(\pi \rho)$  the little sword that Cæsar had left with them during a battle. Plutarch (Casar, 26), who reports this fact, seems to have been influenced by the Greek and Roman custom, and we cannot conclude from this statement that a building was referred to. At Toulouse the sacred places included lakes, where great treasures were eventually accumulated under the water (Strabo, iv. 1. 13; Justin, xxxii. 3, 10).

There were temples among the Cisalpines; and it was to one of them that the Boil brought their booty and the head of the consul Postumius. There they made this head into a cup hooped with gold, and it was this sacred vessel that was used by the priests of the temple on their feast-days (Livy, xxiii. 24). Polybius mentions a temple (lepbr) of Athene among the Insubrians where the ensigns of war were kept (ii. 32). There is nothing to show that these temples were anything else than un-

covered enclosures.

The Britons in the time of Queen Boadicea had sacred places, and they offered human sacrifices in the sacred wood (άλσος) of the goddess Adrastia (Dio Cass. lxii. 7). In B.C. 61, Suetonius Paulinus ordered the sacred woods of Mona, which were devoted to savage superstitions, to be cut down (Tac. Ann. xiv. 30).

The council of the Galatians of Asia Minor met to judge cases of murder in a place called Δρυ-νέμετον. The second part of this word means, in Celtic, 'sacred wood.' Probably it refers to a place consecrated to worship (Strabo, xii. 5. 1).

It must further be added that the Druids were regarded as the inhabitants of the forests. According to Pomponius Mela (iii. 2. 19) they taught, and according to Lucan (i. 493) they lived, in caves or secret glades. Pliny states that it was in oak-forests that they gathered mistletoe. The oldest etymology of the name 'Druids' made them 'the men of the oaks,' from the Gr.  $\delta\rho\bar{\nu}s$  (Pliny, xvi. 95,

If we may calculate the shape of the sacred enclosures from the ruins of Gallo-Roman temples, they were almost perfectly square. But nothing more can be determined concerning the Gallic period from the numerous stone temples of which ruins have been found in Gaul, and which date from the Roman epoch. If there were small buildings sacred to the gods in Celtic countries in ancient times, these buildings, like the Gallic houses, were

made of wood and wicker-work (Strabo, iv. 4. 3; Cæsar, v. 43; Vitruvius, ii. 1. 5). The Gauls did not use stone except for building the walls of their oppida, and even then it was unhewn stone, adjusted by means of wooden cross-pieces and iron bolts (Cæsar, vii. 23). They seem to have been ignorant of the art of hewing stones and joining them with mortar.

They probably found it as ridiculous to enclose the gods in any kind of house as to represent them in human form. Diodorus tells that Brennus laughed very much on seeing wooden and stone statues of anthropomorphic gods in a Greek temple (xxii. 9. 4). Lucan, when describing the sacred wood near Marseilles, and Cæsar, when speaking of the Gallic Mercury (vi. 17), use the word simulacra to denote the representations of the gods. Does this refer to more or less rough wooden statues similar to the  $\xi \delta a v a$  of primitive Greece, or to shapeless stone statues like some of the extant menhirs? It is possible that the Gallic races employed now the one method of representing their deities and now the other, according to the nature of the soil. The deities of the Gallo-Roman period—the Bull, the Woodman, the god with the mallet, the god with the mallet, the god with the wheel—undoubtedly arose from a new religious conception due to the influence of the Romans. conception due to the influence of the Romans. No text gives evidence of the Druids having forbidden idolatry, and no text states clearly that there were real statues of gods among the Celts; therefore we cannot affirm that their sacred enclosures contained anything but very rudimentary symbols similar to those of savage tribes. The huge bronze statue of Zeus which the Galatians had at Tavium was probably of Greek origin, like the cult of the god whom it represented (Strabo, xii. 5. 2). xii. 5. 2).

There do not seem to have been any buildings devoted to worship in pagan Ireland. Idols were apparently erected in the open air, as, e.g., the large stone idol called 'Cromm Cruach,' which was surrounded by twelve smaller idols covered with brass and bronze ornaments. There were similar idols in various parts of Ireland, and some of them were believed to deliver orneles a g the famous were believed to deliver oracles, e.g. the famous 'Lia Fail' at Tara. The idol Bel, in honour of which bonfires (through which cattle were made to pass) were kindled on the 1st of May, does not seem to have been enclosed in a temple any more than

the other idols.

As regards the civil architecture of ancient Ireland, it is practically the same as that of races at the same stage of civilization. The houses were usually round in shape, built of wood and wickerwork, and covered with thatch. They were very small. The chief room served as kitchen, diningroom, drawing room, and bed-room. Among the higher classes of society, small recesses were fitted in along the walls, each containing one or more beds. But the common people undoubtedly slept on beds arranged along the wall, as was the custom in Gaul and in Scotland during the same period. The fire was in the middle of the house, and the smoke escaped through an opening in the roof. The beds were placed in such a way that the sleepers had their feet towards the fire. Each bed contained often two and sometimes three persons. It was only in the houses of chiefs that arrangements were made to avoid too complete promiscuity, and that beds were surrounded with curtains.

ARCHITECTURE (Chinese).—As the world is still in the dark with regard to the whole problem of China and the Chinese, so is it with

From an architectural Chinese architecture. point of view, this is a very novel and interesting subject. A style never dreamed of by Europeans is adopted quite freely, and a design which they call irrational and unnatural is executed with success. Little wonder, therefore, that we find few students of Chinese architecture, and those few touching on the subject but superficially.

The style of the architecture is a combination of the trabeated and arcuated systems, the materials consisting of wood, brick, and stone. The curved roof, with the skyward-projecting eaves, forms the principal feature of the building. This feature is especially noticeable in Southern China. Generally speaking, however, both the plan and the elevation are monotonous, and the complete structure is rigidly symmetrical. The mode of decoration is strikingly peculiar. The exterior is usually coloured bright red; and temples and palaces are sometimes decorated with ornamental sculptures sometimes decorated with ornamental sculptures and paintings. Gorgeous colours are applied to the interior, and the whole appearance of rooms and furniture is very picturesque. Red is the predominant colour, and then blue, green, and yellow (gold). Northern China is destitute of trees, as rain falls only once a year. Hence the building materials are principally brick and stone. Consequently a trabeated system of wood and an Consequently a trabeated system of wood and an arcuated of stone have developed simultaneously. On the other hand, the abundance of trees in the South has given an impulse to a considerable development of wooden buildings, with deeply curved and boldly projecting eaves. As to the origin of the concave outline of the roof, there is diversity of opinion. The present writer considers it but a natural result of the necessity of making a gradual change in the slope of the roof as it approaches the eaves, and of the maintenance of harmony with their curves. The fact is that the bold curve of the roofs. It is rather strange that the plan of Chinese architecture is always an arrange-

plan of Chinese architecture is always an arrangement of rectangular blocks; not a single example of roofing on irregular plans is known. This is due to the direct transmission of the ideas of primitive times, and is a good illustration of the stagnant mind of the people.

Chinese architecture may be called the architecture of colouring. Without colours it is a bare, rugged skeleton. Both without and within colours are profusely adopted. The fondness for red betrays the primitive mind. But this primitive colouring is in harmony and uniformity with the taste of the primitive plans and elevations. The simplicity and coarseness of the construction and simplicity and coarseness of the construction and the carelessness of workmanship are beyond expression, especially in the productions of recent date. The exaltation of art and the execution of details have been entirely ignored by modern

architects.

architects.

Historically, Chinese architecture may be arranged as follows: (1) Chinese architecture proper (B.C. 2200-A.D. 68, i.e. from the earliest historical age to the introduction of Buddhism: Hsia, Shang, Chou, Ch'in, and the earlier Han Dynasties); (2) the rise of Buddhist architecture (A.D. 68-A.D. 618, i.e. from the introduction of Buddhism to the Six Dynasties: the later Han, both Chins, Sung, Ch'i, Lian, Chên, and Sui Dynasties, and also Wei, Ch'i, Chou of the North Dynasties); (3) Buddhist architecture in full splendour (A.D. 618-A.D. 1260, i.e. T'ang, Wutai, and Sung Dynasties); and (4) the introduction of Lämaism (A.D. 1260-present day, introduction of Lamaism (A.D. 1260-present day, i.e. Yuen, Ming, and Ch'ing Dynasties).

(1) The first was the period of palace building. Unfortunately, no ruins are in existence for our investigation. From a study of the time, however, we find that there existed during this period magnificent palaces and towers, great in design and majestic in style, such as A-Fang of the Ch'in emperor Shih-

Whuan-Ti, and Chang-Lé, and Wei-Yang of the Han. The relics which show most clearly the structural aspect and treatment of details of that time are the reliefs of Wu-Lian-Tzu, though the monument itself belongs to the later Han Dynasty. From them we can trace long projected wooden eaves, balustraded towers, various kinds of caryatida, richly decorated roofs, etc.

(2) The second period may be divided into the later Han and the North and South Dynasties. During the North and South Dynasties the influence of Buddhist architecture began to be felt. The style of Buddhist architecture remained without much alteration, any change being confined to the inner arrangement and decorations. But for pagodas and those particular buildings required by the new religion, an entirely new system was imported from Central Asia. Scarcely any architectural relics of the Six Dynastics have been discovered, but the style is fairly well represented in the treatment of cave temples and reliefs. Specimens of the later Wei are found at Shih-fou-szu in Yün-gan, near Ta-Tung, Shan-si; at Kunghsien, Ho-nan; at Lung-men, near Lé-yang, etc.

(3) The third period may be divided into the earlier Tang, the later Tang, and Sung. In the earlier Tang, Buddhist architecture and all other branches of art had reached the height of their grandeur, and from the later Tang to Sung they began to decline continuously. During that time elaborate Taoistic temples were also built. The pagodas of Tai-wen-szu and of Chien-fou-szu, at Si-an, Shen-si, are specimens of the earlier Tang. The two pillars and the two stone pagodas of Ling-yin-szu at Hang-chow, Che-kiang, are most probably remains of the Five Dynasties and Sung are found in various parts of Southern Chins.

(4) The fourth period is divided as follows: (a) The Yuen. With the introduction of Lämaism changes were brought about in art. A fine specimen of this time is the arch of Chü-yüng-kwan, near Pe-king. There are also the rock-cut soulptures at Fehlei-fung, at the front of Ling-yin-szu, Hang-chow. (b)

Thus Chinese architecture developed rapidly with the introduction of Buddhism, and reached its golden age under the Tang Dynasty. From the Sung it gradually degenerated down to the present day, when its ancient splendour has entirely vanished.

vanished.

For convenience' sake, we may classify Chinese architecture according to the religions which have influenced the thoughts and arts of the people: Confucianism, Buddhism, Taoism, and Muhammadanism. Others, such as Zoroastrianism, Manichæism, Nestorianism, and Judaism, were of a temporary nature, and have left no architectural remains. Then we have a group of secular architecture: castles, palaces, dwelling-houses, etc., which will be treated below.

I. Confucian Architecture.—The religion which

which will be treated below.

I. Confucian Architecture.—The religion which has spread all over China, and is held in reverence by all the people, is Confucianism. Temples, known as Hsin-shih-miao or Wén-miao (the latter different from Wu-miao [see § 3]), are dedicated everywhere in cities and towns. The most celebrated one is in Ch'ü-fou-hsien, Shantung, the birthplace of the sage. The temples of Pe-king and of Nan-king are well known the former on account of the stone are well known, the former on account of the stone drums in the Ta-ch'eng-mên, and the latter on account of its immense size. But from an architectural point of view they show very little variety

of plan and elevation.

The main edifice of the temple is the Ta-ch'éng-The main edifice of the temple is the Ta-ch'eng-tien, built on a high platform, two-storeyed, and mostly hip-roofed. In the centre of the interior the tablet of Chi-sheng-k'ung-tzu of the most sacred Confucius') is enshrined. To its left, the tablets of Tsung-sheng-ts'eng-tzu and Ya-sheng-meng-tzu, and to the right, those of Fu-sheng-yuen-tzu and Shu-sheng-tzu-szu-tzu, are arranged. As a rule, there are also the tablets of the twelve disciples. In front of the Ta-ch'eng-tien is the Ta-ch'eng-men, and in front of the men is a pond, and still farther forward is a pai-lou (popularly known as the Ling-hsing-men). On the sides of those buildings there are the East and the West corridors. Occasionally behind the Ta-ch'eng-tien there is a building which behind the Ta-ch'èng-tien there is a building which is sometimes called Chung-sheng-tzu. Within the

Ta-ch'éng-mén there are sometimes a bell-tower and a drum-tower facing each other. The general arrangement of these buildings resembles that of the Buddhist temple: e.g. Ta-ch'éng-tien stands for Fou-tien, Ta-ch'éng-mén for Tien-vang-tien, etc. As a rule, the Wén-miao is combined with the institution of learning. One of the most famous institutions is Pai-lu-shu-yüan, at the foot of Wu-lao-fêng, a south-east peak of Lu-shan in Nan-kung-fu, Kiangsi. This was established by Chu-tzu. The largest among numerous buildings in the compound is Hsien-hsien-shu-yüan. Within the gate there is a court-yard, with fifteen cells on either side. Then comes the Wén-hui-t'ang ('meeting-hall'), and behind it another court, with five cells on either side. Last of all, the two-storeyed chin-fêng-lou is reached. The architectural system of educational buildings is more or less similar to the above. The Kung-yüan is an examination hall for the degree of chū-jên, and is noted for its extensive scale. One in Nan-king is said to be ample enough to accommodate over ten thousand students. In fact, learning in China means Confucian teaching; hence the relation of schools to the Wén-miao is similar to that of monasteries to the Buddhist

temple. 2. Buddhist Architecture.—The most important factor in the development of Chinese architecture factor in the development of Chinese architecture is Buddhism. History says that in the reign of Ming-ti of the later Han the new religion was first introduced into China (65 A.D.), and Pai-ma-szu was built at Lê-yang. Henceforward it spread and flourished continuously, until the meridian was reached under the Six Dynasties and the T'ang. The North Dynasty felt its influence more than the South, the earlier Si-an and Lê-yang and the later Lu-shan and Chien-yeh (now Nan-king) being the centres. The highest pagoda ever recorded was built in Yung-ning-szu by the Empress Dowager Hu of the North Wei. It is said to have been 900 ft. high, with a finial of 100 ft. But Buddhism suffered from the corruptions and disorders that were prevalent from the later T'ang to the Five Dynasties, and no temples of any importance were were prevalent from the later Tang to the Five Dynasties, and no temples of any importance were built. A temporary revival began under the earlier Sung, resulting in elaborate temple-building in Southern China during the South Sung Dynasty. Tien-tai-shan, Lin-gan (now Hang-chow), Chingling (now Nan-king), and their neighbourhoods were the centres. Under the Yüan Dynasty, Lämaism was made the State religion. The architectural style of Läma temples does not differ from that of Buddhist, except in the occasional application of of Buddhist, except in the occasional application of Tibetan styles to details, and the importation of Tibetan styles to details, and the importation of new images and ritual articles. One new feature is the introduction of a pagoda which is a direct copy of a Tibetan model. Since the Ming Dynasty, Buddhism has been in a dormant state, greatly influenced by Lāmaism. In earlier days, Buddhism was divided into thirteen sects, but under the later Tang only three prevailed: Vinaya sect, Dhyāna sect, and Sukhāvatī sect. Dhyāna was subdivided into five sects. At present this is the ruling sect, other shades of belief being indistinguishable. We may say that the architectural features are practically common to all sects. Among the temples now existing are Yung-wo-kun in Pe-king and several other temples on the Western hills outside of the city. Wu-tai-shan in Shan-si, Tientai-shan, Pu-t'o-shan, Tien-t'ung-shan, Tienomu-shan in Chê-kig, Lu-shanan in Kiang-si, Womei-shan in Szu-chwan, etc., are widely known, but they are almost in ruins and deserted, without a trace of their former splendour.

The commonest arrangement of Buddhist architecture is as follows:—In the main front there is the first gateway (shan-mên), wherein usually two guardian figures (er-tien) are kept. Then comes

the tien-wang-tien ('temple'). In the centre of this temple an image of Maitreya with the features of Pu-tai is enshrined; behind Maitreya, and back to back, is a standing figure of Vedadeva. In the four corners are the su-tien-wang ('four heavenly kings'): in the North-east is Virtpaksha with a harp, in the South-east Dhrita-rashtra with a sword, in the North-west Vairavana with an umbrella, and in the South-west Virudhaka grasping a serpent. Behind the tien-wang-tien is the ta-tien, known by various names, such as Ta-hsiung-pao-tien or Fou-tien. Here the Buddha and eighteen Arhats are enshrined.

Still further behind the ta-tien are sometimes the fa-t'ang ('preaching hall'), tsang-ching-kê ('library'), and fan-chang ('cloister for head priest'). To the right and left of the above buildings are corridors, divided into sections, used for various purposes. Generally there are the ke-t'ang ('reception hall'), ch'ieh-lan-tien ('shrine for the guardian god'), tsu-shih-tien ('shrine for the founder of the sect'), shan-t'ang ('meditation hall'), ch'i-t'ang ('eating hall'), yin-shui-t'ang ('cloister for mendicant priests'), etc. To the right and left of the t'ien-wang-tien a bell-tower and a drum-tower stand facing each other, sometimes with the eddition of a pagede.

('cloister for mendicant priests'), etc. To the right and left of the t'ien-wang-tien a bell-tower and a drum-tower stand facing each other, sometimes with the addition of a pagoda.

The pagoda is the most, interesting and tasteful of Buddhist buildings, there being numerous varieties of form. Its origin is the stūpa of India, obviously transported from Central Asia and India. The process of the modification of form is not yet plain, as even the pagodas of a very remote period seen on reliefs and carvings are many-storeyed, already losing the shape of the original stūpa. The pagoda of Tzu-en-szu, Si-an, is the oldest now in existence, and is said to be a copy of a model from Central Asia. It is seven-storeyed, and square in plan. Others are mostly seven- to thirteen-storeyed, octagonal, and built of brick. One in T'ien-ning-szu, Pe-king, is an example of the kind. In the Southern China and Yanze valleys seven-storeyed and hexagonal pagodas are also seen. The Lāma pagoda is merely a copy of a Tibetan model, the origin of which is an Indian stūpa. They are abundantly seen in Northern China, and a beautiful example is that of Pai-ta-szu of Pe-king.

3. Taoist Architecture.—There is no special style of architecture in Taoism, as it is practically borrowed from Buddhism. With a slight modification of the images and ritual articles, a Buddhist temple gives a good idea of the Taoist\_temple,

3. Taoist Architecture.—There is no special style of architecture in Taoism, as it is practically borrowed from Buddhism. With a slight modification of the images and ritual articles, a Buddhist temple gives a good idea of the Taoist temple, such as is represented in Pai-yun-kuan at Pe-king. Behind the entrance pai-lou there is a shan-mên; and then comes a ling-kuan-tien, where at the centre and in the four corners the images of Linkuan are enshrined, corresponding to the tien-wang-tien of a Buddhist temple. Then there is the yil-huang-tien, where Yü-huan is worshipped; the lao-lü-tien for the seven sages of Taoism; the chiutsu-tsu-tien, and the su-yü-tien successively follow. In the last hall even the 'Eight Treasures' of Lāma-ism are contained.

ism are contained.

Temples for Chinese gods owe their origin to Taoism. The architectural style is Buddhist, with the following exceptions: at the front they have a stage for theatrical purposes, and before the stage there is an extensive court-yard; the architectural details are more minute, and the decorations more elaborate. The Kuun-ti-miao, or Wu-miao, is seen everywhere in China. Here Kuan-yii is worshipped, always attended by his two followers, Ch'ou-ts'ang and Kuan-ping. The chenghuang-miao is a guardian temple of town and village. Numerous temples, such as Wên-chang-miao ('Temple of the god of Wealth'), Huo-shen-miao ('Temple of the god of Fire'), Fêng-shen-miao ('Temple of the god of Fire'), Fêng-shen-miao

Johnson Colonia (1975)

('Temple of the god of Wind'), Shui-shen-kun ('Temple of the god of Water'), Niang-niang-miao ('Temple of the god of Love'), and many others for

('Temple of the god of Love'), and many others for 'profane' gods, and occasionally many storeyed temples such as Yim-huang-ké and K'uei-hsing-lou, are abundant all over China.

4. Muhammadan Architecture.—Since the first mosque was built at Canton in the 7th cent. A.D., Muhammadanism has seen many ebbs and flows during the course of time, but it is flourishing far and wide. Ardent adherents are numerous, especially in the provinces of Kan-su and Shen-si. All the architectural relics of old days have been lost. the architectural relies of old days have been lost; according to investigations made by the writer, there is none older than the early part of the present dynasty. The temple is known by the one name Ching-chên-szu, or popularly, Li-pai-szu. In style it resembles an ordinary Chinese temple; but the plan and the interior arrangement show the characteristic traits of the faith of foreign origin. The building consists of porch, hall, and sanctuary. The roofs are also divided into three distinct sections. The sanctuary is either square or hexagonal in plan, two- or three-storeyed, and pagodashaped, instead of domed like the mosques in other countries; the inner wall is niched, with a mihrāb, the architectural relics of old days have been lost; countries; the inner wall is niched, with a miḥrāb, and decorated with arabesque and Arabic characters. The hall is usually divided into front and back portions, with an arcade between. The minbar is placed at the right-hand corner of the back hall, where decorations of arabesque and Arabic characters are again executed here and there. Near the hall there is sometimes a fountain, and sometimes a hall for purification. Occasionally halls for the a hall for purification. Occasionally halls for the head priest, for receptions, etc., are arranged as in a Buddhist temple. Often even the interior of the hall is of a Chinese style, entirely losing all signs of Muhammadanism. Thus in a Chinese mosque there is neither dome nor minaret; it is but a slight modification of an ordinary Chinese temple.

5. Tombs.—The ancient Chinese tombs were simply low artificial mounds where coffins were kept.

Later on, monuments were erected, accompanied by stone figures of men and animals. This custom was prevalent as early as the later Han Dynasty, and still exists at the present day. Massively designed mausoleums of the Tang Dynasty may be seen in the neighbourhood of Si-an. Earth is raised in a mound, and human and animal figures of stone are erected on the site. Hsiao-ling in Nan-king and Shih-san-ling in the north of Pe-king are the mausoleums of the Ming Dynasty. They are of the same design: pai-lou, ta-hung-mên, pei-lou, stone-men, stone-animals, and then again gates and archways leading to the last mound. The mausoleums of Tai-tsu and Tai-tsung of the present mansoleums of Taltsu and Taltsung of the present dynasty are near Mukden. They are simply copies of the Ming mansoleum. In the tomb of an ordinary person there are no stone-figures. It is a little cone-shaped mound, often enclosed by earth heaped up in the shape of a horse-shoe. Sometimes the coffin is placed in a cave made on a hill-side and covered with stone slabs. Sometimes a stone chamber is built to contain the coffin. The tombs and covered with stone slabs. Sometimes a stone chamber is built to contain the coffin. The tombs of priests are pagodas of either brick or stone, or pagoda-shaped monuments of some architectural design. There are, of course, many varieties.

6. Secular Architecture.—Castles, palaces, meeting-halls, dwelling-houses, and the like, are distinguished from ecclesiastical architecture. The

castle is surrounded by high strong walls of brick. Battlements, with embrasures, are erected on the walls. The entrances consist of double gates (yüch-chêng): beyond the first the path turns sharply and leads to another. The upper part of the gate is a two-storeyed tower, and beneath is a vaulted passage, which can be closed at will by huge doors strengthened by bands of iron. On a

large building in the main street of the city there stand bell- and drum-towers for reporting the time, the upper part being the tower and the lower the passage. The present mode of palace architecture in general is the same as that of the past. The Peking palace is similar to the old Ming palace of Nanking. It is called Chiu-chung-tien-mên ('Nine-fold system'). The front part, which is used for public audiences, is called chao, and the back, for private audiences, is ting. The architectural mode of the tien and the mên does not differ from that of the temples already described. Here the T'an, or platform for nature- and ancestor-worship, may be included, for which the T'ien-t'an at Pe-king is so famous.

A building called hui-kuan is an assembly-hall for colonial clans and commercial guilds. The club-system is wonderfully developed in China, and there are magnificent buildings for the purpose. In front they have a theatrical stage facing an extensive court-yard, which is surrounded by corridors.

sive court-yard, which is surrounded by corridors.

Dwelling-houses in Northern China vary in some respects from those of the South. In general, the premises are enclosed by high walls. At the entrance is a gate with a cell, and then a court-yard. A second gate with corridors, a second court-yard, a third gate with corridors, a third court-yard, etc., are repeated in the same manner, the number of gates and yards indicating the wealth and rank of the occupant. The house itself is a simple repetition of rectangular blocks itself is a simple repetition of rectangular blocks and corridors. The unsuitable materials, the heavy mode of construction, the defectiveness of lighting and ventilation, etc., detract from its architectural value; but, on the whole, with its fantastic features, it presents a picturesque appearance.

ARCHITECTURE (Christian).—Although it is possible to discuss the different edifices erected by Christians in divers times and places, it is most important, at the outset, to dispel any of those misconceptions which would suppose that there ever was any Christian style as such. The Gothic architecture of the Middle Ages has often been spoken of as Christian architecture par excellence, and undeally it is the most important of the styles in doubtedly it is the most important of the styles in which Christians have erected their buildings, and being the style of our own country, it naturally demands the largest share of our attention. But Christianity, as such, never has created, and never could create, a style of architecture, any more than could create, a style of architecture, any more than it could create a style of mathematics, or science, although it may make use of all of them. It has used buildings of the Latin, Byzantine, Moorish, Gothic, and Renaissance, and even the Greek styles, which differ from each other as much as one style of architecture can differ from another; and the differences are due to differences in the mothetic. of architecture can differ from another; and the differences are due to differences in the æsthetic expression of the people. These may be associated with other differences of character which may affect the forms of Christianity itself, but they are both the outcome of causes behind; the one is not the cause of the other. A certain type of man will produce a certain type of art and a certain type of Christianity, but the type of Christianity does not make the type of art, any more than the type of art makes the type of Christianity. Even schools of science or philosophy may be coloured in the same way. The failure to grasp this very simple fundamental principle has led to much absurd criticism and a complete misunderstanding of art and architecture. Doubtless the cause is to be sought in the fact that to be a Christian it is not necessary to be an artist, and many a good Chrisnecessary to be an artist, and many a good Christian, quite innocent of any knowledge of art, has endeavoured, in the light of what he did under-stand, to interpret things which he did not underAll this does not alter the fact that a church is a definitely Christian building erected for Christian purposes, and as such it will in many ways reveal this fact; but, at the same time, its principal architectural qualities are exthetic rather than religious, and a building such as St. Paul's is architecturally more akin to Castle Howard than to Westminster Abbey, which, in its turn, claims a closer kinship with Westminster Hall or the town halls of Belgium. The architecture of the Middle Ages was as much an architecture of castle and hall as of cathedral and church, and is as closely related to the spirit of chivalry and romance as to Christianity. Mediæval Christianity, chivalry, romance, and architecture are alike the outcome of the mediæval man; one is not the cause of the other, even although there is a certain amount of interaction. To speak of Christian architecture, then, as a parallel term with Greek architecture, is entirely illogical. In this article, therefore, we can examine Christian buildings in various styles of architecture, although we cannot strictly speak of Christian architecture as such. It may also be possible to show how Christian building doubtless left some impress upon the several styles of which it made use.

I. Latin Architecture.—The earliest form of

church with which we have any intimate acquaintance is the so-called Christian basilica, and its origin is exceedingly difficult to trace. One thing at least is clear; it is not directly derived from the Roman basilica, as was absurdly suggested in an uncritical and unhistorical age. The Christian church naturally developed from humble beginnings, where two or three might gather together; and such a lordly prototype is impossible. It used even to be suggested that the actual basilicas were the first Christian churches. But, as Christianity was some 300 years old before the conversion of Constantine, the Christians could not have had the remotest chance of using these buildings. Moreover, even after A.D. 312 (the date of Constantine's conversion), the basilicas were still required for their original purpose, and could not have been handed over to what, even at that time, was but a minority of the people. During all these three hundred years the Christians had required places of worship, and undoubtedly a more or less definite arrangement of their buildings by that time had become crystallized.

quired places of worship, and undoubtedly a more or less definite arrangement of their buildings by that time had become crystallized.

As an instance of the feebleness of the argument, not to say the gross perversion of the contexts, we may note the following—one of the main passages quoted in favour of this theory. In a landatory piece of writing by Ausonius addressed to the Emperor Gratian thanking him for the consulship, we find the following passage: 'Quis, inquam, locus est, qui non beneficiis tuis agitet, inflammet?' Nullus, inquam, Imperator Auguste, quin admirandum speciem tuæ venerationis incutiat: non palatium, quod tu, cum terrible acceperis, amabile præstitisti: non forum, et basilica olim negotiis plena, nunc votis, votisque pro tua salute susceptis.' The passage is given by Professor Baldwin Brown in his admirably suggestive work, From Schola to Cathedral (1886), and, as he points out, vows or an Emperor's welfare in palace, forum, basilica, or senate house (mentioned later), are scant evidence that any one of these places was turned into a church, and why the basilica should be singled out from the others with which it is coupled remains a mystery.

Leaving such puerilities, it remains perfectly true that the Christian basilica in the 4th cent. A.D. bore some resemblance to the Roman basilica, although it has never been proved that the Roman basilica was even roofed in; but one might as well argue from a modern fleet as to the appearance of the Spanish Armada, the interval of time being the same, and the development of Christianity as rapid as that of our fleets. What was the case in A.D. 350 is of little value as evidence for what was the case at the beginning of the Christian era, in architecture just as in anything else.

The earliest Christian services were held in the Jewish synagogues, and in private houses; and in

comparatively early times we find the Christians legally occupying the position of the sodalicia, which correspond to our Friendly and Burial Societies. These Societies often possessed a scuola, or lodge-room, where they held their banquets in honour of the deceased.

These three forms of building may all have influenced the early form of the Christian church, although it should be noted that the scuola, with its apse, was probably itself derived from the large private hall, which often had an apsidal termination.

FIG. 1.

On the whole, the largest influence may be assigned to the private house (fig. 1). Certainly such houses were made over to the Christians for their use, and it may be even more than a coincidence that we find in the atrium of the early church the atrium of the Græco-Roman house, in the cloisters the peristyle of the house, and in the church itself the hall, œus, or principal chamber, as at St. Ambrogio, Milan (fig. 2), or the Church of the Nativity at Bethlehem, where the atrium is reduced to a simple narthex.

The narthex, which gradually disappears from the Christian church, was the outer vestibule into which catechumens and penitents were permitted to enter, who were not admitted into the church

FIG. 2.

itself. It is probable that the atrium originally served a similar purpose, and the idea may be derived from the Court of the Gentiles in the Jewish Temple.

Some of the earliest actual places of meeting that still exist are the little chapels such as that in the catacomb of St. Agnese (fig. 3); but their value as evidence is slight, as the conditions were peculiar, and the form caused by throwing two or three cells together was the result of ne-

F1G. 3.

cessity rather than choice. The several cells may suggest divisions between the sexes or simply be-

tween clergy and laity, the clergy fairly obviously occupying the end cell and the bishop the seat at the end. The altar must have been somewhere in the body of the chapel, and as there is no trace of it, it was presumably in the form of a wooden table. But even this cannot be dated earlier than A.D. 250, and there is room for much change in a couple of hundred years.

What, then, are the characteristics of the early Christian basilica when first it emerges into the light of history? It is a three- or five-aisled hall, with the central aisle rising higher than the others and lit by a clerestory. At the end of the central aisle, generally the west end, is an apse containing the seats of the clergy. The entrance is at the opposite end, and beyond that is a narthex, and sometimes a complete atrium. The baptistery, commonly of circular or octagonal form, is usually in a separate building, on the other side of the atrium, or of the narthex, as at Parenzo. In the latter arrangement we may possibly see the origin of the German two-apsed church.

FIG. 4.

Occasionally, particularly in Rome, there is a space in front of the apse, and a great arch is thrown across the last pair of columns, known as the triumphal arch, as in Santa Maria in Trastevere (figs. 5, 7, and 10).

In this space is seen by some the origin of the later transept, but it does not occur in the Ravenna churches, and the later transept probably has a double origin; and this is, at any rate, not

FIG. 5.

the only factor. The building was apparently roofed with a simple open timber roof. The flat ceilings that occur in some Roman examples are late Renaissance, although they may possibly represent something older. They are rarely found elsewhere, but are supposed by some to have been a feature of the Roman public basilica (fig. 6). The walls were generally of brick, and comparatively thin, as there was only the wooden roof to support. Unlike the Roman basilica, it had no galleries, and consequently we find a very large wall space above the line of columns (fig. 7). This formed an excellent field for pictorial decoration, and at the same time distinguished it from the public basilica. Neither were the columns returned across the end opposite to the apse, at any rate in Italy, as was the case with the Roman building.

On the whole also, it seems probable that the apse

was not a usual feature of the public basilica, and, when it did occur, it was practically in a separate part of the building. The columns in the Christian basilicas, particularly in the case of Rome, were stolen from earlier buildings, and it is very usual to

FIG. 6.—PAGAN BASILICA.

find that they do not match. This also accounts for the poor proportions of the earlier Christian buildings in Rome, as compared with those in Ravenna, where there was no such available spoil to hand, and the builders had to fall back upon their own resources. At first the horizontal entablature is more common, but it is gradually superseded by an arcade of arches, which gives an appearance of

FIG. 7.—CHRISTIAN BASILICA.

greater height to the building, although the necessarily wider intercolumniations detract somewhat from the effect of length. The principal entrance was perhaps more often at the east end, following the arrangement of the temples of Greece. But the question of orientation was of little moment, and churches faced in any direction. After the custom of having the entrance at the west, and the altar at the east, came into vogue, as in England to-day, it was hardly ever more than a Northern fashion. Moreover, the first fashion was exactly the reverse way, with the altar at the west. The first church that we know to have had an altar at the east end was built in A.D. 470 (St. Agatha, Ravenna). Of the early churches in Rome 40 out of 50 have not their altars at the east.

The altar or table in the 5th cent. was at the opposite end from the main entrance, but in the body of the church in front of the apse, so arranged

that the faithful sat round it, the clergy on one side and the laity on the other. Of course, this arrangement in most instances has been altered, but

the following churches in Italy show the old plan more or less undisturbed:—Torcello Cathedral, St. Apollinare in Classe, Ravenna, and Parenzo Cathedral (figs. 8, 11, and 4). (The bishop presided in a raised seat in the centre of the apse, very much as did the president at the table in the early scuola.) Outside Italy, in the East, where there has been less change and alteration, such churches are quite numerous, but the following instances will suffice: —Ezra, Pitzounda, Mochwi, Bedochwinta, Abu Sargah (fig. 14), Dair-as-Suriani. Bedochwinta has the seats at the back and down both sides, advancing even beyond the altar (fig. 9).

FIG. 9.

Churches with the altar in the body of the church, and the bishop's seat behind, but without the other seats, are familiar in Italy. There seems also to have been an arrangement, at any rate sometimes, for the lesser clergy and choir, whereby they occupied all the space immediately in front of the altar and were separated from the laity by a low screen. In the old church of St. Clemente in Rome, this screen, part of which is built from the actual pre-existing screen, may be taken to represent the original arrangement.

The floors of the churches were of ordinary marble mosaic, but this has often been altered in later times, and we see the so-called Cosmati work made with large pieces of coloured marble, surrounded by small mosaic, and this, again, by bands of white marble.

A good example of the basilican church is

S. Paolo fuori le mura, Rome (fig. 10). This, although almost entirely a modern restoration after the fire of 1823, is still the best representative of a

FIG. 10.

great five-aisled basilica that has come down to us. It is 400 ft. long and 200 ft. wide, with a central aisle of 78 ft. The complete atrium of Old St. Peter's is here represented only by a narthex. The bema hardly projects beyond the aisle walls, and is peculiar in being double. It is in area among the largest churches in Christendom; but it is quite a simple thing to build these comparatively low buildings, with their light wooden roofs. There are 19 columns with pseudo-Corinthian capitals and a sort of Attic base. They are without flutings, and carry a series of simple, round arches. Above is a cornice, and where there would be the gallery in a Roman basilica, or the triforium in a Gothic church, is a series of medallions. The triumphal arch is carried upon a pair of columns on plinths. These columns have Ionic capitals, and the whole arch forms a very imposing feature, although not comparable with the great arches of the crossing in a Gothic cathedral. The general vista is fine, although, partly from excessive breadth, and still more from an inadequate marking of the bay divisions, which is so well managed in a Gothic cathedral, the length here is not felt. The church at present has a rich coffered ceiling, but it is doubtful whether this would have been the case with the original church of the 4th century.

FIG. 11.

In Ravenna perhaps the noblest example is St. Apollinare in Classe. It illustrates the characteristics of the place, which on the whole shows the indebtedness to Greek work even more than to Rome. As a result, the work forms a far more complete artistic unity. Everything is designed for the position that it occupies, and is not the spoil from other days. The church is a three-aisled basilica and has no transeptal space before the apse, this, as already stated, being what we should expect in Ravenna. In the dosseret above

the capitals, as at S. Vitale (fig. 12), and the polygonal exterior to the apse, we see Byzantine features.

The capitals are carved for their place. Above the nave arcade is a series of medallions, as in S. Paolo fuori le mura. The apse is raised, with a small crypt below it, and it retains the seats round the altar on the side opposite the entrance. The brick exterior is bald to hideousness.

In the Eastern Empire one of the best examples of the Latin or basilican style is St. Demetrius at Salonica. It has certain features, more or less characteristic of the East, which should be noted. The columns are returned across the building at the entrance end, which in this case is the west, and so form a sort of inner narthex. Over the aisles are galleries for the women—another arrangement common in the East. The capitals are finely earved, as we have here the still living Greek influence. This, as already indicated, was felt in the West. It was long before the Italians could carve capitals or lay mosaics for themselves, and either they made use of the old work, as we have seen, or else the new work was executed by Greek workmen. Even in the 8th and 9th centuries, when the Italians began to copy the old work, theirs is very inferior and rude in comparison. In St. Demetrius there are fairly clearly defined projections which perhaps may be termed transeptal,

but they are at the extreme end of the church, even projecting beyond the apse, and they are cut across by the main arcade of the church which makes them more or less invisible, and, in short, they are side chambers rather than a transept. Consequently there is no triumphal arch.

FIG. 14.

Other modified forms of the basilican church are found in Egypt and in Syria. In both cases there seems to be a tendency to keep the form of the apse only on the inside and to make the outside of the building square. The Coptic churches in Egypt are generally triapsidal with three altars, an apse occurring at the end of each of the side aisles—a form we shall meet again later (fig. 14). Syrian churches generally show a marked reminiscence of the style of Ancient Greece, and are finer in their work than those of the West. Not only were there many remains of ancient Greek work, but doubtless after the conquests of Alexander there was a certain admixture of actual Greek blood in the population. In many cases piers, and not columns, are used, and the church is divided into a few great square bays. The result is curiously

FIG. 15.

suggestive of some of the later Romanesque Gothic churches. Almost invariably there is a narthex, and above this, and outside the building, often a gallery with columns, forming a sort of loggia which makes a very pleasing feature (fig. 15). A point in Syrian construction might be noted which is possibly another reminiscence of Greek tradition. There is a distinct aversion to the arch construction, and often an arch is merely an arch in form, or is reduced by corbelling to the smallest possible limits (fig. 16). Note also another common form shown in the figure.

FIG. 16.

The Christian basilica, then, may be considered as a type of building, but hardly a style of architecture; and although we have seen that it was erected in various styles, they are all more or less a

continuation of the later Roman manner, affected nevertheless by different influences, as in Ravenna or Syria. It is perhaps convenient to group the whole together as the Latin style, and remember that other buildings than churches were built in it, but, as is natural from the lack of sacred

association, they have very largely perished.

2. Byzantine Architecture.—In Italy, although Greeks to a great extent executed the work, they were trammelled by the traditions on an alien soil, and by the masters they served; but when the seat of the Empire passed to Byzantium they were able to build more freely on their own lines, in their own country, and among their own traditions. The result was marvellous, and we find the speedy growth of one of the greatest styles of the world, culminating under Justinian, which itself gave birth to descendent styles, and is still a living influence. There are two great ways of covering a square space so as to leave all the sides open —the intersecting vault and the dome. The first was used by the Romans, yet the full compre-hension of its principles and possibilities was not grasped until the Gothic architects invented the grasped until the cottine architects invented the true rib. The dome was used by the Byzantines, and although they cannot exactly be said to be the inventors, they perfected the system, and herein lies the great achievement of the style. The problem involved is the fitting of a hemisphere upon a square. Now, the circle may be made to touch either at the corners or at the centres of the sider. In the one case it is too birs in the other it. sides. In the one case it is too big; in the other it is too small (fig. 17, I and II).

In the former case we may carry up the sides of the square, so to speak, cutting off the overor the square, so to speak, cutting on the over-hanging portion of the hemisphere, and the dome then rests upon the points of the square, and, pro-vided abutment is brought to resist the outward thrust upon the arches formed by this process, the dome is stable (fig. 17, I and III). Now, it is interesting to notice that these arches, formed by the interesting of the planes of the

formed by the intersection of the planes of the sides of the cube below the dome, are semicircular, and, further, the intersection of a sphere by a plane always gives a circle, and therefore it is always possible to raise such a dome upon semicircular arches; moreover, it is always possible to place one such dome up against another, and it is not necessary for the two domes to be of the same size. It is only necessary that the chords upon which the arches rest should be of the same length; the arches them-selves will always be semicircles. It may also be put conversely that the intersection of two spheres is always in a plane circle, and therefore the intersection of two domes always allows of the building of a plane arch; and thereby the Byzantine architect escaped the greatest difficulty of the Gothic vect escaped the greatest difficulty of the Gothic builders, who found that the intersections of their vaults were not in planes. This was perhaps the principal peculiarity or most individual characteristic of the Byzantine style, which, in certain of its aspects, can be described as a congeries of globular forms growing out of one another, as in the case of a mass of soan bubbles, which perfectly the case of a mass of soap bubbles, which perfectly

is open to certain objections. The apparent height is given only by the part above the arches, and the

FIG. 18.

resulting effect is comparatively low and flat. In order to remedy this, the dome is raised in one of two ways. The first is another instance of the intersecting spheres. A dome (as in fig. 17, II) with diameter equal to the diameter of the square, intersects, and rests upon, a dome (as in fig. 17, I) with diameter equal to the diagonal of the square. Of the lower, nothing is left, save the ring upon which the upper hemisphere rests, and the four triangular portions that remain after the four sides of the square have been raised in the manner indicated above. These triangular portions are

termed pendentives (fig. 18).

This is the characteristic method of the first great period of Byzantine architecture. But the dome may be even further raised by the introduction of a cylindrical drum between the dome itself and the pendentives. This is, on the whole, the characteristic arrangement of the second period of Byzantine architecture, although it is not universal. The same pendentive method may be employed above an octagon as above a square, and it is not uncommon to find such an octagon set within a square, and the lower dome, resting on the octagon and forming the pendentives, itself intersected by little domes that form semi-domes in the corner of the square (fig. 18). Another method, and one frequently used in the case of a dome upon an octagon, is a system of corbelling, wherein squared stones are set horizontally, instead of radiating to the required curve of the dome. It is really the same system as the domed chambers of the Mycensean civilization, but in this case the surface of the stones is not rounded off to the curved surface of the vault (fig. 18, Corbelled Pendentive).

The first great period of Byzantine architecture may be said to be from A.D. 500 to 600, but its principal achievements were all accomplished in the first 50 years. Its crowning glory is St. Sophia, completed in A.D. 537. Then follows a blank interval during the Persian and Saracenic wars, until we come to the second great period which lasted from the middle of the 9th cent. to the end of the 12th. In this period the great masterpiece is St. Mark's at Venice. After this follows a long period of decline, lasting till about the end of the leth century.

(a) In the first period the plan generally approximates to a square, and there is almost invariably a narthex, and often an exo-narthex beyond that The church is commonly entered by three doors, and a great dome covers the central area of the church, which contains the principal available open space. The dome rests upon piers, generally eight illustrates the system (fig. 18, St. Sophia).

But although such a dome, in its simple form as thus described, occurs in Byzantine architecture, it ्राम् स्टब्स् वर्षेत्राच्या सम्बद्धाः स्टब्स् वर्षे

the alternate intervals, semicircular niches which extend the central area toward the corners of the square (fig. 19). There is an apse behind the altar containing the seats of the clergy. The outside of the apse is polygonal. The central apse in which the altar stands is shut off from the church by an

FIG. 19.

iconostasis, and where there are two side apses there are generally two more of these screens.
The side apses, except in the rarest instances, do not contain altars.

The whole style is much lighter and more skilful than that of the Romans, and the Byzantine builders made their domes generally of brick, using no conmade their domes generally of brick, using no concrete. Consequently the supporting piers were much less massive. Columns were used, as we have seen, not as an essential feature of construction, but rather as screens, and to break up the building. Thus, by this slight use of the principle of multiplicity, they produce an effect of scale that the open, undivided building would lack. The columns have bases with a few simple moldings,\* and a capital generally most elaborate in execuand a capital, generally most elaborate in execution. Above the capital is the dosseret—one of the sign marks of Byzantine architecture. sign marks of Byzantine architecture. It is sometimes said that its use is to enable the column to support the very thick wall above it. It may be so, but the upper section of the dosseret is generally about the same area as that of the capital itself, and, in any case, there is no advantage in diminishing to the bottom of the dosseret, and then starting with a large top to the capital, so as to diminish again. The very function of a capital is to do this work, and there is no reason why, if necessary, its sides should not slope inwards more It is somenecessary, its sides should not slope inwards more sharply. A capital that cannot do its work is a solecism. It seems, perhaps, more likely that the dosseret is a curious survival of the entablature (fig. 20). In any case it is not a pleasing feature. When it is so reduced as to make merely a sort of double abacus, there is not the same objection, as the diminution in the upper one, or dosseret, makes it a mere molding, emphasizing the horizontal nature of the abacus, as in some examples in St. Sophia (fig. 21) The shafts are commonly monoliths of coloured marble, generally with an entasis but no flutes, and the whole style depends for its effect upon colour rather than upon solid forms. The forms that are used depend for their value upon pattern, not upon mass, doubtless as the result of the same æsthetic preferences where as the result of the same æsthetic preferences where surface rather than solidity is used as the medium of expression. Hence we find no great cornices, as in classic architecture, and no subdivided columns or ribs upon the vaults, as in Gothic architecture. The wall surfaces are flat and the decorations are flat. There are practically no moldings, and the arches have plain soffits. Plinths or basemolds to the wall, and string courses, are insignificant or the wall, and string courses, are insignificant or altogether absent. The very corners, even, are \* This is the correct medieval spelling now generally adopted.

rounded off to allow of mosaics being carried round Hence the carving is all surface carving. them.

FIGS. 20 AND 21.

and does not stand out from the background. The drill plays an important part, and there is but little modelling; the effects are those of patterns with a dark background formed by deep drilling, which is sometimes undercut, so that the pattern is detached from the stone behind. Even the capitals have the same character; projecting masses are rarely found. As wholes they are comparatively formless, although covered with the most intricate surface work. Doors are square-headed, although usually with an arch and tympanum above. Windows are generally simple semicircular-headed openings, but sometimes two or three lights, with semicircular heads, are placed together with shafts, or plain unmolded mullions, between.

FIG. 22

Large semicircular windows are occasionally divided up by shafts, and even by a sort of transom bar, as at St. Sophia. The result is not beautiful. A more beautiful device is the thinslab of marble, often carved with the most ex-quisite patterns, which frequently fills the smaller windows. These patterns are cut deeply into the marble, which is sufficiently translucent to allow the light to come through. It is conceivable that the light to come through. It is this represents a Greek tradition.

The total result is a style easily grasped as far as its main architectural features are concerned. The variety which actually exists is perhaps surprising, considering that it is achieved within such comparatively narrow limits. Of course it cannot amount to the variety found in the Gothic style, which depends for its greathering results of the product of the pro which depends for its esthetic expression largely upon complexity, whereas the Byzantine style, in its purely architectural character, is wholly simple. Complexity, with a touch of Eastern barbarism, makes its appearance only in the surface ornament.

The glory of Byzantine architecture of the first

period—indeed of the whole style—is St. Sophia. This church was begun in A.D. 532 and completed in the extraordinarily short period of six years. This time can apply only to the architecture, and much of the interior decoration must have been added afterwards. In the centre is a great dome, a trifle over 100 feet in diameter, and nearly as large as the dome of St. Paul's, London, It rests on pendentives raised upon four immense piers. The great feature is the extension of this central space by two huge semi-domes of the same diameter as the principal dome, abutting against the arches of the pendentives. These semi-domes, together with the great masses of the piers in the direction of the length of the church, resist the thrust of the great dome in that direction. But the thrust in the direction across the church is met by enormous masses of masonry carried by arches over the aisles, and forming a bold, if somewhat extraordinary, feature upon the outside of the building. The

figs. 23 and 24.—section and plan of st. sophia.

result is the most spacious interior in the world. In order, however, to preserve the apparent as well as the actual size, there is a skilful arrangement of columns, in two storeys, in the great arches at the S.E. and N.W. sides, and in the semicircular niches that we have already seen as characteristic of the first period of Byzantine architecture. These columns give something of the principle of multiplicity, and provide a unity of measurement, without destroying the meiestic simplicity of the whole

destroying the majestic simplicity of the whole.

The central area is surrounded by aisles covered with intersecting groined vaults, after the Roman manner, and at the lowest end is a fine narthex 205 ft. long. Over it is a gallery for the women, which is continued on either side over the aisles. A gallery for the women is the usual arrangement in Byzantine churches, and may be contrasted with the curious arrangement in the Basque provinces, where there are two or three galleries, one above the other, for the men and the boys. The lighting is effected by forty windows round the central dome and five in each of the semi-domes and the minor domes. Above the two tiers of columns on the

sides are two tiers of windows (fig. 23). There are also large windows in the aisles. But in no case is the window arrangement satisfactory, and this is the weakest feature in the church.

St. Sophia was by far the most important church in Christendom built in this epoch, and it is interesting to notice that there is no attempt made to orientate it: the axis is one degree south of S. W.

orientate it: the axis is one degree south of S.W.

The majesty and simplicity of the interior of St.
Sophia, with the richness of its colouring, make it by far the finest interior of its kind in the world. It is difficult to compare things that are so utterly unlike as a Gothic cathedral and this building; each is wonderful in its own way; but certainly there is nothing in St. Sophia that warrants us in ranking it after any interior whatever. The exterior is different. One may work up a qualified admiration for it; but, in spite of a certain dignity of mass which it shares with all great engineering works, it is hardly architectural, and finds its competers rather in the pyramids or in a modern railway station.

station.

St. Vitale at Ravenna is generally classed as one of the great churches of the first Byzantine period; i.m., as Forgusson points out, it shows affinities with the so-called course of Minerva Medica at Rome, quite as marked as any resemblaness between it and SS. Sergius and Bacchus at Contantinaple. There is, however, Greek influence in the Roman building, so there is something to be said for this view.

(b) The churches of the second period are smaller.

(b) The churches of the second period are smaller than those of the first, and have several characteristics of their own, although in the main they follow the earlier work. The lighting of the dome had always been a difficulty. Windows in a dome are, of course, not vertical, and the effect is always unpleasant. The difficulty can be met on the exterior by raising a vertical wall, which at the same time is helpful in resisting the thrust, acting as a pinnacle would in Gothic architecture. The outside of the dome is then generally treated with a double curve (fig. 25).

Viewed from the exterior, this naturally suggests the drum, which we find as the characteristic feature of the second period, even if it made its first appearance earlier. It is, however, not invariable. The effect of the drum is on the whole pleasing, forming an effective lantern in the interior, and giving altitude and architectural character to the exterior (fig. 26), which latter is so much needed at St. Sophia. The central dome is still the leading feature of the design, but subsidiary domes are frequently grouped round it. In St. Mark's, Venice, there are five domes. The dome is almost invariably, in this period, placed upon four supports only, instead of the eight common in the earlier period; and the semicircles (as in fig. 19) do not occur. The general proportions of the building show more variety than the practically square outline of the previous period. Sometimes we find an elongated rectangle or an approximation to the cruciform plan. The triple apse is almost universal in this period, with the

altar in the bema before the central apse. In other features the two great Byzantine periods are not markedly different.

FIG. 26.

Of this period the greatest church is undoubtedly St. Mark's at Venice, which, in spite of numerous later alterations, still preserves in its interior its principal Byzantine features. The Byzantine parts of the church of St. Mark's, as we now see it, are the result of extensive alterations, amounting nearly to a re-building, in the middle of the 11th cent., of an earlier basilican church of A.D. 976, itself containing parts of a still earlier building. The western narthex, the walls and arcade of the nave, and portions of the east end, are practically all that remains of the basilican church. The columns in the eastern part of the church were removed, and six great piers were introduced—two at the west end and four in the centre of the building. These are themselves pierced by arches of the same height as the nave arcade. Two transepts were added, the east end was lengthened, and the narthex was continued round the two sides of the building. Above the nave and the crossing were erected two large domes and three somewhat smaller domes over the bema and the transepts, which are made slightly smaller than the crossing by the width of the pilaster shafts that support the arches leading into the three arms. By this skilful device a perspective effect of greater size is obtained. Great arches, which are practically barrel vaults, cross from pier to pier, and upon these the domes rest. Above the nave arcade is a narrow gallery, some 3 ft. wide, which represents the women's galleries of the Eastern Byzantine churches. It is, however, valuable as providing a unit of measurement, and thus giving size to the church, rather than for any utilitarian purpose. The capitals are not very characteristically Byzantine, being of a sort of pseudo-Corinthian type. They probably belonged to the original basilican church, and are of very excellent workmanship. Above them is a double abacus, or abacus and reduced dosseret. The church is not nearly so well lit as St. Sophia, the principal light coming from sixteen windows in each dome,

just above the springing.

The colour effect is the main feature of the building: the marble columns, and the famous floor with the wonderful Byzantine mesaics on their golden ground, and even the pictorial mesaics of a later age, all give a richness unsurpassed elsewhere. Hence we find the usual flat Byzantine treatment with few moldings of any kind, although St. Mark's, figs. 27 and 28, has an unusual amount of carving of a bolder type than one associates with Byzantine work, most of it, however, not belonging to the Byzantine design of the building. St.

Mark's retains a magnificent example of an iconostasis with figures of the Virgin, St. Mark, and the

FIGS. 27 AND 28.—SECTION AND PLAN OF ST. MARK'S

Twelve Apostles. This feature in the Byzantine churches corresponds to the rood loft of the Gothic buildings. In later times, particularly during the 13th and 14th centuries, a great deal of ornament has been added, especially to the exterior, which has been cased with a veneer of marble. The domes have been covered with tall cupolas, and to the same period belong the pinnacles and overflorid Gothic ornament.

3. Gothic Architecture.—During the development of Byzantine architecture—the direct outcome of the æsthetic character of the people of the regions where it occurs—we have another style developing in the West, a little later in reaching its maturity, but roughly the contemporary of the Byzantine. This style, to which the name 'Gothic' is not altogether inappropriately given, if we extend the term a little beyond its usual and somewhat arbitrary limits, was the style principally used by the Christians of the North. Those of the East made use chiefly of the Byzantine, and Italy of the Latin style—one, as we have seen, much more closely related to the Roman. Of course other styles have been used by Christians in different countries, as, for instance, in Norway or in Russia. Even in N.W. Europe, although it is convenient to group the styles of several countries under the one heading, there are in reality several styles; and the more one studies, say, the Gothic architecture of England and France, the more one realizes how little they have in common. It is true that to some extent the great wave of Romanticism marks the æsthetic character of the whole area, so that a church in England is, of course, more like a church in France

than a church in Russia, Constantinople, Italy, or Norway; but it is only a very inartistic or super-ficial observer that fails to see the enormous difference. The comparatively little that is known about the styles of the East offers an interesting parallel. We class Armenian architecture as Byzantine, but there is almost as much difference between the cathedral at Ani and St. Sophia as there is between St. Sophia and St. Paul's, London.

But, provided we remember that 'Gothic' is a name belonging to a group of styles rather than to one single style, it is really helpful to consider them together. The Gothic, then, may be defined as the architectural expression of those races which, beginning with Alaric the Goth (d. 410 A.D.), and Theodoric the Ostrogoth (d. 526 A.D.), overthrew and superseded the power and civilization of Rome. The beginnings of the Gothic tendency in archias Theodoric, but the culmination of the style is in the 13th century. The name 'Gothic' was originally given at the time of the classical revival as a term of contempt, practically meaning barbarous; but although the actual Goths had nothing to do with what we term Gothic architecture, nevertheless they were the pioneers in that wave of North European civilization which finds its highest artistic expression in the architecture

that passes under their name.

The character of the Northern races is essentially different from that of the South of Europe, and expresses itself, whether on its intellectual, artistic, expresses itself, whether on its intellectual, artistic, moral, or religious side, in a manner of its own. There is also, undoubtedly, the character of an age as well as of a race, and this factor has also to be taken into consideration. As a result of race and age in this case, we have in the artistic world the romantic expression that we see at its height in such examples of art as Malory's Morte d'Arthur, the Chanson de Roland, the Cloth Hall at Ypres, Lincoln Cathedral, or Bodiam Castle. Chivalry on the social side, as Romanticism on the sethetic, is the social side, as Romanticism on the æsthetic, is the outcome of the same root characteristic; the one is not the result of the other; they are cognate characteristics proceeding from a fundamental trait at the back. It is important to notice this, as it is a safeguard against some of the common errors of those who, perhaps learned in their own departments, have no practical artistic knowledge. All artists are familiar with the attempts of laymen to explain perfectly natural artistic forms that arise inevitably from artistic causes by reasons based upon moral or religious grounds. It is perfectly true that there may be close parallels in the moral or religious world, but these artistic forms are not derived from them any more than they from the art forms, although both they and the artistic forms may proceed from something behind them both. The Gothic form of art seeks to express itself by the principle of multiplicity rather than by simplicity, and by suggestion rather than com-[For a further examination of this ques

tion, see the article ART (Christian).]
The beginnings of Gothic architecture are to be found in what is perhaps best termed Romanesque Gothic—a style commonly known as Romanesque, and largely dependent upon Roman architecture. The term by which it is known is hardly a matter of much importance; the chief interest in the style is in the points wherein it showed its living force in developing from Roman architecture, and in pointing the way towards the later Gothic, rather than in its dependence upon the former. The style, moreover, is largely influenced by other elements that have nothing to do with Rome: the Celto-Saxon influences of our own country, for instance, or even the influence of Byzantium.

After the downfall of the Western Roman Empire, while Europe was in the melting-pot, architecture seems to have been somewhat stationary. It is, however, difficult to make certain, as later re-building has practically destroyed all evidence. Even if the conquerors were desirous of building, there was much less opportunity for it than in times of peace. About the beginning of the 9th times of peace. About the beginning of the 9th cent. we find men's thoughts turning towards an architectural expression that rapidly blossomed into great things. In Burgundy and Provence, along the Rhine valley, in Lombardy, in Normandy, and in our own country, arose architectural schools, all of great interest, with their own individual characteristics, which endeavoured to express this artistic principle of romantic, suggestive, complex unity. In spite of its many complex unity. In spite of its many gestive, complex unity. In spite of its many parts, there is in the developed Gothic more homogeneity than in any other style save the Greek. The stone wault upon the stone walls, stone columns and arches, though doubtless to some courtest a precention against five is still extent a practical precaution against fire, is still more the expression of this æsthetic principle. The effect of organic growth, rather than of aggregation, marked by an extraordinary æsthetic appro-priateness in every member to the function which it has to perform, all helps towards the final scheme. Above all, the suggestiveness of a cer-tain intricacy of plan and elevation, of structural features and of ornament, marks out the esthetic

features and of ornament, marks out the æsthetic character of the Northern peoples and the age during which these buildings were erected.

It has been suggested that the Latin style had in itself a power of development that would have given us the future forms quite independently of the North; but, without entering into the argument, it is practically sufficient to point out that Central Italy itself never produced anything of the kind, even when the North had invented the style and carried the art to perfection. The different schools were not equally successful. Burgundy and Provence, with their barrel vaults, exercised comparatively little influence; and although the Rhine churches at first were in the van, they the Rhine churches at first were in the van, they dropped behind and left it for England and Normandy, and the slightly later school of the He de France, to perfect the art. The influence of the He de France school ultimately became the greatest of all, although the Durham dates have now been of all, although the Durham dates have now been settled beyond dispute, and prove that the Durham, or at any rate the English, school was first in the field, with perhaps the two greatest inventions of the Gothic architects—the shell vault on ribs and the flying buttress. But English architecture, uninfluenced, pursued its own line of development to the last, ignoring the French work alike at Canterbury and at Westminster.

In a short article such as this a sketch of the

In a short article such as this, a sketch of the development of our own school, and a brief comparison with that of the Île de France, will perhaps be the best way of illustrating the leading features of the age.

(a) Celto-Saxon work.—Putting aside for the present all architecture save that of church building,—although the influence of domestic and civil work upon churches is enormous and commonly overlooked—we find that we have in this country a Celto-Saxon type of church, resulting from the composition of divers elements, of which the more important are as follows:

In the first place we have a purely Celtic element in the architecture, partly surviving through the Celtic or British population, partly resulting from the architecture introduced by the Celtic missionaries of St. Columba from the North. This spread over the whole country save the South-Eastern portion. St. Columba himself died in 597, but his missionaries continued to further his

VOL. I.-45

In the year in which St. Columba died, St. Augustine came over to Canterbury, with the powers of a bishop, to convert the English, and he introduced a Latin element. But this influence was small, and affected the style but little. work.

Later we have an influence of Northern monasticism, which must be distinguished from the great Norman influence of the Conquest, but which also represents the Romanesque Gothic of which also represents the Romanesque Gothic of Northern Europe. East Anglia was converted by a Lombard priest, Felix, afterwards bishop, and even until quite a late date we find a distinctly un-English influence at work in the great Benedictine foundations of East Anglia. Sussex was converted by Birinus, an Italian or Lombard monk, early in the 7th cent., and to some extent East Anglia, Kent, and Sussex remained the stronghold of Continents influence until the lest stronghold of Continental influence until the last. Monastic builders from Normandy were employed at Romsey Abbey in 967, and upon Bishop Ethelwold's cathedral, Winchester, during the reign of Edgar, who with Dunstan as his administrator largely reformed the monastic system.

The first element is by far the most important in the formation of the Celto-Saxon type of church. It is characterized by a narrow rectangular plan, to the characterized by a narrow rectangular plan, commonly of two or more chambers, of which Trinity Church, Glendalough, Ireland; Egilsay, Orkney; St. Regulus, St. Andrews, Scotland; Escomb, Durham, and Bradford-on-Avon, Wilts, England, may be taken as typical. The different characteristics to be noted are—(1) the general length as compared with the breadth; (2) separate contaggles about the plants. rectangular chambers; (3) large porches, or side chambers, as at Bradford, Repton, Deerhurst, etc.; (4) a western tower of defence, round or square, usually entered from within the church; this is a

RTG. 29.

common feature; occasionally, as at Brechin, it is separate from the church; (5) a type that occurs as at Studland, Dorset, Barton on Humber, or Basing, Hants, where the tower actually forms the body of

the church (fig. 29).

All these features continue to play a prominent part in English architecture, and help to distinguish it from that of the Continent. In the first place, the extreme length of the English churches is one of their most important characteristics; they are the longest in the world. Secondly, the rectangular, instead of apsidal, endings to English churches are too familiar to need comment. Although the apse was introduced, it speedily disappeared, and never made way at all in the West of England. Thirdly, we may notice the English tendency to a series of more or less separate chambers—the separate closed in choir, the nave being often, as at Canterbury or Windsor, completely shut off, and the separate extensions at the !

east end, as at St. Albans, Wells, Gloucester, Hereford, Winchester, and indeed most of our cathedrals. Fourthly, the large porches or side chambers have a double influence. As entrance porches they are exceedingly common, e.g. Worcester, Gloucester, Canterbury, etc., and in hundreds of small parish churches. It is said that our inclement Western weather is the original cause of the western entrances being rarely used or alto-gether absent in this country. We also see these side projections in the very marked English transuce projections in the very marked English transepts, as compared with those of the Continent (see figs. 55 and 56). Frequently there is a second transept; many of our English cathedrals have three, while Lincoln has four, pairs of such projections. Fifthly, the single western tower, so familiar feature in the English parish church can be traced. a feature in the English parish church, can be traced back to this source, and it hardly ever occurs in France. With regard to the last feature—when the tower forms the centre of the church—we reach by the addition of the characteristic side chamber a cruciform central towered type (e.g. Braemore, Hants, and the Priory, Dover Castle). There are doubtless other influences that give us this type, but it is probably the double influence that preserves it as the typical English great church, right through the Middle Ages.

The second element in the Celto-Saxon style is

the Latin style introduced direct from Rome by St. Augustine, i.e. the basilican type of church; but the Augustine influence seems to have been local and of little moment. The original church at Canterbury was quasi-basilican with an eastern as well as a western apse, the altar presumably There are being in the western at so early a date. one or two basilican examples up and down the country, but they are very rare. It is, indeed, not at all certain whether the type as found at Wing in the vale of Aylesbury has anything to do with St. Augustine, and may not rather be a survival of the old Romano-British type of far earlier date, such as, presumably, we see in the plan at

Silchester.

Latin influence, however, does make itself felt, but through an indirect channel, and the division into nave and aisle is introduced through the third great element—the Northern monastic church. The aisle, however, never becomes quite the popular feature in this country that it is on the Continent. Five aisles, so common abroad, practically do not occur in English cathedrals. It is also largely to this influence that we owe the great central towered cross-church plan. But even this would probably have disappeared along with other importations had it not practically coincided with a type of more native origin. To this composite influence we may be said to owe the unequalled pyramidal composition of Salisbury, or the dominance of the central tower in such magnificent tower groups as Durham, Lincoln (fig. 57), or Lichfield, quite unapproached by the Continental architects

The details of the Celto-Saxon style are very largely of Celtic and Teuto-Scandinavian origin, although decadent Roman work is also a factor to be considered. There are certainly affinities with early German work, particularly noticeable in the method of wall building, which is solid, and not built with a rubble core after the Roman method found in France. A brief résumé of the principal

details is as follows :-

(1) Long and short work, or massive corner quoins. (2) Absence of buttresses. (3) Pilaster strips, stone carpentry, or strap work—a feature whose origin is obscure, but a far-away derivation from the Roman pilaster is perhaps the most probable. (4) The arches are semicircular, and often cut out of a single stone, or else they are straight-sided—a peculiarity not found in other styles. (5) The windows are often divided by baluster shafts, which are set in the centre of the wall, with a long stone forming a sort of abacus that runs from front to back

through the whole thickness of the wall. (6) The windows are widely splayed, both internally and externally. (7) There is a great fondness for parallel lines as ornament, foreshadowing the later characteristic English parallel moldings of many bands, which contrast with the simpler flatter treatment of the Continent. (8) The interlacing bands and characteristic Celtic curves seem also to foreshadow the English ornamental work of the 13th century. There is a vast difference in the character of English and French ornament, which is generally overlooked. It is probably connected with a difference in origin.

FIG. 30.-CELTO-SAXON DETAILS.

Such are some of the principal points in connexion with the Celto-Saxon work—a style much more important than is commonly supposed, which tends to be ignored on account of the greatness of the next style of architecture that made its appearance in these islands, and was in its turn made use

of for Christian purposes.

(b) The Rise of English Gothic.—The Norman Conquest produced in Britain a massive style of architecture, of towers, fortresses, and strongholds. The churches, which naturally are always built in the style of the country, partake of the same character, so that a change comes over the church building in these lands. Contrasted with the comparatively light buildings of Celto-Saxon work, we find heaviness almost the leading feature of the new work. But the English soon made their own influence felt, and for a time English church architecture undoubtedly led the way in

In the first place, the number of churches built is entirely without parallel. During the hundred years that followed, when the country had settled down after the disturbance of the Conquest, there were built between three and four hundred great cathedrals and monasteries, churches of first-class rank, besides numberless smaller buildings. In the last hundred years, with a population nearly twenty times as large, and enormously improved methods of transit and mechanical appliances, we have built only one great church, nearly completed a second, and laid the foundations of a third. Not only, however, was the number of churches remarkable, but the scale of the English churches very greatly exceeded all other churches in the world that were built about that time. In all the rest of Europe there were built only two churches of over 50,000 sq. ft. area. In England there were four churches that exceeded even 60,000 sq. ft.

Arras of Great Medizval Churches
built or in course of construction in a.d. 1100.
The Continent. England.

In many respects the very fact that England led the way was against her, because her great churches were already built when advancing art would have allowed her to build greater. Still more was she hampered in re-building and enlargement by the

sizes already fixed. A new choir built on to an old nave cannot be made altogether out of scale with it.

That England led the way in number and size shows an activity, a resource, and an initiative that, even taken by themselves, would be strong presumptive evidence in favour of her being a leader in style; and this we shall afterwards see to be the case.

The Romanesque Gothic is marked by the cruciform plan, and the Norman form has the central lantern tower. The origin of both these features is far from clear. The transept is generally considered to be the development of the space in front of the altar in the Latin style. This, however, is not found at Ravenna, for instance, and is not common outside Rome, and the intermediate steps in any case can hardly be said to be traceable. The central lantern is still more doubtful in origin. Some have suggested a Byzantine origin for the whole North European Cross church as explaining both the cross and the central lantern; but although it may explain the cross better than the basilican church, and there is at least the lantern dome, while the basilica has no such thing, it is still a far cry from a Byzantine dome of the first period to a Norman lantern tower. The few dated examples are merely enough to make us beware of drawing hasty conclusions. There seems no particular reason for not supposing that the central tower was invented in the North, except that it is the fashion just now to believe that no one ever invented anything—which is true only within certain limits. The object of the lantern tower was twofold. In the first place, it threw light into the centre of the building, where the high altar was put; and, in the second place, it formed a unifying central feature, both within and without. The removal of the high altar from its proper position to the east end leaves the lantern tower to throw

to the east end leaves the lantern fower to throw its light upon an empty space.

In any case, we find two distinct types of Cross church making their appearance in this country, both of which the national genius modified to suit its own esthetic conceptions. First, we have the multapsidal type, and, secondly, the chevet type. The origin of the multapsidal type is possibly to be sought in the Byzantine or Egyptian types already noted, or it may be directly derived from the basilica, but it certainly becomes quite a common variety. The Normans in Normandy treated it in their own way, squaring the end two bays beyond the crossing, in a manner perhaps foreshadowed at St. Apollinare Nuovo at Ravenna, and then adding

FIG. 31.

the apse (fig. 31). The Anglo-Normans took this plan, and it at once began to assume the first English characteristic of greater length. We find a typical example at St. Albans, with its long parallel apsed chambers (fig. 31). This becomes one of the great types of Benedictine orthodoxy in the East of England.

But it is to the West and the North that we have to turn to find the truly English manner. Here we find Hereford with a square end as early as 1079-1095, and Llandaff and Romsey early in the next century. It has been said that the square end was introduced into this country by the Cistercians. This is impossible, as it was in use before the Cistercian order was founded. But it is interesting to observe that from this very Western district came Stephen Harding, one of the original founders, and head of the order, and abbot of Citeaux in 1109. It seems most probable that the Cistercians owe their seems most probable that the clistercians owe their square East ends to him. Hence, when we find the Cistercians at a later date building their square East ends in England, they are merely bringing back an English feature that naturally falls in with, and helps to strengthen, the native tradition.

FIG. 32.

So we find that in English hands the multapsidal

type develops a squared form, such as we see in Kirkstall Abbey, Yorkshire.

The Reformed orders, Cistercians and Augus-tinians, mainly in the West and North, worked out the English manner, and although the great Benedictine abbeys of the East have had the fortune to survive, it is rather to the ruined abbeys of Yorkshire and the Welsh Border that we must turn if we wish to see the English style in the making. Hence, while the conservative Benedictine abbeys were still using the round arch and the apsidal termination, we find the pointed arch and the square end in the North and the West. The change of style is, as in France, partly due to an Prince of style is, as in France, partly due to an Episcopal influence that furthered advance and reform. In the latter country the bishops joined hands with the laity against the old Monastic orders, and we get the great laic cathedrals of France. In this country they joined hands with the Reformed orders, and to this is due the strongly marked Monastic character of English building. In early days the Cistercians eschewed ornament, central towers and triforiums, which gave a chasteness to the style in their hands that, to some extent, it would be true to say, marks the English work

until well into the 14th cent., even after such luxuries as towers and triforiums had become common again.

The other great type is the chevet type, which, as Fergusson points out, is very probably a development from the circular church by the addition of a nave, the circular part becoming the

choir. The development is apparently French (fig. 33). In England the circular churches have and the circular churches have had choirs built on to them, and the circular part becomes the nave. The chevet type, with or without its circumscribing chapels, is found at Bury St. Edmunds, Norwich, Edward the Confessor's, Westminster Abbey, etc., and is always lengthment in the English memor (for 24). This was always lengthment in the English memor (for 24). ened in the English manner (fig. 34). This we also find still further Anglicized with a square ambulatory at the east end, as at Dore Abbey, Salisbury, or Glasgow.

Besides the lengthening from east to west, the English æsthetic character shows itself in the wide transepts and the still more characteristic transeptal west ends (fig. 55), which we find even in Rouen Cathedral, a church planned by an English architect. This we can contrast with the narrow twin-towered French Norman type, such as we

see at St. Etienne, Caen.

The Anglo-Norman church of Bury St. Edmunds had a wide-spreading front of 260 feet. Ely was planned for a west front of 200 ft., although it is doubtful whether this front was These two are about three times ever completed. as wide as the nave.

The best way to obtain a general survey of each period is to work from the ground plan upwards. It has already been pointed out that Romanesque Gothic in England, perhaps best termed Anglo-Norman, is massive in its treatment, and this naturally shows on the ground plan. A single pier of Durham contains as much material as the whole set of piers of some of the later churches. The walls are always immensely thick, even when they support only a wooden roof, which on the

FIG. 35 .- WALL DIAGRAM AND SECTION OF CHURCH.

whole is the commoner arrangement; but when they have to resist the thrust of a stone vault, this is even more the case. Buttresses are as yet quite rudimentary, and the history of Gothic architecture might be described as a progression from a heavy wall with a wooden roof to a glass wall and a stone roof. The projection of the buttresses becomes greater and the wall thinner, and the progress might be diagrammatically represented as in fig. 35. So what practically happens is that the wall is turned round in sections upon itself, whereby, with the same or even less material, a greater resisting power is obtained (fig. 35).

greater resisting power is obtained (fig. 35).

Before passing upward to details, the general treatment of the elevation should be noted. The Anglo-Norman great church is a three-aisled building of three storeys (fig. 35). The nave-arcade is the principal series of arches in the church, and divides the central aisle, or nave, from the side aisles. In order to light the central aisle it is raised above the roof of the side aisles, whereby we obtain a clerestory, through which the light passes, and which is contrasted with the blind storey or triforium that occupies the space of the aisle roof. Sometimes the triforium is transparent, as it is termed; that is, it is treated as a gallery

FIG. 36.—JEDBURGH.

with windows over the side aisles. This treatment is more common in France than in England.

There is more variety in the bay treatment in this country than in France, arising in part from a different initial standpoint. The French architects were more interested in the logic of construction, and the tendency for their buildings is to become, as it were, skeleton constructions, and for the wall as such to disappear. The English, however, continued to regard the wall as a feature in itself, giving an æsthetic sense of horizontal continuity, as distinct from the vertical skeleton expression of French architecture. The wall, therefore, continues to some extent to be regarded as a field for decorative treatment on its own account. A single instance must suffice, and is seen in the interesting bay treatment, favoured mainly by the Augustinians, in which the triforium is treated as a hanging gallery, depending from the main arcade. Examples may be seen at Jedburgh, Romsey Abbey, Oxford Cathedral, Glastonbury, and Dunstable. It gives a sense of height greater than either the simple two-storey or the simple three-storey treatment.

two-storey or the simple three-storey treatment.

Anglo-Norman piers are of two main types. In the first, which is more or less columnar, we probably see a far-off descendant of the columns of Greece. There are two distinct varieties, of which one, although generally built up in courses, and not in single drums, still, in general proportion of capital, and base, preserves the characteristics of a true column. The other is a huge mass of masonry with a few moldings round the top in lieu of a capital. This partakes more of the nature of a pier, and is peculiar to this country. Examples may be seen in Gloucester, Durham, Tewkesbury,

FIG. 37.—NORMAN PIERS

etc. The second type is the pier proper, developed from a section of wall left between the arches.

Both these types develop in two ways which mutually influence each other; first, the struc-

F1G. 38

tural, which is more particularly characteristic of France; secondly, the decorative, which is more particularly characteristic of this country. In the first system additions are made to the pier, in order to support sub-arches and vaulting shafts; thus we get a composite type of pier where each part is assigned to the performance of some definite function. In the decorative system the pier also becomes composite, but in a different manner. The corners of the pier, for instance, may be chamfered off so as to form an octagon, or cut out as at St. Lawrence, Kent, and ornamental shafts inserted (fig. 38), thus giving a sense of lightness to the whole. Later we find these ornamental shafts arranged round the octagon formed by cutting off the corners. The octagon may become a circle. In the decorative system the change begins with the shaft, and the abacus remains square, and, in any case, the detached shafts have no direct connexion with the load above. When both load and support become very complex, the eye is sufficiently satisfied with the complex support for the complex load, without logically following out each subordinate part. The carpal and metacarpal bones in the beauty of the human anatomy may be taken as a parallel. The bases are generally set on a square plinth, often with an ornament to fill up the angles. The commonest form of molding is a hollow above a round (fig. 39).

There are three types of capital: (1) a pseudoclassic, a sort of debased Corinthian or Ionic, much commoner on the Continent than here; (2) a cushion-shaped capital which seems an original invention; and (3) the scalloped capital, a type derived from the cushion variety, which in its turn has important influences upon the next period. The abacus is always square, first with plain cham-

fer, then with hollow chamfer and small nick above. Passing upward, we may note that the arches are generally round, although the pointed arch is occasionally found. The earliest known example in this country is c. 1090 A.D., half a century before it becomes at all a general feature. The arcade arches are rarely of more than two orders (i.e. recesses or steps)—a main arch and a sub-arch (fig. 39). The moldings of the arch are very simple, a plain chamfer, a hollow chamfer, or an edge roll being all that is generally found. Door arches are often of many orders, being recessed sometimes as many as seven times. They are frequently much enriched. The features of the triforium arcade are the

The features of the triforium arcade are the same as those below, but it might be noted that decorative development often makes its appearance here before it is seen anywhere else.

The clerestory generally shows an ornamental arcade on the inner face of the wall, and plain round-headed windows on the outer face, commonly with a passage between the two in the thickness of the wall. The Anglo-Norman window is generally widely splayed within, and set near the outer face of the wall, in which respect it may be contrasted with the Celto-Saxon window.

It is not treated with the elaboration of the door. Some later Anglo-Norman windows show rich decoration on the outside, but it is interesting to notice that, whereas the door becomes a less important member as Gothic architecture advances, the window gradually becomes the most important of all.

In the roof we reach the most complex and most interesting feature in Gothic architecture. It has even been said by some that Gothic architecture is nothing more than the art of building stone vaults. This, of course, is ridiculous; the early writers, such as Rickman, whose work still remains one of the most interesting on the subject, wrote of Gothic architecture with hardly any reference to the vault at all. There is certainly enough that is distinctive, and shows the whole spirit of the thing, without taking notice of the vault. Gothic architecture is not the mechanical treatment of any one feature, neither the vault nor the buttress, nor even the window, which probably, after all, is both more influential and more characteristic than any other single feature. It is not even a question of mechanics; Gothic architecture is architecture—a truism, one would have supposed; it is neither engineering nor building, as some writers would have us believe. Hence it depends fundamentally upon æsthetic principles, which, so to speak, set the mechanical problems for the mechanicians to solve, and the latter are essential, it is true, but only means to an end.

Of course any one is at liberty to define 'Gothic' as he pleases; but to deny the title to such a building as Eltham Palace or St. Peter Mancroft, Norwich, is so to circumscribe the sphere of inquiry as to make it of comparatively little importance. It is a primary and more fundamental question to find what is the root principle common alike to Crosby Hall, Exeter Cathedral, and Notre Dame, and differentiating these buildings from St. Sophia and St. Stephen's, Walbrook, than to find what differentiates them from each other—not that this latter inquiry has not great importance within the

latter inquiry has not great importance within the larger sphere.

A full discussion of the vault would be impossible

within the limits of this article, but it may be thus briefly summed up. In early days it was more common to find an open-timber roof, but a desire to give organic unity to the whole conception, coupled doubtless with the advantages of greater security against fire, led to the gradual substitution of the roof of stone. This we find first in the aisles, and then over the wider spans, such as the great English Chapter Houses, some of them 40 ft. wide, or the high vaults over the naves of the great

FIG. 40.

churches. The vault was almost always covered by a wooden roof to protect it from the weather. This is to some extent a false construction, which is at variance with the ordinary methods of the Gothic architects. But there are a few examples of true stone roofs in this country,—the Treasury, Merton College, Oxford; Willingham, Cambridge; Minchinhampton; Rosslyn; and Bothwell. The simplest form of vault is the plain barrel

The simplest form of vault is the plain barrel or waggon vault, which gives a great continuous thrust throughout its length, and therefore requires a very thick continuous wall. The effect is gloomy, because the lighting problem is difficult of solution. Large windows are impossible in a wall bearing a continuous thrust, and sloping windows in the vault are both weak and ugly. If a window is put in the vault, it is a natural step to carry up the vertical surface of the wall below, as we saw in Byzantine architecture (fig. 25). This at once suggests the treatment of intersecting barrel vaults, which is eminently suitable for the vaulting of a square space, A, O, C, being the square of intersection of two half cylinders of hemispherical section, corresponding to A', O', C' (fig. 41, I and II). This form of vault was used by the Romans, and the tradition never completely died out; and this vault, the ribless quadripartite vault, as well as the simple barrel vault, is used by the early Romanesque builders, as in the castle at Oxford.

the tradition never completely died out; and this vault, the ribless quadripartite vault, as well as the simple barrel vault, is used by the early Romanesque builders, as in the castle at Oxford.

The intersection of two cylinders is not a circle, as in the case of intersecting spheres (see p. 701), but an ellipse. This elliptical line of intersection is termed the groin of the vault. Directly the space to be vaulted is not square, difficulties arise, and as long as semicircular vaults are used they will not intersect at the crown at all, as the vaults are of different height (fig. 41, III). It is therefore

necessary to bring them to the same height, which may be done by stilting the narrower vault, that is,

raising it on two vertical walls that serve the purpose of stilts. This may also be helped by using less than a semicircle for the larger vault. But, in any case, the groins will become twisted in plan, as may be seen in fig. 41, IV and V. In the narrow vault it is obvious that any point in that vault, up to the height of the stilt, must be vertically above the line CB. Any point, therefore, being on the line of intersection of both vaults, must be vertically above the side CB, until a height above A is reached. On the other hand, in the bigger vault, there is no vertical portion, and it curves gradually away from the side BF at the outset; the groin, therefore, will tend away from above BF, but keep close above CB. When the top of the stilt is reached, however, the narrow vault curves rapidly over to the other side, but the larger vault continues its gradual curve, so that the groin now crosses rapidly over to the other side, and then keeps similarly close above GF until it reaches G. In actual building the curve is generally coaxed a little, so as slightly to reduce the violent break in the line, as seen in the plan above, but in any case it is excessively ugly and weak, as the weight of the vault rests upon the groins. By making the vaults enormously thick and filling in the back with concrete, until the whole becomes one solid mass for some way up the vault, the weakness is counterfacted, but it means an undue weight upon the walls

Now the great invention of the Gothic architects was the substitution of another principle. So far the vault has been regarded as the intersection of two continuous cylindrical tunnels, and the groin is merely the line of intersection. At any point along the vault we have, say at ML or HK (fig. 41, V) a section of a perfect cylinder; the line of the groin, however, we saw was not in a plane, but twisted. The invention is to build the groin regular (i.e. in a plane), and then accommodate the vaults to fit the groin, which is made in the form of a strong rib to support the whole. The vault is built by first erecting a series of arches of regular shape (i.e. in planes), not twisted, to form the ribs. The short ends may be stilted, the diagonals segmental, and the broad ends semicircular, so as all to be of equal height. The vault itself is then built, as a light shell, resting on these ribs. This shell is built in courses, as NP, PR (VI), which are practically straight, but very slightly arched to the ribs upon which they rest. The consequence is that, as now the shell must follow the curve of the groin ribs, it cannot itself be part of a regular cylinder; and as before the diagonals were twisted to suit the vault surface, now the vault surface is twisted to suit the diagonals. The result is a curved surface very much resembling that of a ploughshare.

resembling that of a ploughshare.

The ribbed vault—and by ribbed vault is meant a ribbed shell vault upon the above principle, i.e. one which is structurally based upon the rib curvature—is perhaps the most distinctive invention made by the Gothic architects. Ribs may occasionally have been used in earlier days to strengthen the groins of vaults, based upon the curvature of the vault surface, but that is not the Gothic vault. There is no doubt that the earliest vaults of this type of which we have any knowledge are those of Durham Cathedral. Such were the high vaults of the choir begun in A.D. 1093. The earliest properly attested date in France is, at the very least, more than thirty years later.\*

\*The whole discussion of these dates, with regard to England and France, is given in J. Bilson's able little book, Beginnings of Gothic Architecture (1899). No other writer approaches Bilson in his thorough grip of his subject. A short resume of the subject is given in the present writer's book now in the press (Fairbairns & Co.).

As to the cause of the compartments assuming As to the cause of the compartments assuming the rectangular form instead of the square, it can hardly be questioned that the primary reason was esthetic and non-mechanical, as the great English Chapter Houses, with spans of 40 ft., where there were no structural considerations, are so built. The immense improvement to the vista, and the beauty of the apparent length thereby gained, quite apart from any principle of unified complexity, are sufficient to account for it (fig. 42). The French

continued to use the square vault for a long time, taking two compartments of the aisle to one of the nave, even inventing the sexpartite vault (fig. 41, VIII) to get over the difficulty before finally following the English lead. The introduction of the pointed arch into the vault followed not long after. It offers an aesthetically more pleasing solution of the problem of vaulting over a rectangle, at the same time preserving the level crown, than does the stilted arch (fig. 41, VII). The pointed arch in every rib gives a far more satisfactory sense of æsthetic unity than the mixture of segmental and stilted arches, and it also reduces the ploughshare twist.

The pointed arch was used by no means solely in order to be on the level grown over the different

in order to keep the level crown over the different spans, because in France the domical vaults, used when the ribbed system was introduced, continue even after the introduction of the pointed arch in the vault, and there is no attempt to make the crown level. Nevertheless, the fact that pointed arches of the same height can be erected over varying widths (fig. 41, IX) is one of their many advantages, as we may see in numbers of transept crossings, e.g. St. Bartholemew's, Smithfield.

An interesting variant of the sexpartite vault, which we might term quinquepartite, occurs in the

aisle vaults of Lincoln, which is an ingenious and more justifiable use of the principle, as there are two windows on one side and only one opening on

the other (fig. 42).

The origin of the pointed arch is another of those unsolved problems, but it occurs in the East long before it is found in Northern Europe. It is even found in Roman work—in the bridge of Severus in the Levant. It was certainly in common use in France earlier than here, although an example is found at Gloucester (c. 1090), of which Bilson gives an illustration. The pointed arch cannot be considered a specially Gothic feature, being found in various Eastern styles; and, moreover, many buildings where it does not occur are obviously completely Cothic in faciling.

Gothic in feeling. In connexion with the ribbed vault appears the other great invention of the Gothic architects, namely, the flying or oblique buttress, where the buttress, instead of descending vertically to the ground, is carried obliquely upon an arch over an intervening space. This enables the abutment of

the high vault to be carried across the aisles. beginnings of this are seen in the demi-berceau or half-barrel vault of Gloucester (c. 1090), strength-

ened at intervals with buttresses or ribs. But the perfect system brings the abutment to bear, not continuously, but only so as to meet the resultant thrust of the vault ribs that support the vault. This we find in Durham choir (commenced A.D. 1093), where the buttress is carried over a semi-circular arch. It occurs also at Chichester (commenced 1091), whereas the later development, namely, where the buttress is carried over a quadrant, was probably actually built at Norwich in 1096. It was certainly planned and half executed at that date, as that which remains after later alterations attests. The nave of Durham shows it complete (A.D. 1125).\* The French examples are later, but the credit of perfecting the feature certainly belongs to them, if they did not even carry it too far.

Anglo-Norman ornament, at first sparing, gradually becomes rich if not over-ornate. The frequent use of arcades along the walls, particularly as a sort of 'dado,' and on towers, is the most prominent of these features, but minor forms are endless, of which perhaps the most common are given in fig. 44.

FIG. 44.-ARCADE AND MOLDINGS.

It has been usual among writers upon Gothic architecture to speak of a Transitional period; but as the special features that were supposed to distinguish it all appeared half a century earlier, this is only confusing. In any case, a division into periods is purely arbitrary. The whole story of Gothic architecture is one long transition, and the system of division into periods at all opens up the

danger of considering the periods as though they were styles, which is to misunderstand everything.

(c) The zenith of English Gothic.—Anglo-Norman work developed into what are often termed the Early English and Decorated periods—the zenith of Gothic architecture. Here we see a further development of those principles we have already noticed. The tendency of the English plan is to become longer still. The old short choirs are pulled down, and great extensions take their place. In the elevation we may notice that the tendency is for the bay divisions to become wider in proportion to their height, and for the triforium to diminish.

\* See references quoted above re the vault.

On the exterior the lofty spires of these two periods are the most distinguishing features.

The decorative sense develops and shows itself Three great types of pier make the South-Western, the Southin every member. their appearance-

FIG. 45.-PIER TYPES

Eastern, and the Northern. The South-Western is formed by triplets of shafts attached to a central core and ranged regularly round it (Pershore, fig. 45). It is probably directly derived from the Anglo-Norman composite pier. But it makes little

FIG. 46 .- THE DEVELOPMENT OF THE 13TH CENT. CAPITAL.

headway beyond its own district, and gradually dies out. Not so the South-Eastern and Northern varieties. The South-Eastern type is formed by a central core with detached shafts round it, gener-

ally, although not invariably, of purbeck marble or some local variety (fig. 45). The central core is built up, and the shafts are monoliths, or in two or three long sections with annular bands. The Northern type, e.g. Roche and Sweetheart abbeys (fig. 45), is a composite pier of several shafts all united in one, without a central core, and seems to have originated from such forms as we see in Bishop-Auckland Castle, York crypt, Durham galilee, or Selby triforium. In these cases there are a num-ber of separate shafts not grouped round a central mass. In the Northern type the composite pier is built up in horizontal courses, and the shafts composing it are therefore not continuous.

For a time the South-Eastern type carries every-thing before it and drives back the Northern, so that during the 13th cent. (Early English period) it practically becomes the type of the period, and is found, for instance, as far north as Durham. In the 14th cent. (Decorated period) the Northern re-asserts itself, and the South-Eastern type is driven back and disappears. The Northern type remains supreme, as long as Gothic architecture lasts, and is found all over the kingdom. A very beautiful example occurs at Grantham, with the fillets particularly common to this type. In the same church is an early example of the South-Eastern type (fig. 45).

The commonest base in the 13th cent. is characterized by the water-holding molding (fig. 47), developed from the so-called Attic base (fig. 2, ARCHITECTURE (Greek)). In the 14th cent. the hollow is filled by a round, the lowest member often

overlapping the plinth. The English capitals are distinguished Fig. 47. from those of the Continent by the characteristic abacus, which in English work is almost always around, and in the thirteenth century consists of a roll and fillet deeply underent, and in the 14th of a scroll molding. The neck-molding is generally a plain astragal in the 13th cent. and a scroll molding in the 14th. Those capitals that have foliage are marked in the 13th cent., by a beautiful type, apparently derived from the scallop capital (see fig. 46), and very different from the French type derived from the classical capitals. The English variety, which we may term stiff stem foliage, is generally said to have the same origin as the French capitals, being derived from the classical volutes; but a careful examination of the capitals of the West Country and the North, where the national style has its origin, has led the present writer to the above conclusion. Doubtless the Continental variety was not without its influence; but not only does the other derivation explain the general form more satisfactorily, with its stiff stem and without the lower band of foliage found in French work, but it also explains another peculi-arity of the English capital. The English foliage

tends to twirl round the capital instead of standing out from the centre as in Continental work. In the 14th cent., although the forms are sometimes exceedingly beautiful, there is a distinct artistic decadence. An attempt to be true to nature results in being untrue to the stone material in which the artist is working—a much more serious fault. The forms are ill adapted to stone, and, moreover, instead of growing up from the neck, are twined round like a harvest festival decoration, and have no part in the organic unity of the whole. The arches are pointed and with numerous mold-

ings, of which those in fig. 49 are typical. The Early English moldings are marked by freehand drawing and numerous independent members, separated by deep hollows, e.g. Peterborough. Characteristic members are the roll and fillet and the pointed bowtell. Decorated moldings are set out by the compass instead of being drawn freehand. The fillets on the triple roll and fillet are set differently. The ogee curve makes its appearance, and a three-quarter hollow often marks off the orders of the arches (fig. 49). Up to the end of the 14th cent. the orders of the arch are generally clearly distinguished.

The development of the window is a long story, whose course can only be briefly indicated. The

PTG. 50.

normal early Anglo-Norman window is a square

longer in its proportions, and the process continues after the introduction of the pointed arch, producing the so-called lancet window, until such extreme examples are reached as at Bottesford, which is 8 in. wide and 15 ft. 6 in. high. The natural result is to group windows together, one being insufficient for lighting purposes (fig. 50). In the gable end the normal arrangement in the

first half of the 13th cent. is three windows, the central one raised to fill the gable. At first the windows are quite distinct; then a common hood mold gradually draws them together, and finally includes them under one arch. The small spandrels are first pierced with various shapes and finally cut out altogether, and then cusped as at Cirencester or Peterborough Cathedral. But this pushes all the ornament up into the extreme head; and it is perhaps the two-light window in the aisle, which follows suit, that tends to the filling with tracery of the whole head of the window above the

springing (see examples in fig. 50).

We thus pass from the lancet period to the first traceried period, which has been called the Geometrical period. This is a most misleading name, as it implies that the curves of the next period are not set out with a compass. Although at first glance they may not appear to be parts of circles, they invariably are. The real distinction is between curves of single and double curvature; or the first period may be described as composed of independent figures-circles, curvilinear triangles, and squares (not spherical, of course), quatrefoils, trefoils, etc., filling the head of the window. The terms Simple and Compound would be short and self-explanatory.

There are three main types of Simple or independent-figure tracery. In type I. (fig. 51) the circle or other figure rests on two sub-arches. The points or other figure rests on two sub-arches. The points of the sub-arches projecting below the central ornament are objectionable, and probably are the cause of type II. making its appearance, in which the outer curves of the sub-arches coincide with the curves of the window arch. It should be noted that type I. does not disappear but continues to be used, and this is the case all through the development of window tracery: a new form does not enment of window tracery; a new form does not entirely oust an old one. The objection to type II. is that it tends to push the ornament too much into the head of the window. In all cases the sub-arches may also intersect or be separated from each other. Type III., which is really a three-light develop-

FIG. 51.—SIMPLE TRACERY.

ment, has no leading sub-arches, but the arches of

the lights alone, and no leading central ornament.

The development into the Compound or flowing period is the result of attempts to improve type I.

Divers devices had been tried to get rid of the objectionable points, the best being the disguising of them by a rejection of the objection of th them by a pointed trefoil. It occurred, however, to some unknown English genius that an exceedingly with a semicircle over it. This tends to become simple and obvious device—as is the case with most

great discoveries—was to omit the points, and continue the curve of the sub-arch into the curve of the circle. Thus is obtained a curve of double curvature or an ogee curve. The other side of the sub-arch is made to correspond, and we have a circle supported on ogee arches (fig. 52, A). The bottom and top of the circle then disappear, leaving us the completed type I. of the Compound period. This develops on lines similar to the independentfigure period with a second and third type (fig. 52).

FIG. 52.—COMPOUND TRACERY.

The vaulting continues to develop. First, in The vaniting continues to develop. First, in order to reduce the ploughshare curvature, resort is had to elliptical ribs, involving a most difficult and complex problem in the setting out and erection of every vault. This is superseded by pseudo-elliptical vaulting, where, instead of a true ellipse, an approximation to the ellipse is made by parts of circles, which join at points where the tangent is common to both circles, so as to avoid breaks in the curve (fig. 53). The line of the pier or shaft from which the vault springs is also tangential to the early arms. the arch curve.

FIG. 53.

The ridge rib to mark the leading line of the roof, and also to provide a line of fitting for the vault shell, was apparently first used at Ripon. has great esthetic value, giving continuity to the whole and a line of emphasis to the vista. It is, in fact, the dominant esthetic line of the building, corresponding to the keel of a boat. The French architects could not use it with any effect, on account of their broken ridge lines caused by the domical vault. Where they have use is unpleasantly suggestive of the sea. Where they have used it the result

Is unpleasantly suggestive of the sea.

In order to reduce the space between the ribs, and to make the filling easier, subsidiary ribs are introduced, called tiercerons by the French architects. They were invented by the builders of Lincoln Cathedral and used first in a peculiar way (fig. 53). In the 14th cent. lierne or net ribs make their appearance, and give great complexity to the vents (fig. 53)

to the vaults (fig. 53).

The buttresses in the 13th and 14th centuries become more prominent, and the pinnacle, giving additional resisting power to the buttress, soon appears in the Early English period. Angle buttresses

in the 14th cent. are commonly set diagonally, instead of in pairs at right angles (fig. 54).

FIG. 54.—BUTTRESSES.

It is difficult, and indeed inadvisable, to try to assign any particular date or period for the summit of Gothic architecture. In many points it continued to advance down to a very late date, more particularly in the development of towers and of the vault, but the decorative foliage certainly declines after the 13th century. For beauty of light-ing nothing equals the so-called lantern churches of the 15th cent., but the window itself is perhaps at its best in the 14th. It is so with all arts; decadence does not come suddenly throughout the whole, but shows itself here and there, while the main trend is still forward. It would be much easier to assign a definite summit to French than to English architecture. In France there is a more or less definite single effort culminating in the 13th century. In England there are continuous new impulses: vault, wall, pier, foliage, window, and vault again; each in turn seems to play the leading part

As said at the outset, the French and English styles are entirely different. A summing up at this point of a few of the differences between the plan of a great English and a great French church may show that it is surprising, not that they are now seen to be different, but that any one ever thought they were the same.

The English church is long and narrow with three aisles. The French is short and broad with five aisles.

The English West Front is broad. The French West Front is narrow, in Notre Dame narrower even than the nave. The English transepts project enormously beyond the main lines, and often the English church has two or three of these

figs. 55 and 56.—metropolitan churches of england and france. projections. The French transepts hardly project at all, and projections. The French managers many positions only is attempted.

The English church has a square East end. The French church has a semicircular chevet.

The English church has a long choir, generally more or less

shut off from the nave, being largely the result of monastic influence. It has no side chapels. The French church is broad and open throughout, with a short choir, largely the result of lay influence, and has numerous side chapels dear to the laity. The four enormous central piers in the English church show the central tower that dominates the whole. The French church has great Western towers, but nothing, or merely a 'flèche,' at the crossing.

The English church is cut up by screens and divisions. The French church is open (figs. 55-58).

The interior of a French church is hard to surpass. It is exceedingly lofty, which gives it a most impressive character. The internal effect of the chevet is often exquisitely lovely, and the grace of the proportions as a whole, width of bays, and width to height, is in every way admirable.

The English church in its interior depends for its impressiveness upon length rather than height, except where modern folly, as at Norwich, has planted an enormous organ that entirely destroys the whole raison d'être of the building, completely (not partially) blocking the vista which would be, in its way, perhaps the finest in the world. Both English and French effects are delightful, but perhaps the French is the finer. Yet there is no perhaps the French is the finer. Yet the reason why they should not be combined.

But with regard to the exteriors there is no emparison. The English here loses something by want of height. (Visit Chartres, Amiens, and then Lincoln within two days of each other, and the result will be startling.) But the dominant central tower, the wonderful skyline, together with the tower-groups, the grand projecting transepts and fronts, with their fine shadow effects, make the French examples look in comparison a shapeless Where there is a narrow tall twin-towered front, there is an unpleasant effect of an over-weighted end suggestive of a giraffe. The Franco-

-LINCOLN AND AMIENS.

German church of Cologne is perhaps the worst example of this effect. The differences extend to every molding and every detail, and to the spirit in which everything is carried out: the French is more logical, the English more picturesque. (d) The Decline of English Gothic.—The last period of English architecture is marked by rectangular forms and horizontal lines, and is generally called 'Perpendicular.' This word in most minds is so closely associated with vertical, that

Rectangular' is a more satisfactory name.
Roofs become nearly horizontal, tops of doors and windows and all the arches follow the same tendency. There is often an actual straight horizontal line, strongly emphasized, above these features, particularly in the case of doors. Horizontal topped towers take the place of spires, horizontal transom bars appear in the windows, and horizontal topped panellings, instead of niches, occur all over the walls. Even the foliage and other ornaments become rectangular in form.

The Early English period was an age of Ecclesiastic reform, and the work of that period is marked by a certain ecclesiasticism in its planning and arrangements. The Traceried period of the 14th cent. is the age of the great nobles; the very ecclesiastics themselves aped the pride and pomp of worldly splendour; and the churches, with their private chantries and heraldic ornament and such things, partake to some extent of this character, as Mr. Prior points out (History of Gothic Art in England, 1900). The people, too, are beginning to assert themselves. The worship of Our Lady being particularly the cult of the people in Eng land, we find the Lady chapels being built all over the country, in most instances actually at the east end, and approached from behind the high altar. The ecclesiastic privacy of the mon-astic choir perforce disappears. During the Wars of the Roses, the great barons gradually vanished, and the trading classes made their influence felt. This is the age of the guild chantries, and above all of the parish churches of the people. The large proportion of our parish churches belong to this date, and are built in the rectangular style. Hardly a single great monastic church or cathedral was built at this time, although, of course, there was a certain amount of re-building and enlarge-The chantries and other extensions affect the plans of the churches, and tend to obscure all transeptal projections.

The piers still belong to the Northern type, but incline to become meagre in their treatment both in section and in their capitals and bases (fig. 59). The S-shaped curve under the chamfered abacus is characteristic, as is also the curious cushion mold-

ing in the base and the bell shape above it. Capitals sometimes disappear altogether, and the moldings run right round the arch without a stop. when found is rectangular in treatment (fig. 59). The arches above show the same attenuation in

the treatment of their moldings, and the distinction between the orders of the arch is often quite lost. The most characteristic feature is the cavetto, a deep hollow in the middle of the group (fig. 59). The arch, both in the main arcades and in the window, is often of the four-centred variety. Most arches are struck from two centres, but a four-centred arch, while rising without a break from the springing, allows the crown to be comparatively flat (DCEK, fig. 59). A drop arch, as it is called, gives the flat crown, but produces a broken effect where it springs from the shafts (B, fig. 59).

The triforium, owing to the horizontal tendency in the roofs, practically disappears and becomes a mere band of ornament.

The window gradually becomes a series of rectangular panels, partly as offering increased strength for the vast windows that become common, partly to further the easy arrangement in the glass of rows of saints standing in niches. The vertical lines at first appear timidly in the head of the window, then ascend from sill to crown, and finally even cut across the tracery sub-arches (fig. 59).

The vault still continues its development until we reach the wonderful fan tracery characteristic of this country. The multiplication of tiercerons seems to have suggested a polygonal form for the vault conoid, and from this to a circle is easy,

FIG. 60.

and we reach the concavo-convex conoid of the fan vault (fig. 60). The architects of the Gloucester cloisters have produced a delightful piece of work on this principle. But there is one objection, namely, that the flat central space makes an abrupt

break with the lines of the ribs. It is probably this that led to the introduction of the four-centred

this that led to the introduction of the four-centred arch, which allows the line of the ribs to pass imperceptibly into the central space (fig. 60, Windsor). This is very satisfactory for a vault over a square, but the problems of satisfactorily vaulting a rectangular space begin again. The most complete solution is by the Oxford architects in the Divinity schools and the Cathedral, which are not true fan vaults (fig. 61); and the same principle, somewhat meretriciously carried out in a true fan vault, appears in Henry VII.'s Chapel, Westminster. The appears in Henry VII.'s Chapet, Westminster. The principle is practically that of dividing up the rectangular space to be vaulted into a new nave and aisles, as it were. The springings of the vaults are then supported upon great transverse arches thrown across the whole space. In this way a square compartment is obtained in the middle, which is easy to vault, and the small minor compartments are her rectand by some other method. partments can be treated by some other method. In the case of the Cathedral at Oxford they are very effectively treated as barrel vaults.

FIG. 61.

The influence of domestic architecture upon that of the church is a subject of great interest which has hardly yet received the study that it deserves. In early days many of the problems were first worked out in the Norman castles. Later, the domestic window with its transom bars and the beautiful open timber-roofs of the great halls had considerable effect upon church architecture. Of considerable effect upon church architecture. Or course, the plans and arrangements are different, but the spirit of the two is the same. Sometimes, as, for instance, in Belgium, the greatest achievements are in civil architecture; and although the bulk of these buildings in our own country have perished, such examples as the small Town Hall at perisned, such examples as the small Town Hall at Cirencester have a charm quite equal to that of the churches. But in any case, whether the building is for the Church, the State, the Borough, or the private individual, the artistic qualities triumph over the special difficulties involved in the partial printegers and the express of buildings. cular instance, and the series of buildings—castles, cathedrals, halls, palaces, and churches—is as noble as that in any style.

## RENAISSANCE ARCHITECTURE.

When, at the time of the Renaissance, men's minds began to turn back to the glories of the classical epoch, the result was naturally seen in architecture as in everything else. It was also architecture as in everything else. It was also natural that the beginning of the architectural change should be in Italy, as was the case in other departments of the movement, particularly in view of the large number of actually existing remains upon Italian soil. The development, however, was considerably stimulated by the discovery of the manuscript of Vitruvius Pollio, the architecture of Augustus, who wrote the de Architectura. This samous treatise, in ten books, upon the architecture famous treatise, in ten books, upon the architecture of the Augustan epoch, was translated into Italian in A.D. 1531. In spite of the impetus thus given to

Survey of the second of the

the study, it would appear to have been by no means entirely beneficial in its results. Vitruvius seems to some extent to have been the Palladio of his day, viewing the art in a cut and dried and somewhat lifeless manner, which was not without its effect upon his followers of a later generation. It is true that Vitruvius' work was drawn chiefly from Greek sources, although these were probably very late; but it must always be remembered that, in the main, Renaissance architecture was founded not upon the Greek but upon the Roman style—a style itself a hybrid and full of solecisms. Many of the criticisms that are brought against Renaissance work apply equally to that of Rome, in such instances as the profuse use of meaningless decoration, and the unintelligent application of features imperfectly understood, e.g. the architrave that supports no ceiling, the incomplete drums, flutings, or drafted stones copied from unfinished Greek work, and chopped off sections of entablature, as in the church of St. Spirito, Florence.

It may be said that Bruneleschi, the Florentine, was the first great architect of the Renaissance. He produced a plan for the building of the dome of the Cathedral of Florence soon after A.D. 1407, which was eventually carried out. The spread of the style in Italy was extraordinarily rapid. The cause was very largely that the Gothic style had never firmly established itself in Italy: indeed, it may practically be said that it never penetrated to Central Italy at all. Even in Florence such an example as the famous campanile of Giotto has hardly anything of the real Gothic spirit, in spite of the applied Gothic features and ornament. It is not the living organism of Gothic structure and ornament, but a simple rectangular block with an elaborate veneer of surface adornment. The Italian mediæval churches were mainly 'Latin' in motive, and it was natural that the Italian mind should turn whole heartedly toward a style which

it had never in essence entirely abandoned.

From Italy the movement spread throughout Western Europe with varying degrees of rapidity, and was strenuously fought by the architectural traditions of the lands into which it made its way. The Renaissance style made no headway in the East, because the Greeks, who for centuries had been the most cultured people of Europe, were at this time overwhelmed by the Turks. In fact, the sack of Constantinople in A.D. 1453, although it was the final blow to Greek civilization in the East, scattered the Greeks over Europe, and very largely made the Renaissance what it was.

In the case of any revival or Renaissance style, it is always more difficult to make a division into periods than in the case of a style of true growth; because, in the first place, the individual factor is stronger, depending upon study and research, and also at any moment fortuitous circumstances may combine to make a particular building a more complete representation of the old style. But it may be said that Renaissance architecture was by no means wholly a 're-naissance'; it was in many respects a living style. And it may be noticed that it did pass through three more or less clearly marked stages, although these vary considerably both in manner and in date in different countries.

The first period is marked by a distinctly Gothic tendency, besides showing a comparatively limited knowledge of the nature of ancient work.

The second period, the period of maturity, shows a much greater knowledge of classical detail and arrangement, and is marked by a much more definitely classical spirit. The picturesque irregularity of Gothic planning and elevation gives way to a precise and calculated symmetry. The style reaches its zenith and exhibits itself in many of the world's noblest buildings, although the lover

of Gothic architecture will always feel a certain coldness about them, and the lover of Greek architecture will be repelled still more by their lack of spontaneity, subtlety, and delicate restraint. In the work of the second Spanish period there is a certain restraint, it is true, but it is rather a formal coldness, and does not resemble the reserved but intense passion of Greek work. The nearest approach to the true Greek restraint is in the best work of Florence. It is to this second period that we have to look for the true work of the Renaissance. It is here that we learn what are really its characteristics. The first period is but one of transitional preparation, and the last of over-ripeness and decay.

one or translation propagation, that the or over-ripeness and decay.

The third period, sometimes known as the 'Rococo,' is marked by exaggeration, ostentation, and a still more mechanical application of rule, which proceeds side by side with a tendency towards slavish reproduction of ancient work. The latter tendency resulted in what is sometimes called the 'neo-Classic revival,' doubtless hastened as an antidote to the extravagances of the Rococo.

r. In the first period, then, the new style was fighting its way. Even in Italy, although the architects themselves were probably completely unconscious of the fact, the influence of Gothic work was quite marked, whereas in other countries the Gothic influence for a long time remained paramount, and the period of transition was enormously prolonged. In France, even in late Renaissance days, when Wren was building in England in a severely classical style, the high roofs and other features betray a Gothic origin.

In Florence, although the classical orders were used they were very much subordinated and

In Florence, although the classical orders were used, they were very much subordinated, and in comparison with later work their use seems timid. Their actual scale was small, and this also was the case with the ornamental features which are characteristic of Gothic work. There was still a tendency towards that multiplicity of parts which characterizes Gothic feeling. Windows are generally round-headed, often with sub-arches in the typical Gothic manner, and occasionally they even contain a sort of tracery, especially in France and Britain (fig. 62). Even pointed arches are used, particularly in Venice, as in the Doge's palace.

FIG. 62.

In Florence great use is made of rustication—one of the typical affectations of the Renaissance, which seems to have had its origin in ancient Roman work, where unfinished Greek work was copied in which only the outer borders of the stones had been dressed. Ugly and meaningless as it frequently is, particularly in its aggressively finished forms, it is not so hideous or so foolish as the leaving of

occasional square blocks in a round column-a device that even the most extreme admirer of Renaissance work does not attempt to defend. This, however, does not appear until the style is more or less advanced. It becomes common in France during the reign of Charles IX. (A.D. 1560-1574). Rustication was never popular in Venice, where there had always been a certain true Gothic feeling, mingled with Byzantine, which was distinctly opposed to anything Roman. Indeed, it was doubtless partly a survival of this feeling that caused the Renaissance style to be reluctantly adopted in Venice only when the 16th cent. was well advanced. A rather charming device common in Venice at this period may at this point be noted, namely, the so-called shell ornament (fig. 62).

Another objectionable feature, apparently first used by Alberti in St. Maria Novella at Florence, in A.D. 1470, is the inverted console placed above the aisles. Presumably it may be regarded as the successor of the flying buttress of Gothic work, but it is utterly unfitted to perform any function structurally or æsthetically. A curve suited for a small decorative bracket becomes ridiculous when applied to a feature of the main composition

over a score of feet in length (fig. 63).

FIG. 63.

On the whole, it may be said that, although many churches were built in Italy during the Renaissance, partly as a result of the counter-Reformation of the Jesuits, in the North the Gothic epoch had more than supplied all the churches that were required. Hence, religious buildings in the North, particularly during the first period, are comparatively rare, and it is only in such instances as the churches of London built after the Great Fire that there is anything very extensive in the way of ecclesiastical work. It was rather a palace-building epoch, such as is shown in the great châteaux on the Loire, of which the Château Chambord may be taken as typical. In the North, Renaissance architecture made its way very slowly, at first appearing only in minor accessories such as altars, tombs, pulpits, doorways, and occasional enlargements, as the apse of St. Pierre at Caen. When the main fabric itself is attempted, the result is a building entirely Gothic in planning, arrangement,

and construction, and the surface ornament merely is of the classical type. Pilasters take the place of buttresses, and cornices the place of corbel tables, and so on, as, for example, in St. Eustache, Paris
—an excellent specimen of the first period of
Renaissance work in France. In Britain, although Inigo Jones and Wren introduced a pure classical style earlier than anything of the kind in France, this transitional feeling continued in certain districts very much longer, particularly in Oxford. As late as 1648–1652 the charming little church of Berwick-on-Tweed affords a most pleasing instance

of the fusion of the two styles.

In the South of France much of the work was done by bands of travelling Italians, who have left a considerable impress upon the minor features of the period in that district. In the main it is true to say that French work of the time of Francis I. (1515-1547) is marked by a special elegance which is peculiar to itself. It is doubtless the outcome of the elegant French-Gothic acting upon the Renaissance style, and applies especially to domestic examples. In England the Early period, which may be said to cover the reigns

from Henry VIII. to James I., may be divided into two. The earlier part, from the close of Henry VIII.'s reign to the death of Edward VI., is marked by Italian influence, as in the case of Torrigiano's tomb made for Henry VII., and the later part is marked by Flemish and German influence; but throughout the whole period everything is tentative and experimental.

2. In the second period we have the matured Renaissance style, when buildings were classical not only in detail, but in spirit. This may be said to have been inaugurated in Italy when in A.D. 1506 Bramante commenced the church of St. Peter's in Rome, a date which was about contemporaneous with the very first beginnings of Renaissance influence in Britain.

In this second period the picturesqueness of Gothic planning almost entirely disappears. It is,

FIG. 64.

however, to be noticed that the great cross plan of the large churches, although carried out in a severely symmetrical manner, is the indelible impress of the symmetrical manner, is the indelible impress of the Gothie hand upon the succeeding age. Even St. Peter's itself is so planned. Not only so, but, in the case of both St. Peter's, Rome, and of St. Paul's, London (figs. 64, 68)—the two greatest buildings of the style—the more severely symmetrical plan of the Greek cross, as designed by the architects, was altered to the long-naved Latin cross in deference to Gothic tradition. Both churches suffered ence to Gothic tradition. Both churches suffered by this arrangement, St. Peter's very seriously.

The orders in this period are no longer used in an unobtrusive manner, but become, except

perhaps in Florence, the main feature of the style, although, as in ancient Roman work, they are generally little more than mere ornament unrelated to the anatomy of the building. They are generally treated on Roman lines; but there was considerable latitude, the shafts occasionally being even fluted spirally, or wreathed with bands of foliage and fruit, or, worst of all, broken by square blocks. The Tuscan order becomes clearly defined in Renaissance work as a separate order. In Spain a new kind of capital appears, termed the 'bracket capital,' in which two or more brackets spring from the head of the column. It has the advantage of reducing the strain on the architrave.

FIG. 65.

In the best designed work one order is used for each storey; and in France this arrangement was practically universally observed. This was owing to the supreme influence in that country of Barozzi da Vignola, author of The Five Orders of Architecture, who had been brought back to France by Francis I. But in Venice Palladio introduced a system wherein one order ran through two or more storeys, minor orders being introduced in the storeys themselves. This unsatisfactory arrangement, which still further degraded the orders as mere applied ornament, unfortunately became popular in Britain, owing to the influence of Palladio, who was the inspirer of Inigo Jones.

One might even make a division of Renaissance

One might even make a division of Renaissance architecture according as the orders or the windows formed the main element of the wall design. The latter is distinctly more Gothic in feeling, and is found more particularly at the beginning and end, before the Gothic art had quite disappeared, and after the Renaissance had spent its force. To some extent the division would be one of locality. In Florentine work the order is always less dominant than in either the school of Rome or that of Venice, and this distinction may also be noticed in those countries respectively influenced by these schools

The column itself frequently bears the arch, particularly in early work, although the more usual arrangement is a massive pier with attached pilasters. Occasionally the unpleasant device is used of a section of entablature above the columns from which the arch is made to spring

from which the arch is made to spring.

The moldings of the orders and other parts were the simple circular sections of Roman work. The great series of receding moldings on the arches of Gothic architecture were replaced by square soffits; and string courses and moldings generally become comparatively scarce. Effect is given by strongly marked entablatures dividing off the storeys of the building, and altogether horizontal features become very pronounced. In Italian and particularly Florentine work, a great cornice of very large proportions is often used on the top storey, suited in its size to the whole height of the building and not merely to the storey in which it occurs. This on the whole gives a pleasing effect with its marked shadow line.

The ornament is founded upon classical Roman work; but in the best Renaissance examples, especially in Florence, it is more refined. It should be noticed that Renaissance carving was almost invariably executed after the building was set up. In Gothic buildings every stone was completed before it was put into its place. The result is that the jointings often cut unpleasantly across Renaissance work, whereas Gothic jointing and the carving-design are thought out together. It is simply one aspect of the principle that the Gothic pile was always essentially a building; the Renaissance pile was rather a monument, treated somewhat after the manner of a picture.

The old Roman ribless vault was revived, at least in form, but a considerable geometrical improvement was made. In the plain barrel form it remained semicircular, but in the case of intersecting vaults over a rectangular space the curve of the vault was made elliptical, so that the diagonal groins might be projected as straight lines upon the plan (fig. 66). It should, however, be observed that in an enormous number of cases the vault was a mere plaster sham, and not part of the construction, as in Roman or Gothic work. All roofs in Italy were hidden within by ceilings, but in France and Germany the open timberroof was made an important feature. The roof is of low pitch, and in the majority of instances so low that from most points of view the parapet forms the sky-line. In France, however, we find the high 'Mansard' roof; and in Germany the high roof with tiers of dormer windows is a very common feature. The fact is that Germany never wholly adopted the Renaissance style until long after every other country in Europe, and these high roofs are medieval in character.

FIG. 66.

The glory of the style is the dome, which in its general treatment follows the Byzantine method. There is almost universally a drum, as in the second Byzantine period; but it is made an even more important feature, and very commonly is enriched by a colonnade. It was usual to build these domes with an outer and an inner shell of different curvature and a space between. The outer dome is frequently a mere timber-framed erection, resting upon the other, as in Sansovino's S. Giorgeo dei Greci at Venice, or the outer dome of the Eglise des Invalides, Paris, which consists of three domes (fig. 66). In this connexion may be noticed the very great use of carpentry all through Renaissance work, which has been compared by some writers to the modern use of iron. St. Paul's, London, has an outer and

an inner dome, with a brick cone between. St. Peter's, Rome, has two brick domes.

Renaissance spires were not of common occur-rence save in England and Spain. They seem to have been invented first by Sir Christopher Wren, but the Spanish use is possibly independent.

In the second period round headed windows were less frequent, and square-headed windows, often with small pediments over them, were the rule. The rustication, so common in Florence in the early period, was now generally confined to the quoins, as in the Pandolini Palace designed by Raphael, and more or less freely copied in The Travellers' Club, London. At the same time there was a tendency for all wall space to disappear, and for the whole surface to be covered with an exuberance of applied architectural features. The detail and moldings became more vigorous and elaborate, but lacked the earlier refinement.

The Roman method of building had been largely one of veneers. The inner part of the wall was of inferior material, but the outside was cased with fine stone or more often marble. Romanesque Gothic had made use of a double wall with a rubble core, derived from Roman use; but this system was gradually abandoned, and in the best Gothic work the wall was built solid, or at least all the face stones were bonded into and formed an integral part of the wall. The Renaissance architects realized that this was a better system, and endeavoured to follow it out in their work. At the same time veneer was not infrequently used, and plaster facing was by no means uncommon. This was particularly so in the last period, when panels, cornices, and orna-ments even upon the exterior were of plaster—a

most unsatisfactory arrangement.

In Italy itself it may certainly be said that there were three distinct schools of the art:

(1) The Florentine, which depended largely on fenestration, and in which the orders played a secondary part. It was very severe, with a breadth and vigour of treatment exemplified in the due sense of the value of contrast as applied to plain wall surface and ornament, and again in the effective depths of shadow given by deep recesses and heavy cornices. It is marked by extreme delicacy in the ornamental carving.

(2) The Venetian, which was shallower and more

pompous, with great ornaments introduced for ornament's sake, often coarse and over-insistent. There is less severity, and many curves give a weakness of effect. Orders of varying heights are used, and are often piled upon other orders some-

what indiscriminately.
(3) The Roman, which is midway between the two in severity. It is marked by great pilasters of the whole height of the building, so as to give the effect of one storey, and in consequence of this it has had a greater influence upon church architecture. The pilaster and not the column is used, as the inter-columniations upon

so huge a scale would make the span of the architrave impossible.

3. In the third period there was a distinct decline, and a great deal of extravagance and affectation makes a broken contable to the contab affectation, such as broken entablatures, and pediments, and curved and irregular cornices. In Italy there is a peculiar lack of inspiration, and the work of Maderno and Bernini may be taken as the work of Maderno and Bernini may be taken as typical. One of the most pleasing examples is that of St. Maria della Salute, by Longhena, in Venice (A.D. 1632). Its proportions and general mass are excellent, although the details leave something to be desired. Doubtless it owes a great deal to its situation. St. Genevieve (The Pantheon), Paris (A.D. 1755), although greatly superior to most work of the time, belongs to this period. It was built

from Soufflot's designs, and is interesting as having the smallest amount of area of supports of any Renaissance church, comparing even with Gothic work in this respect. Compare its plan (fig. 67) with that of St. Peter's or St. Paul's (fig. 68). It has not been successful, however, for it has been necessary to prop and support it several times.

FIGS. 67 AND 68.

The extravagances of the 'Rococo' in France are even surpassed by the work in Spain generally known as 'Churriguerresque,' after the architect Churriguerra, doubtless partly caused by a revulsion from the over-bald mechanical style of such men as Herrera in the previous period.

of such men as Herrera in the previous period.

In considering the Renaissance style as a whole, certain broad characteristics should be noticed. In the first place, there was a very distinct tendency, particularly in the case of its Italian inventors, to view the whole composition as a matter of line and proportion rather than as a building. There is often very little relation between the uses of the building and its form. Architecture is an applied art, and therefore. petween the uses of the building and its form. Architecture is an applied art, and therefore, unless it be well adapted to the function that it has to perform, it cannot be a success. But, further, it is not only upon these grounds that so much Renaissance work must be condemned. Even upon esthetic grounds, in the erection of a monument as distinct from a building, it is necessary that the thing should form an organic whole: and a column which is the organic whole; and a column which is the outcome of the æsthetic endeavour of many ages to express the beauty of support, is clearly out of place when it supports nothing. The concealment of construction and arrangement is a similar but different question. An enormously heavy lantern, rising above what is apparently a dome of light construction, may, it is true, be defended upon the grounds that it is obvious that there must be some further support within. The eye would, however, probably be esthetically more satisfied if there were some indication of this support, as otherwise there is considerable though not absolutely certain danger of the artistic unity being marred. To treat the matter as a moral question is, of course, absurd, and simply there are the matter as a second course, and simply the artistic artists are a second course, and simply the artists are a second course. shows entire ignorance of the nature of all esthetic

philosophy. One might as well argue that a portrait was false because it was not flesh and blood but paint and canvas. But there is no doubt that Renaissance architects were in the habit of sailing very near the wind, and there is frequently a distinct want of harmony in their work. Some of the faults are directly traceable to Roman influence, and it is a pity that the greatest of the Renaissance architects were not better acquainted with Greek work, not merely in detail, but viewed as an artistic conception. As contrasted with Gothic work, Renaissance work—as is also the case with both Greek and Roman work—is more concerned with the building as a whole than with the parts. It is this that makes the exact repetition of similar parts a possibility. But when the Renaissance architect -as was not infrequently the case-allowed the quality of the detail to suffer, although he may find precedent in Roman work, he falls far behind that of Greece, whose detail was the most exquisite and subtle of any architecture in the world. Connected with the desire to form a pleasing whole, is the immense attention paid to proportion and also to symmetry, which was regarded as the best means of attaining this end. With regard to proportion, it is doubtful whether, with all their rules and formularies, the Renaissance architects were on the whole more successful than those of the Gothic era in this respect. A certain level was maintained; but if these laws were a check against falling below, they were also a check against rising above. For an interior vista the Renaissance architects never surpassed such an one as Amiens. The proportions of the bay designs of most of the great Gothic cathedrals are admirable. With reference to their exteriors more may be said; but as regards the proportionate disposition of its masses, it would be hard to find any Renaissance building to rival Durham: certainly not St. Peter's, Rome, whose façade and minor cupolas are entirely out of proportion with the rest. It is true it is a work of many archi-tects, but so is Durham. St. Paul's, London, is per-haps the one rival; and St. Paul's, taking all things into consideration, is the finest of all Renaissance buildings. As for façades, the simple inevitable-ness of such an one as York Minster has deprived it of the praise it deserves. A façade such as that at Certosa will not stand comparison for a moment, neither will that of the Invalides at Paris nor the Pantheon, good as far as it goes, and certainly not Bernini's façade to St. Peter's. Again St. Paul's is the only possible rival.

A great deal of nonsense has been talked about

A great deal of nonsense has been talked about Renaissance proportions. One of the most characteristic qualities of Renaissance work is its treatment of scale. The parts themselves are few in number, but of great size. The result is to give the impression of the building as a whole being very much smaller than it actually is. St. Peter's, Rome, is the largest church in the world, but in effect of size it is surpassed by many a Gothic cathedral not approaching it in area. It is probable that the contrary result was expected, but such is the fact. It is true that there is a certain calm and even dignity about the system, but this should rather be set against the loss of mystery and suggestiveness.

Renaissance architecture is largely the product of scholarship, and as such it challenges criticism in a way that is not the case with less 'studied' styles. It is therefore easy to form an erroneous notion of its value as a style in the architecture of the world, and to fail in giving it the place that it deserves.

ARCHITECTURE (EGYPTIAN). — We shall here deal only with the religious architecture; but as that is by far the greater part of what exists, the discussion will involve most of the known facts. The divisions of the subject are (1) Materials and conditions, (2) Plans, (3) Elevations, (4) Decoration, (5) Furniture, (6) Popular shrines.

r. The materials.—The materials necessarily condition the style and decoration of all architecture. In Egypt the commonest materials used by the peasantry are maize stalks, mud, mud brick, palm sticks, and palm logs. The simplest huts are made by lashing maize stalks (stems of the durrah, called bûs) together by means of palm-libre; the flat screens thus formed are set upright at right angles, and lashed together down the corners. If the weather is cold and the wind strong, they are plastered over with mud. In this form the temporary dwellings in the fields are set up for two or three months of the pasture season. Where a column is required, a bundle of maize stalks is bound together, from 4 to 10 in. in diameter, and plastered with mud, thus forming an extremely stiff and unbreakable mass. Two such columns are even used to support the shaduf, or water-lift, which weighs two or three hundredweight, and is kept continually in swinging motion. In ancient times the papyrus stem was also commonly used, as well as the maize stalk. Mud brick was the principal building material in Egypt in all ages; even in the rainy climates of Syria and Babylonia it was universal, and in the general drought of Egypt it is an excellent material. The mud requires to be mixed with so much sand that the grains shall be almost in contact, and then rain has but a slow effect upon it. Another way of making it durable was to mix it with chopped straw, or even grass roots, which bind it together. The brick down to the VIth dynasty was generally pure mud; the sandy and gravelly bricks are of later age. Another form of brick is thin and wide like a tile, and ribbed on the face, in order to build it up by adhesion of mud on the faces, in forming arches. The palm-stick is used for fences, the tops being left with side leaves to form a barrier to men and animals. The logs of the palm tree are used for roofing-beams, but never for columns.

The nature of these materials has led to the general features of the architecture. The constant use of a portico or verandah in front of house, temple, or tomb, results from the common use of bundles of maize stalk. The palm capital results

from strengthening the column with a coat of the harder palm branches, whose thin tops were left losse around the capital. The sloping walls of the pylon result from tilting the courses of bricks inward, so as to prevent them from being easily dislodged. In order to save the corners of reed huts or brickwork from being broken away, bundles of stalks were lashed on down the edge; these were the origin of lashed on down the edge; these were the origin of the torus molding marked by diagonal winding bands along the angles of the buildings. The fence, formed of palm-sticks with loose heads, lashed together near the top to a line of cross sticks, is the source of the cavetto molding with torus roll below it. The palm-log roof is copied in stone in tombs at Gizeh and Abydos. Thus the forms adopted for the stone architecture belong to the

in tombs at Gizeh and Abydos. Thus the forms adopted for the stone architecture belong to the earlier materials, as in Greece.

2. The plans.—The plans of the temples vary considerably in different ages. The earlier temples are scarcely known except from the plans of the Osiris temples at Abydos, and the views of primitive shrines. The hieroglyph for a shrine in early times retained the appearance of a plain square hut, with a fence in front of it, and two tall poles at the sides of the entrance. Another form is a hut with a domed top, and a low enclosed court before it, having two tall poles at the entrance, and the standard of the deity placed in the middle of the court. The oldest plan of a temple at Abydos is a wall about 16 in. thick, enclosing a space at least 25 ft. wide and 42 ft. long; the entrance is a passage between walls 4 ft. apart and 35 ft. long, facing south. This is probably of the age before the first dynasty. Of the first dynasty is a much larger and more solid building, 42 ft. E.-W. and 21 ft. N.-S., with the entrance probably on the north; the wall is about 8 ft. thick. A great temenos wall was built round the site, and a block of store chambers placed at the side of the temple. The same form continued through the IInd and IIIrd dynasties. Khufu of the IVth dynasty changed the whole worship, and made a great hearth of burnt-offering, where clay models only were sacrificed. This hearth was about 12 ft. N.-S. by 8 ft. E.-W.; it was in a chamber about 15 ft. wide, probably entered from the north. Round this was subsequently added a stone wall reaching about 6 ft. farther out.

In the VIth dynasty, under Pepy I., a great re-construction took place at Abydos. The new temple had the principal door to the north, and a lesser one to the south. The building was of mud brick, with stone doorways; it was 49 ft. N.-S. and 23 ft. E.-W. in the middle hall, or with side chambers 58 ft. wide inside. The walls were 5 ft. thick. From the position of the doorways this seems to have been a processional temple

thick. From the position of the doorways this seems to have been a processional temple, open front and back, for the processions to enter, deposit the sacred back, for the processions to enter, deposit the sacred bark, and pass out by the other door. The sur-roundings were also altered. The old temenos wall had a stone gateway inserted, and outside of it, 40 ft. in advance, was built the outer temenos wall, with another stone gateway. A colonnade led from the outer to the inner gate. To this temple Mentu-hotep added a colonnade on the eastern side.

Another entire re-modelling took place in the XIth dynasty under Sankh-ka-ra. A square of brickwork 47 ft. E.-W., 48 ft. N.-S., held the foundation of a stone temple, probably 44 ft. square. As this mainly overlies the Pepy temple, it was probably entered from the north, like that. The temple of Sankh-ka-ra was, however, not grand enough for Senusert I., who pulled it all down, and laid foundations over the pavement of his predecessor. This temple seems to have faced the East, as the outside length of it was 133 ft. E.-W., while only 75 ft. N.-S. The limits of it are shown by the corner deposits of the foundation.

A great temenos was built around it, 192 ft. distant to the eastward, with a wall 23 ft. thick. To this temple Sebekhotep III. added a chapel and doorway

on the south.

The XVIIIth dynasty saw all this re-built still larger. The temenos was 264 ft. long, E.-W.; in it lay the stone temple facing east, 215 ft. long, and 129 ft. wide; the temenos wall was nearly 30 ft. thick, with gateways of red granite. Lastly, in the XXVIth dynasty, there was an entirely new stone temple, facing east, 132 ft. square. It seems not improbable that this also was of the processional type, open back and front. We have detailed these successive temples as they are the only examples that have yet been observed and recorded, showing the growth and alterations throughout Egyptian history on one site. Many secondary details, and the outlying store-rooms, are not noticed here, nor buildings of the XIXth and XXth dynasties which were in adjacent positions, but are too much ruined

were in adjacent positions, but are too much ruined to be traced. The total result is that there were seven entirely different plans on one site, beside alterations to these. The direction of facing was successively S., N., N.?, N., N.?, E., E., E. Another early temple plan is that of Hierakonpolis. This was entirely of brick, but can hardly be earlier than the XIIth dynasty. Its shrines consisted of five chambers in a row, each 8 ft. wide and 20 ft. long. The whole block was 92 ft. wide over all. The shrines were each a closed cell with one door, and not of the processions type. with one door, and not of the processiona type

Coming now to the temples which can still be examined in a more or less perfect state, the oldest is that of Medum, built by Seneferu of the IIIrd dynasty. This is merely an enclosed courtyard (nearly 20 ft. by 8) against the side of the pyramid, containing an altar between two tall stelle. The approach to it is through two chambers placed with their length across the whole breadth of the building. Next is the granite temple of Khafra of the IVth dynasty, near the sphinx; the entrance the IVth dynasty, near the sphinx; the entrance to it is still buried, so that its nature is unknown. The first hall is 12 ft. by 60 ft. wide; the second hall is 22 ft. from back to front, divided by a row of six pillars, and 81 ft. wide; and from this branches another hall 33 ft. wide, divided by two rows of five pillars, and 55 ft. long. The whole is built of red granite. Neither of these was a temple in the usual sense, but a place for religious services for the benefit of the deceased king.

The eldest temple of which we have full plans is

The oldest temple of which we have full plans is of Tahutmes III. at Medinet Habu. It is solely a processional resting-place for a sacred bark, open at both ends, with a colonnade round it for the procession to pass, and six store chambers behind. Of the same type were the subsequent temples of Amenhotep III. at Elephantine, of Ramessu III. at Karnak, of Alexander at Luqsor, of Philip Arrhidæus at Karnak, and of the Ptolemaic age

at Kom Ombo and Dakkeh.

The other type of temple was not adapted for processions, nor, perhaps, for barks of gods, but had a small cell as the sanctuary, probably to contain a single large statue too heavy to be moved. Of this type there seem to be two of Amenhotep III., at Luqsor and at el-Kab; but all the others III., at Luqsor and at el-Kab; but all the others are Ptolemaic, as at Dendereh, Deir el-Medineh, Edfu, Philæ (Isis, Harendotes, Arhesnofer), and Kalabsheh. Probably also of this type were all the late temples with monolith shrines, which were mostly set up in the Delta (Saft el-Henneh, Nebeshah, Tmey el-Amdid, Sebennytos, Bubastis, Baqlieh) and less often in Upper Egypt, as at Abydos and Edfu.

Abydos and Edfu.

The third type of temple was funerary, for ceremonies of offering to the deceased king, and neither for processions with a bark, nor for holding a statue in a naos. Such are those of Deir el-Bahri.

## EGYPTIAN TEMPLE PLANS.

TEMPLES OF OSIRIS, ABYDOS

[All above, 1:400]

[1:750]

ety I. at Qurneh, Ramessu II., Merenptah, and 'amessu III.

For noting the various divisions of a temple is best to take one built in a single reign, uch as that of Khonsu at Karnak built by tamessu III. The massive pylon leads to the eristyle court, with a single or a double row of olumns around three sides. This is the expansion f the portico of the dwelling-house, with a court-ard in front of it. Behind this is the closed ypostyle hall, which originated in the hall of the ouse which had sometimes a single column in it. t the back of this is the actual sanctuary, with tore chambers at each side, and sometimes also ehind it. The sanctuary was either a long chamer, with wide doors front and back, and a wide assage around it for processions to pass bearing he bark of the god; or else it was a closed naos ontaining the statue of the god.

3. The elevations.—The elevations show almost lways a slight slope inwards of the face of the rall, which is vertical inside, and thus becomes hinner toward the top. This form was inherited rom building in brick. The doorways are, howver, always vertical. The overhanging cornice vith a roll below it was copied from the loose ends f the palm-sticks left free at the top, the roll eing taken from the cross stick to which they rere lashed. When elaborated, the cornice always as a palm leaf pattern on it. The columns are of arious orders. The square pillar without any apital is seen in the temple of Khafra, and in the ourts of the XVIIIth dynasty. Octagonal columns cour in the XIth and XIIth dynasties. The further runcation to sixteen sides belongs to the XIIth and VIIIth dynasties. The palm column is apparently he bundle of maize stalks stiffened by a coat of alm-sticks round the outside, with the leafy ends f the palm-sticks left hanging free around the top, orming a capital. It always had a square abacus o carry the weight free of the projecting leaves. 'he lotus column represents a similar bundle decorted with lotus buds stuck into the hollows of the inding, and a sculptured capital imitating a half-pened lotus flower. The papyrus column is a undle of papyrus stems, with a sculptured capital opied from the feathery head of the plant. The lathor capital is usually on a polygonal column, r circular in late times, with a head of the godless on one, or two, or all four sides. In Roman imes various complex types with foreign elements vere introduced.

The roof was either of wood, brick, or stone. The earlier little shrines were evidently roofed vith the same stems which formed the sides. Brick roofing was certainly used largely for houses and tombs, and probably, therefore, for the smaller rick temples. Barrel roofs 6 ft. across were comnon in the VIth dynasty, and larger ones up to 15 ft. wide in later times. For stone buildings, oofs of stone were naturally used, either of lime-stone or sandstone like the walls. But so strong was the influence of brick arching that the roofs are often cut out in a curve beneath, while flat above, as at Abydos. The earlier stone roofs are very massive. The limestone slabs on the tombs of the IIIrd dynasty reach the size of  $20 \times 8 \times 3\frac{1}{3}$  ft., weighing 33 tons. The granite beams in the great pyramid are at least 21 ft. long, 4 to 5 ft. wide, and about as deep. For greater security, the early roofs were often pointed, and on the cantilever principle; the centre of gravity of the block was over the wall, and it would not tend to fall even if the opposing block were absent. Such blocks sloped from 30° to 40°; and with their great depth, as much as 7 ft., their resistance as beams was enormous. In the pyramids there are generally three layers of such beams, one over the

other. The roofing of temples was on a similar scale. Deep stone architraves rested on the columns, and large slabs stretched across the passage and chambers; those which roof the axial

passage at Karnak are 28 ft. long.
4. The decoration.—The decoration was the life of an Egyptian temple. At first the walls are severely plain; at Medum there is not a single figure or hieroglyph, even on the funeral stelæ. At the granite temple of Khafra nothing is seen but perfectly smooth granite and alabaster, without even a molding. But in the Vth dynasty the Ra temple of Ra-enuser is as richly sculptured as the tombs of that age. The temple walls of the XIIth dynasty were very finely sculptured, and sometimes richly coloured (see Koptos and Kahun). In the XVIIIth dynasty the more complete temples enable us to follow the scheme of design. But it is in a quite perfect temple, such as that of Denderel, that we can see the connexions of the scenes with the use of each part. On the outer screens between the columns is shown the king leaving his palace, followed by his ka, and preceded by an incense offerer. Then Horus and Thoth purify him, and the goddesses of south and north bless him. Mentu and Atmu—of Thebes and Heliopolis—bring him before Hathor, the goddess of Dendereh. On entering the hypostyle hall the king is shown sacrificing to the gods of Dendereh; and along the lowest line of the wall are the scenes of the founding of the temple by the king, hoeing the foundation, and presenting the bricks for the building. In the next chamber the king proceeds to worship the gods. And on reaching the sanctuary itself, the king is shown ascending the steps to the shrine, removing the band from the door, breaking the seals on the doors, opening the door, gazing on the goddess, praying to her, censing the sacred barks, and worshipping before the barks. Finally, he presents the image of truth to the goddess. Thus the the image of truth to the goddess. Thus the decoration all has its purpose as an outline of the ceremonies proper to each part of the temple; it is a kind of ritual and rubrics in stone, like the scenes and figures of the early tombs, so that eternally the king should be considered to be performing the

divine service in his spiritual person.

Apart from the ritual decoration, there were many details of customary ornament. The palm-leaf cornice we have already noticed. On the screens of stone between the columns, and on the tops of shrines, a cornice of uræi was often placed. Such was originally proper to the judgment-hall, the deadly ursus serpent being the emblem of the right of capital punishment. A favourite combination was the disc of the sun, the uræus in front of it, a vulture's wings at the sides, and ram's horns above it. This represents Ra, in three aspects, as Creator—the ram's horns belonging to Khnumu, the creative rain god; as Preserver—the vulture's wings spread out being the emblem of maternal care; and as Judge or Destroyer—the serpent being the sign of judicial right. Where the disc is shown over a king's head, it is often seen without the serpent, and with the wings drooping to embrace the king, as he is protected but not judged by Ra. Similarly on the roofs of tombs, especially the kings' tombs, there is a painting of vultures, with outspread wings across the passage, along the whole distance, showing the protection

given to the soul.

A favourite structural decoration was a dado of papyrus plants along the lower part of walls. This seems to have been used in the 1st dynasty, to judge by the ribbed green tiles; it often appears in later times, and was usual in Ptolemaic and Roman temples. Similarly the ceilings are covered with a dark blue ground, spangled with golden stars. The stars are always five-rayed; and the representation of stars with rays suggests that the ancient Egyptians were short-sighted like the modern, for stars appear only as points of light to

long-sighted eyes.

Of minor decoration there is a very ancient form in the figure of a door surrounded by panelling, which became the emblem of the tomb entrance, and is often shown painted below the sacred hawk. and is often shown painted below the sacred nawk. The ka name of the king is always written above such a doorway. The very elaborate coloured patterns of the panelling on examples in the Old and Middle Kingdoms should be noticed. The small square panels are probably an imitation of a woodwork screen built up of small pieces. Such construction was requisite in so dry a climate, where wood warped and shrank so much, and only small pieces could be trusted to keep their form. The mediaval Arab woodwork met this difficulty in the same way. Another decorative use of wood was in the open-work carving of a pair of lotus leaves tied together, or a group of dad signs, which formed a fretwork over the ventilating holes in the screens. Similarly stiff bracing of woodwork was inserted to steady the framing of chairs and was inserted to steady the framing of chairs and tables by fretwork groups of hieroglyphs, as the girdle tie of Isis, the dad, the ankh, and other signs. Such furniture work passed on into stone decoration of wall surfaces. Vegetable decoration had a great part in Egyptian life. Every festivity, every sociality, was a field for floral ornament with wreaths, garlands, and streamers of convolvulus; every water-jar had flowers over it and round it, and every group of offerings on an altar was heaped with flowers. Hence wreaths became a customary

with flowers. Hence wreaths became a customary decoration on surface carvings and paintings. Also a favourite ceiling design was a vine trellis; and along the beams purple bunches of grapes hung down, made in glazed pottery.

5. The furniture.—The furniture of the temples is frequently represented. The central object of devotion was the sacred bark. This was a boat about 8 ft. in length (Koptos, xix.), fastened down to a framework of poles by rope ties (Temple of Kings, vi.). This framework was put upon the shoulders of the priests for carrying it in procession; as many as twelve to twenty priests are cession; as many as twelve to twenty priests are represented, each probably carrying a burden of half a hundredweight. To set down this bark a high stand was needed. This was sometimes of wood, a sort of square box with decorated panels (Temple of Kings, iii.-vi.), or a block of granite, like one in the British Museum with figures of six gods around it (see illustration in ART [Egyptian]). Upon the bark there stood a canopy or catafalque Upon the bark there stood a canopy or catalalque of slender wooden pillars and a springy top of board; and from this was suspended the square shrine of the god, hung by ropes, and kept from swaying by guide ties at the bottom. The detail of the structure is shown in a working drawing on papyrus. This shrine was elaborately carved and decorated, and was almost always half-swathed in a linen wrapper. Fore and aft of the shrine were a linen wrapper. Fore and aft of the shrine were statuettes of the king and of various gods, adoring the divinity. At each end of the bark was a figure-head, and a great engraved collar of metal hanging below it. Some shrines had a winged figure of Maat, the goddess of truth, at each end, embracing the shrine with her wings. Such seems to be the prototype of the winged cherubs on the Jewish ark. Of other furniture there were the Jewish ark. Of other furniture there were the standards of the gods upon long poles, which were carried in procession, as well as the stands for holding the libation jars and other vases used in the ceremonies; the framed wooden stands for water jars hung round with garlands; and the tall trampet shaped stands of pottery or metal for helding iars. In the papyrus of Ramessu III. are

named the tables of gold, silver, and bronze, the collars and ornaments for decorating the statues on the festivals, and a great balance plated with electrum. The buildings and chambers which now seem so bare and blank were radiant with plated

seem so hare and blank were radiant with plated tables and stands, glittering with precious vases of gold and silver, and bright with garlands of flowers.

6. The popular shrines.—These shrines were scattered all over the country by the waysides, doubtless like the modern Muhammadan wely. Such local worship is directly contrary to Islam, and must therefore have passisted from carling and must the same and must be supposed to the same and must, therefore, have persisted from earlier times, like so many other customs. There still exist models of these shrines of Roman ages, which were used for domestic worship in the house. They are shown as small chambers crowned with a pediment, supported by six columns—three on each side—which were connected by lattice screens; or as an arched roof carried on four columns, with a dwarf wall joining them; or as a small domed chamber with a doorway, exactly like a modern wely. The shrine in the house was a framed wooden cupboard surmounted by a pillared recess, covered with a cornice of urae; inside this recess a lamp burned before the figure of the god.

W. M. FLINDERS PETRIE.

ARCHITECTURE (Greek).—The subject of Greek architecture is one that has been curiously neglected in this country, and the student finds himself beset by an insufficiency of data and an atmosphere of uncertainty immediately he enters upon the study. This accounts for the vagueness and incompleteness of what little has been written upon the question. It is therefore especially necessary in dealing with the subject of origins to be upon one's guard against certain popular fallacies, particularly when those origins are lost in the obscurity of a remote antiquity. A mere resemblance between two forms is absolutely no evidence that one is derived from the other, and nothing is more harmful to true knowledge than the shallow kind of art criticism that makes such an assumption without a very careful weighing of the evidence. Art is in its essence creative, and, in a great art, even when it does borrow, the important element is always not what it takes, but what it gives of itself. At the same time, the higher the art the more subtle it is, and consequently by the inartistic observer the primitive borrowed element is absurdly over-emphasized.

A familiar parallel is seen in the case of faces. The shallow observer is always noticing 'likenesses'; the artist notes differences. The stranger notices the 'likeness' among members of family; those who really know the faces note the differences. Twins at first sight are often almost indistinguishable; later, as knowledge grows, we wonder that we ever noted any marked resemblance. (An excellent instance of this is seen on p. 715b.)

The architecture of Greece, the most refined, the most subtle, and in some respects the most artistic, that the world has seen, is pre-eminently the natural architectural expression of the gifted race that produced it. The Hellenic peoples were marked by extraordinary individuality and independence in a most unusual degree, and therefore, except where there is real evidence, it is not unreasonable to give them credit for invention, when the forms are such as might be developed from the simplest elements by any people of intelligence; and it is unnecessary to seek for far-fetched resemblances to bolster up improbable theories. At the same time, of course, due weight must be given to the conditions of previous and contemporary art, whose influences doubtless made themselves felt.

Of these influences three possible sources may be briefly noted—Egypt, Assyria, and the Ægean civilizations. In each case the most striking fact is the extreme difference in purpose, sentiment, treatment, and detail that distinguishes them from Greek architecture.

(1) The earlier periods of architecture in Egypt—of pyramids and tombs—hardly need be considered; partly because they belong to a time that had long since ceased to exercise any influence in Egypt itself, partly because they are entirely foreign in intention to anything built by the Greeks, who were never a race of tomb builders at all. Of the later Egyptian architecture, of the Theban period, it may be said that it was erected with more definitely religious intent than was that of Greece. The artists were, to some extent at least, under the thumb of a priestly caste, and although art itself is in essence free, the purposes of the buildings naturally influence to a certain degree the channels in which it moves. The effects after which the Egyptian artist strove were mainly internal rather than external. Throughout, the artistic motive is immensity and suggestion, us contrasted with the special grandeur of Greek art, which expresses itself in reserve, refinement, and grace. Like the Greek style, it is trabeated, but as this is the first and most obvious method that occurs to every builder, it certainly does not necessarily constitute an 'influence.' The stone construction is also a little too obvious an expedient to be interpreted as a sign of influence, and there remains the frequent use of columns as the only resemblance. But these are of so essentially different a character, and their gradual development in Greece is so easily explained, that there is no need to make reference to Egyptian practice at all.

(2) Asyrian architecture offers even less resemblance. It was of brick construction, a non-trabeated style, characterized by the arch or the vault. It was primarily secular, and neither tombs nor temples played any important part, but, as far as remains attest, the architectural spirit expressed itself in palaces. The ornamental detail in some ways resembles that of Egypt, and it is here that Greek work seems to have certain affinities, although probably not more than can be accounted for by a perfectly nat

and it is here that Greek work seems to have certain annuous, although probably not more than can be accounted for by a perfectly natural process of development or suggestion from pre-historic work in Greek lands.

It may, however, be noted that the influence of minor ornament is always more wide-spread than that of major forms, from the fact of its occurring upon more portable objects. But it

perfectly natural process of development or suggestion from pre-historic work in Greek lands.

It may, however, be noted that the influence of minor ornament is always more wide-spread than that of major forms, from the fact of its occurring upon more portable objects. But it is a petitic principit to assume that the influence passed from Assyria to the Egean any more than vice versa. The probabilities are rather that there was a certain amount of interaction between the early Ægean, Assyria, and Egypt.

In the case of Persan architecture, which may at earliest be said to date from B.C. 558, although again entirely different in general intention from Greek architecture, there are certain minor features of detail which offer slight resemblances, particularly in the columns. But as the styles are contemporary—a fact invariably overlooked—it seems at least conceivable that we should assume a certain amount of interaction rather than definitely assert that the less original and less artistic race alone exerted influence. The great hall at Persepolis may be dated c. 485 B.C. Therefore, to suppose that it can have had any influence upon Greek Ionic architecture is absurd. The temple of Ephesus, for instance, whose perfect Ionic capitals can be seen in the British Museum, dates from the time of Crosus, whose empire ended B.C. 546. The influence is almost certainly that of Greece upon Persia, and not the other way.

(3) In the third place, there are the great Ægean civilizations, of which our knowledge increases daily. Here on Greek soil most probably may be sought those influences which earlier writers have endeavoured to find in the atore-mentioned countries. Original as the Ægean work undoubtedly is, it is not to be understood that it was entirely untouched by the neighbouring art of Egypt. The most original art may adapt to its own purposes ingredients borrowed from its contemporaries, or even from the past, although this latter is a sign of a fully developed art—ene, if it may so be phrased, that has become distin

must have taken a considerable time to effect, implying several earlier stages. The temple has been dated as early as R.C. 1100, in which case it becomes doubtful whether it should be con-

earlier stages. The temple has been dated as early as B.C. 1100, in which case it becomes doubtful whether it should be considered as originally an early Greek temple, or a late Ægean building, adopted and gradually altered to the Doric style. The remains certainly show gradual and continual alterations, whatever may be the explanation of them.

There are, however, questions of great import in this connexion. The Greek races as a whole, and the greatest of them all in particular, namely the Athenians, were in all probability a mixed race, descended partly from an Ægean stock (probably non-Aryan) and an Aryan-speaking people coming from the North. Therefore, although we cannot point to distinct borrowings and definite features, directly inherited from the indigenous stock, which for convenience is here called 'Ægean,' nevertheless it was the spirit of the Ægean peoples, combined with that of the Northern incomer, that produced the true Hellenic architecture. It may even be hazarded as a suggestion that the ultimate decadence of Greek work was due to the gradual reasertion of the indigenous stock over that of the incomer, and that the glories of what we might term the crossed fruit ultimately succumbed to the characteristics of the original wild crab. In that case the decadence is not a simple decadence, such as we may trace in the history of the art of coinage in Northern Europe, from the stater of Philip of Macedon to the BODVOC coins of Britain, but the re-assertion of an older, more ornate, and less restrained style. It, as seems most likely, we are to regard Byzantine Greek work as the true descendant of Greek art, this view receives a certain amount of additional confirmation. [An account of Ægean architecture will be found elsewhere (see p. 677 ff.)].

Of Hellenic architecture it may be remarked that it was a stone built trabeated columnar style. It would be incorrect to say that its buildings were predominantly religious, although religious architecture played an important, perhaps ligious architecture played an important, pernaps the leading, part. It must always be remembered that a religious building is the most likely to survive, partly from the natural conservatism of religion and religious veneration, partly as belonging to a corporate body in contrast to all private property. We should always, therefore, expect, even in the case of an age where the building activity was evenly distributed, that remains of religious buildings would be the most numerous of other public corporations next. and of ous, of other public corporations next, and of domestic buildings last. The greater resources of a corporation, whether religious or otherwise, tend to a greater scale and possibility of survival; and, comparing religious and other public buildings, there is always the greater need for alteration and change in the case of the latter. Even the change from one religion to another, as in the case of St. Sophia, the Pantheon, or the Parthenon, is of itself only a partially destructive tendency, and indeed to this we owe the preservation of many buildings that would otherwise have been destroyed. An interesting case in point is the small temple of the llissus, which survived changes of religion for 2000 years; yet directly the ægis of religion was withdrawn the temple disappeared.

The same is true of Gothic architecture, and it

is a mistake for the student to assume, as is frequently done, that the predominating character of an architecture is religious, or that it owes its features and style to religious influences, simply because such remains are the most numerous. The greatness of scale in so many religious buildings doubtless had its results in influencing other buildings, but this is only one factor among many. In the case of Athens itself the Stoa Basileios, the Stoa Eleutherios, the Stoa Poikile, the Bouleuterion, and the Prytaneum (see footnote, p. 677) must have ranked with the greatest religious buildings, and the greatest conception of all that has come down to us, judged from the purely architectural standpoint, is the Propylea, which can hardly be classed as a religious building, actually having come into direct conflict with the artists of the property of direct conflict with the religion of the day

Greek architecture is generally considered as divided into three 'orders'—the Doric, the Ionic, and the Corinthian-which are variations in the arrangement or order of the essential constituents. These constituent parts, the stylobate, the column, and the entablature, are found in all three orders. With regard to the temples, at any rate, it may be said that every building rested upon a platform or stylobate, generally of three steps. In this it may be distinguished from all other styles, where, although a base-mold or plinth may be found, nothing of this nature occurs. Upon this, as its name implies, stood the columns, and these in their turn supported the entablature or stone lintel which is the main characteristic of the style. This lintel, or trabeated, construction was used, not because the Greeks were unacquainted with the arch: apparently they deliberately rejected it upon esthetic grounds. They knew of the arch in the East, and quite early made use of it occasionally for purely structural purposes, as in the case of a water-drain at Athens, a barrel-vault at Sicyon, the passage to the stadion at Olympia, an arch in Acarnania, and in the lower storey of a stoa at Alinda. It is not altogether improbable that the Tholos at Athens was covered by a small dome. The arches of the Ægean period are not, as a rule, built with radiating voussoirs, although an example occurs in Arcadia. The arch principle is really involved at Tiryns, perhaps unconsciously, but it is not truly the corbelled system. One may suggest that the reason is to be sought in the Greek type of mind, as it expresses itself both in religion and art, partly in its sense of reserve, the #nôèr æyar of the temple at Delphi, partly in its tendency to seek the highest in a completed and finished perfection that does not lead out beyond itself. Hence it is more readily satisfied in the rectangular self-contained composition of Greek architecture than in a style involving the distribution of thrusts and the essentially suggestive, rather than perfected or finished, mediæval style.

The further major divisions of the order may be tabulated as follows:—

the Doric order has generally been considered the oldest; but there is no adequate reason for supposing so, although it is not unlikely. The pre-Persic remains from the Acropolis of Athens and the temples at Ephesus and Samos, Neandria and Naucratis, show Ionic work of very remote date. Indeed, one might even suppose that they are cognate developments from a common beginning, rather than that the one is derived from the other or is a later invention. The Doric order is marked by somewhat massive proportions; for instance, the columns of the temple at Corinth are 4.47 diameters, and those of the Parthenon, 34 ft. high, are 6.025 diameters. The entablature is similarly heavy in proportion to the whole.

The Doric column consists of a shaft and capital only; there is no base. It is conceivable that there was originally a plain square base, and that a series of these have coalesced to form the top step of the stylobate. The early columns at Corinth (c. 650 B.C.) are monoliths, but in other cases the columns are built up in drums, fitted together with the most marvellous accuracy. The shafts are invariably fluted, with a sharp arris between the flutes (fig. 2). These flutes are generally 20 in number, but other numbers are not so rare as is commonly supposed. Thus:—

The flutes are probably a perfectly natural development from the square pillar—a form not unknown in Ægean art—and, moreover, the anta in Greek work is square in section to the last. At first the corners would be cut, giving an octagon, as at Træzen, then these would again be cut, giving sixteen sides. This would be done, doubtless partly for utilitarian reasons, so as to admit more light and give easy ingress and egress. But that the main reason was æsthetic is shown, in the first place, by the fact that the columns never became plain circles, and, in the second place, by the fluting out of the sides of the polygon. These greatly accentuate the effect, and thereby give æsthetic emphasiz to the verticality of the column, emphasizing the outline of the column, and making it tell, whether against a very dark or a very light background. The suggestion that it was derived from Egypt may be dismissed as fanciful, as the supposed prototypes at Beni Hassan belong to an age too remote to have had any influence. The primitive artist is not an eelectic archæologist. In the second place, the Beni Hassan columns are not fluted, but flat sided. The flute, on the whole, points to a stone rather than a wooden origin, as it seems pretty clearly to be derived from a square, and not from the

round posts of a primitive wooden style. Other

Egyptian polygonal types are even less likely.

The capital is composed of three parts. The abacus is a square flat block that takes the bearing of the architrave. Below this is the echinos or capital itself—a bold molded member eminently suggestive of powerful support. Below this are three fillets to emphasize the neck. This gently curves into the shaft by means of the apophyges, and at the top of the shaft, immediately below the apophyges, are three sinkings which prepare the eye, as it ascends, for the change from the vertical lines of the shaft to the horizontal lines of the capital.

The entablature is divided into three portionsthe architrave or lintel proper, the frieze and the

The architrave is quite plain—a single solid block. In very large examples it may be necessary to use more than one block, but they are placed on their edges so as to present a single face to the front. The frieze is divided into spaces by upright blocks of stone (triglyphs) which support the real weight—a fact esthetically emphasized by the upright channelling that gives them their name. These three glyphs, or channels, are arranged with two complete in the middle and one half on either side. The early form of the glyph

nair on either side. The early form of the glyph seems to have been nearly round-headed (fig. 3). The spaces between are filled with slabs which do not support anything. These are termed metopes. The metope (i.e. the thing behind, or after, or at the back of the ope; cf. µeráφρενον) is the slab that goes behind the ope, hole or opening, in the frieze (fig. 3). This does perhaps imply that the interval was originally open. In a cella wall the rieze (ng. 3). This does pernaps imply that the interval was originally open. In a cella wall this would give light to the building (bm in later writers means a window). In a peristyle it would become useless; and the introduction of the peristyle may have done away with the custom.

It does not throw much light on the beam-end theory, as the opening would be there in any case; but the method of fitting invariably used—which

but the method of fitting invariably used—which is to put the slab at the back of the hole—and the name—which does not mean 'between the tri-glyphs' but 'behind the opening'—if they point any way at all, suggest that the metope was always fitted as we find it, at the back of or behind the opening (fig. 3), which would not be possible if there were beam-ends. In rich examples the metopes are

The cornice moldings need not be enumerated, but it might be observed that the uppermost member, the cymatium, is generally very similar

to the ovolo molding of the echinos of the capital. This molding is carried up over the pediment at the ends of the building, and the corona or flat member beneath it is repeated, occurring once over the triglyph frieze, and once, with slight modifications, under the cymatium of the pediment.

The Doric order is the most severe and refined of the Greek orders, and this characteristic enables it the better to act as the frame of the glorious sculpture with which it was adorned. The tympanum, or triangular space in the pediment or gable, was generally filled with free sculpture, and some or all of the metopes were occupied by sculpture in very high relief. In rich examples, as, for instance, in the Parthenon, it would seem to have been permissible to introduce sculpture elsewhere.

In that example the famous Panathenaïc frieze runs round the upper part of the cella, within the outer range of columns.

It is generally said that sculpture is a speciality of the Doric order, and is not found in Ionic, but for absolutely no reason. The Erechtheum, the temple of Athene Nike Apteros, the temple of the Ilissus, the great temples of Artemis at Ephesus, the translate of Athenesis at Artemis at Ephesus, the temple of Aphrodite at Aphrodisias, the Mau-soleum, and the Ionic order in the interior of Phigalia, were all richly decorated with sculpture.

2. The Ionic order is marked by several important characteristics. In the first place, it is a lighter characteristics. In the first place, it is a lighter style; its columns are of more slender proportions and more widely spaced. At the same time it should be noted that, in proportion to the weight that they carry in the lighter entablature, they are no lighter than the Doric. It is less severe, and in any hands but those of the Greeks might have become over-ornate. The columns have bases which show very considerable variety in their moldings. The so-called Attic base is not a widespread form, occurring only in a single instance in the north porch of the Erechtheum and not elsewhere the north porch of the Erechtheum and not elsewhere even in that building (fig. 2). The Corinthian example of the monument of Lysicrates is, however, but slightly different. The influence of this base upon the architecture of the world was extraordinary, but not more than its extreme simplicity and great beauty justify (p. 713, fig. 47, and con-text). The original form of lonic base seems to have been a torus molding above a sort of plinth with several astragals. The scotia below the torus was first introduced, and then the second torus below.

The flutings are generally 24 in number, and much deeper than the Doric. They are separated by a fillet in place of the sharp arris, which gives a very different effect to the column (fig. 2). In early examples the flutings were more numerous—40 at Naucratis, 40 at Ephesus, 44 on a votive column at Delphi. The sharp arris is also found in these early instances. The capital is lighter and the most distinctive feature of the order. It may be described as resembling a scroll upon two rollers, which form the well-known Ionic volutes. There which form the well-known Ionic volutes. is a very small circular abacus which has ornamental carving. The head of the capital, the mental carving. The head of the capital, the echinos, immediately below and between the volutes, is also carved, and sometimes, as in the Erechtheum, the neck also is richly decorated.

There seem to have been two early forms of the Ionic capital, that which may perhaps be termed Æolic and the Ionic form proper (Neandria and Heræum, fig. 4). It may also be noted that the egg and dart of the small echinos of the Ionic capital and dart of the small echinos of the lonic capital tend to diminish and become pushed up into the volute part of the capital. It is quite possible that this part is really the descendant of free overhanging leaves in an earlier form (fig. 4, Delphi). The architrave is not simple but divided into three facias, each slightly projecting over the one below (fig. 1). The trigory is continuous land unbroken by trigolymbs. frieze is a continuous band unbroken by triglyphs

and frequently sculptured. The cornice is more elaborate than the Doric, and the lowermost mem-

FIG. 4.

ber, as found in Asiatic examples, and afterwards borrowed in the Corinthian order, is very distinctive. This is the dentil band, which may be described as a series of small blocks set below the cornice, giving the appearance of a square serration. The uppermost member of the cornice is almost invariably the molding known as the cyma recta (fig. 9). On the whole it may be said that the Ionic style is less robust than the Doric, and depends more upon architectural ornament.

FIG. 5

3. The Corinthian order is practically only the Ionic with a different capital. We are told by Vitruvius that Callimachus saw an acanthus plant at Bassæ near Phigalia, which had twined itself about a basket of sepulchral offerings, and that this suggested the idea of the Corinthian capital. A single capital of this type occurred at the S. end of the main chamber of the temple of Apollo at Phigalia, all the other capitals being of a peculiar Ionic type. This temple was built as a thank-offering for immunity during a great plague in either B.C. 430 or 420. It might even be hazarded as a suggestion that Callimachus was associated with the architect Ictinus in this case, just as Phidias was in the case of the Parthenon. The ultra-restlessness of the design of the frieze, and an almost over-elaborate treatment of the drapery, carried out though it may have been by Peloponnesian

workmen, would point to the influence of an extreme Attic tendency, such as we would associate with Callimachus rather than with Phidias and his school. That Ictinus, the most famous Athenian architect, built the temple, and Phidias himself made the temple image, suggests some famous Athenian designing the sculptural decorations.

It is fairly clear that the Corinthian capital was an individual invention, as it suddenly appears complete, late in the history of Greek architecture. What more likely then than that in this single central capital, among a set of another kind, we have the original itself? This is strengthened by the fact that at Phigalia we also get the first departure from the true Ionic capital, showing obvious experimental tendencies in new directions on the part of the architect. Callimachus himself was famous as a worker in metal, and there is something suggestive of metal in the design, with its free overhanging leaves. That the inventor may have been familiar with the upward springing tendency of Egyptian capitals is conceivable, but to suggest an Egyptian origin is merely to go out of one's way to find things utterly unlike. The capitals of the Horologium, or so-called 'Temple of the Winds' (fig. 5), have the lotus leaf, but so have those at Persepolis. Vitruvius may very possibly be wrong, but to reject his evidence on the ground of his general unreliability is not of much assistance.

The capital is found in a considerable variety of forms, almost always including some small tendrils or spirals, totally unlike the lonic volute, which is

The capital is found in a considerable variety of forms, almost always including some small tendrils or spirals, totally unlike the Ionic volute, which is more of the nature of a thick scroll, or roll of cloth. Greek examples are not very common. Besides Phigalia, Pansanias informs us that it was used by Scopas in the interior of Tegea. The Choragic monument of Lysicrates is Corinthian, and the Horologium has Corinthian columns with acanthus leaves of Roman type. The temple of Olympic Zeus and the Corinthian Stoa, all in Athens, are other instances. A beautiful and somewhat peculiar example exists from the lesser Propylea at Eleusis. The temple of Apollo Didymœus at Miletus shows fine examples, and there is an archaic Corinthian capital of uncertain date also found at Branchidæ near Miletus. But the loveliest of all Corinthian capitals are those of the Tholos at Epidaurus, obviously fairly early in date, and, with all their richness, marked by the chasteness and refinement of Greek work. The Corinthian order became the favourite of the Romans, and these subtle restrained delicacies were lost. It may be noted that in Greek work the acanthus leaf is worked with a crisp sharp edge, which becomes blunt and rounded in Roman hands (fig. 6).

This slight survey of the general characteristics of the orders prepares the way for the consideration of the commonly accepted theory of the wooden origin of Greek architecture. It is generally said that the Doric order is of unmistakably wooden origin, although it may be more doubtful in the case of Ionic. The grounds for suggesting this are the triglyphs, which are supposed to represent the beam ends, and the upward slope of the mutules, which represent the ends of the rafters. These features do not occur in the Ionic order.

In the first place, the general similarity in the main essentials of the two orders is far too marked for the principal source of origin and inspiration not to be the same. At the same time there are probably different contributory influences.

The stylobate can hardly be claimed as anything but a stone feature, even though the upper part were timber. In Doric architecture, as contrasted with Ionic, the columns have no base, and the base is one of the supposed signs of a wooden origin, either representing a metal shoe to prevent splitting—a feature hardly consonant with a primi-

tive style-or a flat stone laid on the ground to distribute the weight. However, it might be remarked that the distribution of weight is estheticmarked that the distribution of weight is esthetically demanded in any case by the slender Ionic column. The massive Doric column requires no base, and if it ever had one, it was early seen to be unnecessary. Its proportions are obviously those of stone, as are the narrow intercolumniations. The more slender Ionic with its considerably longer lintel has a closer resemblance to wooden proportions. It should further be noticed that the oldest Doric columns are the most massive, and most obviously the outcome of their stone material. The tendency of development from a wooden origin would naturally be in the reverse direction. Pausanias says that one of the columns of the Herœum at Olympia was of oak. It has been suggested that this was the last of the original wooden set, which were gradually replaced. There are, however, difficulties with regard to the entablature, which would not fit equally well upon a set of stone Doric columns of more or less normal prostone Doric columns of more or less normal proportions and upon wooden ones. Nevertheless it is conceivable, and the intercolumniations are certainly wider than usual.

The heavy Doric abacus projecting on all four sides is also obviously of stone; a wooden one would split off. To some extent the same might

be said of the echinos, but its whole shape is essen-

tially non-wooden.

In the Ionic capital, however, we find proportions that are not square and that would be eminently adapted to wood. The grain of the wood would run parallel with the line of the architrave. The spreading support is obtained, and at the same time the capital does not overhang at the front or time the capital does not overhang at the front or the back, so there would be no danger of splitting off. Again, the spirals are a natural primitive in-cised ornament, equally applicable to stone and wood, although their final form is more suited to stone. Early incised and painted capitals have been found on the Acropolis of Athens. The Dorice

been found on the Acropolis of Athens. The Doric echinos, however, though subtle in its curvature, is a natural primitive stone form, claiming kinship with such a form as the rude primitive cushion capital of the Normans (fig. 37, p. 710).

It is just possible that the different fluting points the same way. A polygon when fluted can give only a sharp arris. It is a natural and simple expedient, in borrowing the idea of fluting from the stone Doric form and applying it to the circular form, to leave the plain fillet which we find in Ionic work. The surfaces of the fillets are on the circumference of a circle and are not flat. The circular form is the natural shape of the tree-trunk; the polygonal form is the natural development from the square block of quarried stone.

from the square block of quarried stone.

But it is in the Doric entablature that the wooden origin is supposed to be most conspicuous. The general proportions, which may be contrasted with the light entablature of the Ionic, are certainly approximately and them. tainly true stone proportions as we find them. The massive architrave in a single block certainly does not suggest anything but the stone block which it is, whatever may be said for the three

facias of Ionic work.

The triglyph frieze is generally said to represent the ends of the beams, and it is suggested that the guttæ represent the heads of the pins. What the guttæ represent the heads of the pins. What the regulæ are, from which the guttæ depend, is gracefully omitted from the theory. Now, in the first place, the actual position of the guttæ suggesting a vertical pin is quite impossible as at  $\delta$  (fig. 6); but even if we try a diagonal position such as at  $\gamma$  (fig. 6), the pin would be absolutely useless, as it would draw, and this is really equally impossible. A pin might be placed at  $\alpha$  or a huge pin directly underneath at  $\beta$ , but in neither place are the guttæ

found. A true artist may have had the guttæ suggested to his mind by pin-heads, and then created a genuine stone feature, but that has nothing to

do with a wooden origin for architecture, any more than the acanthus leaf implies a haystack as an architectural prototype. The raindrops may equally well have suggested the idea and have spontaneously suggested rain-drops to children, who did not know the meaning of the word gutta.

But the most serious objection to the pin theory is that guttæ are not found in early work. They do not occur in the Bouleuterion at Olympia or the Selinuntine treasury, or in the newer, but still early, porch of the Geloans. They are not found at Assos or in the early Athenian fragments, or in

the temple of Demeter at Pæstum.

With regard to the triglyphs, they are in the first place needlessly enormous for any ceiling joists. They might be the right scale for tie beams, but they are then placed at impossibly close intervals. The dentils of the Join and a many of the place of the Join and a many of the Join and the beams, but they are then placed at impossibly close intervals. The dentils of the Ionic order would in many examples, although most of them late, approximate more nearly to a reasonable scantling. But the most pertinent question to ask is how one could have beam ends all round the building at the same level—which is a hopeless iming at the same level—which is a hopeless impossibility. Now, in the case of the Lycian tombs at Xanthos (fig. 7), where we have actual copies of timber work in stone, we see, of course, where ends and sides of the building are visible, that the ends of the beams show only at the sides of the building. We also get a feature resembling purlin ends under the gable roof. It should be noticed that where we find timber construction reproduced in stone, as at

Kanthos, Beni Hassan (Egypt), or Naksh-i-Rustam (Persia), it is in no case a building, but simply a representation carved out of the solid, and is entirely non-structural. It is, in short, merely a pictorial representation.

its own methods of construction, and this is perhaps particularly necessary in days of early development. Further, if they were beam ends, they would not occur at the corners, but a metope or a portion of the wall would finish the series. This again is, of

course, the case in the Lycian tombs.

The difficulty of the metopes has already been noted. But what are the vertical channels themselves? They seem to serve the same purpose as the vertical flutes of the column. But to emphasize the verticality of a horizontal beam is somewhat of a solecism. The suggestion has been made that they are timber markings—which is not merely untrue but foolish, for they could not resemble timber markings, which radiate from a centre.

The very early treasury of the Geloans at Olympia is so early that it is not even Doric in character, but it is undoubtedly stone; and if its influence may be considered at all, it points in this direction. Although probably of the 7th or 6th cent., it may be set against the supposed original wooden Heræum. In several features, particularly its stylobate, its columns,\* and its characteristic waterspouts, it anticipates Greek work of a later date. It might further be noted that the dentil band in Ionic work, which may possibly represent beam ends, is above the frieze, whereas the beams of the coffered ceilings in Doric work are above the frieze, making triglyphs as beam ends impossible.

The construction of the triglyph frieze, with rebated uprights and slabs behind, is found in the dado or frieze discovered at Knossos (fig. 15, p. 682). There it was obviously a stone construction from the outset, and was applied to the face of the wall. This is quite a conceivable origin for the triglyphs.

In early examples the triglyph and metope are frequently worked in one piece, as in several of the treasuries at Olympia. This is also found in many of the stones of Libon's temple of Zeus (also at Olympia), and was the case on the sides of the Athenian Hekatompedon. This of itself is enough to constitute a fatal objection to the whole theory.

The slope of the under side of the mutules would not coincide with the slope of rafters, and (like that of the under slope of the cornice itself) is sufficiently explained as a slope to throw off the rain and pre-

vent its running under and down the face of the frieze. This device is common in stone architec-

ture of all styles. It occurs even in string courses of Gothic moldings. The mutules above and the regulæ below the triglyphs are a delightful way of softening the effect of these members and also of providing for the eye an asthetic support or introduction to the frieze and cornice respectively. They correspond to the corbel tables of Gothic architecture, which are more asthetic than structural.

It should be noticed that Greek doors are narrower at the top than at the bottom (fig. 8). This is obviously to reduce the interspace for the stone lintel, and would be quite pointless in a wooden construction. Even as it is the lintels have often cracked. The exquisitely beautiful doorway of the Erechtheum had to be repaired in classical times.

Perhaps then it may be said that we have in Greek architecture the work of a stone-building people, modified in the East by a wooden type of work resulting in the Ionic style, and perhaps slightly affected in Greece itself by a mixed style of stone and wood. To some extent the two materials have always been used together: doors, ceilings, and roofs tend to be of wood in a stone building, and door-sills and hearths of stone in a wooden one. In any case it is the remarkable adaptability of every detail to the stone material in the perfected style, and the inevitableness of Greek architecture, that give it its charm.

Greek architectural ornament consisted in the first place of sculpture, either free, as in the case of the pedimental sculptures in the tympana, and the akroteria (figures placed on the summit of the pediment, and on little platforms at the lower extremities and standing out against the sky), or in reliefs, as in the case of the metopes and friezes. Sculpture also occurs upon the lowest drum of the column, as in both the archaic and later temples at Ephesus. Figures in the round are used as supports, as in the Telemones at Agrigentum or the Caryatids of the Erechtheum or at Delphi. In the second place, there are the exquisite moldings, which seem to be entirely original, and in any case the actual refinement in the forms used has no parallel in any other architecture in the world. The most important are the ovolo, c.g. in Doric capitals; the cyma recta, c.g. in the capital of the Doric anta; the cyma reversa, or ogee, used in string moldings; the torus, e.g. in the Ionic hase; the scotia, a large hollow of double curvature, also found as a base molding; the fillet, a small projecting square-edged mold; and the astragal, a small projecting round molding; this when sunk is termed a bead (fig. 9).

FIG. 9

A remarkable quality of Greek ornament is the adaptation of the surface decoration to the molding which it enriches. The outline of the ornament tends to be the same as the section of the molding; thus the egg ornament is found on the ovolo, the honeysuckle ornament on the cyma recta, the water leaf on the cyma reversa, and the guilloche on the torus (fig. 10).

loche on the torus (fig. 10).

In the third place, the Greek architects made use of colour, as for instance on the echinos molding of the Doric capital, and traces of it are not infrequent in many places. It is possible that more

<sup>\*</sup> There is some doubt about the assignment to this building of a column found at Olympia.

was used than would be pleasing to a modern eye, particularly in cases where marble stucco was

FIG. 10.

applied to some inferior quality of stone such as poros. But we are not to imagine that the Greeks were not keenly alive to the beauty of their exquisite Parian, Pentelic, and other marbles, and the major portions of the surface of the buildings remained without colour. A very small amount of colour judiciously applied certainly enhances the effect of the marble, which looks almost staringly white without it, when new; and the comparison between buildings with and without colour may profitably be made in modern Athens to-day.

The workmanship of Greek architecture has never been approached, although some of their methods of construction are not above criticism, particularly in early work, as for instance in the blocks placed on edge on the face of the foot of the wall, forming a course much higher than the other courses (orthostatai) (fig. 1 in Architecture [Ægean]). Very little bond is used in Greek work, but the size of the blocks makes these things a matter of small moment. Mortar was never used, yet so accurately are the stones fitted that in some instances they have actually grown together, and survived the accident of a fall without coming apart. Dowels are very frequently used, however, and their different shapes are useful for the determination of dates.

The methods employed can largely be gathered from internal evidence, particularly in the case of unfinished buildings. The building was apparently completed before the final dressing of the stone, which was done from the top downwards as the scaffolding was removed. The fine dressings on the faces of the stones, worked only for a short distance from the joint, and the short flutings of an inch or two at the top and bottom of columns, otherwise plain, are instances that may be cited of unfinished work, both of which have been ignorantly copied in Roman and modern times as though complete. Even in the finest work there is always a difference between the top joint of the column, which shows distinctly, and the others; as the flutings on the top block, which included the capital, were worked before it was placed in position. The rest of the fluting was worked when the joints had been made absolutely true by turning the blocks round and round after being placed in position. This seems to be the explanation both of their finer joints and of the wooden plugs and pins that have been found in the centre of the Parthenon drums (fig. 2, p. 679). The pin would be just strong enough to stand the turning of the drum but could not add any real strength to the building. The ankones, or projecting pieces found on unfinished drums and on other blocks, must have been used for this turning process. Doubtless they would also have been convenient for hoisting, but a quite unnecessary luxury, whereas the turning of a round drum would have been impossible without some such thing. The uppermost block could not be turned for fear of chipping the finished edge, hence the difference

between that and the joints that were finished afterwards, which is always noticeable. The joints in the walls were probably made accurate by a similar process of pushing the blocks backwards and forwards, so as to grind the contiguous surfaces absolutely true, with the result that the finest knife blade could not be inserted anywhere between these mortarless joints. For this again the ankones would be useful. Every piece of carving, as for instance in the moldings of the Erechtheum, is executed with a minuteness of finish that one would naturally associate with ivory carving rather than with work in stone.

It is, however, the subtle curvatures in Greek architecture that are its most remarkable refinement, and the whole problem connected with them offers in itself a wide field for study. The following points may, however, be noted here. In the first place, it may be broadly stated that there are no straight lines in a Greek building of the finest class—a rather startling discovery to those who are accustomed to think of a Greek building as composed of nothing else.

Taking the principal lines of a building, the stylobate and the architrave, we find in each case a slight curve amounting to a rise of about 3½ in in the case of the long sides of the Parthenon, 228 ft. in length, and about 2 in. in the short sides, 101 ft. in breadth. These curves occur in the temple of Hephæstus and the Propylæa, but apparently not in the colonies or at Bassæ or Ægina. The next most important curve is the entasis of the columns, which is a convex departure from the straight amounting in the Parthenon to ½ of an inch at a point about ½ of the height from the ground, the columns being 34 ft. in height. The entasis of the Erechtheum shafts is even more subtle, 10½ to the length of the shaft and 1½ to the lower diameter, against 1½ and 1½ in the Parthenon. It should be noticed that these curves are not segments of circles but parabolic, or in some cases hyperbolic; but whether they were laid out mathematically or by eye seems to be uncertain. We may assume that the eye which would be sufficiently accurate to appreciate such a subtle distinction of curvature would probably be equal to the task of drawing the curve with a sufficient degree of precision. In the case of the

FIG. 11.—SUBTLE CURVES, ETC., OF PARTHENON EXAGGERATED.

echinos of the Parthenon, what appears at first glance to be a straight line rounded off at the end is found to be a subtle curve throughout, but the application of a 'straight-edge' to it reveals how minute this curvature is.

In addition to these refinements of curvature, others may be noticed. The columns that appear to the modern eye to be vertical really incline inwards towards the centre, so that the lines of the side columns in the Parthenon would meet at a point a mile and a quarter above the earth (fig. 11). The inclination of front to back is similar, and of

course all the intermediate columns incline proportionately. It is also preserved in the faces of the entablature and the pediment and the steps of the stylobate. But here a counter subtlety is introduced, and the faces of the higher moldings are slightly inclined the reverse way, so as to counteract undue foreshortening, occasioned by the other process and by their actual height above the ground.

It might also be observed that the angle columns are an inch or so wider than the others. The intercolumniations are slightly smaller, so as to bring the angle column under the triglyph. There is an exception in the temple of Demeter at Pæstum, where the last metope is made larger

so as to attain the same result.

The extraordinary skill and refinement required may perhaps best be realized, as Professor E. Gardner suggests, by considering the case of the bottom corner drum. Here then what do we find? In the first place, the base of the drum has to be cut so as to allow for the curve of 31 in. in 228 ft. But the mason has also to consider the curve, running at right angles to this, of 2 in. in 101 ft. This would be sufficiently puzzling if the axis of the column were vertical; but it is not. It has to be so inclined that it shall meet the axis of the corresponding column at the other end of the front, at a point 13 miles above the earth, and a similar inclination has to be made in the other direction along the side. Added to this, the edge of the step from which he works is not vertical; and, further, he has to allow for the beginning of the entasis a curve of  $\frac{2}{3}$  in. in 34 ft. Those who are familiar curve of § in. in 34 ft. Those who are familiar with the extreme difficulty of cutting a voussoir for an arch in a curved wall—a comparatively simple process—will appreciate the work of the Greek mason. For not only did he conform to these requirements, but he executed it all with a nicety that would not admit of a sheet of paper being put into the joint. The voussoirs of the arches in such a building as the circular nave of the Temple Church, London, are well cut, but it is mere child's play in comparison.

It may well be asked for what purpose all these things were done, and in any case the answer seems to throw light upon the character of the Greek mind, confirming what might have been otherwise deduced.

It has generally been said that these are optical corrections, that the entasis of the column counteracts the tendency of two straight lines to appear hollow in the middle, that a straight architrave would appear to sag and a straight stylobate would appear to curve up at the ends, that the slope inwards is to correct a tendency of the columns to appear out of the vertical and overhang at the top.

t may be so.

But there are certain objections to the optical illusion theory.

In the first place, what does this theory mean? It means that the result of all the curves is to give lines that are optically straight and optically vertical as the case may be. If this is not the result, the optical illusion theory is ridiculous, as its only object is to avoid the appearance of curves and deviations from the vertical, which on this theory are exhiptothesi ugly. Now, it is quite true that in very early buildings, e.g. Corinth, there is no entasis. But when it first appears what do we find? An enormous swelling visible for miles, that no optical illusion could ever make look straight. The curve can be there for no conceivable object but that it should be seen. But, further, the parabolic curve with its maximum deviation at # from the base would not be correct for the correction of an optical illusion, whatever the amount of the curvature. In the case of the entines there is no possible suggestion of such a theory, but we find a similar curve; and what is most important is that, in the early examples, it is coarse, just as in the case of the entasis, and altimately becomes refined. These curves, then, were obviously deligibled in for their own sake, and, as the eye became more trained, it naturally demanded that they should become more subtle. There remain, then, the curves of the entablature and the stylobate. Now, it the side of the building be viewed from some little distance, the optical illusion caused by these lines would be the same as that caused by the lines of the column; in other words, the architrave would drop in the middle and the

stylobate rise, in which case the correction for the stylobate should be the reverse of what it is. To one standing upon the stylobate or very near it and above it, this correction might be stylicate or ver hear it and dover, this correction might be valuable, but in that case the architrave would be wrong in its turn. It is very doubtful whether there is any optical illusion at all in the case of straight-sided columns. If there were con-

FIG. 12.—DIAGRAM SHOWING OPTICAL ILLUSION CAUSED BY ANGULAR LINES IN PROXIMITY TO PARALLEL LINES.

cave curves (or lines at an angle near them, as in the pediment and architrave) this might be the case. The line of the architrave is a legitimate instance because of the triangular pediment, but the line of the stylobate is not, and would appear to urve down at the ends even though there is no curve or angle below it (see diagram and test with ruler).

As to the inclination inwards of the columns, the upholders of this theory urge in the same breath that it is a correction of an illusion of the column not looking vertical, and that it gives a beautiful pyramidal appearance. If it does one, it cannot do the other.

the other.

That optical illusions were also considered, seems, however, certainly to be the case; the thickness of the angle columns and several other such subtleties appear to show it. Moreover, at Priene is an interesting diagram on the faces of the antæ of a temple, showing the correction of propor-tions as they appear to the eye in perspective. Although, then, the optical illusion may have

some influence, it seems more rational to fall back upon principles of æsthetic for the main reasons. It is clear in the case of the entasis and the echinos curve that it is pure delight in the curve. Doubt-less this is associated with what we might term a mechanico-esthetic reason. These curves are undoubtedly suggestive of strength and of organic growth, and may be paralleled by the exceedingly subtle curves in a human arm. The shape, indeed, would actually be stronger, although of course there is no practical need for it, as the margin of material to work done, allowed by the Greek, was very large, something like 3 to 2. In the case of the architrave and the stylobate there is the possibility of actual sagging in the centre upon soft ground, and therefore an appearance of greater strength is certainly given by the upward curve in the centre. In the case of the architrave the optical illusion would exaggerate the suggestion of weakness, and may have been taken into account. Earthquakes and weather, and the great powder explosion in the Parthenon, have made it more difficult to determine the original nature of the architrave curve than of the stylobate.

But all these things are an interesting illustration of one of the most elementary of art principles carried out with exceptional subtlety. A thing must not only be right, but must look right. In this case, therefore, it must not only be strong, but look strong. A plate-glass shop front, however excellently built, could never be esthetically beautiful unless the eye were in some way satisfied as to the support of the walls above. In the achieve we have a to call this remainly account to echinos we have not only this principle exemplified, but also the still more fundamental principle of organic unity of design; and the vertical lines of the columns and horizontal lines of the architrave become one whole by the intervention of the

echinos. It is curious that the eye does not demand a base to the Doric column for the same reason. Indeed, some people have felt the want. But the side lines are diverging at the base, whereas they are converging at the top; the foot of the column, moreover, is so large as in some measure to dispense with such a necessity; it sits firmly without aid, so to speak. At the same time, it is a bold experiment, and is a feature that occupies æsthetically a somewhat peculiar position among great works of art.

It seems not unreasonable to suppose that the 5th cent. Greek saw all these things and delighted in them, just as his ancestors had delighted in their ruder curves, their less subtly proportioned columns, and their exaggerated projection of capital, all exemplifying the same principles, but carried out with less refinement. The result must have given to his keenly sensitive eye an organic artistic unity that has never been surpassed.

Whatever be the interpretation of these subtleties, one inference at least is certain, namely, the accuracy and refinement of the Greek eye, coupled with an æsthetic demand for a completeness and thoroughness in even the minutest particulars that go to make up perfection in a work of art. The immense importance that these must have had for the Greek, to make him expend such extreme care upon them, can be paralleled in modern times only outside the field of art, as in the making of a modern rifle barrel or an observatory telescope. Even optical illusions we are practically content to leave alone. But alongside this minuteness is a breadth and majesty equally astonishing. The composition as a whole is simple in the extreme, and the dignity of its proportions is unsurpassable

and the dignity of its proportions is unsurpassable. In these things we find the key to the interpretation of Greek art, and there are certain distinct advantages in approaching that art through its architecture. Much can here be demonstrated by rule and line which only the highly-trained eye can see in the sculpture. The whole artistic feeling, too, which inspired every detail of Greek architecture and art, has its corresponding parallels in the Greek conception of religion and in Greek intellectual investigations. Naturally it is necessary to beware of the error of the superficial inquirer, who would make one the mere result of the other, rather than go deep enough to find their common basis. This does not mean that the one had no influence upon the others, but that each, as it were, remained master in its own house with its own fundamental principles. In the case, however, of the plan and general arrangement of the Greek temple the æsthetic and religious factors are somewhat closely connected. The general design of the building is naturally largely determined by religious requirements. It is hardly necessary to point out that the Greek temple was not a place of worship: the act of worship took place in the open air, generally in the tempons, or enclosure surrounding the temple; and here the altar was placed. The image within the temple was not the object of worship; the altar architecturally is therefore entirely unrelated to it. The temenos itself and the altar in it are supposed by some to represent the forecourt with its altar in the Mycenæan house. Small subordinate altars there seem to have been within the building; and doubtless there were always two tendencies at work—that which is essentially Greek, and culminates in the highest flights of Greek philosophy and art, and the grosser and more superstitious side which was shared with others. It is not always easy to disentangle these elements, but the essential Greek characteristic, that which distinguishes them, rather than that which they share with al

the main question. Doubtless it is easier to discern it in the time of its full growth, but the tendency is there from the outset; and it is this tendency that made the Greeks what they were, and that was their contribution to the world of humanity. Whatever may have been the origin of the temple image, which it would be out of place to discuss here, it may briefly be said that in the golden age of Athens it was certainly not a fetish or an idol, in the sense of a spirit or spiritual quality embodied in a material object. Nor can it even be regarded as a symbol; it is rather the rational self-explanatory expression of a concept, viewed, it is true, from the æsthetic side, in which we may say Greek art preceded Greek philosophy. It was not an idol, for it was not regarded as possessing any power per se. It was not a symbol, for it rationally explained itself without interpretation. Least of all was it a portrait or likeness; it represented no traditional appearance, and pretended to no inspired vision on the part of the artist. But it did express the outward beauty of certain inward qualities mentally conceived, and these quali-ties were the qualities of deity. It would perhaps seem a little strained to describe the temple image as the formulated creed of the Greek religion as the formulated creed of the Greek rengion esthetically expressed, yet it is hardly possible to look upon the later images of Phidias and Scopas in any other light. The natural superstition and conservatism of humanity among the masses were counteracting tendencies, but at the same time declining ones, and the essential Greek characteristic tends away from these. The intellectual expression in art of a religious and ethical position is an instance of the complete balance of the esthetic, intellectual, and moral nature, tersely embodied in their motto,  $\gamma\nu\omega\theta\iota$   $\sigma\epsilon\alpha\nu\tau\dot{\sigma}\nu$ , and its concomitant  $\mu\eta\delta\dot{\epsilon}\nu$   $\dot{\epsilon}\gamma\alpha\nu$ , implying a complete knowledge and development of all that makes man man, and yet excess in nothing. It is this that makes the Greeks unique among the peoples of the world. The temple may be considered as the casket con-

The temple may be considered as the casket containing the image, and it is on this account that it is the outside, rather than the inside, which on the whole receives the first consideration. At the same time it is esthetically the embodiment of the same general principles as are contained in the image itself. The idealism of Greek religion in its highest aspect had not to wait for Plato for its exposition, in the case of those who could understand. It is already esthetically complete at the time of Phidias, and beginning to advance to what perhaps may best be termed a transcendentalism, culminating, as far as extant work can be taken as evidence, in Scopas. Probably it was closely approached by Praxiteles, whom we are apt to misjudge from the weakness of the copies of his work, read in conjunction with certain minor traits in the Hermes. It would be hard to say whether Greek philosophy ever reached the parallel to this second position; and even architecture shows only the beginnings of it in buildings such as the Propylea and the Erechtheum; although in sculpture it is already making its appearance in the work on the Parthenon, particularly in the frieze.

It is therefore natural that the plan of the temple should be simple and remarkable for its perfection rather than its size—an appropriate casket for its treasure. This is all in marked contrast to the Egyptian temple, which is extensive and of many courts and chambers. The decoration of the Egyptian temple is almost entirely within, and it is dark, vast, and mysterious. The Greek temple is comparatively small, and the open-air worship in the temple is characteristic of the Greek nature, frank, free, and outspoken, fearless in inquiry, and anxious to bring the light to bear upon all things. The

priestly caste and the artificial mystery of the Egyptian were entirely alien to the Greek mind. There was no priestly caste, and hardly anything that could be called a priestly order; and we find this reflected in the popular character of their ceremonies and the open simplicity of their religious architecture. To say that the extraordinary progress of thought in the 5th and 4th centuries, the most rapid and far-reaching that the world has seen, was either the result of these things or their cause, would perhaps be an error, but the interseen, was either the result of these things of their cause, would perhaps be an error, but the inter-relation is unmistakable, and they are alike the product of the Greek mind. It should be said that one important religious building which survives, at least in plan, is to some extent an exception to the general rule—the Telesterion (so-called temple of Demeter) at Eleusis (fig. 14).

FIG. 13.

To the simple primitive rectangular cella a second rectangular chamber is apparently an early addition; but throughout Greek history there is hardly a departure from the general rectangular plan, although circular religious buildings do occur, such as the Thymele at Epidaurus.

The simplest form is a three-walled building with an open end divided by two columns 'distyle in

antis' (fig. 13). The trabs or architrave, resting upon a column, required a support at the other end that would satisfy the eye as well as merely subserve its utilitarian end. It was not sufficient, therefore, that it should rest upon the wall, but a special feature was built for its support, a flat column of rectangular section attached to the wall, called an anta. Hence, wherever we have an architrave passing from a column to a wall, there is invariably an anta to receive it with its own capital and base. This capital and base mark the double character of the member, and are not the same as The trabs or architrave, resting antis' (fig. 13). character of the member, and are not the same as those of the column, but are in some respects more closely related to the flat wall (fig. 13). The anta with its clearly defined function degenerates into the Roman pilaster of later date. It has been suggested that the origin of the anta is an end-facing to a rubble wall. This does not explain the capital and base, or its frequent position not at the end of a wall. On the other hand, the anta is never found where it does not support an architrave.

The 'distyle in antis' arrangement may be at one or both ends, as at Rhamnus or Eleusis (figs. 13, 14). There is, however, no entrance to the temple at the back, the temple image being placed at that end of the temple with its back to the wall—an arrangement occasionally modified in the larger examples. The next development that may be noticed is a portice in front, 'prostyle'; or one in front and one behind, which is by far the more common arrangement, 'amphiprostyle,' as in the charming little temple of Athene Nike Apteros at Athens and the one by the Ilissus, both destroyed in comparatively modern times, although the former has been re-built. In the largest examples a range of columns is carried right round the building, 'peristyle'; and sometimes there is a double row of columns, 'dipteral,' as in the temple of Olympic Zeus in Athens. A single line of

FIG. 15.

columns at a considerable distance from the cen-

columns at a considerable distance from the central building, or naos, is termed 'pseudo-dipteral,' as at Selinus (fig. 15). A temple is also sometimes described according to the number of columns at the ends—hexastyle, octostyle, and so on.

In the smaller temples the roof was apparently of a single span, leaving the floor space perfectly free. But in larger temples we find columns inside. They may be down the centre, as in the Doric temple at Pæstum (fig. 15), or the Ionic temple at Locri. The temple of Apollo at Thermum in Ætolia

shows the same arrangement. More commonly we find two ranges of columns, forming three aisles, as

in the temple of Poseidon at Pæstum or the Par-These were apparently in two tiers, one

thenon. These were apparently in two tiers, one above the other, as those remaining in situ attest (fig. 16). The roof, presumably, was of timber, and was covered with tiles, frequently of marble.

The columns down the centre seem obviously to support the ridge piece of the roof; but the arrangement must have been very unsatisfactory, blocking the central view of the building, and the temple image if placed in the middle line. The three-aisled arrangement would also lend support to the roofs, but clearly that seemed have been the only roof; but clearly that cannot have been the only function, for in the case of the two largest Dorio temples known, that at Selinus and the temple of Olympic Zeus at Athens, a considerable part of the roof, which was the same breadth throughout, was apparently without these supports.

In the temple of Zeus at Olympia the lower tier

supported a gallery, which was approached by stairs at the east end. There seem also to have been stairs in other instances, as in the great Ionic temple of Artemis at Ephesus, which may have served the same purpose (fig. 14). But they also occur where there were no interior columns, as in the great temple of Apollo Didymæus at Miletus, the great temple of Apollo Didymæus at Miletus, in which case they presumably only led to the space above the ceiling. That ceilings existed below the roof proper, we know from the record of the finding of a corpse between the ceiling and the roof at Olympia. The columns seem partly to have served a quasi-ritual purpose, for we find that a low screen often existed between them, as in the Parthenon or the Zeus-temple at Olympia. In the case of the Parthenon and the temple of Artemis at Enhesis the columns are returned at the west at Ephesus the columns are returned at the west end (fig. 14). Only the priests would be allowed within the screens, and possibly only favoured persons would be admitted to walk round the gallery

sons would be admitted to walk round the gallery or aisles, and so obtain varying views of the statue. It is also possible that the two-aisled arrangement may have had something to do with the lighting of the cella, which has always been a difficult problem. There are several possibilities. (1) It is suggested that all the light was admitted through the great temple doors, and when the great brilliancy of the light

in Greece is considered, it does become just conceivable. But let any one who holds this theory seriously examine such plans as those of the great temple at Selinus, the temple of Artemis at Ephesus, or the temple of Olympic Zeus at Athens. A distance of 115 ft. through two doors and five sets of columns will bedim almost any light. After all, it is hard enough to see the part of the Parthenon irize in situ; and this is outside. The interior frieze at Phigalia would be absolutely invisible.

(2) A second suggestion is that of artificial light, which doubtless would produce a certain richness of effect with a statue made of such materials as gold and ivory. Of course one cannot disprove such a theory, but it is a strange and unsatisfactory arrangement.

arrangement.

(3) It is suggested that the light was largely given by what filtered through the marble tiles. This almost precludes the possi-

bility of a ceiling, as, even if spaces were left in it, such a comparatively dim light would by this additional screen be still further reduced. In this connexion, however, it seems worth noticing that in Byzantine architecture, which may even represent a Greek tradition, thin slabs of marble, deeply carved, so as to become still more translucent, were actually used as windows.

(4) Some sort of opening in the roof is suggested, which may be of two kinds. There might be one or more comparatively small openings in the tiles, or one single great hypathral opening. The former receives some support from tiles found by Professor Cockerell at Basse (fig. 17), and the latter from sarcophagi found in the form of little model temples (fig. 17). We are told that the temple at Miletus was open, and had shrubs growing inside—the temple image being in a small shrine within the temple. Strabo, however, mentions it as peculiar and not intentional, but due to the fact that it was found to be too big to roof. Vitruvius says that the temple of Olympic Zeus at Athens was hypathral, but the temple was not completed until long after Vitruvius' death, so that this statement is valueless. We may therefore assume, first, that these temples were exceptional, and secondly, that they were merely unfinished buildings. A hypathral opening would certainly sadly mar the line of the roof, and would admit rain and moisture that would have been very destructive. However, it is generally

PTG. 18.

forgotten that we have an actually existing instance in the Pantheon at Rome, and what was possible in the one place is

Sea Section

conceivable in the other. There seems, in some cases at least, to have been a parapetasma, or curtain, before the image, which may have been to protect it from the weather. It has to be admitted that this theory, although in some ways the least pleasing, has a certain amount of real evidence in its support.

(5) The fact that the covers of the coffers in the ceiling of the peristyle of the Theseum are movable, and marked with letters, has been used as evidence that light was obtained thus by reflexion from the navement below, and then presentedly reflected a second time from the roof. The amount of light thus obtained would be exceedingly small, and to reduce it under any circumstances by putting the covers on would seem to be quite unnecessary. The markings were probably simply for the convenience of the builders, just as a mediaval or modern mason marks a stone cut for a special position.

(6) The presence of the internal columns, as pointed out above, suggests the most ingenious and beautiful theory of all, if not the most probable. It is the theory of Fergusson, who suggested a kind of clerestory somewhat after the Egyptian manner. It is a tempting theory, but there is nothing to support it, save the bare fact that Fergusson anticipated so many of the so-called discoveries of other people, more particularly upon Gothic architecture, and has shown the keenest insight of the writers that have ever written upon the subject. If may be noted that the system is possible without interior columns, although the windows can be made much larger when they are present. The theory receives some measure of support from the fact that the columns certainly were not used solely to decrease the span, as shown above, nor were there generally galleries (fig. 18).

Unless new evidence be found the problem is likely to remain unsolved.

In size the Greek temples corresponded to our parish churches rather than to our cathedrals, making up, however, for the lack of size in the extreme refinement of workmanship. Moreover, the mass of material was considerable, and the actual size of blocks enormous, many of them weighing as much as 20 or 30 tons. The largest stone at Baalbec, very likely of Greek workman-thin weighs approximately 1100 tons. The cella ship, weighs approximately 1100 tons. The cella almost invariably faced the east in the case of temples of the gods, although there were slight variations, probably in order that the image might sacred to the god. This may even be trusted to give us the dates of their erection, calculated astronomically. In the case of heroes, the general rule seems to have been the reverse, and the temple to have faced west. In this matter of orientation the Greek usage may be contrasted with the Roman, which paid no attention to such things.

Within the temple, the temple statue held the place of honour, facing the entrance, and from the 5th cent. B.C., at any rate, this statue was of colossal dimensions. That of Zeus at Olympia, we are told, was so large that he would have been unable to stand upright had he risen from his throne. It would add to this effect if the temple were not too large; and what size it had was clearly not for the accommodation of worshippers, but simply what was necessary for the display of the statue. Indeed, one must clearly grasp that the temple and its image were a unity, and cannot be considered apart.

Within the temple there would be a minor altar

to the deity, upon which offerings of cakes, or things of vegetable nature, would be made; and there seem also in some other cases to have been altars to other than the principal deity of the place, as, for instance, to the hero Butes in the Erechtheum. In addition to the altars, there would Erechtheum. In addition to the altars, there would be numberless votive offerings dedicated to the deity by the State, as in the case of spoils of war, or by private individuals. These would have a tendency to accumulate, and yet, from their nature, it would doubtless have been sacrilege to throw them away. There would be small portable objects too, that would not be table for public display, particularly when of walue. Moreover, the deity, especially in EM case of Athene Polias, represented the city herself, and the wealth of the city and the wealth of the goddess were, in of the city and the wealth of the goddess were, in a sense, one. These circumstances combined to make it necessary that, attached to the temple, there should be some place for the storing of

treasure. Hence, in the larger temples we frequently find at the back of the cella (vabs, or temple proper) another chamber prolonging the rectangular plan, and used for the above purposes. Indeed, the treasure chambers of the temples may in some senses be regarded as the State banks. The porticoes themselves were not infrequently closed in by railings between the columns.

In considering the plans of the larger Greek temples, we must not suppose that they were built upon any one pattern. Quite the contrary is the case, and it would be truer to say that there are almost as many different arrangements as temples. Perhaps the two most irregular plans are those of the Erechtheum (fig. 19) and the temple of Apollo at Basse. [The building at Eleusis is not a temple.] The irregularity of the first of these

RTG. 19.

is well known, occasioned partly by the irregularity of the site, partly by its having to house the image of more than one deity, and possibly in order that it might include certain sacred objects, such as the marks of Poseidon's trident and the salt spring.

The temple at Phigalia is interesting partly because of the curious arrangement of attached logic accounts.

Ionic columns running round the interior of the building with the beautiful frieze above, which form a series of small recesses the whole way round, but even more as showing the importance attached to the correct orientation of the statue. It was more convenient to build the temple with its longer axis from north to south; the cella, therefore, had a door in the east side of the temple through which the statue looked eastward (fig. 20). The effect of lighting, to one entering the temple from the north during the morning light, must have been most impressive, and the esthetic value of such an arrangement would doubtless influence the architect. It is possible that the actual cella occupied the site of a smaller sanctuary of normal orientation. The temple in some respects bears a curious resemblance to the Heræum at Olympia.

It is a hexastyle building, and its long proportions with 15 columns down the sides are those of an

early temple, the tendency being for the later temples to be wider. The Ionic half columns attached to the short side walls also recall the

FIG. 21.

earlier building. Richter figures an Ionic capital from the Heræum, presumably from the interior, which, in the proportions of its volutes and the arrangement of the continuation of the volute-bead, strikingly anticipates the later capitals at Bassæ.\*

The plans of one or two religious buildings other than temples may be briefly noted in conclusion. The Telesterion, the great hall at Eleusis (fig. 21), is the nearest approach in Greek architecture to the modern church, a building designed for holding a congregation of people. Here, in a large square hall, with a roof supported by seven rows of six columns, were performed the sacred drama and final initiation of the mustai, after they had been worked up to a condition of religious excitement by fasting and wandering in the dark. The whole hall was surrounded by tiers of seats as in a theatre, and it seems probable that there was a gallery above these. The building was erected against a hillside, and there were six entrances, two on each of the free sides. The plan is traditional, and takes the place of a much earlier and smaller building of similar design, whose foundations can be traced. Below this are the foundations of a third, smaller still. This building was begun by Ictinus, c. 425 B.C., and was not completed until c. 315 B.C., when Philon built the porch. We know that the temple had windows and shutters above, for the admission or exclusion of light during the ceremonies. This could have been admirably arranged by a clerestory system such as Fergusson suggests (fig. 18). Fergusson, however, makes the ridge of the roof run from N.E. to S.W., so that Philon's portice would have no pediment, which, though quite possible, particularly as it was intended to carry the portico round as a sort of stoa, may not have been the case. But the roof might have been as in fig. 22.

\* The present writer has not been able to see this capital, and does not know where Richter saw it (fig. 4).

In his restoration, all but the end column of the central row are omitted; but although this would

FIG. 22.

provide a wider open space and better lighting, and account for the curious disposition of the columns, six on the sides and seven on the end, nevertheless it is not necessary. If most of Philo's interior columns were Doric, as those of his portico undoubtedly were, there might have been a single

PIG 98

range of the more slender Ionic columns down the centre instead of the two-storey arrangement, a device used where columns of two heights were required. Those in the so-called Parthenon-chamber of the Parthenon were possibly Ionic columns of the height of the two tiers of Doric columns in the cella. Unfortunately, little exists but the ground plan, and there are practically no architectural remains from which to deduce the character of the building. The existing remains are mainly of Roman date, with Ionic columns.

cectural remains from which to deduce the character of the building. The existing remains are mainly of Roman date, with Ionic columns.

In the island of Delos are the remains of the so-called 'sanctuary of the bulls,' the building containing the horned altar of Apollo, reckoned among the seven wonders of the world. In this building is said to have taken place the celebrated dance of the Delian maidens. It was extraordinarily long and very narrow, 219 ft. by 19 ft. (fig. 23). It was built upon a granite base with marble steps. The building was divided into three parts, a long central hall, with a sunken area, in which presumably the dances took place, and at the southern end a Doric portico, possibly tetrastyle, possibly 'distyle in antis.' At the north end of the long hall was the chamber containing the altar. It was entered between two composite piers, formed by a half Doric column on the one side, and an anta with two recumbent bulls as a capital on the other side. Above was a frieze with bulls' heads upon the triglyphs. It is these bulls that give the name to the building.

The Thymele (i.e. 'place of sacrifice'), the so-called Tholos, at Epidaurus (fig. 24) is one of the few round buildings, used for religious purposes, that have come down to us. Others were the Arsinceion at Samothrace sacred to the Great Gods, the very small whilding if so it may be called whose circular

The Thymele (i.e. 'place of sacrifice'), the so-called Tholos, at Epidaurus (fig. 24) is one of the few round buildings, used for religious purposes, that have come down to us. Others were the Arsinoeion at Samothrace sacred to the Great Gods, the very small building, if so it may be called, whose circular foundations may be found in the Asklepieion at Athens, and the quasi-religious Philippeion at Olympia, which may be regarded as a sort of Heroon of Philip. It seems to have been one of the loveliest buildings of antiquity. The foundations are probably of older date, but the principal remains date from the end of the 4th cent. B.C., when it was built by the architect Polyclitus (possibly a grandson of the famous sculptor). It was 107 ft.

in diameter, and stood upon ring walls 4 in number. Upon the outermost and widest were two circles of

FIG. 24.

columns, the outer Doric circle containing 26, and the inner Corinthian, 14. The inner rings are divided by openings and connected by cross walls in a rather curious way. The Doric entablature had large richly sculptural rosettes upon the metopes. The ceiling of the ambulatory was executed with beautiful marble coffers. The capitals of the Corinthian order, as has already been noted, are in their way the acme of Greek art. The use of the building has been much discussed, but its name, and its correspondence to its miniature prototype or copy in the temenos of the same god at Athens, point on the whole to the building covering a sacrificial pit. That sacred serpents may have been kept in the spaces between the ring walls is also conceivable, without interfer-

ing with the first theory.
In its own way Greek architecture has never been surpassed, and probably never will be. It has said the last word upon such problems as nicety of construction and proportion, and has carried the delicacy of ornamental treatment to the furthest delicacy of ornamental treatment to the nurthest limits that are visible to the most highly trained human eye. The Greeks may be said to have set out to achieve perfection, and they have achieved it. Their style was original and practically entirely self-oreated. It is not until we reach the architecture of the Gothic architects that we again find an entirely original creation. The Gothic architects, however, did not aim at perfection, but at something different, and they, too, in their way were unsurpassed. In order fully to comprehend even the general spirit of Greek architecture, it would be necessary to have some knowledge of other than religious buildings, which alone come properly within the scope of this article. But in the main it is an extension of the same principles, showing however the principles of the same principles. showing, however, more variety and power of practical adaptation than is perhaps evident in the

practical adaptation than is perhaps evident in the sacred buildings here considered.

J. B. STOUGHTON HOLBORN.

ARCHITECTURE AND ART (Hindu).—The adherents of all the Indian sects and religions used for their several purposes the art of each age and country, which was applied, as occasion arose, to the special requirements of each form of worship. No fundamental distinction, from the point of view of the historian of art, can be drawn between the buildings of the various religions, and often it is impossible to determine merely by considerations of style whether a given building or sculpture is Buddhist, Jain, or Brähmanical. As Le Bon observes, 'l'architecture est beaucoup plus fille de la race que des croyances.' But from the point of view of the student of comparative religion, it is legitimate and necessary to examine the modes in which the general canons of art were applied to the service of particular creeds; and it is possible, subject always to the understanding that the hissubject always to the understanding that the history of Indian art as such is in the main independent of variation in creed, to treat the Buddhist and Jain works separately, and to concentrate attention on the artistic forms especially, although not exclusively, affected by Brahmanical Hindus. Relic-worship not being an orthodox Hindu practice, the construction of stūpas with their attendant railings seems to have been confined to the

tendant railings seems to have been confined to the Buddhists and Jains. This fact alone eliminates a multitude of important works from an account of Hindu art in the restricted sense. The chaitya hall, likewise, not being serviceable for Hindu ritual, all the known examples of this kind of building, whether rock-cut or structural, are Buddhist. Although it is true that Brahmanical Hinduism in one shape or other is older than either Buddhism or Jainism, and that the worship of Siva, Kṛṣṇa, and the other deities now favoured by the masses of the people, may be traced back to a distant antiquity, the material remains of ancient Hinduism are extremely rare, and nearly all the really old monuments are either Buddhist or Jain. Whatever may be the correct explana-tion of this, the fact is certain, and affords a further practical justification for the separate treatment, for certain purposes, of specifically Hindu works as distinguished from those of Buddhist or Jain origin.

Architecture is the dominant art of India, and almost all other modes of art have been developed as accessories to it. No Hindu ever spontaneously set to work to produce a statue or picture for its own sake, as a thing of beauty by itself, without reference to an architectural composition. The few detached images which exist were usually intended to be worshipped, and were designed primarily for religious not artistic purposes. It is hardly necessary to observe that Indian life in all its aspects—art included—is governed by religious motives, and the consequence necessarily follows that all notable works of art in India are associated with buildings dedicated to the service of religion. The examples of architectural skill applied to purely secular purposes are rare and comparatively unimportant, while the minor decorative arts as applied to articles of ordinary use or special luxury are largely dependent upon mythological motives. Practically, therefore, a discussion of Hindu architecture and art must deal almost exclusively with the architecture and decoration of temples appro-priated to Brāhmanical worship. The decoration is nearly all the work of the sculptor, the few examples of Indian painting deserving the name of works of art being all, probably without exception, either Buddhist or Muhammadan.

For a discussion of Hindu architecture generally, the reader is referred to Fergusson's standard work. Here it will suffice to observe that the essential part of every temple is the shrine, containing the image or symbol of the deity. That shrine very often is not the principal element in the composition, being overshadowed by the subsidiary parts added for the purpose of giving the desired impression of dignity and mass—not for congregational uses, which Hindu ritual excludes. The leading styles of Brahmanical temple architectures are the statement of the state tecture are six in number, namely, four northern tecture are six in number, namely, four northern and two southern. The northern styles are (1) the 'Indo-Aryan' of Fergusson; (2) the Gupta; (3) the Kaśmirī; and (4) the Nepālese. The southern styles are (5) the Dravidian, and (6) the 'Chāluk-yan' of Fergusson, better designated as that of the Deccan. We proceed to indicate briefly the geographical distribution, chronology, characteristics, and principal examples of each of these six styles. The reader who desires to pursue the subject will find a great mass of information recorded in the selected works named at the end of this article, and in the unnamed multitude of other

subject will find a great mass of information recorded in the selected works named at the end of this article, and in the unnamed multitude of other books dealing with Indian archæology.

1. The 'Indo-Aryan' style is characterized by the bulging steeple with curvilinear outlines which surmounts the shrine or sanctuary containing the image, and frequently is repeated in other parts of the design. In Orissa an early temple sometimes consists of nothing more than the steepled shrine with a low-roofed porch, devoid, or almost devoid, of pillars; but larger examples have additional pillared chambers. The great temples at Khajurāho, in Bundelkhand, dating from the time of the Chandel dynasty, are built on a cruciform plan, with naves and transepts, which results in buildings of imposing dignity. The style in one variety or another is found all over northern India, between the Himālayan and the Vindhyan mountains. The most elegant examples may be assigned to the period between A.D. 950 and 1200, but some of the Orissan temples are supposed by Fergusson to date from A.D. 600. As a rule the material is stone, but a few brick temples in this style are of the Orissan temples are supposed by rergusson to date from A.D. 600. As a rule the material is stone, but a few brick temples in this style are known. The best preserved specimen built of brick is that at Konch in Bihār, to the north-west of Gayā, which is assigned to the 8th cent. A.D. (Cunningham, Archeol. S. Rep. vol. xvi. p. 58). Certain brick temples in the Cawnore district, rather earlier in date, probably had steeples of the standard form, but are too much ruined to admit rather earlier in date, probably had steeples of the standard form, but are too much ruined to admit of certainty. The most ancient known Brāhmanical temple is one built of decorated moulded bricks, discovered by Dr. Führer in 1891-92 at Ahichhattrā in Rohilkhand, and assigned for good reason to the first century B.C. (Archeol. S. for N.W.P. and Oudh, Progress Report, 1891-92). Unfortunately no description of the building has been published. It is probable that the style was developed originally in brick, but it is not known how it originated. Nor is the genesis of the curvilinear steeple easy to explain. The most plansible suggestion is that the design was curvilinear steeple easy to explain. The most plausible suggestion is that the design was modelled on the form of a frame of bamboos fastened together at the top. In modern buildings the tendency is to diminish greatly or dispense with the curvature of the outline, and many temples of recent date have slender straight-line spires, closely resembling European church forms.

2. The Gupta style, with which Fergusson was not acquired its overhead because it was favoured.

not acquainted, is so named because it was favoured not acquainted, is so named because it was favoured by architects in the 4th and 5th centuries A.D., when the imperial Gupta dynasty ruled northern India (see art. CHANDRAGUPTA, 2, 3). The re-corded examples, about thirteen in number, includ-ing a good one at Sanchi, are found in the southern parts of the United Provinces and the neighbouring territories. Cunningham, who first distinguished the style, enumerates its seven characteristic features as follows:

features as follows:

(1) Flat roofs, without spires of any kind, as in the cave temples; (2) prolongation of the head of the doorway beyond the jambs, as in Egyptian temples; (3) statues of the rivers

Ganges and Jumna guarding the entrance door; (4) pillars with massive square capitals, ornamented with two lions back to back, with a tree between them; (5) bosses on the capitals, and friezes of a very peculiar form, like Buddhist stūpas, or beehives, with projecting horns; (6) continuation of the architrave of the portice as a moulding all round the building; (7) deviation of plan from the cardinal points (Cunningham, Archael. S. Rep. vol. ix. p. 42, and ib. vols. i. v. x. xi. xiv. xvi. xx. xxi.)

3. The Kaśmiri style is restricted to the valley of Kaśmir and the Salt Range country in the Panjāb, between the Indus and the Jhelum. Its peculiarities are distinctly marked, and include pyramidal roofs, fluted pillars closely resembling those of the Doric order, arches with trefoil-shaped openings, and dentils as ornaments. The temples openings, and dentils as ornaments. The temples are usually small, but in some cases are surrounded by cloistered enclosures of considerable magnitude. The notion that such enclosures were intended to contain water is erroneous. The oldest example to which a date can be assigned is the well-known to which a date can be assigned is the well-known temple of the Sun, under the name of Mārtānḍa, which was built by order of king Lalitāditya, about A.D. 750 (Stein, trans. of Rājataranannī, All known specimens of the style may be dated between A.D. 600 or 700 and 1200. The obviously Greek character of the pillars has attracted much attention from European writers. but it is not attention from European writers; but it is not easy to ascertain how quasi-Doric pillars became the fashion in Kaśmir and the Salt Range, and nowhere else. Perhaps, as Le Bon conjectures, the style was introduced from Persia during the rule of the Arsacids.

rule of the Arsacids.

4. The Nepälese style in its characteristic form is mainly Chinese, being merely a local modification of the Chinese style described as follows by Dr. Bushell (Chinese Art, vol. i. p. 49, London, 1904):

"The most general model of Chinese buildings is the ting. This consists essentially of a massive roof with recurved edges resting upon short columns. . The roof is the principal feature of the building, and gives to it, when finished, its qualities of grandeur or simplicity, of strength or grace. To vary its aspect the architect is induced occasionally to double, or even to triple it. . The great weight of the roof necessitates the multiple employment of the column, which is assigned a function of the first importance. The columns are made of wood. . . The stability of the structure depends upon the wooden framework; the walls, which are filled in afterwards with blocks of stone or brickwork, are not intended to figure as supports.'

Most of the Nepalese temples are constructed on the same principles, but the curvature of the roof is much less marked than in China. The small valley of Nepāl proper, measuring about 20 miles by 15, in which the three towns Kāthmāṇḍi, Pātan, and Bhātgāon, are situated, probably contains more temples than any other equal area in the world. The total number is believed to exceed 2000, of which the great majority are in the town. 2000, of which the great majority are in the towns above named. In modern Nepāl the practices of Brāhmanical Hinduism and Buddhism are so in-Brāhmanical Hinduism and Buddhism are so inextricably mingled that the symbols of both religions are found indifferently in the shrines. Le Bon has rightly laid stress upon the proposition that the existing state of things in Nepāl goes a long way towards explaining the process by which, in India, Buddhism gradually melted away into Hinduism. The oldest monuments in Nepāl are Buddhist stūpas, which may go back to the time of Aśoka (wh. see); but the Indo-Chinese structures described above are all comparatively modern none probably being older than A.D. 1800. structures described above are all comparatively modern, none probably being older than A.D. 1500. The Nepalese temples built entirely of stone vary much in form, and do not admit of summary classification as regards style. Examples of some of the most notable varieties are given in Le Bon's plates. plates.

5. The Dravidian style is so named because it is that prevalent in the countries occupied by peoples speaking Dravidian languages. These countries correspond closely with peninsular India to the south of the Krishna (Kistna) river, and are nearly accomplant to the Madres Presidency. The Breb. equivalent to the Madras Presidency. The Brahmanical temples in this style may be devoted to the worship of either Siva or Visnu. Which-ever god is specially honoured, the style is the same. Mr. Fergusson defined its characteristics as follows (p. 325):

The temples consist almost invariably of the four following

The temples consist almost invariably of the four following parts, arranged in various manners, as afterwards to be explained, but differing in themselves only according to the age in which they were executed:

1. The principal part, the actual temple itself, which is called the wimāna. It is always square in plan, and surmounted by a pyramidal roof of one or more storeys; it contains the cell in which the image of the god or his emblem is placed.

2. The porches, or mandapas (mantapa), which always cover and precede the door leading to the cell.

3. Gate pyramids, gopuras, which are the principal features in the quadrangular enclosures which always surround the vimānas.

\*\*imanus.\*
4. Pillared halls, or choultries, which are used for various purposes, and are the invariable accompaniment of these temples. Besides these, a temple always contains tanks or wells for water, to be used either for sacred purposes or the convenience of the priests; dwellings for all the various grades of the priest-hood attached to it; and numerous other buildings designed for state or convenience

Except in the earliest rock-cut examples, the roofs and almost all parts are bounded by right lines. The bulging curvilinear steeple of the 'Indo-Aryan' style is unknown in the south. The celebrated Seven Pagodas at Māmallapuram (Ma-hābalipur) near Madras, executed under the orders of Pallava kings in the 6th and 7th cents. A.D., and certain other rock-hewn temples in the North Arcot and Trichinopoly districts, mark the earliest known stages in the development of the style, which then showed distinct traces of specially Buddhist forms. At Ellora, in the Nizam's dominions, we possess in the magnificent rock-cut Kailas a perfect Dravidian temple, as complete in all its parts as any later example of the style. This edifice is made to simulate a structural temple by the complete cutting away of the superfluous rock, both externally and internally, so that the temple stands out freely. It was excavated in the reign of Kṛṣṇa I. Rāṣṭrakūṭa, about 760 A.D.

The great structural temples of Southern India are much later in date. They are extremely numerous, and remarkable for their vast size. Fergusson was personally acquainted with 'upwards of thirty great Dravidian temples, or groups of temples, any one of which must have cost as much to build as an English cathedral, some a great deal more.' One of the most notable is the temple erected at Tanjore by the victorious Chola king, Rājarāja, between A.D. 985 and 1011, which has the great merit of having been 'commenced on a well-defined and stately plan, which was per-severed in till its completion.' The numerous in-scriptions on this temple have been edited by Dr. Hultzsch (South Indian Inscr. vol. ii.). Öther huge similar structures, less laudable in plan but still magnificent, are to be seen at Srīrangam, Chillambaram, Rāmeśvaram, Madura, and many other places. The adequate description of any one of these would fill a large volume. The central corridor of the choultrie at Rāmeśvaram has an uninterrupted length of 700 feet, that is to say 100 feet longer than the nave of St. Peter's; and these figures may suffice to give some notion of the large scale on which the southern temples are designed. Fergusson expressed the opinion that the Dravidian temples 'certainly do form as extensive, and in some respects as remarkable, a group of buildings as is to be found in provinces of similar extent in any part of the world—Egypt, perhaps, alone excepted; but they equal even the Egyptian in extent '(op.

cić. p. 379). 6. The so-called Chālukyan style, which may be designated more fittingly by a territorial name as that of the Deccan, is, as Le Bon correctly observes, a transitional one connecting the forms characteristic respectively of the North and South.

If we exclude the purely local and isolated styles of Kaśmir and Nepal, the two extremes of Indian or Kasmir and Nepāl, the two extremes of Indian architecture are formed by the Indo-Aryan and the Dravidian styles. The Gupta and Chālukyan both possess an intermediate character, and are to some extent related to each other. The latter has two well-marked varieties, that of Mysore, described by Fergusson, and that of Bellary, described by Rea.

described by Rea.

The Chālukya empire, which comprised at its greatest extent most of Mysore, parts of the Nizam's territories, and some districts now British, was founded about A.D. 550, and lasted under the first dynasty for about two centuries. The second dynasty was established in A.D. 973, and came to an end, as a power of importance, about A.D. 1190. But early in the 12th cent. the Chālukya kings lost the Mysore country, which passed under the government of a Hoysala dynasty, and the splendid temples at Halebid (Dorasamudra) and Belür, which excited the enthusiastic admiration of Fergusson, who gave the inappropriate name Chālukyan to their style, really were built under the orders of the Hoysala kings. The Belür temple was erected by king Vignu when he was converted from Jainism to Hinduism in A.D. 1117, and the Halebid temple belongs to the same reign, a few years later (Epigr. Carnatica, vol. v. p. 36).

The Mysore style, as described by Fergusson, is
